**BLACK ROCK, P. V.,** Black Rock t., Erie co., N.Y., 360 m. W. by N. Albany, 363 W. Situated on the E. side of Niagara river, at the foot of lake Erie, 2½ m. N. of Buffalo, with which it is connected by a rail-road. Incorporated in 1837, and contains one church, ten stores and groceries, five warehouses, four flouring-mills with twenty-five run of stones, two saw-mills, two oil-mills, two distilleries, one iron foundry, one plaster-mill, one machine-shop, one store-factory, one rope-walk, one clothiers'-works, and various other mechanical establishments; 350 dwellings, and about 1800 inhabitants. The harbour is formed by an immense stone pier or mole in Niagara river, over a mile in length, 50 ft. wide at its base, and 30 ft. at the top, erected by the state of New-York, at an expense of \$300,000, for the double purpose of forming a safe and convenient harbour for vessels on the lake and the canal-boats which enter the lake through it, and for supplying the Erie canal with water from the lake, as far E. as Montezuma, nearly half of its entire length. A dam, 165 yards long, connects the shore with Squaw island, which raises the water in the harbour 4½ ft., to a level with the lake, creating an immense water-power, but partially improved. A lock admits vessels from the harbour into the river. The average depth of the water in the harbour is 15 ft. The Erie canal enters the harbour opposite to Bird's island, which is immediately above, and connected by a mole with Squaw island, which latter contains 131 acres. In the year 1840, 519,984 bushels of wheat were received, and 944,700 barrels of flour were manufactured at this place. A ferry crosses to Waterloo, in Canada. The township extends on three sides of the city of Buffalo, from which it is centrally distant 3 m. It has ten schools, 336 scholars. Pop. 3683.

**BLACK SEA** (the Euxine, or *Illyris Euxina*; of the Greeks and Romans), a large internal sea lying between the S.W. provinces of Russia in Europe and Asia Minor, extending from 40° 50' to 40° 45' N. lat. and from 37° 25' to 40° 45' E. long. It is bounded on the N. and N.W. by the Russian provinces of Taurida, Khercon, and Bessarabia; on the N.E. and E. by the Caucasian countries Circassia, Mingrelia, and Imeritia; on the S.E. and S. by Armenia and Asia Minor; and on the W. by the Turkish governments of Rumelia and Bulgaria. Its extreme length from E. to W. is upwards of 700 m.; its greatest width, on the 31st meridian, 400 m.; E. from this it narrows by the projection of the Crimea, and the advance of the opposite shore of Asia Minor, to 154 m.; again it widens to 263 m. between the strait of Yenikale and the gulf of Samsum, but from the last point it constantly and rapidly diminishes, till its E. coast (running due N. and S.) does not exceed 60 m. in width. Its surface is estimated at about 100,000 sq. m., and its coast line, including its sinuities, considerably exceeds 3000 m. (*Chevalier, Voy. de la Perse, et du Pont Euxin*, p. 330; *Jones's Travels*, II, 385; *Russell's Comp. Geog. of W. Asia*, II, 377; *Arrowsmith's Atlas*.)

The Black sea is connected with the sea of Azoph by the strait of Yenikale (an. *Bosphorus Chelmerius*), and with the sea of Marmara by the channel of Constantinople (an. *Bosphorus Thracicus*). With these exceptions, it is wholly isolated. It is also much more compact in form than most other large bodies of water; giving off no great limbs, like the Baltic, Mediterranean, &c., and having very few even moderately-sized gulfs. The most important, that of Kizikint, (the *Cerentius Sinus* of the ancients) lies between the N.W. shore of the Crimea and the opposite shore of S. Russia, extending as far E. as the isthmus of Perekop. The coast of the sea is, however, by no means round; small bays and harbours innumerable occur at short distances, through all its circuit, but none of them is in the least comparable, as to size, with the gulf of Kizikint, unless, indeed, the sea of Azoph and the sea of Marmara be reckoned as gulfs of the Black sea. The straits of the Black sea are very remarkable; they scarcely break the continuity of the land, for at their narrowest part, that of Yenikale, is not more than 2 m. across, and that of Constantinople less than 1½ m. (*Pallas's Travels* in S. Russia, II, 288; *Chevalier*, p. 44.) The former, indeed, spreads out in low and swampy grounds into a kind of marshy bay, the greatest width of which, measured transversely, is about 34 m. (*Pallas*, II, 300); but the Thracian Bosphorus flows through its whole length of about 17 m., like a magnificent river, between mountainous banks, and in no part attains a width of more than 2 m. or 2½ m. (*Jones*, I, 448.)

The depth of water in this sea is variable, but the vari-

## BLACK SEA.

tions appear to be extremely regular, depending generally upon the proximity of the land; so much so, indeed, that in many places (off the mouths of the Danube in particular) the distance of the shore may be known within ½ m. from the soundings only. (*Eltz, Commerce of the Black Sea*, p. 6.) In the strait of Yenikale, the depth, in its shallowest part, does not exceed 11 ft., nor in its deepest is it more than 23 ft.; but, passing this, the sea itself is found, in the neighbourhood of the strait, to have a general depth of 4 fathoms, deepening rapidly to 30 fathoms or more; while, in the S. parts, 45 fathoms are found at the entrance of the Thracian Bosphorus; an equal or greater depth along the W. shore, at a little distance from the land, as far as the mouths of the Danube; and in the main sea, between the Bosphorus and Sebastopol, in the Crimea, no bottom is found at 100, 130, 140, and 160 fathoms. The sea upon the S. coast, from Constantinople to Sinope (long. 35°), is tolerably deep; thence to the E. coast it is known only that vessels of any draught may navigate its waters; and the N.E. shore, between the rivers Phasis and Kuban, may be regarded as yet unknown to Europeans. (*Voyage of the Blenda*, 1839; *Geog. Journal*, I, 106; *Eltz*, p. 7-15; *Admiralty Charts*, sect. IV, pl. 73.)

The Euxine is enclosed on the N.E., E., S., and S.W. by high mountains, which run down close to its margin; even on the W., the Carpathians approach its shores to within 170 m.; but towards the N.W. and N., it opens on the great European plain, which includes Russia, Poland, Prussia, N. Germany, the Netherlands, and Denmark. Not a mountain, not a hill, rises near its bed, in these directions, except the small range in the S. of the Crimea. It might be reasonably imagined that, in consequence of such a formation, its basin would consist exclusively of the countries stretching from its N.W. and W. shores. This is, however, far from being the case. It is true that its N.E. coast, bound closely in by the Caucasus, receives only the torrents that run their short courses from the W. slopes of that mountain system, but from the S.E. and S., the supply yielded by Asia Minor is by no means niggardly, several very considerable rivers having their embouchure in its waters.

The basin of the Euxine expands in this direction, from about 40 m. to nearly or quite 360 m. in width; but immediately N. of the Caucasian mountains, it suddenly stretches E. 300 m., the sea receiving, through the Kuban, nearly all the water that flows from the N.E. face of the Caucasus, and by various other channels, considerably the larger part of all the drainage from the low and swampy lands W. of the Caspian. (*See CASPIAN SEA*.) On its N. coast, the Black sea receives the waters of some of the first class European rivers from a distance of 700 m. from its shores. (*See DON, Dnieper, Danube*.) The Don, indeed, falls into the sea of Azoph; but this is, physically considered, only a part of the larger body with which it is connected. But by far the most remarkable part of the basin of the Euxine is that towards the W. It has been already stated that the Carpathians approach, in this direction, to within a comparatively short distance of its shores; but, notwithstanding this, the Danube, after breaking through the mountains at Orsova, reaches the Euxine charged with all the surplus waters of the E. and N.E. declivities of the Alps, the S. and part of the N.E. declivities of the Carpathians, the S. declivities of the Sudetes, and the N. declivities of the Balkhan; in other words, the whole water of N. Turkey, of the Austrian empire, with the exception of Bohemia and Lombardy; together with a great part of that of Bavaria and Wirtemberg. (*See DANUBE*.) These countries extend above 1000 m. W. from the Black sea; their surface is equal to more than 1-11th part of the whole of Europe, and their running water to almost 1-8th part. (*Lichtenstein, Oermag.*, I, 393, & seq.) When to this is added the supply from the N.E. and S., it will be evident that the basin of the Euxine is of very great extent. The much larger portion belongs to Europe, of which it drains almost 1-3d part; and the amount of water received by the sea is equal to that given from the same division of the world to the Mediterranean (*direct*) and Baltic together. It is, indeed, by far the largest of the European basins, nor is there anywhere a similar tract of country so abundantly irrigated.

There are, of course, no tides in this close sea, but, from the vast quantity of water received, the currents are very marked, powerful, and regular; a little variation is caused by winds, and some trifling complexity near the mouths of rivers, but in general the direction is from all points towards the channel of Constantinople, through which a very constant flow is kept up to the sea of Marmara. Within this strait, however, the currents become rather more variable, being thrown from side to side by the inequalities of the coast, and the narrowness of the channel. (*Chevalier*, p. 45; *Jones*, II, 394, 447; *Pallas*, II, 288; *Geog. Journal*, I, 107, &c.) The water of the Black sea appears to contain more salt than could have been expected, under existing circumstances. It has been observed of the constant action

## BLACK SEA.

of the St. Lawrence on the N. American lakes, that it has been continued long enough to make them sweet and clear, even had they originally been filled with ink! But an operation, not less powerful, has been at work fully as long upon these waters; and though the sea of Asoph has become potable, except when a S.W. wind prevails, the Black sea itself is said to be only about 1-7th part less salt than the Atlantic, and fully 1-10th saltier than the Baltic. (Mardin, p. 135; Jones, ii., 143, &c.) This, if correct, is, in all probability, attributable to the saline nature of the sea-bed. The N. coast is almost one continued plain of salt, and the numerous lakes, with which these steppes abound, are, by the action of the summer sun, covered with a thick, white crust of the same mineral, perfectly crystallized, and having the appearance, and almost the consistency, of ice. (Pallas, ii., 466-477; Mrs. Guthrie's *Tour through the Taurida*, p. 55-59, &c.) It is very improbable that this peculiarity of soil should be continued to the very edge of the sea, and then suddenly cease; and, on the other hand, if it be further continued to any distance, it will necessarily countervail in a great degree the influence of the immense supply of fresh water. The fact is, however, that but very little is known, with anything like certainty, of the chemical composition of the Black sea. The Russian observations are limited to the N. shores; the few French and English travellers who have traversed its surface, have done so only partially and hurriedly; among trading navigators there has been no Jonas Hanway; and the statements of the Turks exhibit nothing but ignorance, prejudice, and misrepresentation. A scientific survey of this sea has yet to be performed, and Russia is the only power to which Europe can look for this service. Her government has already distinguished itself by similar investigations, and as she has so great an interest in the correct delineation and description of this sea, it is to be hoped that she may shortly undertake the task. Meanwhile, however, many old prejudices with respect to it are fast vanishing; and the Euxine is no longer regarded as a dark and desolate region of storms, danger, and shipwreck. That such an opinion should have ever prevailed, is not a little remarkable; but it did prevail in ancient, and in modern times till a comparatively late period. Tournefort was the first who attempted to dispel the prejudices and misrepresentations referred to; and who ventured to represent facts as he found them, and not as they had been disguised by the poets of antiquity, and by blind and ignorant Turkish navigators. *Quoiqu'en aient dit les anciens, ainsi que les modernes, et excellent traveller, la Mer Noire n'a rien de noir, pour ainsi dire, que le nom : les vents n'y soufflent pas avec violence, et les orages n'y sont gueres plus frequents que sur les autres mers. Il faut pardonner ces exagerations aux poetes anciens, et surtout au chagrin d'Ovide; en effet le sable de la Mer Noire est de même couleur que celui de la Mer Blanche, et ses eaux en sont aussi claires; en un mot, si les côtes de cette mer, qui passent pour si dangereuses, paraissent sombre de loin, ce sont les bois qui les couvrent, ou le grand eloignement qui les font paroitre comme noires.* La ciel y fut si beau et si serene pendant tout notre voyage, que nous ne pûmes nous empêcher de donner une espèce de dementi à Valerius Flaccus, fameux poète Latin, qui assure que le ciel de la Mer Noire est toujours embrasé, et qu'on n'y voit jamais de temps bien formé. (ii., 164.)

The prevailing wind in the Euxine is from the N.E., and, as it blows over a great extent of flat and swampy country, it is laden with moisture; and, being confined by the high land on the E., S., and S.W., heavy fogs are occasionally produced. It may even be conceded to Dr. Clarke, that "in winter these fogs, and the falling snow, cause sometimes a darkness so great, that mariners are unable to discern objects at the distance of a cable's length from their vessels." (Travels, i., 641.) But this inconvenience involves scarcely any hazard, for the depth of water is always sufficient to allow of lying to without danger of drifting upon sand or rock; and, with the least break in the weather, landmarks of the very best kind come into view, which may be seen at 30, and often at 60 m. distance. (Eton, p. 8, 9.)

From the confined extent of the water, a short and troublesome sea is caused by anything like a gale; but it is not dangerous; and storms, to which the Black sea is not more subject than other seas, are rarely of long duration. (Eton, p. 8.) While they last, the close, pent-up water being greatly agitated, accidents, of course, sometimes occur; but it would, perhaps, be rather difficult to point out any sea of limited dimensions where, under such circumstances, they do not occur. The N.W. shore is low and sandy; a sandbank, 3 m. in extent, lies near the entrance of the Channel of Constantinople; and on the coast of Crimea two rocks lie close in shore.

Lastly, there is an opening, called *Yalen Boker* (false mouth), a little to the N. of the Channel of Constantinople, and very considerably resembling it, though easily

enough distinguished when the landmarks are visible. Ignorant, half-bred pilots frequently conduct their ships into this mouth; and as it runs upon a low and dangerous shore, the consequences are mostly fatal. These are the only known real dangers of this sea. Can it be affirmed that any piece of water of like extent has so few? (Eton, p. 4-9; Jones, ii., 387-397.) On the other hand, the Euxine is deep, and singularly free from rocks and shoals: there are but two islands in its whole area; the Isle of Serpents, off the mouth of the Danube, and Kerpe, or Cypsel, on the shores of Asia Minor. The navigation is, therefore, of the openest kind, and even in the worst of storms there is no want of sea room. The largest ships may sail close to its high shores: the anchorage grounds are good, and hold well; and many of its ports are excellent. In fine, the Euxine may be described as a clear, open sea, whose navigation is as easy as possible to skillful mariners, the bad character which it has so long undeservedly borne being wholly ascribable to the bad build of the vessels, their want of charts and compasses, and the utter incapacity of the sailors by whom, till recently, it has been navigated. From the 15th to the latter part of the 18th century, the Turks excluded every other nation from its waters. At length the Russians fought their way to its shores, and in 1790 it was partially opened to British and other European traders. Conventions to the same effect were made with the Turkish government by Queen Elizabeth, James I., and Charles I., &c. (Treaty of Adrianople, Sept., 1675), but they seem to have been without any effect; and it is only, therefore, since the latter date, or from the beginning of the present century, that the Black sea has become known to, and been justly appreciated by, navigators.

The climate of the Black sea and its neighbouring countries is subject to great extremes, but at an average is lower than would be supposed from its latitude. This would seem to be ascribable principally to its want of shelter on the N.; the winds from the polar regions reaching its coast, and blowing over its surface, unmitigated except by the temperature of the plain land over which they pass. Winds from the S. are less frequent than those from the N., and, having to climb the snowy heights of the Taurus, before they reach the coast, they arrive there materially chilled. Even on its S. shores, the N. wind sometimes prevents travelling even in the month of May. (Tournefort, ii., 37.) Its N. gulfs and bays are in certain seasons frozen hard enough to open a passage for troops; and it is recorded by Strabo (lib. vii.), that the soldiers of Mithridates engaged those of the Tauric Chersonesus (Crimea) in the winter, on a part of the Bosphorus where, in the preceding summer, a naval action had been fought. In 1665, the width of the strait was measured on the ice (Pallas, ii., 300; an equal degree of cold has been experienced in several winters within the present century; and, though such extreme inclemency be not very common, navigation is always suspended with every return of winter in the sea of Asoph, and most commonly along the whole N. shore of the Euxine. On the other hand, the summers are usually hot, the thermometer in the shade frequently standing at 90°, 100°, and even 120° Fahr. It often, however, varies in the same day from 29° to 97°, both in winter and summer, and in the former the barometer partakes of the irregularity, but is subject to fewer changes in the latter. Thunder-storms are rare, but tremendous when they do occur, being frequently accompanied by destructive hailstones and water-spouts. The climate is accounted healthy, except in the autumn, when bilious fevers are prevalent. The scourge of Mohammedan countries, the plague, is more or less common all round the coast, but this is a consequence of the filth of the inhabitants, and not of the climate. (Pallas, ii., 376-380; Mrs. Guthrie, p. 33, 35, &c.; Tournefort, ii., 16, &c.)

The Euxine teems with seals, porpoises, sturgeons, dolphins, mackerel, mullet, bream, and other fish, mostly of the same kind as those caught in the Caspian and sea of Aral (see CASPIAN SEA); there are, however, few fisheries established along its shores, though, where they do exist, they are extremely productive. (Pallas, ii., 51, 128, 239, 461-463; Olivier, *Voyage dans l'Empire Ottoman*, i., 135, &c.)

There are many conflicting opinions as to whether the Euxine be or be not of permanent magnitude. It was a commonly received opinion among the ancients that it was formerly separated from the Mediterranean, and that the Thracian Bosphorus was burst through by a convulsion of nature, or by the deluge of Deucalion; and Aristotle even believes that this event did not long precede the time of Homer. (Josephus, *Antiq.*, i., 3; *Diog. Sic.*, v., 3; *Aristotle de Met.*, xiv.; *Pliny*, vi., 1, &c.) Without supposing any great degree of physical knowledge on the part of the Greeks, it may be supposed that the inhabitants of the countries bordering on the Euxine would have a vivid recollection of such a catastrophe, had it occurred, and that, con-

## BLACKSTONE.

sequently, it would scarcely have been an invention or hypothesis of the writers. Add to this, that geological appearances strongly confirm the supposition; and the fact, though sneered at by some, will appear not a little probable. (*Pallas*, i. 80, 83; *Turner*, ii. 344-360; *Olivier*, i. 123; *Dureau de la Malle*, *Géog. Phys. de la Mer Noire*, p. 108-325.) It will be observed, that among the ancient only historians and naturalists have been cited, but it may be added that the same revolution is dwelt upon by their poets and fabulists. (See in particular *Lucan*, vi. 5.) It was, in a word, the universal belief of all ranks and orders. But if this sea were ever thus confined, its surface must have been considerably higher than at present; and this also appears to be the fact, from the accumulation of salt-lakes and marshes in the plain country on its N. border. It is evident, indeed, that a rise of a few hundred feet in its surface would be quite sufficient to flood the greater part of southern Russia, the whole of which, except the mountains of the Crimea, bear evident marks of having been laid bare at a comparatively recent period (*Pallas*, *passim*); and the whole appearance of its N. shores is that of a diminished bed. Polybius supposed the Euxine to be gradually decreasing; and he has offered reasons, in support of this opinion, formed on more solid premises than ancient writers often depend upon (iv. 5). In this, however, he appears to have been mistaken. The change in extent, if any ever did take place, seems to have occurred at once with the subsidence of the waters, by the opening of the Thracian Bosphorus. Since the age of Polybius no change seems to have taken place in the size of the sea; but that it has become clearer, is evident from two facts; first, that a bank, called by Polybius *Stathos* (*Στάθω*), formed at the mouths of the Danube, and more than 100 m. in length, has wholly disappeared; and that the Cyanean isles, at the mouth of the Bosphorus, so celebrated in the voyage of the Argonauts, are now reduced to low and insignificant prolongations of the two opposite shores. (*Ges. Journ.*, i. 105; *Jones*, ii. 444; *Olivier*, i. 122.) It is not, perhaps, likely that any further change should take place, except by some new convulsion. The surface is still a little, though probably but a little, higher than that of the Mediterranean, as is evident by the constant set of the current through the channel of Constantinople—a consequence of the narrowness of the latter, and of the rivers bringing down more water than is taken off by evaporation.

Notwithstanding the horror entertained by the Greeks, or, rather, the Greek poets, of this sea, its shores are famous in their true and fabulous history. Colchis, the Temple of the Sun, and scene of the Argonautic expedition, were on its E. coast; the Cimærian land of everlasting darkness was originally fixed upon its N. shore; and, in more historical times, the Lydian, Persian, and Byzantine powers, and the exploits of Mithridates, illustrated its S. and S.W. borders. At an early period, many Greek colonies were planted on its shores. Its commerce was also reckoned of first-rate importance. Athens drew from it her principal supplies of corn and naval stores; and it furnished the favourite slaves to the markets of Greece and Rome. Ovid died in exile somewhere on its borders, but whether on the Danube or Dniestr is disputed. From the time of Constantine till the 15th century, it formed the centre of the Roman world, and, during this period, a part, at least, of the Indian trade was carried on through it: the Venetians and Genoese were the conductors of this traffic. Soon after the fall of Constantinople in 1453, all but Turkish vessels were excluded from the Euxine; and it was not till after the treaty of Kainardji, in 1774, that the Russian eagle was displayed on its waters.

The name of this sea, *Euxine*, is only a modernized form of the original Greek word *αἰνός* (inhospitable), bestowed upon it for the imaginary reasons previously alluded to. It appears, however, that, subsequently, the Greeks imbibed a somewhat better opinion of it, and changed its designation to *Εὐξείνιος* (hospitable): it was sometimes also called simply *Πόντος* (the sea). The Turkish name is *Caca Deniz*, and the Russian, *Czorno More*, both being literally translated in the term *Black sea*.

**BLACKSTONE**, river, rises in Paxton and Holden townships, Worcester co., Mass., and flows S.E. into the state of R. I., where it assumes the name of Pawtucket r., until it enters Providence river. It affords extensive water-power. The Blackstone canal, which connects Worcester with Providence, passes along the valley of this river. This canal is 45 m. long, 34 feet wide at top and 18 at the bottom, and is 4 feet deep, and was completed in 1829 at a cost of about \$700,000.

**BLACKWALL**, a hamlet of England, co. Middlesex, par. Stepney, at the confluence of the Lee with the Thames, 5 m. E. St. Paul's, being in fact a suburb of London. Here are the E. and W. India Docks, &c., for an account of which see **LONDON**.

## BLANC (LE).

**BLACK WARRIOR**, river, Ala., is formed by the junction of Mulberry river and Locust Fork, which unite in the S.W. part of Jefferson co. It then flows S.W. by Tuscaloosa, and thence S. by W. to its junction with Tombigbee r., at the S. point of Greene co. Its whole length is about 160 miles. It is navigable, at certain seasons, for steamboats to Tuscaloosa, and for boats much farther.

**BLACKWELL'S ISLAND**, N. Y., situated in the East river, belongs to the city, and contains the city penitentiary, a fine stone building, and a lunatic asylum. It is a mile and three quarters long.

**BLADEN**, county, N. C., situated in the S. part of the state, and contains 1900 sq. m. Drained by Cape Fear river. It contained in 1840, 9789 neat cattle, 5855 sheep, 31,668 swine; and produced 1549 bushels of wheat, 180,705 of Indian corn, 4654 of oats, 55,141 of potatoes, 74,487 pounds of rice, 58,193 of cotton, 14,381 barrels of pitch, tar, and turpentine. It had eleven stores, eighty-three grist-mills, twenty-one saw-mills, eighteen distilleries, one academy, 11 students, 93 schools, 248 scholars. Pop.: whites, 4317; slaves, 3413; free-coloured, 292; total, 8022.

**BLADENBURG**, p. v., Prince George co., Md., 6 m. N.E. Washington city, 34 W. Annapolis. Situated on the S.E. side of the rail-road from Baltimore to Washington. It contains three churches, one Episcopal, one Methodist, and one Presbyterian; an academy, eight stores, one flouring-mill, one grist-mill, sixty dwellings, and 400 inhabitants. There is a mineral spring in the village. Commodore Barney, with a few marines, here made a brave resistance to the British, in their advance to the confederation of Washington in 1814, but was overpowered by greatly superior numbers.

**BLAIN**, a town of France, dep. Loire Inférieure, cap. cant. near the right bank of the Isac, 22 m. N.N.W. Nantes. Pop. 4553. Its castle, of which only a small part now remains, was formerly one of the strongest in Bretagne. It was partly demolished in 1629. Calvinism was early introduced into this town, a synod having been held here in 1565, at which there were reckoned above 1200 Protestants. (*Hugo*, art. *Loire Inférieure*.)

**BLAIRSVILLE**, p. v., Black Lick t., Indiana co., Pa., 171 m. W. by N. Harrisburg, 199 W. Incorporated in 1825. Situated at the junction of Black Lick creek with the Conewangh river. The Pennsylvania canal passes through it. A bridge here crosses the Conewangh r. It contains five churches, one Presbyterian, one Methodist, one German Lutheran, and one Roman Catholic; fourteen stores, one fulling-mill, one woollen-factory, one flouring-mill, three grist-mills, three tanneries, one printing-office, one weekly newspaper, 1 school, 255 scholars, and 150 dwellings. Pop. 990.

**BLAIRSVILLE**, p. v., capital of Union co., Ga., 118 m. N.N.W. Milledgeville, 617 W.

**BLAKELY**, p. t., Luzerne co., Pa., 150 m. N.E. Harrisburg, 254 W. Drained by Lackawannock river and its tributaries, which afford water-power. Anthracite coal is abundant. It contains two stores, two flouring-mills, eight saw-mills, four schools, 160 scholars. Pop. 570.

**BLAKELY**, p. v., capital of Early co., Ga., 203 m. S.W. Milledgeville, 850 W. It contains a court-house, jail, an academy, and eight or ten dwellings.

**BLAKELY**, p. v., port of entry, and capital of Baldwin co., Ala. Situated on the E. side of Tenaw river, one of the outlets of Mobile river, opposite to Mobile. The harbour admits vessels requiring 11 feet of water. The situation is healthy and pleasant, and the village is well supplied with good water. A greater depth of water, and a more ready access to the ocean, it was supposed, would render it a formidable rival of Mobile, but the expectations of its founders in this respect, have not been fully answered. It contains a court-house, ten stores, and many neat dwellings.

**BLAMONT**, a town of France, dep. de la Meurthe, cap. cant. on the Vezouze, Pop. 2638. It was burned down in 1527 and 1636. It produces yarn for hosiery, and has considerable tanneries.

**BLANCHARD**, p. t., Piscataquis co., Me., 73 m. N. by E. Augusta, 668 W. It contains 2 schools, 80 scholars. Pop. 570.

**BLANCHARD**, p. t., Hancock co., O., 80 m. N. by W. Columbus, 451 W. It contains 4 schools, 215 scholars. Pop. 639. The post-office is called Blanchard's bridge, and the village contains 71 inhabitants.

**BLANCHARD**, t., Putnam co., O. Pop. 688.

**BLANC (LE)**, a town of France, dep. Indre, cap. arrond., on the Creuse, in a pleasant situation, 33 m. W.S.W. Chateauroux. Pop. (town ex cant.) 3847. It is divided by the river into two parts, called the high and low towns; both are ill-built, particularly the former, the streets of which, besides being narrow and crooked, are also precipitous. It is the seat of a tribunal of original jurisdiction. There now remain but few traces of its ancient fortifica-

## BLANCO (CAPE).

does, which, however, were once strong enough to resist several sieges. This is a very ancient place, and was often frequented by the Roman legions. The road from La Blanc to St. Savin is still called the *Route de César*. (Hugo, *op. cit.*; *Dict. Géographique*.)

**BLANCO (CAPE)**, a celebrated cape on the W. coast of Africa; lat.  $26^{\circ} 46' 28''$  N., long.  $17^{\circ} 4' 19''$  W. This cape, which was discovered by the Portuguese in 1441, forms the extremity of a rocky ridge, called the Geb-el-reid, or White mountain, projecting into the sea in a S. direction. Inside the cape is a spacious bay, which has on its S.E. side the bank and town of Argila.

**BLANDFORD FORUM**, a par., bor., and town of England, co. Dorset, hund. Coomb's Ditch, Blandford (or N.) div., 98 m. S.W. London. Pop., 1831, 2643; 1851, 3109; houses 528. This neat little town is situated on a bend of the Stour, amid one of the finest tracts of sheep pasture in the kingdom; a six-arched bridge crosses the stream, and there are two others to facilitate the communications of the town during occasional floods. The houses are uniform brick structures, arranged in regularly-formed, and well-paved and lighted streets. The church is a modern building in the Grecian style, with a tower and spire. There are also an Independent chapel, a free grammar school, and a blue-coat school, each with small endowments; almshouses, supporting ten old people; a charity producing £120 a year, for apprenticing poor boys; and another, now producing £300 a year, originally left for the purpose of educating four poor children. There is a handsome town-hall, and a neat theatre; and on a fine down, near the town, annual races are held in Aug. The weekly market is held on Saturday, and 3 annual fairs on March 7, July 10, Nov. 8: they are for horses, cattle, and cheese. A manufacture of shirt buttons employs many women and children of the town and neighbourhood, but it is much less extensive than formerly; lace of a very fine description (some of it selling for £30 a yard) used also to be made; but the chief business of the place originates in its market and fairs, and in its being the resort of the neighbouring gentry and others at the races, &c., which makes it a thriving and increasing town. It was incorporated by charter of Ed. of James I., which also granted the manor. Under the Municipal Reform Act there are four aldermen and twelve councillors, and the limits of the borough are restricted to the town, where 99 of every 100 of the pop. of the parish reside. The revenue of the corporation is derived from tolls of the market and fairs, lands, and quit-rents, and averages about £125 a year; they hold a court twice annually. A court of record was granted by the first charter, which has long been disused. Petty sessions for the Blandford div. are held in the town by the co. magistrates; and monthly courts of the bishop and archdeacons of the diocese. It is also a polling town for the county, and the central town of a union of 33 parishes, under the Poor Law Act; it has three guardians; its rates amount to £777. Archbishop Wake was a native of the town; and it gives the title of marquiss to the Marlborough family.

**BLANDFORD**, p. t., Hampden co., Mass., 110 m. W. by S. Boston, 370 W. Bounded N.E. by Westfield river, and drained by its branches, which afford water-power. It contains three churches, one Congregational, one Methodist, and one Episcopal; two stores; one fulling-mill, one woollen-factory, one grist-mill, four saw-mills, one paper-mill, two tanneries, 7 schools, 236 scholars. Pop. 1427.

**BLANKENBURG**, a town of the duchy of Brunswick, cap. distr., and formerly of the principality of Blankenburg, on a rivulet of the same name, 37 m. S.E. Brunswick. Pop. 3300. It is surrounded by walls, has some good buildings, including a gymnasium, a school of industry, &c. On a hill immediately adjoining the town is a large, heavy-looking palace of the duke of Brunswick; it had a good collection of pictures, but the best of them have been removed. On the summit of the Regenstedt, also at a short distance from the town, are the remains of a large castle, constructed by Henry the Fowler, in 919, consisting of chambers cut out of the rock. (Murray's *Handbook*, &c.)

**BLANTYRE**, a parish of Scotland, co. Lanark, in which manufactures have made great progress. The Blantyre mills, in the village of Blantyre, on the Clyde, 3 m. W. Hamilton, and 8 m. S.E. Glasgow were erected in 1785 for the spinning of water twist. In 1791, another mill was built for mule twist: both are moved by water-power. The total number of workmen in 1835 was 458; and the aggregate of spindles, 30,000. In 1813, a cotton weaving factory was established, which employs nearly 500 hands, the moving power being partly water and partly steam. There are in the par. 128 hand-loom weavers. The dyeing of Adrianople or Turkey red on cotton yarn has been carried on here for forty-five years. The total number of hands employed in these various works, exclusive of the hand-loom weavers, is about 1000, of whom considerably more than a half are females. There is a school connected

## BLENHIM PARK.

with the mills; average attendance in the day school, in 1835, 126; in the evening school, 56. There is also a library for the use of the workmen, a funeral society, and a society for religious purposes, all established by the workmen. (New *Statistical Account of Scotland*, No. vii. § Blantyre.)

**BLAYE**, a seaport and fortified town of France, dep. Gironde, cap. arrond., on the right bank of the Gironde, 34 m. N.N.W. Bordeaux; lat.  $45^{\circ} 7' 7''$  N., long.  $6^{\circ} 46' 40''$  W. Pop. 2865. It is divided into the high and low towns; the former, however, is merely the castle or citadel, built on a rock commanding the Gironde. The river is here about  $\frac{1}{2}$  m. wide; and for its defence Fort Pâti has been constructed on an island in its channel, about 1000 yards from Blaye, and Fort Medoc on the opposite side of the river. All vessels inward bound are required to anchor in the port or road of Blaye, and deliver a manifest of their cargo, and many of the outward-bound ships call here to take on board provisions, and complete their cargoes. The town has also a considerable direct trade, exporting wine, brandy, corn, oil, soap, timber, apples, &c. Many of the pilots, so indispensable to ships navigating the Gironde, reside in Blaye. It has tribunals of original jurisdiction and of commerce, an agricultural society, a theatre, &c. In the centre of the town is a fine public fountain. Blaye is very ancient. In 1568 it was taken by the Protestants, and more recently by the League. The extensive marshes by which it was formerly surrounded having been drained by Henry IV., have become very fruitful of corn and other products. In 1833 the Duchess of Berry, when confined in the castle of Blaye, was brought to bed of a daughter. (Hugo, *op. cit.*; *Dict. Géographique*, &c.)

**BLEDSOE**, county, Tenn. Situated towards the S.E. part of the state, and contains 590 sq. m. Drained by Sequatchie river and its branches. It contained in 1846, 7798 neat cattle, 3609 sheep, 27,709 swine; and produced 22,833 bushels of wheat, 2357 of rye, 341,014 of Indian corn, 64,739 of oats, 7622 of potatoes, 7341 pounds of tobacco, and 8098 of cotton. It had fourteen stores, fifteen grist-mills, ten saw-mills, six tanneries, fourteen distilleries, one academy, 30 students, 8 schools, 215 scholars. Pop.: whites, 5010; slaves, 538; free coloured, 129: total, 5676. Capital, Pikeville.

**BLEECKER**, p. t., Fulton co., N. Y., 10 m. N. Johnstown, 53 m. N.W. Albany. Drained by West Storey and Caroga creeks. It contains six saw-mills, 4 schools, 73 scholars. Pop. 346.

**BLENDON**, p. t., Franklin co., O., 11 m. N. Columbus, 404 W. Incorporated in 1815 by the name of Harrison. Drained by Alum and Big Walnut creeks, which afford water-power. It contains one academy, 50 students, 2 schools, 188 scholars. Pop. 972.

**BLEICHERODE**, a town of the Prussian states, prov. Saxony, reg. Erfurt, between the Bode and the Wipper, 10 m. S.W. Nordhausen. Pop. 3000. It has some oil-mills and fabrics of serges and other descriptions of woollen cloth.

**BLENHIM** or **BLINDHEIM**, a small village of Bavaria, circ. Upper Danube, on the Danube, near Höchstädt. This village is famous in modern history as being the scene of the great battle fought Aug. 13, 1704, between the English and Imperialists, under the Duke of Marlborough and Prince Eugene, and the French and Bavarians, under Marshals Tallard and Marin and the Elector of Bavaria. Each army consisted of nearly 80,000 men. The English and their allies gained a complete and decisive victory. Their enemies left above 10,000 men killed and wounded on the field; a vast number more were drowned in the Danube, and above 13,000 were made prisoners; among the latter were Marshal Tallard (whose son was killed) and many other officers of distinction. All the artillery, baggage, &c., of the French and Bavarians fell into the hands of the conquerors. The loss of the latter, though severe, was not greater than might have been expected, having amounted to about 5000 killed and 8000 wounded.

**BLENHIM PARK**, an extra-parochial district of England, co. and liberty of Oxford, 60 m. W.W. London. Area 5700 acres, being the demesne attached to Blenheim House, an edifice erected in the reign of Anne, as a token of the national gratitude for the public services rendered by the first Duke of Marlborough: (for which purpose £500,000 was voted by parliament, and the queen added the honour of Woodstock (an ancient property of the crown) to the grant. It was called Blenheim from the great battle fought above. The usual entrance to this splendid domain is from the Woodstock side, under a triumphal archway of the Corinthian order erected by the first duchess. Fronting the palace is a fine sheet of water, partaking of the character both of a lake and river, and winding away through a deep vale; this is spanned by a magnificent bridge, and on an eminence beyond the bridge, in the midst

## BLENNHEIM.

of a fine lawn, is a fluted Corinthian pillar, 120 ft. high, surmounted by a statue of the duke in a Roman dress; on one side the pedestal is an inscription (written by Lord Bellingbrooke) reciting his public services; on the other, the acts of parliament declaratory of his services, and abstracts of the entail of his estates and honours. The mansion occupies three sides of a parallelogram, the principal front being N., and the E. and W. sides forming wings for the domestic offices, stables, &c.; a terrace with several flights of steps gives due effect to the elevations. The north, or principal front extends 248 ft. from wing to wing; it has five compartments, and is highly enriched, especially the central one, which has a Corinthian portico and fine pediment at the height of two floors, over which is an attic story. The south or garden front is of a plainer character; but its compartments correspond with the other, and a flight of steps leads to a portico, over the entablature of which is a colossal bust of Louis XIV., taken from the gateway of Tournay. The interior is magnificently finished and contains a fine collection of sculptures, paintings, and tapestry. A well-known satirical couplet, raised a prejudice against this noble pile which prevented for a lengthened period, a fair estimate being formed of its merits. The details have been severely criticised, and some of them may be open to censure. But whatever may be the defects of particular parts, they are lost in the *total ensemble*. The general effect of the building is excellent; by general consent, to be a noble proof of the genius of its architect, Sir J. Vanburgh, as well as an "illustrious monument of Marlborough's glory, and of Britain's gratitude." (*Brewer's Oxfordiana*, Genl. Mag., vol. LXXX.; *Noble's Views of Seats*, vol. iii.)

**BLENNHEIM**, p. L, Schoharie co., N. Y., 66 m. W.S.W. Albany, 382 W. Bounded E. by Schoharie creek, and watered by its branches. It contains four stores, two fulling-mills, one woolen-factory, two grist-mills, eighteen saw-mills, three tanneries, one academy, 25 students, nineteen schools, 738 scholars. Pop. 3725.

**BLERÉ**, a town of France, dep. Indre et Loire, cap. cant., on the Cher, 17 m. E.S.E. Tours. Pop. 3073. The castle of Chenonceaux, once the property and residence of the celebrated Diana of Poitiers, is situated in the immediate vicinity of Bléré. Diana, having been dispossessed of the castle by her rival, Catherine de Medici, the latter surrounded it with a superb park. After many vicissitudes, it was acquired, in 1733, by M. Dupin, a gentleman distinguished by his wealth and learning, but more by the wit and beauty of his wife. Under its new masters Chenonceaux became the resort of some of the most illustrious personages of the 18th century, including, among others, Voltaire, Montesquieu, Buffon, Fontenelle, Bellingbrooke, &c. Rousseau wrote several pieces for the theatre of Chenonceaux, and it was here that the *Devin de Village* first appeared. Happily, Chenonceaux escaped the revolutionary phrensy; and continues to be one of the most interesting objects in this part of France. (*Hugo, France Pittoresque*, II, 101.)

**BLETHINGLY**, a par. and town of England, co. Surrey, hund. Tarridge, 16 m. S. of London. Pop. 1391, 1187; 1831, 1203; houses, 308; area, 5250 acres. The town is situated near the end of the chalk range that traverses the co., and commands extensive views. The church is a fine specimen of the earlier Gothic style: there is an endowed school for 30 boys, eleven almshouses, and several small charitable donations. There are two annual fairs, held June 23 and November 2; the latter is for horses, pigs, and lean cattle: its ancient weekly market has been long discontinued. The inhabitants are chiefly engaged in agriculture: the upper part of the parish (in which the town is situated) is a sandy and chalky soil, the lower part clay. Blethingly returned two mem. to the H. of C. from the 33d of Edward I. till the passing of the Reform Act, by which it was disfranchised: the right of election was in the holders of burge- gess tenures, amounting to 130. A castle, built soon after the Conquest, formerly stood on the brow of a hill at the W. end of the town. There are some vestiges in this parish of the residence of Earl Godwin, who retreated hither when his Kentish estates were inundated: the Croydon railway passes through it, on the N. side.

**BLISSFIELD**, p. L, Lewanoe co., Mich., 71 m. S.W. Detroit, 439 W. Watered by Raisin river, and contains four schools, 141 scholars. Pop. 778. The village is on the N. side of Raisin river, and contains four stores, one flouring-mill, two saw-mills, and about sixty-five dwellings. The Erie and Kalamazoo rail-road passes through the place.

**BLOCK ISLAND**, lies in the Atlantic, S. of the state of R. L. and constitutes the township of New Shoreham, Newport co., R. I. It lies 15 m. S.S.W. of Point Judith, and 12 m. S. of the nearest point of the continent. It is 8 m. long, and from 2 to 4 broad. A chain of ponds extends

## BLOOMFIELD.

from the N. end to the centre, which, with some others, cover one seventh part of the island. The surface is elevated and uneven, being diversified with abrupt hills and narrow dales. The soil is sandy and gravelly loam, and produces Indian corn, barley, and potatoes, but is no longer celebrated for its fine cattle, sheep, and dairies. The shore, being unprotected by rocks, is continually encroached on by the ocean. There are no forests, and the only fuel is peat. It has no harbour; but many of its inhabitants are engaged in the cod and mackerel fisheries. See New Shoreham.

**BLOOMFIELD**, p. L, Philadelphia co., Pa., bounded N.E. and E. by Schuylkill river. Watered by Cobbs's and Mill creeks. It has elegant country seats on Schuylkill river, and contains the county almshouse, two foreign commission stores, sixteen retail stores, three fulling-mills, four woolen-factories, three cotton-factories with 738 spindles; three dyeing and printing works, one ropewalk, one flouring-mill, two grist-mills, three saw-mills, one academy, 14 students, six schools, 370 scholars. Pop. 3318. It includes the borough of West Philadelphia.

**BLOIS**, a town of France, dep. Loir et Cher, on the left bank of a hill on the right bank of the Loire, 35 m. S.S.W. Orleans. Lat. 47° 35' 39" N., long. 10° 50' 18" E. Pop. (c. 1841), 11,498. This is neither a large, a well-built, nor a handsome town; on the contrary, many of its houses are mean, and its streets narrow, crooked, and sometimes not accessible to carriages; but it is remarkable from the beauty of its situation, its antiquity, its monuments, and the historical events of which it has been the theatre. At one extremity of the town is the castle, and at the other the cathedral. The former is an immense pile, built at different epochs, and in different styles of architecture. Louis XII. was born in this castle; and in it also Margaret of Anjou was married to the Duc d'Alençon, and Margaret of Valois to Henry IV. But it derives its principal interest from events of a very different character. Here, in December, 1588, the Duc de Guise and his brother the Cardinal, were basely murdered by the order, and almost in the presence, of Henry III. This, also, was the scene of the imprisonment of Mary and of the death of Catherine de Medici. The last rays of glory fell on this castle in 1814, when Marie Louise held her court in it after the capitulation of Paris. It is now occupied as a barrack. The cathedral is a handsome edifice; but the finest building in the town is the hotel of the prefecture, formerly the Episcopal palace. The view from its gardens is extensive and fine. In the church of St. Vincent are fine monuments to Gaston, Duc d'Orléans, and a daughter of that prince. A suburb on the opposite side of the river is connected with the town by a handsome bridge of eleven arches, begun in 1717. The most ancient monument in the town is a superb aqueduct, ascribed to the Romans, cut in the solid rock. It is in excellent preservation; and conveys the waters of several springs, a distance of about half a mile, to a reservoir close to the town, whence they are distributed among public fountains dispersed in different parts of the city. Blois is the seat of a bishopric, a court of original jurisdiction, a departmental college, a diocesan seminary, and a secondary ecclesiastical school; a botanical garden, founded by Henry IV.; a public library, with 19,000 volumes; a royal society of agriculture; a departmental nursery, &c. It has, also, a port well frequented by the craft navigating the Loire, a theatre, an abbatoire, and a *dépot d'aliénés*. It produces serges, hosiery, and gloves, cutlery and hardware, leather, &c., and has a considerable trade in wines, spirits, vinegar, fire-wood, and staves, liquozes, and other articles. Bernier, the celebrated eastern traveller, was a native of Blois. (*Hugo, art. Loir et Cher; Ingold's Switzerland*, &c., p. 387, &c.)

**BLOOM**, p. L, Seneca co., O., 86 m. N. Columbus, 430 W. Watered by Honey creek, a branch of Sandusky river. It contains one store, two grist-mills, six saw-mills, eight schools, 127 scholars. Pop. 1168.

**BLOOM**, L, Columbia county, Pa., 10 m. N.E. Danville, bounded S. by Susquehanna river. It contains ten stores, one fulling-mill, one woolen-factory, one flouring-mill, two grist-mills, one pottery, two tanneries, one distillery, two printing-offices, two weekly newspapers, one academy, 30 students, six schools, 280 scholars. Pop. 1174.

**BLOOM**, L, Morgan co., O., watered by Muskingum river. It contains two stores, three saw-mills, seven schools, 250 scholars. Pop. 1338. It contains the village of McConnellsville, the capital of the co., which see.

**BLOOM**, L, Fairfield co., O. Pop. 2301.

**BLOOM**, L, Scioto co., O. It has five schools, 96 scholars. Pop. 913.

**BLOOMFIELD**, p. L, Somerset co., Me., 35 m. N. Augusta, 630 W. Bounded N. and E. by Kennebec river. Incorporated in 1814, and contains one store, two grist-mills, three saw-mills, one academy, 50 students, eight schools, 442 scholars. Pop. 1093.

**BLOOMFIELD**, p. L, Essex co., Vt., 90 m. N.E. Montpelier,

## BLOOMING GROVE.

**227 W.** Bounded E. by Connecticut river. Watered by the Nahegan river and its branches. Chartered in 1763, by the name of Minehead, first settled in 1800. It contains one saw-mill, two schools, 63 scholars. Pop. 179.

**BLOOMFIELD, p. t., Hartford co., Ct., 7 m. N.W. Hartford, 343 W.** Incorporated in 1835: formerly the parish of Wintombury, which name was formed by a combination from the names of Windsor, Farmington, and Shimsbury, from which it was taken. Drained by Wood river, a branch of Mill river. It contains three churches, one Congregational, one Baptist, and one Methodist, two stores, one woolen-factory, one grist-mill, one saw-mill, five schools, 123 scholars. Pop. 568.

**BLOOMFIELD, p. t., Essex co., N. J., 6 m. N. Newark, 54 m. N.E. Trenton, 934 W.** It contains one store, one fulling-mill, one saw-mill, three paper-mills, one dyeing and printing works, which employ 50 persons; one distillery, two academies, 60 students, eight schools, 955 scholars. Pop. 2528. It contains the villages of West Bloomfield and Belleville, which see.

**BLOOMFIELD, p. t., Juniata town, capital of Perry co., Pa., 24 m. W. by N. Harrisburg, 136 W.** Situated on the N. side of Little Juniata creek, and contains a court-house and county offices of brick, a jail of stone, two churches, one Presbyterian and one Methodist; five stores, one printing-office, one weekly newspaper, one academy, 90 students, one school, 116 scholars, sixty dwellings, and 419 inhabitants. Incorporated in 1831.

**BLOOMFIELD, t., Lagrange t., Ia.** It has three saw-mills, two schools, 37 scholars. Pop. 307.

**BLOOMFIELD, p. v., capital of Greene co., Ia., 74 m. S.W. Indianapolis, 641 W.** Situated on the E. side of the west fork of White river. It contains a court-house, a seminary, two churches, one Methodist and one Presbyterian; six stores, and about 700 inhabitants.

**BLOOMFIELD, p. v., capital of Stoddard co., Mo., 333 m. S.E. Jefferson City, 987 W.**

**BLOOMFIELD, t., Oakland co., Mich.** Drained by the N. branch of Rouge river. It contains three stores, one fulling-mill, three flouring-mills, three grist-mills, one saw-mill, two distilleries, eight schools, 500 scholars. Pop. 1508.

**BLOOMFIELD, t., Richland co., O., 15 m. S.E. Mansfield, 60 m. N.E. Columbus.** Pop. 1394.

**BLOOMFIELD, t., Jackson co., O., drained by a branch of Racoon creek. It contains two saw-mills, one school, 15 scholars. Pop. 731.**

**BLOOMING GROVE, p. t., Orange co., N. Y., 19 m. S.W. Newburgh, 94 m. S. by W. Albany, 985 W.** Drained by Murderer's creek. The village contains one Methodist church, two stores, one grist-mill, one saw-mill, twenty-five dwellings, and about 150 inhabitants. The township has ten schools, 484 scholars. Pop. 3296.

**BLOOMINGTON, p. v., capital of Monroe co., Ia., 49 m. S.W. Indianapolis, 616 W.** It contains a court-house, jail, five churches, one Presbyterian, one Associate reformed, one New-school Covenanters, one Methodist, and one Christian; a county female academy, 330 dwellings, and 1550 inhabitants. The Indiana University, located here, has convenient buildings, and was founded in 1827. It has a president and four professors or other instructors, 59 alumni, 59 students, and 1750 vols. in its libraries. The commencement is on the last Wednesday in September.

**BLOOMINGTON, p. v., capital of Muscatine co., Iowa, 320 m. above St. Louis, 910 W.** It is situated on the W. bank of Mississippi river, and contains a brick court-house which cost \$13,000, a jail, two churches, one Methodist and one Presbyterian; five forwarding and commission houses, ten stores, and about 600 inhabitants.

**BLOOMINGTON, p. v., capital of Macon co., Mo., 166 m. N. Jefferson City, 989 W.** Situated 6 m. E. of Charleston river.

**BLOSSBURG, p. v., Tioga co., Pa., 133 m. N.N.W. Harrisburg, 943 W.** Bituminous coal is mined in the vicinity, and a rail-road connects it to Corning, N. Y., whence there is lake and canal navigation to Albany.

**BLOUNT, county, Ala.** Situated towards the N. part of the state, and contains 1650 square m. Drained by head branches of Black Warrior river. It contained, in 1840, 8045 near cattle, 2040 sheep, 18,316 swine; and produced 15,014 bushels wheat, 249,691 of Indian corn, 20,213 of oats, 6294 of potatoes, 5633 pounds of tobacco, 109,949 of cotton. It had eleven stores, eight grist-mills, six saw-mills, five tanneries, eight distilleries, eight schools, 154 scholars. Pop.: whites, 5225; slaves, 244; free coloured, 1: total, 5570. Capital, Blountsville.

**BLOUNT, county, Tenn.** Situated in the E. part of the state, and contains 900 sq. m. Bounded N.W. by Tennessee river, and S.W. by N. C. It contained, in 1840, 11,053 neat cattle, 11,068 sheep, 32,439 swine; and produced 95,229 bushels of wheat, 540,397 of Indian corn, 131,465 of oats, 12,592 of potatoes, 10,059 pounds of tobacco, 27,239 of cotton. It had nine stores, two forges, one cotton-factory, with 204 spindles: fourteen flouring-mills, fourteen grist-mills,

## BOCKING.

eighteen saw-mills, thirteen tanneries, thirteen distilleries, one college, 40 students, one academy, 25 students, twelve schools, 262 scholars. Pop.: whites, 10,684; slaves, 945; free coloured, 136: total, 11,745.

**BLOUNTSTOWN, p. v., capital of Blount co., Ala., 104 m. N.E. Tuscaloosa, 734 W.** Situated on the W. side of Locust Fork of Black Warrior river. It contains a Methodist church, an academy, two stores, twenty-five dwellings, and about 400 inhabitants.

**BLOUNTSTOWN, p. v., capital of Sullivan co., Tenn., 229 m. E. by N. Nashville, 394 W.**

**BLUE HILL, p. t., Hancock co., Me., 75 m. E. Augusta, 19 m. E. by N. Castine, 671 W.** Bounded S.E. by Blue Hill bay. It contains ten stores, one fulling-mill, three grist-mills, five saw-mills, three tanneries, one academy, 73 students, seventeen schools, 731 scholars. Pop. 1891.

**BLUE RIDGE, or SOUTH MOUNTAINS,** the eastern branch of the Alleghany mountains. It separates from the main range in North Carolina, crosses Va. and Pa. and terminates in the Highlands on the Hudson river. The peaks of Otter, in Bedford co., Va., have a summit elevated about 4000 feet above its base, 30 m. W. by N. Lynchburg.

**BLUE RIVER, t., Hancock county, Ia.** It contains one store, one grist-mill, one saw-mill, one school, 20 scholars. Pop. 731.

**BLUE RIVER, t., Harrison co., Ia.** It contains one flouring-mill, one grist-mill, one saw-mill. Pop. 1429.

**BLUE ROCK, p. t., Muskingum co., O., 63 m. E. Columbus, 346 W.** Watered by Muskingum river. It contains one steam saw-mill, ten or twelve salt-factories, seven schools, 280 scholars. Pop. 1063.

**BLUE SULPHUR SPRINGS, p. o., Green Brier co., Va., 297 m. N. by N. Richmond, 964 W.** A celebrated watering place, 22 m. W. of the White Sulphur springs, which are still more frequented. It contains accommodations for 400 visitors, one store, one Presbyterian church, and but three families of permanent residents.

**BLYTTE (S.), or BLYTH NOOK,** a sea-port town of England, co. Northumberland, on the Blyth, 13 m. N.E. by N. Newcastle-on-Tyne, and 8 m. S.E. by E. Morpeth. Pop. in 1801, 1283; in 1831, 1944. It is situated on the E. side of the river, where it discharges itself into the German ocean, and consisted till lately of a few narrow ill-laid-out streets; but modern improvements are giving it a new aspect. Its church is a chapel of ease to the parish church of Earsdon; Methodists, Presbyterians, and other dissenters have places of worship. The coal trade is carried on to a considerable extent, and iron from the Bedlington works is largely exported. The harbour is excellent for ships of small burden, affording free entrance and safe anchorage in all seasons; and the coast for some miles is peculiarly adapted for bathing. There is here a dry dock, a custom-house dependent on that of Newcastle, a light-house, and a beaconlight.

**BOARDMAN, p. t., Trumbull co., O., 170 m. N.E. Columbus, 287 W.** It contains six schools, 330 scholars. Pop. 629.

**BOA VISTA,** the most easterly of the Cape de Verde islands, which see.

**BOBBIO,** a town of the Sardian states, div. Genoa, cap. prov. same name, on the Trebbia, 34 m. N.E. Genoa. Pop. 4000. It is surrounded by walls, and is the seat of a bishopric, and of a tribunal of original jurisdiction. It was ceded to Sardinia, in 1743, by Austria.

**BOBROV,** a town of Russia in Europe, gov. Voronez, on the Bitogov, 52 m. S.E. Voronez; lat. 50° 5' N., long. 40° 10' E. Pop. 5000. It has two churches, and includes a large space laid out in gardens. It derives its name from the number of beavers (*bobry*) formerly found in its vicinity.

**BOBRUISK, or BOBRISK,** a town of Russia in Europe, gov. Minak, on the Bobruia, where it falls into the Berezina, cap. district, 90 m. S.E. Minak. It was fortified in 1810 and 1812, and was ineffectually attacked by the French during the last of those years. It has four churches and a gymnasium.

**BOCHNIA,** a town of Galicia, cap. circ., near the Raba, 25 m. S.E. Cracow. Pop. 4800. It has a gymnasium, and a board for the administration of mines and salt-works. For an account of the latter, which are very extensive, see WIRLICKA.

**BOCHOLD, or BOCKHOLT,** a town of the Prussian States, prov. Westphalia, reg. Munster, on the Ahr, 15 m. E.N.E. Cleves. Pop. 4000. There are rich iron mines in its vicinity; and it has some trade in corn, spirits, &c., with manufactures of cotton and silk.

**BOCHUM,** a town of the Prussian States, prov. Westphalia, reg. Arnsberg, cap. circ., 25 m. N.E. Dusseldorf. Pop. 4900. It has three churches and a college; and manufactures coffee-mills and jewellery.

**BOCKING, a par. and village of England, county Essex, hund. Hincford: area of par., 3900 acres. Pop. 3198.** The village, almost contiguous to Braintree, and 38 m. E. by N.

## BODMIN.

London, consists principally of a single street, extending along the high road from London to the E. counties. There are several corn and fulling-mills on the river Brain, and the increase (349) in the pop. during the ten years previous to 1831, is ascribed to the increased manufacture of silk and crapes. It has a free school, endowed by Dr. Gauden, bishop of Worcester, for the education of 30 boys; an almshouse, founded in the reign of Henry VI.; and some other charities. (See BRAINTREE.)

**BODMIN**, a bor. and town of England, co. Cornwall, land. Trigg, 25 m. W. by N. Plymouth. It is nearly in the centre of the county, is built on a gradual acclivity, between two hills, and consists chiefly of one main street nearly a mile in length; the houses are an intermixture of low irregular ancient structures, and neatly-built modern ones. The church (rebuilt about A.D. 1479) is a spacious structure in the late Gothic style, situated in the vale at the E. end, whence the town gradually ascends. The Calvinists, Wesleyans, and Baptists, have each chapels. There is an endowed grammar school, founded by Elizabeth, and a national girls' school. The town-hall was originally the refectory of St. Austin's Priory; each of its ends are fitted as courts of justice, and the intermediate area used as a corn-market; over the whole are grand-jury and public-assembly rooms. N. of the town is the county jail, including a sheriff's ward and a bridewell; at the W. end is the county lunatic asylum, built in 1830. It is well supplied with water, and partially paved and flagged, but not lighted. Pop. in 1831, 3902; in 1831, 3375: houses at the latter period, 566. These numbers refer, however, to the old boundaries of the borough, which included but a minor portion of the parish; whereas its present par. boundaries comprise the entire parish, and also the adjoining parishes of Helland, Lanivet, and Lankidock, comprising in all an area of 16,300 acres, and a pop., in 1831, of 5238. It has returned two mem. to the H. of C. since the 23d of Edward I.; the right of election having been vested, previously to the Reform Act, in the corporation. In 1835 it had 339 registered electors. The market is held on Saturday; and it has several fairs. The chief manufacture is shoes, of which a considerable number are made, and sold at the different markets and fairs of the county. A rail-road, commencing at Wade bridge (at the head of Padstow harbour), about 6 m. in a N.W. direction, terminates at the back of the town, by which coals and other articles are brought to it, as well as lime and sea sand, to the agricultural district through which it passes. It is governed by a mayor, three aldermen, and twelve councillors. It is a stannary town, and had, at an early period, the privilege of stamping tin. The summer sessions, three of the general quarter sessions, and the election courts for the E. division of Cornwall, are held here.

**BOEOTIA**, a famous region of ancient, and now of indep. Greece, prov. E. Hellas, and forming the N. part of the monarchy of Attica and Boeotia, between lat. 38° 9' and 39° 44' N., long. 32° 53' and 33° 49' E.; shape triangular; having N.W. Phocis; N. the Opuntian Locris; N.E. the channels of Talande and Egrippo; and S. Attica and the Corinthian gulf; length E. to W. about 43 m.; greatest breadth 27 m.

Its mountains, the most celebrated of which is Zagora (or *Helicon*), mostly surround or divide it into two principal basins—those of the Cephissus and Thebes. Its chief rivers are the Gavrios (*Cephissus*) and the Asopo (*Asopus*). It contains three lakes; those of Topollas (*Copais*), Sarzina (*Hylica*), and Paralimni; the first the largest in Greece. It is a high but well-watered region; and as many of the streams find their way, and the lakes a vent to the sea, only by means of subterraneous courses, marshes abound; and the atmosphere is damp, foggy, oppressive, and unhealthy in some places, as at Livadia, where intermittent fevers are prevalent. The fertility of Boeotia is, however, such, that it has always an abundant crop, though elsewhere famine should prevail. The land is well cultivated, especially with wheat, rice, madder, cotton, maize, hemp, and tobacco. Helicon is clothed in its lower parts with evergreens; above these there is a forest of pines, and its top is often capped with snow; kermes oak grows abundantly, and 6000 oaks (350,000 lbs.) of gall-nuts are collected yearly. The lake Topollas still produces the reeds anciently so celebrated for rustic flutes, and Boeotian pipers are still in high repute. Most of the cottages in the neighbourhood are built of these reeds. Flocks of bustards inhabit the banks of Topollas; and its large oels, dried and salted, form a considerable article of trade. Many spots in Boeotia present striking scenery. It forms two eparchies, those of Thebes (*Thies*) and Livadia, which are its two principal towns.

**BOGENDORF**, a village of Prussia, prov. Silesia, reg. Liegnitz 18 m. W.S.W. Sagan. Pop. 1400. It has in its vicinity mines of the precious metals, and of copper and lead.

**BOGLIPOOR**. See BHADOLPORE.

**BOGNOR**, a marit. town and chapelry of England, co.

## BOGOTA.

Santer, rape Chichester, hand. Aldwick, par. S. Bersted, 58 m. S.W. by S. London. Pop. (of the whole par.), in 1831, 1851; 1831, 2190. It is situated on the coast between Selsey Bill and Worthing, amid rocks that extend in a curving direction 2 or 3 m. into the sea, and make it inaccessible except to the smaller class of coasting vessels: there is a good beach and every accommodation for bathing. Previously to 1780 it was a small fishing village, and this is still the occupation of its resident population, who send their produce to the London market. In the above year Sir R. Hotham commenced building a villa and some good lodging-houses, since which this watering-place has continued to enlarge, and forms a favourite resort for those who seek retirement, rather than gaiety, in occasional change of scene. It is sheltered on the N. by the South Down hills, a range extending from Portsmouth to Dover. The Portsmouth and Arundel canal passes within 3 m. There are Episcopal, Independent, and Wesleyan chapels; a school, in which 90 girls are clothed and educated; another (founded by the late Princess Charlotte) for 50 girls; a good hotel and lodging-houses, &c., for the accommodation of visitors. The regulation of the town is placed under commissioners (by an act of parliament), who meet monthly, and levy a duty of 2s. a chaldron on coals, to defray the expenses of repairing roads, &c. Weekly markets are held, in a spacious modern market-place, on Thursday and Saturday, and an annual fair on the 5th and 6th of July.

**BOGODOUKHOF**, a town of Russia in Europe, gov. Kharkof, cap. distr. on the Merlo, 60 m. N.E. Potava; lat. 50° 2' N., long. 35° 50' E. Pop. 6800. It is surrounded by a rampart and a ditch. The inhabitants are principally employed in tanning and dressing leather, and making it up into boots and shoes; they also carry on a considerable trade in cattle, hides, &c.

**BOGORODITSK**, a town of Russia in Europe, gov. Tula, cap. distr., at the confluence of the Lerno-Oupert and the Viarkova, 40 m. S.E. Tula. Pop. 5000. It has a royal castle and four churches. The country round is productive of corn, hemp, flax, and honey, which form the principal objects of the trade of the town.

**BOGOTA** (formerly *Santa Fé de Bogotá*), a city of Colombia, of which it is the cap. and the seat of the government, on an elevated plateau at the foot of mount Chingam, 8615 feet above the level of the sea; 225 m. E. the Pacific ocean, 50 m. E. the river Magdalena, 65 m. S.E. Honda, and 134 m. N.E. Neiva; lat. 4° 37' N., long. 74° 10' W. Pop. from 30,000 to 40,000. Owing to its elevation, the city enjoys a fine and equable temperature; the climate, however, is exceedingly humid; though not unhealthy. The first appearance of the town from the N.W. is very imposing: being built on rising ground, it forms a sort of amphitheatre, and the white towers of the cathedral and the monasteries of Montserrat and Guadalupe are seen seated on lofty peaks behind it. Streets generally narrow, but regular, intersecting each other at right angles, and some having a stream of water constantly flowing down the middle: all of them are paved, and the principal ones have footpaths. The chief street, or *Calle Real*, has at its extremity the *plaza mayor*, or principal square, where the market is held; it is formed by the cathedral, the palace of the president, custom-house, &c. Bogota being subject to frequent earthquakes, the houses are low, with thick walls; elegance being commonly sacrificed to solidity. Nearly half the area of the city is occupied by religious structures; there are twenty-six churches besides the cathedral, nine monasteries, and three nunneries; and four sixths of the houses in Bogota are said to belong to them. The cathedral, built in 1814, and distinguished by the simplicity of its interior, was destroyed by an earthquake in 1827. Most of the other churches are more remarkable for gorgeousness and gilding than for taste; gems are lavished in profusion upon the statues. The palace of the former viceroys and New Granada, now occupied by the president of the republic, can boast no architectural beauty. The "palace of the deputies" is a large house at the corner of a street, the under story of which is, or at least was a few years ago, "let out in shops for the sale of brandy." The "palace of the senate" consists of one of the wings of the convent of the Dominicans. The mint is a large plain building. There are three sets of barracks, two *guarides*, and an artillery depot, where all military equipments are made, and articles of European manufacture repaired; some of the convents have hospitals attached, but they are wretchedly conducted, and very dirty. It has a university and three colleges, the principal of which belongs to the Jesuits; a school of chemistry and mineralogy; a Lancasterian school on the most liberal principles; a national academy; a public library, &c. There is a theatre, a well-constructed building, and well attended; but the performances are bad. The private houses in Bogota are constructed of sun-dried brick, whitewashed, and tiled: latterly their style has been considerably improved. Beams are now concealed by a ceiling: glass has been introduced into,

## BOGWANGOLA.

and bariandas removed from, the windows; the street doors are better painted, and light balconies have begun to supersede enormous and heavy galleries. In general, the houses are built with a court in the centre, round which runs a gallery or a covered terrace. The furniture is simple; but European carpets and other manufactures are now in general use. There are no chimneys, stoves only being used.

In the principal streets, the ground floors are occupied by shops; these are, however, dirty and dark, and the only admission of daylight is by the door. Almost every inhabitant, not in the employment of government, in the church, or in the army, is a shopkeeper. "Seated upon his counter, smoking incessantly, and giving laconic answers to his customers, the Colombian merchant in many respects resembles those of Smyrna and Aleppo." Bogota cannot boast of ten merchants who can command 100,000 piastres, nor of five individuals living upon a revenue of that amount. The most common incomes are from 5000 to 10,000 piastres. The city is very badly lighted; there are no common sewers; and the filth being cast into the streams that run through the streets, renders them infectious. Owing to the scantiness of the population, and the want of carriages, some of the streets are overgrown with grass. The market is well and cheaply supplied with provisions; but European manufactures are said to be extravagantly dear. There are no carts or vehicles of any description, traffic being carried on exclusively by mules. The environs of Bogota are agreeable, but little frequented; the favourite promenades being the *alameda*, or public walk, at one of the entrances to the town; and the two principal streets, along which gentlemen may often be seen riding at full gallop on wretched horses, bedizened with gold, and glittering in military uniforms, "some with round hats ornamented with plumes of feathers, others with cocked ones, and a still greater number wearing *shakos* and helmets." The costume of the females is still more peculiar. Rich and poor dress alike out of doors: the mantilla is worn; a piece of blue cloth envelops the head, and covers all the features excepting the eyes, reaching to the waist; and the whole is crowned by a broadrimmed beaver hat. The women of Bogota are generally acknowledged to be handsome; their complexions are fair and clear; their physiognomy is Spanish. They are, however, accused of being great triflers, and very severe strictures have been passed upon them by travellers. Visiting, evening parties, balls, masquerades, and religious processions, are their chief amusements; as bull-fights, cock-fights, the theatre, and gambling, are those of the men.

Bogota was founded by Gonzalo Ximenes de Quesada, who built twelve huts here in 1538; in 1548 it was created a city, and made the seat of a royal *audiencia*; and in 1561 advanced to the honours of a metropolitan see. It was the capital of New Granada, while a colony of Spain; a distinction which, since the war of liberation, it has changed for the greater one it at present enjoys, as the head city of a free state. (*Mod. Trav.*, xlvii, 311-327; *Balti*, 3d ed., &c.)

**BOGWANGOLA**, an ind. town of Hindostan, prov. Bengal, 8 m. N.E. Moorshedabad; lat. 24° 21' N., long. 86° 39' E. It is built entirely of bamboo, mats, and thatch; but is a place of considerable trade, and from hence the cap. of the district is chiefly supplied with grain.

**BOHAIN**, a town of France, dep. Aisne, cap. canton, 16 m. N.N.E. St. Quentin. Pop. 3393. It has a fabric of German clocks & *carillons*, and produces shawls, gauzes, &c.

**BOHEMIA** (Germ. *Böhmen*, Boh. *Cechá*), (*Kusron* or), an inland country, occupying the centre of Europe, and forming an important portion of the Austrian empire, between lat. 48° 34' and 51° 3' N., and long. 12° 5' and 16° 46' E., having N.E. Prussian Silesia, N. and N.W. Saxony, S.W. Bavaria, and S. and S.E. the archduchy of Austria and Moravia. The area, pop., &c., according to the *Austrian Encyclopedia*, are as follows:

| District or Circle | Extent in sq. miles (Eng.). | Pop. 1851. | Chief Towns and Pop.   |
|--------------------|-----------------------------|------------|------------------------|
| Bunzlau . . .      | 1,656                       | 267,996    | Joan-Bunzlau . . 5,000 |

## BOHEMIA.

Its shape is an irregular rhomboid: greatest length, E. and W., 300 m.; greatest length, N. to S., 170 m. But, in 1838, the pop. had increased to 4,198,651 (*estd.*, p. 234); and in 1857 the pop. of Prague, ex the garrison, the inhabitants of the citadel, and the strangers in the town, amounted to 107,260. (*See* FRAUER.)

**Mountains, &c.**—Bohemia is a basin, surrounded on every side by mountain ranges, which in some parts rise to upwards of 5000 ft. in height. From the Fichtelgebirge (plateau mountains), near the W. extremity, the chain called the Erzgebirge (ore mountains) runs N.E., forming the boundary between Bohemia and Saxony, as far as the exit of the Elbe from the first-mentioned country. The highest point of this range is the Schwarzwald, about 4000 feet above the sea; parallel to it is the Mittelgebirge (midland mountains), which runs as far as the left bank of the Elbe. From the right bank of the Elbe, E. and S.E., forming in part the frontier against Prussia, runs a series of chains, entitled successively the Lanitz, Iser, Elsen (giant), and Sudetengebirge, the loftiest point of which, the *Saack-cop*, is from 5000 to 5400 feet in height. The S.W. border is formed by the Böhmerwald, or Bohemian forest mountains, included in the Hercynian forest of the ancients, and a branch from the Fichtelgebirge: they are wild and precipitous, and contrast remarkably with the Moravian chain in the S.E., which is of gentle ascent, varying from 900 to 3000 ft. in height, and separating the affluents of the Elbe from those of the Danube. Within these boundaries, Bohemia presents an undulating surface, with an inclination, for the most part, towards the N.; its hills are sometimes steep, and even precipitous; but rising generally no higher than about 500 or 600 feet above the level of the sea.

**Rivers.**—Bohemia forms, in fact, an elevated plateau, sloping towards the N., and drained by the Elbe, which traverses two thirds of its breadth, and receives the numerous brooks and streams that descend from its lofty barriers. The sources of this great river are in the Riesengebirge mountains, whence it descends, in a S. direction, to Pardubitz, and thence W. as far as Melnik, where, after receiving the Moldau, it becomes navigable. In its course to the frontier of Saxony, it is joined, besides, by the Adler, at Königgrätz, the Iser, and the Eger; the Wattawa, Saawa, Boununka, and Luschnitz, fall into the Moldau before its junction with the Elbe. The Moldau is navigable from Budweis, and an iron railway between that town and Linz, on the Danube, completed in 1834, forms a connecting link of a grand water communication between the German ocean and the Black sea. This spirited undertaking was, until lately, the longest rail-road in Europe; but it is only adapted to carriages drawn by horses, and having to pass over considerable heights, which occasion much difficulty and expense in transporting goods, the advantages it afforded were insufficient to divert the course of trade into this new channel, and it has proved an unprofitable speculation.

**Minerals.**—The mineral riches of Bohemia are of considerable importance and value. From the 13th to the 17th centuries, considerable quantities of gold and silver were obtained; the first is now, however, no longer met with, except occasionally in small quantities, in the beds of some of the streams; but above 90,000 marks of silver are still obtained annually from the lead mines. The latter produce about 60,000 cwts. a year of lead and litharge. Iron is found in most parts of the kingdom; but the product is but trifling, not exceeding from 15,000 to 20,000 tons a year. There are also tin mines (the only ones in the Austrian dominions), with mines of copper, zinc, cinnabar, arsenic, cobalt, &c. Coal is pretty abundant, particularly in the N. parts of the kingdom; and the produce, which has increased very rapidly of late years, is now probably little under 90,000 or 100,000 tons a year. There are a great variety of mineral springs; those of Töplitz, Carlsbad, Sedlitz, &c., having a European reputation. About 80,000 bottles of water from these springs are said to be annually exported. All the salt used in Bohemia is imported. The working of the mines is superintended by two mining commissions, at Joachimsthal and Freiberg. Under these are twenty-three inferior mining courts and branches, the miners having their own codes of law and special courts of justice; the whole is controlled by a department of the ministry of finance at Vienna.

**Climate** very healthy; but, from the elevation of the country, it is, on the whole, rather cold. In the mountainous regions, the snow, which often lies 12 ft. deep, does not disappear until April; the mildest climate is that of the valley of the Elbe. At Prague the mean temperature of the year is about 47° Fahr. The prevalent winds are westerly.

**Soil, Agriculture, &c.**—The soil of Bohemia consists principally of a clayey loam, but in parts sandy loams and sand predominate. In some of the mountainous circles there is a good deal of waste land; but, speaking generally, the valleys are very fertile. The finest land is in the circle of

## BOHEMIA.

**Soax.** Of the total area of the kingdom, amounting to 90,985 Eng. sq. m., or 19,968,000 Eng. acres, it is estimated that 11,050,673 acres are under culture, or otherwise productive, being distributed as follows: Arable lands, 5,539,509 acres; common pasture lands, 696,668 acres; woods, 3,393,915 acres; vineyards, 6357 acres; meadows and gardens, 338,930 acres; the rest being barren mountains, water, roads, and other uncultivable lands. Here, as in all the rest of Germany, rye forms the principal crop, and next to it is oats, and then barley and wheat. The produce of each description of grain has been estimated at: Rye, 9,199,506 grs.; oats, 1,739,753 grs.; barley, 877,506 grs.; wheat, 394,153 grs. (*Becker's Handel's Lexicon*, and *east*, p. 239); but we have no doubt that this estimate is below the mark; and, in fact, the estimate in the National Encyclopedia makes the product of rye 15,000,000 metzen, or about 3,950,000 grs., and so with the other crops.

Potatoes are now very extensively cultivated, particularly in the mountainous districts, where they form the greater part of the food of the people. Flax and hemp are principal objects of attention, and supply the material for the staple industry of the country. Hops, which are excellent, are raised in considerable quantities, about 19,000 cwt. being annually exported to Bavaria only. The culture of beet-root, with a view to the manufacture of sugar, has of late years increased very rapidly; so much so that, in 1836, no fewer than eighty-seven factories of beet-root sugar were in operation. The export of fruit from the circle of Leitmeritz only has in some years amounted to 60,000 cwt. Some wine is made, but the quality is very inferior; and beer is the national beverage. The stock of horses, in 1831, was estimated at about 144,000; of horned cattle, at 974,000; and of sheep, at 1,350,000. Until recently, but little attention has been paid to stock husbandry; lately, however, considerable efforts have been made to improve the breeds, and there have been very successful, particularly in the case of the sheep. The supply of cattle is inadequate for the consumption; and there is annually a large importation from Poland and Hungary.

On the whole, agriculture in Bohemia, though a good deal improved, is still in a very backward state. This, no doubt, is ascribable to a variety of causes; but principally, perhaps, to the depressed state of the peasantry, and the want of leases. Most of the land is parcelled out into immense estates; and these are cultivated, either by peasants employed by, and working on account of the landlord, or by petty occupiers, paying a labour rent for their land. Mr. Gleig has given some curious details in reference to this subject in his *Travels in Germany, Bohemia, &c.* "Of large towns," says he, "there seems to be in Bohemia very few; but every vale and strath is crowded with human dwellings; village succeeding village, and hamlet treading on hamlet; with the most remarkable fecundity. On the other hand, you may strain your eyes in vain in search of those species of habitations which give to our English landscapes their peculiar charm. There is no such thing in all Bohemia—I question whether there be in all Germany—as a park; and as to detached farm-houses, they are totally unknown. The nobility inhabit what they term *schlosses*, that is to say, castles or palaces, which are invariably planted down either in the very heart of a town or large village, or, at most, a gun-shot removed from it. No sweeping meadows surround them with their tasteful swells, their umbrageous covers, and lordly avenues; no deer rove from glade to glade, or cluster in groups round the stem of some giant oak, their favourite haunt for ages. But up to the very hall door, or at least to the foundations of the wall which girdles in the court-yard, perhaps twelve or twenty feet wide, the plough regularly passes. A garden the graft generally possesses, and his taste in flowers is good; but it almost always happens that his very garden affords no privacy, and that his flowers are huddled together within some narrow space, perhaps in the very court-yard of which I have already spoken as alone dividing his mansion from the open and cultivated fields. With respect, again, to the condition of the cultivators, that is, in all respects, so different from the state of our agricultural gentlemen at home, that, even at the hazard of saying over again what has been stated a thousand times already, I must describe it at length. In the first place, then, there is no class of persons in Bohemia corresponding to our English farmer. Nobody hires land in order to make a profit out of it; at least nobody for such a purpose hires a large tract of land; but each individual cultivates his own estate, whether it be of wide or of narrow extent. Thus the graft, or prince, though he be the owner of an entire circle, is yet the only farmer within that circle. He does not let an acre of ground to a tenant; but having built what he conceives to be an adequate number of *housen-houses*, he plants in each of these a *bauer-man*, and pays him for tilling the ground. These *bauer-houses*, again, are all clustered together into villages, so that the *bauer-man* is never without an abundant society adapted to his

tastes; and very happily, albeit very rudely, his days and nights appear to be spent.

"The land in Bohemia does not, however, belong exclusively to any order in the community. Many *bauer-men* are owners of their farms, some of them to the extent of 100 acres and more; while almost every township has its territories, which, like the noble's estate, are cultivated for the benefit of the burgh. But in all cases it is the owner, and not the cultivator, to whom the proceeds of the harvest belong. These are, indeed, gathered in and housed for him by his representatives, who, in addition to some fixed money payments, for the most part enjoy the privilege of keeping a cow or two on the wastes belonging to the manor; but all the risk and trouble of converting his grain into money attaches to the proprietor of the soil" (II., 19).

But though by far the larger portion of the land be cultivated in the way described, by hired labour, still it is certain that a good deal is let in Bohemia, as in all similarly situated countries, not for money or a quantity of produce, but for a certain amount of labour to be performed on the estate of the lord, which amount is regulated by a law called the *Roboth-patent*. Mr. Reeve, in his instructive *Sketches of Bohemia*, has the following statement as to the relation subsisting between the lords and those occupying their estates, under this system:

"The subjects, as they are termed, are all registered in the books of the estates; the lord collects the king's taxes, besides his own dues, and sends an annual supply of recruits to the imperial army. He has the power of expelling misdoers from his estate, and he exercises a certain control over his subjects; but the peasants are by no means attached to the soil; and they may always appeal to the courts of justice against their lord, with a proverbial certainty (such is the policy of the government) of gaining their cause. On the other hand, the lord represents the government to his peasants, and the peasants to the government; and while he is accountable to the justice of the country, he has it in his power to exercise a beneficent influence over the lower orders. He provides for their instruction; he introduces improvements, and encourages trade; he increases their commercial relations; he arbitrates in their disputes; and in proportion to his fulfilment or neglect of these functions, the estate is prosperous or poor. It often happens that the nobility and gentry have acquired a purely German character, in accordance with that of the Austrian government, but very much opposed to the national spirit and national wants of the Bohemian people. All the ancient seigniorial rights which were not legalized and regulated by Joseph II., as the *Roboth dues*, &c., were abolished by that monarch. But the tradition of feudal attachment and of feudal obedience still exists among the people; thus, although the consent of the lord is not legally required to a marriage between his peasants, it is generally asked, and considered indispensable. The possessions of some of the Bohemian nobles are immense; Prince Schwartzberg owns one eighth of the country; and the estates once held by the great Wallenstein were so vast as to have formed the appanage of six great families after his death and attainder." (*Metropolitan Mag.*, April, 1837.)

Hence the condition of estates, and of the population upon them, depends more, perhaps, in this than in any other country, on the conduct of the lords. Wherever the latter are liberal and intelligent, the estate has an improved appearance, and the inhab. are contented, industrious, and thriving. Unluckily, however, the bulk of the landlords, like the occupiers of their estates, are strongly attached to routine practices, and to those feudal privileges which, while they oppress and degrade the peasantry, impoverish the lords.

Here, as in most other countries, industry flourishes most where it has to contend with the greatest difficulties. The rich level lands of Bohemia, instead of being the best, are the worst cultivated. The occupiers of the mountainous and poorer districts display, speaking generally, not only the greatest industry, but the greatest skill, and the most improved methods of cultivation.

The forests, as already seen, are very extensive: they are mostly situated in the W. parts of the kingdom, and especially in the district of Prachin. They are estimated to yield annually above 2,000,000 cubic fathoms of wood.

**Manufactures.**—With the exception, perhaps, of Moravia, Bohemia has long been the most celebrated of all the Austrian states for its manufactures. At this moment it produces the finest linens and linen yarn of any country in Europe. Spinning is the universal and favourite employment of the women; and no fewer than 500,000 females are said to prosecute it as a subsidiary business! Machines for spinning have, however, been introduced; but it remains to be seen whether they will be able to undersell the yarn produced by the hand. About 35,000 hands are supposed to be employed in linen weaving; and the total annual value of the produce of this branch of industry, including

## BOHEMIA.

that of lace, may be estimated at about £1,900,000 a year. This branch of industry is said, however, to be on the decline, in consequence of the growth of the cotton manufacture. According to the National Encyclopedia, 90,000 individuals are employed in hand-spinning, exclusive of those employed in the factories, which are numerous; 18,000 hands are said to be employed in the hosiery department of the trade. There are about 500 bleaching establishments in full work, and the manufacture of potash is very considerable. The woollen manufacture is very extensive; in spinning only, 55,000 hands are said to be engaged; and in weaving, from 15,000 to 16,000; the weaving of woollen stockings employs from 9000 to 3000 hands. The hat-makers, furriers, &c., are estimated at about 1900; and the leather manufacturers at 4000. There are about 100 paper-mills; and the imperial tobacco manufactory at Sedlitz supplies the whole country with that article, through the agency of above 7000 retail shops. The manufacture of metals and minerals, and of beet-root sugar, has already been alluded to.

But of all the Bohemian manufactures none is nearly so well known in foreign countries as that of glass. Bohemian glass is not so pure as that of England or France; but the art of staining, painting, and gilding glass is much better understood there than in this country, and articles of Bohemian manufacture are unequalled in point of lightness and richness of appearance. It is probable, however, were it not for the weight of the duties laid on glass in this country, and the troublesome regulations connected with their assessment, that we should soon become formidable rivals of the Bohemians, even in those departments in which they appear at present to have the greatest superiority.

Altogether, it is said that from 1-5th to 1-4th part of the inhab. of Bohemia are engaged in manufactures. But then it is material to observe that all the hand-spinners and weavers combine with their business that of cultivators of patches of land, and other employments. We believe, too, that the cotton trade of Bohemia, like that of the rest of Austria, is entirely the creation of prohibitions and oppressive duties on foreign stuffs and yarn; and that, were these repealed or materially modified, the manufacture would be involved in the greatest difficulties.

Owing to the want of capital, many of the great landed proprietors are obliged to engage in manufactures. Thus, Prince Kinsky, and counts Harruch and Bucquoy, are the greatest glass manufacturers; Prince Auersberg manufactures sulphur, vitriol, and colours; Count Urbna and Prince Windischgratz, tin plates; Count Thun, porcelain; Prince Lobkowitz, earthenware; Prince Wallenstein and others, beet-root sugar, &c. It is clear that manufactures carried on under such auspices must be more expensive and less improved than if they were carried on by individuals dependent upon them.

**Races of People.**—Of the 4,000,000 people in Bohemia, nearly 3,000,000 are Czechs, of Slavonic origin, and the rest Germans and Jews. The Germans, to the amount of 900,000, principally inhabit the capital and the circles of Elbogen, Saaz, Leitmeritz, Bidschow, and Königgratz. In these circles German is the more prevalent language, though even in them Bohemian is the vernacular tongue of the lower classes, as it is that of the middle classes, and even of the higher ranks in other parts. The German pop. is more industrious, intelligent, and enterprising than the Slavonic. The Jews have been settled in Bohemia from a very remote epoch. Here, as in other countries, they are mostly engaged in mercantile and pecuniary transactions; and they are also extensively engaged in the business of distilling and brewing.

**Religion.**—Notwithstanding Bohemia may be truly said to be the cradle of the Reformation, and the determined and long-continued stand her inhabitants made in defence of the doctrines promulgated by Huss and his followers, she is now become one of the principal strongholds of Catholicism. The spirit of the ancient Bohemians has been entirely subdued; and they have become among the most bigoted and superstitious adherents of a faith imposed on them by the sword of the conqueror and the rack and gibbet of the inquisitor. Nowhere, perhaps, is the miserable trumphy of relics and saints' days held in such veneration. Religion here has not been employed to enlighten the understanding or improve the morals, but to darken the one, and to pervert and debase the other. The more intelligent part of the pop., disgusted with its ceremonies, have taken refuge in skepticism; but the great bulk of the people believe what they are told, and forsake the altars of Christ to prostrate themselves before those of St. John of Nepomuck! The church hierarchy consists of an archbishop (of Prague), 3 bishops, 7 deans of chapters, with numerous canons, 13 bishops, 133 deacons, 1107 parish and 505 minor cures. Though the monastic institutions were much diminished by the vigorous and salutary reforms effected by Joseph II., there are still no fewer than seventy-five monasteries and

seven convents, comprising about 1090 monks and 150 nuns; these are, however, obliged to do the duty of parish clergy, or to employ themselves in education, or in the care of the hospitals.

Joseph II. granted full toleration to all sorts of religions. The Lutherans and Calvinists together amount to from 60,000 to 70,000. The Jews, amounting to nearly 70,000, are under the grand rabbi at Prague.

**Education.**—If the goodness of education were to be inferred from the number of educational establishments, Bohemia would have little reason to fear a comparison with most European countries. The institutions for its promotion consist of a university at Prague; a polytechnic school; 95 gymnasia; 3 philosophical seminaries; 3 theological seminaries; 1 military academy; 3 convents for female education; 1 Jewish college; 40 grammar schools; 2500 Catholic, 36 Protestant, and 20 Jewish schools; and there are also schools for music and drawing, an observatory, and numerous libraries and cabinets of natural history, arts, and sciences. The Academy of Prague, though not long established, enjoys considerable celebrity.

But there is great reason to fear that the enlightenment of the people is looked upon as a secondary and subordinate object by those who superintend education in Bohemia—that is, by the clergy. Their primary object is to maintain the existing order of things; to educate the people in the belief that the Catholic is the only true faith; and that it is the duty of every good and well-disposed person to submit implicitly to the dictates of his spiritual and civil superiors! Such an education is better fitted to narrow and enslave, than to expand and emancipate the mind. Anything like free inquiry, and examination into the reciprocal duties and obligations of princes and subjects, or any inquiry into the real sources of public wealth, would not be tolerated in the Bohemian academies. The pupils are taught to believe that whatever is ordered is right! And adding to such a system of education the influence of a rigorous censorship of the press, the wonder is not that knowledge is at a low ebb in Bohemia, but that it is so far advanced as it really is.

"The march of intellect in Bohemia, though the school-master be abroad, is in very slow time, and, what is worse, it is but little aided by the national pen or the national printing-press. As a proof of this, I may mention that there are only ten printers and ten booksellers in Prague; while for the political *quid* *saxæ*, there are merely published a couple of very small, stupid newspapers in the German tongue, with other two, no less stupid, in the dialect of Bohemia. The literary periodicals, again, are confined to a small paper, called the *Bohemian*, in German, published thrice a week; and the *Abendunterhaltungen*, in Bohemian, printed twice a week. For the lovers of science, art, manufactures, and agriculture, a journal devoted to these matters is published twice a year; while the religious world remains quite satisfied with one quarterly journal. Such is the limited extent of the demand for political, literary, and religious information throughout Bohemia."—*Strong's Germany* in 1831, li, 306.

During the reign of Joseph II., the use of the Bohemian language was forbidden, not only in the courts of justice, but also in the colleges and higher academies. But, instead of suppressing the language of the people, this seems to have occasioned a reaction in its favour; and during the present century Bohemian literature has been a good deal attended to, and made considerable progress.

**Poor.**—The number of hospitals and charitable institutions in the capital and principal towns is very considerable, and in the towns the poor are carefully provided for. No regular poor-rates are, however, collected; where the foundation funds and voluntary subscriptions do not suffice, the deficiency is made up by government. But the contributions of the latter are afforded very sparingly, and begging is, after all, the great resource of the Bohemian poor, as it must be of the poor of every country where a compulsory provision is not established. It is here, in fact, universal; and all travellers are disgusted with the numbers and importunity of the mendicants.

**Manners, &c.**—The Bohemians are passionately fond of music and dancing, and have attained to great proficiency in both. The national airs are nearly the same with those of the Slovaks of the N.W. part of Hungary, and are generally plaintive. The waltz is the favourite dance; and two of its most fashionable varieties, the *Redowal* and the *Galoppe*, have been borrowed from the Bohemian peasants. The men are generally robust and well-proportioned; and the women are (in Germany) celebrated for their beauty. The dispositions of the people are more mercurial, and their manners more gay, frank, and open, than those of their Saxon neighbours. How much sower the objects of their veneration may be changed, they are still, as in the days of Huss and Jerome of Prague, zealous defenders of what they believe to be right and proper. These

## BOIS-LE-DUC.

is a nearly total want of a middle class—an intermediate rank between the lords and their vassals. With the exception of Prague, there are no great towns, none of those *foes* whence intelligence and civilization are diffused over a country. But, however ignorant and prejudiced, the character of the Bohemian peasant is most respectable. In point of morals, he is quite on a level with the peasantry of the other Germanic nations. Crimes of violence are of rare occurrence. The proportion of illegitimate to legitimate births is as 1 to 8; but in the capital it is as high as 1 to 2.

**Government, &c.**—The nobility of Bohemia are stated to be 2900 in number, including 14 princes, 172 counts, 80 barons, and more than 100 hereditary knights as heads of families; the total revenues of the nobility were estimated fifty years ago at 180,000,000 of florins, £18,000,000. At the meetings of the Estates, which form four divisions, viz., 1st, the prelates; 2d, the nobles (*Herrn*); 3d, the knights; and, 4th, the citizens of the principal towns, nothing but the distribution of the sums ordered by the emperor to be raised is discussed. No law, however it may affect the regulations, moral, or material welfare of the state, is ever submitted to them. A small minority once made a struggle for some ameliorations of the existing system, but without success. There is, indeed, a strong feeling against the absolutism of the emperor; but the nobility are afraid lest their peculiar privileges should be affected by any change, and no efficient reform need therefore be expected at their hands. The government of the country is directed by the different sections of the ministry at Vienna; the principal of which is the imperial united chancery, under which is the *Gubernium* at Prague. The court of appeals at Prague is under the ministry of justice at Vienna; the receiver of taxes is under the finance minister at Vienna. To these central authorities the various branches in every circle are subject; the courts of justice of the circle being at the same time courts of appeal from the minor courts of the nobles, who exercise judicial authority over their estates. The city and town magistracies have their own civil and criminal courts, from which appeal lies to the court of appeals at Prague. The military have a peculiar jurisdiction, and the nobles have, as in the other provinces, a special court, called the *Landrecht*. Independent of all authorities, judicial or administrative, the police forms a branch apart, being in the towns confided to especial commissaries, and in the country to the captain of the circle, in whom the three functions, judicial, administrative, and those of police are united. The number of civil employes in the kingdom is stated in the *Encyclopædia* to be 6461.

**Towns.**—Exclusive of Prague, Bohemia contains no town of any considerable importance, or of more than 10,000 inhabitants. The towns are divided into royal and aristocratic boroughs, and the former, again, into privileged and non-privileged. The towns privileged to send deputies to the diet are Prague, Pilsen, Budweis, and Kuttenberg. Both classes of royal boroughs have their own magistrates, police, &c., and their internal government in their own hands. The boroughs of the nobility are usually under the control of their lords.

**History.**—After innumerable mutations, Bohemia, with Hungary and Transylvania, fell, in 1526, under the dominion of Ferdinand of Austria, brother of Charles V., who had married the sister and heiress of Louis, king of Bohemia and Hungary, killed at the battle of Mohacz. Bohemia was at this epoch in the enjoyment of a comparatively free constitution, and three fourths of the population were attached to the reformed faith. The attempts of the Austrian sovereigns to undermine the free institutions of the country, and to lay restraints on the exercise of the Protestant worship, provoked a desperate contest, which continued till 1620, when the Austrian troops totally defeated the Bohemians at the battle of Weissenberg, near Prague. The persecution which followed has seldom or never been equalled for atrocity. Many of the best and noblest Bohemian citizens lost their lives on the scaffold, and thousands upon thousands were driven into exile, and had their estates and properties confiscated. The free constitution of the kingdom was entirely annihilated; the Protestant religion all but extirpated; and such was the combined influence of massacre and exile, that in 1637 the pop. did not exceed 750,000! Subsequently the government gave every encouragement to the settlement of German colonists in the country; and in the reign of Maria Theresa and Joseph II. a new era began; and the milder and more liberal system of government which they introduced has since been followed up.

**BOIS-LE-DUC,** a fortified town of Holland, cap. prov. N. Brabant, in a morass, at the confluence of the Dommel and Aa, 37 m. S. by E. Utrecht. Pop. 13,500. It is about 5 m. in circ., is defended by a citadel and two forts, and in case of need the environs may be laid under water. It is a well-built handsome town, and is intersected by several canals, over which there are a great many bridges. It is

## BOKHARA.

the seat of a vicer-general and tribunals of original jurisdiction and commerce, and has a fine town hall, on the model of the Stadt-house at Amsterdam; six churches, of which the cathedral church, or that of St. John, built in the end of the 13th and the beginning of the 14th century, is one of the finest in Holland; a grammar school, in which Erasmus was partly educated; an academy of painting, sculpture, and architecture; two hospitals, an orphan asylum, a house of correction, &c. Its manufactures, which are considerable, consist of linen and thread, needles and pins, cutlery, &c., with distilleries, glass-works, &c. It is well situated for, and has a considerable trade.

Bokhara was founded, in 1184, by Godfrey III., duke of Brabant. In 1699 it was taken by the Dutch, after a lengthened siege. It was held by the French from 1794 to 1814, when it surrendered to the Russians, by whom it was again made over to its old masters.

**BOJADOR (CAPE),** a celebrated promontory of the W. coast of Africa, desert of Sahara; lat. 26° 7' 10" N., long. 14° 29' 5" W. This headland forms the W. extremity of a rocky ridge, called Geb-el-khal, or Black mountains. It was long the limit of navigation towards the S., and was first passed by the Portuguese in 1433.

**BOJANO,** (an. *Boianum*), a town of Naples, prov. Salerno, cap. cant. on the Biferno, in a deep gorge, at the foot of mount Matese, 16 m. E.S.E. Isernia. Pop. 3000. This town has suffered severely from earthquakes, the last calamity of this sort having occurred in 1803. It is the seat of a bishopric, and has, or had before the earthquake, a cathedral, with several churches and convents, and a hospital. During the early period of Roman history, Boianum was a very important place. In the Social war it was one of the strongest holds of the confederates. It was taken by Sylla, and afterward retaken by the Marci. Under Cæsar it became a military colony. Strabo says that in his time it was ruinous and deserted. (*Cramer's Ancient Italy*, II. 238.)

**BOJANOWA,** a town of the Prussian States, prov. and reg. Posen, 9 m. N.W. Rawicz. Pop. 3000. It is divided into the Old and New towns; most part of the houses are of wood; it has a large town-house, and fabrics of coarse cloth.

**BOKHARA, or UZBEKISTAN,** a country of Central Asia, comprising considerable portions of the an. *Sogdiana* or *Transoxiana*, and *Bactria*, forming the most powerful state of what is named by the moderns Indus, Turkey, or Turkistan. It lies between lat. 36° and 41° N., and long. 63° and 70° E.; having N. the desert and the khanat of Kokan; E. the mountainous regions of Hisar and Koon-dooz; S. Caubul; and W. the khanat of Khiva or Khazasm. Area, probably about 235,000 sq. m. Pop., according to Burnes, 1,000,000. It is divided into nine provinces, viz.:

| Provinces.                                 | No. of towns.          | Total Pop. in villages. | Chief City or Town.     |
|--------------------------------------------|------------------------|-------------------------|-------------------------|
| Bokhara . . . . .                          | City & 71              | 51,000                  | Bokhara, 160,000 inhab. |
| Karakool . . . . .                         | 1                      | 15,000                  | Karakool.               |
| Kerman . . . . .                           | 3                      | 27,000                  |                         |
| Moussak (or valley of the Kohak) . . . . . | 7                      | 43,000                  | Kaita Kurgan.           |
| Samarcand . . . . .                        | 5 t. and 5 other dist. | 49,000                  | Samarcand, 10,000 inh.  |
| Jumak . . . . .                            | 1                      | 8,000                   | Jumak (Dinikh).         |
| Kurand . . . . .                           | 1                      | 22,500                  | Kurand.                 |
| Sub-sab (or bank of the Orus) . . . . .    | 4                      | 22,000                  |                         |
| Balkh . . . . .                            | 1                      | 27,000                  | Balkh, 9000 inh.        |
|                                            |                        | 277,000                 | = 184,000.              |

Bokhara is mountainous only in the E., where its mountains are northern spurs from the Hindoo Koonh, and on its S. frontier, where they seem to belong to the Ghoor or Paropamisian range; if we except a few low-lying hills about Shahr-Buzh, Samarcand, and Bokhara. The height of the former range, in about lat. 36°, is supposed by Burnes to be at least 18,000 ft., since the mountains 150 m. E. of Kurand were seen by him covered with snow in June. The plain region which comprises all the rest of Bokhara, is nothing but a sandy desert, with a few oases, stretching for a few miles on either side the banks of rivers; in which are planted the chief cities and towns; and which constitute the only cultivable lands, and are very densely peopled. The rivers are therefore of the highest importance: there are five, viz., the Jihon or Amoo (Orus), Kohik or Zer-afshan, Kurandee or Karchi, Zourhah, and Balkh. The Orus intersects the country S.E. to N.W., dividing it into two unequal portions, and varying in width from 300 to upwards of 800 yards. The course of the Zer-afshan (river of gold) is entirely within this country; it rises in the highlands E. of Samarcand, runs N. this city and Bokhara, and, after a course of about 450 m., chiefly E. to W., falls into the lake of Denghis. The Kurandee rises in the same

\* The land rev. of Balkh, 20,000 tillas, goes to its own chief.

## BOKHARA.

highlands as the Kohik, runs N.E. to S.W., by Shahr-Sabz and Kurahee, and is lost in the desert. The Zourhat runs from N. to S., and is similarly lost. The Balkh river rises S.W. the Hindoo Koosh, and runs N. to Balkh, where its waters are distributed all over the surrounding country by means of canals. The lake Denghis, or "the sea," is 60 m. S.S.W. Bokhara, surrounded on all sides by sand hills; 25 m. long, and very deep; its water is salt, and it appears neither to increase nor decrease at any season of the year. There are other lakes, but of no importance.

**Aspect.**—The fertility of the country is said to have been anciently much greater than at present; the valley of Sogdiana has been spoken of as a paradise by both Greek and Arabian writers; but it is mostly destitute of large trees, and the banks of the Kurahee entirely so. The desert is varied only by sand hills, 15 or 30 ft. high, raised by the wind; of a horse-shoe shape, the bow towards the N., and always resting on a base of hardened clay. Some stunted herbage, low brushwood, and the camel-thorn, are the only signs of vegetation; and a few rats, lizards, beetles, and solitary birds the only permanent inhabitants. S. of the Oxus, however, it is not quite so bare as elsewhere. Curtius has well described the present state of the region round Balkh, in his glowing description of ancient Bactriana. (See *Burnes*, ii., 211.) Many remains of former splendour, aqueducts, temples, &c., are to be met with in various spots, as between Khouloom and Mazar; the ruins of Bykund, 30 m. W.S.W., and of Khojouban, 25 m. N.W. Bokhara, &c.

**Geology and Mineralogy.**—N. of the Oxus, and from the base of the mountains to Bokhara, there is a succession of ranges of limestone, oolite, and gravel, alternating with vast and hardened plains of argillaceous clay or quartzose sand; the pebbles in Miankal are sharp and angular, and look very unlike having ever been subjected to the action of water. There is more gold in the sand of the Oxus than in any other river rising in the Hindoo Koosh; but other metals are not found in any quantity in this country; silver, iron, and copper, are all imported from Russia. Sal-ammoniac is native near Juzzahn, and there is a bed 5 m. in circ. of dark-coloured, imperfectly crystallized salt, near Char-jooee, 500 lbs. of which sell for 3s. in Bokhara city. The water in the wells of the desert is often found brackish and unfit to drink, especially S. of the Oxus; between that river and Bokhara the water is good, and exudes through the sand.

**Climate.**—The climate of the elevated E. frontier is of course very different from that of the rest of the country. In the plains it is generally dry and salubrious; in the winter sometimes so cold that the Oxus is frozen over, and the snow lies for three months at Bokhara; in the desert in summer the heat exceeds 100° Fahr. The seasons are very regular; at the beginning of March the spring opens, the heat soon increases to an oppressive degree, being seldom refreshed by showers, and for four months the bed of the Kohik is dry at Bokhara, and the country suffers from drought. The summer lasts till October, when a fortnight or three weeks' rain sets in, succeeded by frosts, and these again by rains from the middle to the end of Feb., which are often very heavy, but evaporation is rapid. Violent tornadoes sometimes arise, blowing from the N.W.; but a steady wind from the N. blows across the desert in the hot season: the atmosphere is remarkably clear and cloudless at Bokhara, and meteors are frequently seen in considerable numbers at night. At Balkh the summer heat is very oppressive, and the climate unhealthy. Rheumatism is a frequent disease there; and ophthalmia and blindness are the scourges of the desert: fevers are rare, but leprosy is common.

**Vegetable Products.**—There is but little large timber: willow and poplar are the principal trees in the plains, and the latter is used for house-building: tamarisks and leguminous plants are the most frequent shrubs. A bastard indigo flourishes profusely on the banks of the Oxus, but neither the true plant nor the sugar-cane grow wild. Some *Boraginæ* and *Cruciferae* are found universally; lilies, asphodels, and euphorbias less commonly. The *Galeaia africana*, the favourite food of the camel, covers many parts of the desert: rhubarb grows in Kurahee; but the gigantic *Ferula persica* (which produces assafetida) is the sole member of the umbelliferous family. Bokhara is celebrated for its fruit: it is believed to be the native country of the melon, which grows here to more perfection than anywhere else; and most of the fruits familiar to us grow there in great perfection.

**Animals.**—Wild animals are few: the lion is not now found, though Alexander killed one in Transoxiana. Diminutive tigers on the banks of the Oxus, wild dogs and asses, deer, antelope, bears in the E., wolves, foxes, jackals, cats, martens, rats, and minks, are the chief *Mammalia*; otterfishes in the S.; eagles, hawks, owls, crows, storks, pigeons, plovers, and water-fowl, are common; but there

are no singing birds, and all kinds of game are scarce. Tortoises and lizards are found in the desert; but there are neither alligators, nor many snakes. The fish in the lake Karakool are good: those of the Oxus are the same as in other Asiatic rivers; a large dog-fish is caught there often of 600 lbs. weight. There are few insects; locusts sometimes infest the neighbourhood of Balkh; the scorpion is common, but not dangerous; a kind of cochineal insect lives on the bastard-indigo, but the dye it produces is very inferior, and the proper mode of treating it is unknown. The silkworm is abundant on the banks of the Oxus, where the Turkmen is planted for it in great quantity; and the Turkmans in the summer months are nearly all occupied in the production of silk. The quality of the water, or some other cause in Bokhara city, produces the *rickets* or Guinea worm, and  $\frac{1}{2}$  part of the population are said to be attacked annually with a painful disease, owing to the formation or growth of these worms beneath the skin. When observed, they are extracted by means of needles; an operation in which the Bokharees are very expert.

**Races of Men.**—Baron Meyendorf estimates the pop. and the different races of which it is made up, as follows:

|             |           |                           |           |
|-------------|-----------|---------------------------|-----------|
|             |           | Brought forward 2,400,000 |           |
| Uzbeks      | 1,300,000 | Kirghiz & Kara-           |           |
| Tadjiks     | 650,000   | kalpaks                   | 6,000     |
| Turkmenians | 300,000   | Jews                      | 4,000     |
| Arabs       | 50,000    | Afghans                   | 4,000     |
| Persians    | 40,000    | Lezgiz                    | 2,000     |
| Kalmucks    | 20,000    | Bohemians                 | 2,000     |
| Carry over  | 2,400,000 | Total                     | 2,478,000 |

Burnes, however (1835), estimates the total pop. at no more than a million, half of whom he thinks are wandering tribes. The Uzbeks, the last race who conquered this country, say they originally came from the neighbourhood of Astrakhan, and are divided into a number of tribes, of which that of Mangout is the principal, and the Khan always belongs to it. In their physical appearance they resemble a mixture of Tartar and Kalmuck, but those of the capital are scarcely to be recognised as belonging to either of these families, from their great intermixture with Persian blood. The Uzbeks are chiefly established in the principal towns, and in the valley of the Zer-afshan: they are all warriors, and the government offices are for the most part filled by them. Many are employed in trade, though they are avaricious, and much addicted to deceit. They are naturally proud, and have a great contempt for the other races, especially the Tadjiks; but are also said to be often well-disposed, and are simple, and easily subject to imposition.

**Tadjiks.**—The Tadjiks are regarded as the stockmen, and descendants of the ancient Sogdians. They are similar to European races in both features and complexion, the latter being much less brown than that of the Persians; their hair is black; they are active, laborious, and intelligent, but pusillanimous, and never take arms: they therefore differ in numerous particulars from the Uzbeks. They do not lead a wandering life, but are cultivators, artisans, and merchants; in the latter capacity, like the Uzbeks, they are greedy and avaricious. Most of them know how to read and write; and, excepting the clergy, they are the most civilized people of the country. Their physiognomy expresses mildness and tranquillity; but they are deceitful, and unfeeling towards their slaves.

**Kalmucks.**—A large portion of the Kalmucks are descendants of the hordes of Jenghis-khan; the remainder are Torgout Kalmucks, who, in 1770, abandoned the banks of the Wolga, to return to their original seat. The former are to be recognised only by their physical appearance; they have almost forgotten their original tongue, and have adopted the customs of the Uzbeks, among whom they live, in villages of their own.

**Turkmans.**—The Turkmans, or Toorkmans, inhabit chiefly the region S. of the Oxus (which forms part of Turkestan, or Toorkmania); they belong to the great Turfar family, and differ from the Uzbeks in being exclusively a wandering tribe, having the face larger, and the figure more squat; in these particulars resembling the Kalmucks. They cultivate rice on the banks of the Amoo, but have many herds, and live much on their milk and flesh. Their horses are excellent, and have been celebrated since the time of Alexander. The Turkmans are by profession dealers in slaves; they have chiefs of their own, named begs, but all pay tribute to the Khan of Bokhara.

**Arabs.**—The Arabs have been established here ever since the age of the caliphs. They are immediately recognised by their swarthy complexion. Some are wandering, and others demi-nomadic tribes; a third section live in villages, some of which are near Bokhara; others are cultivators, and possess flocks in the steppes: it is chiefly the latter who furnish the lamb-skins, in such general demand.

**Persians.**—The Persians are mostly slaves, who have

## BOKHARA.

been captured by the Turkmans; and a proportion of eight individuals in every village of twenty houses is perhaps a fair average throughout the country.—(*Burnes*.)

**Kirghiz.**—The Kirghiz are a small wandering horde, found especially N. the valley of the Zer-afshan. Some of the Afghans and Kirghiz are descendants of the hostages retained by Timur: there are some Chinese who have a similar origin. The Bohemians, or Zingees, here called Mazanés are of unknown extraction, and live in different companies in every part of the country; they tell fortunes, and have all the other occupations of gipsies.

**Jews, &c.**—The Jews live almost entirely in Bokhara city; where there are also 300 Hindoos, who are not allowed to build temples, have Idols, walk in processions, bring their families beyond the Oxus, or purchase female slaves, and are prescribed a particular dress. They come chiefly from Sindh; are very sober and orderly, industrious and devoted to trade, in which they amass considerable wealth.

**Agriculture** is the principal source of the national wealth: rice, wheat, barley, jowar, sesamum, maize, melons, melons, and beans, are the chief objects of culture. The propensity to grow rice is strange, in a country so unfitted for it; but the fields of Shahr-Sabz yield rich crops, and irrigation for the purpose is pursued to a very great extent in the Kurash valley, and at Balkh. Meyendorff observes that the rice of the Miankal (valley of the Kohik) is not good. 8. of the Oxus the wheat fields, when sown, yield crops for three successive years. When the first harvest is finished, the cattle are turned in upon the stubble fields; and next season the stalks grow up and ear; and a third but scanty crop is reaped in the same way. At Karakool, in Bokhara Proper, the return is said to be sevenfold; at Balkh the wheat ripens in a month; the crops are very good, and the stalk as high as in England. Wheat is usually sown in autumn, and reaped in July; and the fields are afterwards ploughed for peas, which are gathered in the same year. Barley is sown early in March, and reaped before wheat: it comes in the place of oats, which are not used in Bokhara. Jowar (*Holcus saccharatus*), which, with wheat and melons, occupies most of the surface, comes to maturity in nearly the same period as barley: it grows to five feet in height, and affords both grain for the poor, and, by its leaves, good forage for the cattle. It is commonly surrounded by terraces of hemp and cotton, the seeds of which oil is extracted: a considerable quantity of cotton is grown and exported, both raw and manufactured. Trefoil is cut seven or eight times a year; madder is grown, and tobacco; the best of which is from Kurash. Beet-root, turnips, carrots, &c., abound; the potato has not yet been introduced. Kurash is a "sheet" of gardens and orchards, but most of the stone fruit is inferior to that of Persia. There are many kinds of grapes, and the raisins prepared from those of Bokhara are unrivalled for size and flavour, and beautifully transparent. The vines are not pruned, as in Europe. The wines have little flavour, and will not keep long. The most celebrated fruit is the melon, which is of several kinds; one is oval, with a green or yellow skin, sometimes four ft. in circumference, and of a most delicious flavour. Winter melons are said to surpass all the others. Cucumbers also attain great size and excellence. The iris, rose, aster, sunflower, &c., are cultivated a great deal in the gardens, which are very large and numerous. The fields are paried into *tesaks*, each of which comprises a surface of 3000 square yards; their limits are denoted by ditches for irrigation. The want of water is the great hindrance to the progress of agriculture, as, wherever there are neither rivers nor canals, the ground is uncultivated. Property in land is of five kinds: 1st, The state property, which is the most considerable. 2dly, The *khass*, the right to which was formerly doubtful between the government and certain proprietors, and has been ceded to the latter, on payment of a light tax. 3dly, Feud, bestowed for military services. 4thly, Properties of individuals. And, 5thly, Legacies for religious purposes. The state territory, as well as other property is let, government receiving as rent two fifths of the produce.

**Cattle, &c.**—Bokhara is rich in cattle; the sheep and goats claim the first notice, since the one yields the celebrated skin, and the other a wool, only inferior for shawls to that of Cashmere. These flocks graze on furs and dry grass, and their flesh is sweet and well-flavoured. All the sheep are of the variety with large tails, some of which yield as much as 15 lbs. tallow. The description of sheep which produces the jet black curly fleece, made into caps in Persia, and so much esteemed everywhere, is peculiar to Karakool, a small canton between Bokhara and the Oxus. The animal will thrive nowhere else, and has been transported to Persia and other countries without success: when removed it loses the peculiarity in its fleece, and becomes like other sheep. The annual export of skins amounts to about 900,000, the best of which are sent to Constantinople. The goats yield the shawl wool, and are about the common

size, of a dark colour, and many belong to the wandering Kirghiz tribes. The oxen are neither large nor strong, and beef is eaten only by the poor: mutton is the food for which there is the greatest market. The horses of Toorkmania are large and bony, and more remarkable for strength and bottom than symmetry or beauty. The Uzbek tribe, of Karabser, possess the most matchless horses in the East: the breed was introduced by Tamerlane, or Timur, into the country round Samarcand and Shahr-Sabz. All the traffic of Bokhara, however, is carried on by means of camels: those have a sleek coat, as fine as that of a horse, and shed their hair in summer, from which a fine water-proof cloth, of close and heavy texture, is manufactured. The Sacrian camel, with two humps, and tufts of black hair on the neck and thighs, abounds 8. of the Oxus, and can carry a burden of 6 cwt.; the dromedary is common in Bokhara; the asses are large, sturdy, and much used: there are no mules.

No considerable manufacture is found in Bokhara; none employing more than four or five workmen at a time. Cotton thread, silk stuffs of different colours, leather, excellent shagreen, good sabres, knives, and other steel articles, locks, hardware, gold and silver mounting for knives and sabres, rings, and other jewellery, articles of turnery, and fire-arms, are among the chief productions. Women are often employed in embroidery, and especially in divesting the cotton of its seeds, which occupies many hands. No further use is made of hemp than to procure an intoxicating drug; sugar and confectionary are made from the manna found on the camel-thorn. The Jews and others excel in the art of dyeing, but leather is generally bad, and the cutlery, &c., inferior to that of Persia. The fine arts are still less advanced, owing to the influence of Islamism, which does not permit representations of animated objects; flowers are the principal subjects of paintings, and sculpture is confined to seating tombstones. The modern edifices of Bokhara are destitute of merit, and the fine mosques built at Samarcand, under Timur, are looked upon as impossible to be equalled in the present day. The canals are large; which is indeed essential in a country where evaporation is so rapid; and all the villages are situated on the banks either of a river or canal, and consist generally of about a hundred houses built of earth, sometimes walled round, and intersected by public ways not so narrow as those of the towns: in their centre is commonly a public fountain, or small reservoir. There are very few towns; they are all built on rivers, and surrounded by cultivated fields: Bokhara, Samarcand, Kurash, Karakool, and Balkh are the principal; the rest are but large villages.

**Commerce.**—Bokhara, though politically of such secondary importance, holds a pretty high position in the commercial world. Fruitful in the productions of the earth, where all around is desolation, it is a central mart, where the commodities of Europe, China, Persia, India, and Cabul, may be exchanged with advantage. Peter the Great of Russia wished to open a communication between the Caspian and the banks of the Oxus: he succeeded in opening roads from the S. of Asiatic Russia to the E. of the Aral sea; and for eighty years they have been annually travelled by the caravans of Bokhara, which bring back the manufactures of Russia; while those of Britain reach the banks of the Zer-afshan by way of India.

**Exports.**—The exports are chiefly silk, cotton, wool, coarse chintz, cotton-thread (which is in much request), lamb-skins, and others. The following articles were, in 1819, among those imported at Orsking from Bokhara: Cotton, 16,812 bales (299,670 lbs.); cotton-thread, 18,998 pounds (676,000 lbs.); white cotton, 30,410 pieces, of 35 yds. each, 74,265; silk, chalcas, torques, lapsi, small, dried fowls, raisins, &c. &c. The returns are said in Dutch cruises and ducaes, Spanish pistons and Russian silver to be 2,394,000. The total exports to Russia are valued at nearly 2,000,000. Silk and cotton are sent in huge quantities to Cabul, and even into India; and wool as well, which fetches from 4 to 8 shillings (24 to 25 Rs.) per 250 lbs. Engl. The lamb-skins of Karakool are paid for in ready money by foreign merchants.

**Imports.**—The imports from India are the same as those into Cabul; a half of the 2000 camel-loads that reach the latter country yearly from India pass on into Turkestan. Muslins, Bonese brocade (about 500 pieces), white cloth from the Punjab for turbans, gear, and shawls which pass through to Russia, are the chief imports. Till within the last twenty years the trade in European fabrics was with Russia only, through Orsking and Protshka; but it is now carried on more extensively through India and Cabul. There are six great roads from Russia; viz., 1st, from Astrakhan to Bokhara, across the Caspian, and through Ourgunje (Khiva), 20 days; 2dly, Orsking to Bokhara, between the Caspian and Aral, through Ourgunje, 60 days; 3dly, Protshka, across the desert of Kipchat, 8. the Aral, 40 days; 4thly, Perekopok, through Tashkend to Bokhara,

## BOKHARA.

90 days. The first is the best and safest, and is taken by the great yearly caravan, which leaves Bokhara in June; it is, however, necessary that amicable relations should subsist between Bokhara and Khiva. The less valuable merchandise goes to Frotshah, generally in August. The imports from Russia are white cloth, muslins, chintzes, and broadcloth, both of Russian and English manufacture, and the chintzes often Polish or German, imitation broads, velvet, nankeen, gold thread, hardware, metals, cutlery, jewellery, leather, paper, Kirmis dye, refined sugar, &c. Not less than three fourths of the articles from Russia and India are of British manufacture. British chintzes, which realize sometimes 50 per cent., and broadcloth (the finest selling for 30s. per yard) are, like most other British manufactures, valued by the females of both Caubul and Bokhara greatly above those of Russia; and though we may have to yield to Russia the trade in metals, which are so readily supplied from her S. frontier, we shall, no doubt, supersede her in the supply of piece-goods; the demand for those of Britain has been for some time increasing, while that for those of Russia has been proportionally diminishing. Russian muslins are said to be better than the English (though of this we are very skeptical); but all other white goods are inferior, and none now find their way S. of the Oxus. The vizier of Bokhara told Burnes, that a more extended export of white cloths, muslins, and woollens from England would effectually supplant the Russians in those branches of commerce. The transport through Caubul costs little; and if Russia navigate the Volga, Britain commands the two great thoroughfares of the Ganges and the Indus. By the trade with the Chinese trade of Cashgar and Tarkund, Bokhara derives coarse porcelain, musk, bullion, tea, silks raw and manufactured, rhubarb, and Tibet wool; in all about 800 camel-loads, but chiefly conveyed by horses. Tea is drunk at all hours of the day in Bokhara, and especially among the Turkmenians; and 950 horse-loads, about 200,000 lbs., were imported from China in 1833. The Persian trade is inconsiderable; Kirman shawls, sugar, and opium, are the chief imports; the latter is re-exported to China. The merchants of Caubul bring indigo and Cashmere shawls, most of which come through their hands. From Kokan are received white cottons, silks, more durable than those of Bokhara, and a raw silk of inferior quality. The commerce with Russia is said to employ 3000 camels; that with all other countries as many more; but it is said that none of the merchants are possessed of £40,000, from their frequent and severe losses by the pillage of the wandering tribes. The total capital vested in foreign commerce is believed to be from £500,000 to £800,000.

*Money, Weights, &c.*—The coins in use are the *tilla* (gold), worth 13s. 4d.; the *tenge* (silver) = 7½d.; and the *pent* (copper) = 27½d. Weights: the *batman* = 131.104 kilog. (291 lbs.); *seer* (35½ lbs.). The duties on European goods are very moderate, being only 2½ per cent.; a Christian must, however, pay 20 and a Hindoo 10 per cent. These injunctions are derived from the Koran; but as the Koran inculcates strict protection to the merchant, and as the people are strict observers of its precepts, in no Mohammedan country is there so much safety and freedom from exaction for the trader.

The *Public Revenue* is professedly spent in the support of mosques and moolahs, but the present khan is supposed to use a considerable portion to maintain his armed force. These revenues are derived chiefly from land, which in Turkestan is valued according to the water which fertilizes it: the total amount is estimated by Meyendorff at about £400,000 (by Burnes, at £360,350); but half the land is enjoyed by the church. Other taxes are those on merchandise, which in the late khan's reign were not levied until the goods were sold; taxes on the farmers' produce, on gardens, orchards, and melon beds; on dried fruits, manna, and skins; customs on goods entering the capital (according to Meyendorff, about £16,000 a year, which ought to be applied to the use of the schools and clergy); a capitation-tax on all the inhabitants of the country not Mohammedans, and in time of war a tax on each household. The land revenues are received by the *hakims*, or governors of districts, who pay the *employes* and troops cantoned in their prov. before forwarding the collections to the royal treasury: the administration of the finances is entirely in the hands of the khan himself and his vizier.

The *Government* is a combined monarchy and hierarchy: the khan is despotic; but does nothing without the advice and authority of the moolahs, or priests. This arises from no inability on his part to assert his power; but from the constitution of the monarchy, which is exclusively bottomed on the laws of the Koran, which are here more strictly enforced, perhaps, than in any other Mohammedan country. The order of succession to the throne formerly required only that the khan should be of the family of Jenghis, whether by the male or female line; but that family is not now on the throne. He takes the title of *emser ool*

*moosunom*, or "commander of the faithful," and looks upon himself as one of the heads of the Mohammedan religion, paying, however, a respect to the sultan of Constantinople, of whom he calls himself "the bow-bearer." Everything that the khan eats or drinks is first tasted by the vizier and his attendants, and an hour elapses to judge of their effects (poisoning being common) before they are sent him. Hence we may fairly suppose, with Sir A. Burnes, that the ruler of the Uzbeks seldom enjoys a fresh-cooked dinner. The present khan, Nussur Oollah, came to the throne in 1829, after the dispute which ended in his putting to death *five* of his brothers! He is about 40 years of age; and, notwithstanding his frightful proceedings, is said to be just, liberal, and strict in religious observances, though bigoted. (Burnes.) The *kosh beges*, or vizier, has great influence, and his high office has seemed lately to have become hereditary in his family: all the local governments are at present filled by his dependants or nominees. Every town or village is ruled by moolahs, the descendants of the first caliphs, and, excepting the khan, the vizier, and priesthood, there is no other body having any weight in the country: there are no subordinate khans, nobles, or rajahs, as in Caubul or India; nothing, in short, bearing any semblance of a feudal aristocracy. The court displays no magnificence; the same system of government has existed in Bokhara from the earliest ages of Mohammedanism. The *towns*, or districts, are governed by *hakims*, who are in direct communication with the khan; each is assisted by three functionaries, viz., a superintendent of police, a receiver of imposts, and a secretary. All the chief towns have a *cadi*, or judge; the smaller ones only a commissary of police: the *cadi* is assisted by a mufti, and in the capital by two: the police is strict and efficient, and the roads in the interior are free from robbers.

*Justice* is summary and severe; guided wholly by the Koran, and often capricious and contradictory; but nowhere in Asia is there so much protection afforded to all classes. The most trivial offences are punished with death; fines, imprisonment in dungeons, and blows, are also employed. Burnes relates that, though tobacco be publicly sold without prohibition, to be seen smoking it subjects the party to severe punishment. Meyendorff says, that a Jew, who had sold brandy to a Cossack, was imprisoned by order of the police commissary; his family fined 50 *tillas* (about £33), and himself beaten with 60 strokes of a club. This punishment is very severe, for the blows are often given on the stomach, and 75 strokes are equivalent to capital punishment. Another mode of torture consists in shutting up a criminal in a room with stinging insects, which destroy him in a day or two.

The *armed Force* consists of about 20,000 horse and 4000 foot; levied from the different provs., but without discipline; independent of a militia of 50,000 horse, 10,000 of which are from Balkh and the countries S. the Oxus; and which are seldom called on to serve, and when embodied receive no pay. The regulars are paid in grain, each soldier receiving 8 maunds of 256 lbs. yearly; their chiefs have assignments of land. The regular force consists wholly of Uzbeks, who, though not good soldiers, are superior as irregular cavalry. They are armed with curved sabres, long knives, and heavy spears 20 feet in length, with a short blade: some wear a short coat of mail, a helmet of iron, or a round shield of buffalo hide; the infantry carry matchlocks, but use them very indifferently. There are no native artillerymen; the artillery consists of forty-one field pieces, which lie neglected in the citadel at Bokhara. Few troops are drawn from the S. of the Oxus; the Arabs are good soldiers, but the Turkmenians cannot be coerced.

*Religion.*—The people are all Bonnite Mohammedans; their religion has great influence over all their usages; and the intolerance of their sect causes incessant hatred towards their Shiite neighbours, the Persians. Intolerance and bigotry are among the most prevalent national vices, and no religion other than the national one may be publicly professed; though the Jews find means to avoid the injunction. Daily public prayer is enjoined, and in the capital nothing is allowed to be sold during the hour so employed; and the police officers expel with whips persons then exposing their merchandise in the markets. There are colleges at Bokhara, but theology alone is studied, and proselytism is greatly encouraged by the government. Astrology is honoured highly, for superstition is very prevalent; magic is firmly believed in, and its origin referred to India.

*Public Education.*—Bokhara itself for a long period was considered a learned as well as a holy place; Timour and Baber encouraged literature; which has, however, greatly declined since the Uzbek conquest. Notwithstanding a great number of colleges in the capital, and schools in the country, most of the population know neither how to read or write. The children of the Tadjiks acquire these branches, and some knowledge of figures, to serve them as merchants, since they are very rarely members of the chief

## BOKHARA.

clergy: the sons of the most opulent persons generally learn only to read, write, and get the Koran by heart. Still a respect for knowledge and its professors is generally prevalent: to found schools is an act of piety, as well as to feed poor scholars; and these often come uninvited and unknown to the *ménages* of the rich, and receive money. Geography, astronomy, history, and medicine are, as may be expected, in a very low state.

*Habits. Dresses, &c.*—The diet of the people is very simple: after morning prayers, they take tea, mixed with milk, salt, and oily substances, of which mixture they are very fond. At 4 or 5 o'clock they dine, on rice, carrots, turnips, &c., with mutton, or other meat. The Uzbeks sometimes eat horseflesh, but it is expensive; cheese, milk, and fat, are much used; a sheep is killed, and the entire tail, however large or fat, is melted up with the meat, and cooked in a single boiler. Immediately after dinner they take tea, prepared as in Europe; coffee is not used. They eat with their fingers, knives and forks being unknown. Drunkenness, if public, would be perhaps punished even with death.

*Dress*—of the men, is one or two long robes of cotton cloth; the under longer than the upper; and a white cotton turban; or among the Uzbeks, a cap of red cloth, bordered with marlene skins: here, as well as at Constantinople, the form of the head-covering indicates the distinctions of rank. All wear large white trousers, and close short drawers: the rich public functionaries are often habited in Cashmere shawls, and cloth of gold. The dress of the women differs little from that of the men; they wear the same pelissas, but the sleeves are tucked together, and tied behind; richly decorated boots; and have always a black veil over the face: the Turkman women are, however, not veiled. Both sexes often stain the nails red with henna, and the Persians use this herb to dye their beards; the women braid their hair, and blacken their eyelids and eyebrows with plumbago. The languages in use are the Persian and Turkman; the latter is spoken by the Uzbeks, and wandering tribes S. of the Oxus, and is remarkable for its rudeness. The articles of luxury in use are very few; their dress and houses constitute nearly all the personal property of the people; their houses are ill built, almost destitute of furniture; they have neither plate, glass, nor clocks, and very seldom a watch. The rich have many slaves, who are brought from Orgunjé, and are mostly Persians, seldom Russians or Chinese.

*History.*—Alexander penetrated into both Bactriana and Transoxiana, which were after his death ruled by his successors. The Arabs conquered this country at the end of the 7th, or in the early part of the 8th, and Jenghiz Khan devastated it in the 13th century: it was the native country of the next great eastern conqueror, Timour, whose successors were dispossessed, by the Uzbeks, in the beginning of the 16th century. Nadir Shah, early in the 18th century, took Bokhara; but the government soon after fell again into the hands of the Uzbeks and of the descendants of Jenghiz: that family has, however, ceased to reign since 1800. The late khan devoted himself wholly to religion, and died in 1825, leaving a kingdom that had suffered insults and encroachments on every side, from his own want of attention to temporal concerns. The present sovereign, his son, is on amicable terms with the neighbouring states of Khiva and Cabul, and the empires of China and Turkey: with the Persians the Uzbeks hold no communication; and in Kokan the influence of Russia predominates. (*Burnes's Travels in Bokhara in 1833-1834*, 3 vols. 8vo, 1835; *Meyendorff, Voyage d'Orenbourg à Bokhara*, Paris, 1826.)

**BOKHARA** (*the treasury of sciences*), a celebrated city of Central Asia; capital of the above *khanat*, and seat of the khan; on the left bank, and within 6 or 7 m. of the Zer-afshan, at the W. end of its valley; 115 m. W.S.W. Samarcand, and 350 m. N.W. Balkh; lat. 36° 48' N., long. 64° 29' E. Pop. (*Burnes*, 1835) 150,000, but this is probably beyond the mark. It is 8 m. in circ.; of a triangular shape, and surrounded by a wall of earth about 20 feet high, flanked by round towers and bastions, and pierced by 12 gates, with brick masonry. Bokhara is surrounded by a flat but rich country, and is quite embosomed in trees, giving it a beautiful appearance at a distance, which, however, vanishes on entering it. The streets are so narrow that a laden camel fills up even the largest, and in the smaller ones two persons have difficulty in passing each other: they are also extremely dirty, and always crowded with camels, horses, and asses. The houses are mostly small, and of one story; the common ones built of sun-dried bricks, on a frame-work of wood; others of a superior kind are painted and stuccoed, with Saracenic or pointed arches set off with lapis lazuli and gilding; the roofs of all are flat; and they have but a bare wall without windows facing the public ways: except in one building, there is no glass whatever. About 100 ponds and fountains, constructed of squared stone, furnish the population with water: the city is also intersected by canals shaded by mulberry-trees, which bring water from the Zer-afshan; the main canal from which is opened ev-

ery fifteen days. There is scarcely a garden or burying-ground within the walls; "the traveller winds his way among lofty and arched bazars of brick, and sees each trade in its separate quarter of the city: here the chintz-sellers, there the shoemakers; one arcade filled with silks, another with cloth. Everywhere he meets with ponderous and massy buildings, colleges, mosques, and lofty minarets." The principal structure is the *Azeri*, or khan's palace, nearly in the centre of the city, built on a natural elevation between 350 and 300 feet high, surrounded by a brick wall 70 feet high, with a lofty entrance of brick decorated by a minaret on either side. This fortress contains the residence of the sovereign, his harem, and a mosque, all encircled by a garden, together with the residence of the vizier, and his public courts of audience; stables, barracks, &c.: the gates, both of the palace and of the outer city, are shut at twilight, and a double guard mounted. There are 360 mosques, and 366 schools and colleges in Bokhara, superintended by about 300 moollahs, who undertake the charge of both religion and education; Bokhara always enjoyed the titles of holy and learned. The mosques and colleges are generally situated opposite each other, and have a striking resemblance in their architecture: that of the former is the most varied; the principal mosque covers a space 300 feet square, and has a cupola rising to one third that height, and covered with blue enamelled tiles: most of these buildings are of brick, and the courts of some paved with stone. The handsomest structure in Bokhara is a college of King Abdolla, built in 1650, which has a lofty arched entrance, some beautiful enamel, and a white marble pavement: the largest college here was built at an expense of 40,000 roubles in specie, destroyed by Catherine II. of Russia. Attached to the great mosque is a brick tower, or minaret, 210 feet high, built by Timour, in good proportions; the materials disposed in ingenious patterns, and the whole in good preservation. Criminals are thrown from this tower; but, excepting on these occasions, no one ascends it but the high priest, to call the people to prayers; and he only on Fridays, since it overlooks most of the private gardens in the city, and the most scrupulous endeavours are made to seclude the women in Bokhara from the gaze of every stranger. W. of the palace is a small square, the Segistan, surrounded with massive buildings, colleges, shops, and stalls; a third part of the city consists of shops and hotels: and the jewellery and cutlery of Europe, the tea of China, the sugar of India, the spices of Manilla, the shawls of Cashmere, and every other article of use or ornament, may be purchased. Many of the merchants remain night and day in their shops, having no other habitation; the bazars are generally open every day, excepting those for slaves, gems, and other such luxuries, which are open but twice a week. There are 4000 Jews in Bokhara, which is proportionally more than in any other eastern city, and they contend they are better treated here than elsewhere, though they are confined to a residence in three particular streets, are subject to high imposts, and not permitted to build a new synagogue. Sir A. Burnes gives a graphic description of the daily scene in Bokhara (*Travels*, II., 237-239): "From morn to night the crowd which assembles raises the humming noise, and one is stunned at the moving mass of human beings. In the middle of the area, the fruits of the season are sold under the shade of a square piece of mat, supported by a single pole. One wonders at the never-ending employment of the fruiterers, in dealing out their grapes, melons, apricots, apples, peaches, pears, and plums, to a continued succession of purchasers. It is with difficulty that a passage can be forced through the streets, and it is only done at the momentary risk of being ridden over by some one on a horse or donkey. The latter animals are exceedingly fine, and amble along at a quick pace with their riders and burdens. Carts of a light construction are also driving up and down, since the streets are not too narrow to admit of wheeled carriages. In every part of the bazar there are people making tea, which is done in large European urns, instead of teapots, and kept hot by a metal tube. The love of the Bokharese for tea is, I believe, without parallel: for they drink it at all times and places, and in half a dozen ways: with and without sugar; with and without milk; with grease; with salt, &c. The day is ushered in with guzzling and tea-drinking, and hundreds of boys and donkeys, laden with milk, hasten to the busy throng. The milk is sold in small bowls, over which the cream floats: a lad will bring 20 or 30 of these to market in shelves supported and suspended by a stick over his shoulder. Whatever number may be brought, speedily disappear among the tea-drinking population of this great city. Next to the vendors of this hot beverage, one may purchase '*raakut i jan*,' or 'the delight of life,' grape jelly, or syrup mixed up with chopped ice. This abundance of ice is one of the greatest luxuries in Bokhara, and it may be had till the cold weather makes it unnecessary." It seems to be as available, and used as much by all classes, as in Sicily; no one in Bokhara ever thinks of drinking water unless iced.

## BOLBEC.

The learned, or would-be-learned, are seen poring over the tattered pages of Tooke or Persian lore, at book-stalls, and at the doors of the colleges the students are often seen lounging after the labours of the day; "not, however, so gay, or so young, as the tyros of a European university, but many of them grave and demure old men, with more hypocrisy, but by no means less vice, than the youths in other quarters of the world." Each of these resident students has a fixed allowance, as well as the professors; the colleges are well endowed, and possess many of the surrounding lands, which have been purchased by pious individuals for that purpose, as well as the whole of the bazar and baths. The baths, of which there are eighteen, can accommodate 270,000 people yearly, and bring an annual revenue of £1800: some are very large. The colleges are shut for six months in the year, when the students work in the fields for a subsistence; their course of study generally lasts seven or eight years: they come from all the neighbouring countries except Persia. "With the twilight, the busy scene in Ekshara closes, the king's drum beats, it is re-echoed by others in every part of the city, and at a certain hour no one is permitted to move out without a lantern. From these arrangements, the police of the city is excellent; and large bales of cloth are left on the stalls at night with perfect safety. All is silence until morning."

The origin of Bokhara is uncertain, but it is believed to have been at first but a collection of fishermen's huts, its site having abounded with small lakes. It is supposed to be at no great distance from the ancient *Triplicetra*, but which Ptolemy places on the opposite side the *Zer-afshan*, or river of Bogliana; in A.D. 705 it was taken by the Arabs, and between 698 and 990 was very flourishing, and the seat of the Samanide dynasty. Jenghis Khan burned it in 1219, and it was threatened, but saved, by his grandson. Under Timur it flourished anew, but since the rule of the Uzbeka has rather declined, though it is still the most renowned city in Central Asia. Its priests affirm that while light descends to all other parts of the world, it ascends from the "holy" Bokhara. (*Bureau's Travels*, i, 222-261; *Meyerdorf's Voyages*, p. 164-183.)

BOLBEC, a town of France, dep. Seine Inférieure, cap. cant. at the foot and on the declivity of a hill washed by the Bolbec, 18 m. E.N.E. Havre. Pop. 9608. This is a handsome thriving town. Having been almost entirely burned down in 1763, it was rebuilt on a regular plan. Houses partly of brick and partly of hewn stone; streets wide and well laid out, the principal being ornamented with two fountains surmounted by statues in marble. In the environs are a number of country-houses. It has a chamber of commerce, and a council of prud'hommes; and was early, and is now, very extensively engaged in the spinning and manufacture of cotton. "Bolbec," says M. Dupin, "is advantageously situated for commerce, bringing raw cotton from Havre, and coal from Fecamp and Harfleur, while she sends her products to Rouen—the great mart for all sorts of cotton goods. The manufacturers of Bolbec unite a spirit of order and economy to activity and enterprise: their establishments are on a level with the progress of industry. The workmen are not all concentrated in the town; many of them live in the adjoining country; they are in comfortable circumstances and happy." M. Dupin farther states, that there were, in 1827, in the district of which Bolbec is the capital, 18,178 work-people employed in the spinning and weaving of cotton, producing goods of the annual value of above 25,000,000 fr., or £1,000,000 sterling. (*Annales Productives et Commerciales de la France*.) Exclusive of cotton, it also produces various descriptions of woollen and linen goods, and has tanneries, dyeworks, &c. There is here no local tax or octroi on the goods imported into the town. (*Hugo, art. Seine Inférieure; Dict. Géog.*, &c.)

BOLGARY, or OUSPENSKOI, a village of Russia in Europe, gov. Kasan, near the Volga, 16 m. S.W. Spask. In its vicinity are the ruins of the ancient city of Boulghar, the capital of the Bulgarians. It was visited by Peter the Great in his expedition against the Persians in 1722, and has since been visited and described by Erdmann and others.

BOLI, a city of Asiatic Turkey, in Natolia, cap. sanjak, 88 m. N.W. Angora; lat. 40° 36' N. long. 33° 19' E. Pop. 6000? It is situated on an eminence at the W. extremity of a rich and fertile plain, on or near the site of the ancient city, known to the Romans by the name of *Hadrinopolis*. The ruins of a castle stand on the summit of a small hill. It is a poor place, consisting of about 1000 houses, principally inhabited by Turks, with a few Armenians, but no Greeks. It has 12 mosques, a square or market-place, a public bath; is the residence of a pacha of two talls, and, as it lies on the direct road from Erzeroum to Constantinople, is a considerable thoroughfare for caravans. There are mineral baths within about four m. of the town, to which the Turks resort in great numbers. (*Ritter's Journey in Asia Minor*, &c., p. 271.)

## BOLIVIA.

BOLIVAR, county, Miss. Situated in the W. part of the state, and contains 1700 sq. m. Bounded W. by Mississippi river. Watered by Sunflower r. It contained in 1840, 2414 neat cattle, 173 sheep, 2605 swine; and produced 48,350 bushels of Indian corn, 5015 of potatoes, 27,145 pounds of cotton. It had one school, 14 scholars. Pop.: whites, 384; slaves, 971; free-coloured 1; total, 1356. Capital, Bolivar.

BOLIVAR, p. t., Alleghany co., N.Y., 15 m. E. Angelica, 265 m. W.S.W. Albany, 212 W. It contains two stores, one fulling-mill, one grist-mill, three saw-mills, one school, 27 scholars. Pop. 406. The village has one store and about twenty dwellings.

BOLIVAR, p. v., capital of Hardeman co., Tenn., 162 m. S.W. Nashville, 847 W. Situated on the E. side of Hatchy river, a mile and a half distant from it. It contains a court-house, jail, three churches, one Methodist, one Baptist, and one Episcopal; two academies, and about 500 inhabitants.

BOLIVAR, p. v., capital of Polk co., Mo., 139 S.W. Jefferson city, 1068 W. Situated near a branch of Pomme de Terre river. It contains a court-house, jail, a Methodist church, and about 150 inhabitants.

BOLIVAR, p. v., capital of Bolivar co., Miss. Situated on the S.E. bank of Mississippi river, near the outlet of Lake Bolivar.

BOLIVIA, or UPPER PERU, a republican state of S. America, comprised between lat. 9° 30' and 25° 40' S., and long. 56° and 71° W., having N. and N.W. the states of North and South Peru, E. Brazil and Paraguay, S. La Plata and Chile, and W. the Pacific ocean: extreme length, N. to S., above 1100 m.: do. breadth, above 750 m.: the area has been estimated at 316,000 sq. m. Popp. estimated the pop. at 1,200,000, but others estimate it at little more than half that amount. The *Weimar Almanac* gives the following statement, which, however, we rather incline to think, makes the population greater than it should be:

| Departments.               | Area in sq. m. | Pop.      | Chief Towns.              | Inhab.  |
|----------------------------|----------------|-----------|---------------------------|---------|
| 1. La Paz                  | 80,565         | 380,000   | La Paz                    | 65,000  |
| 2. Oruro                   | 5,400          | 80,000    | Oruro                     | 5,000   |
| 3. Potosi                  | 81,820         | 320,000   | Potosi                    | 24,000  |
| 4. Cochabamba              | 66,180         | 320,000   | Cochabamba                | 25,000  |
| 5. Chuquisima              | 24,844         | 176,000   | Chuquisima                | 12,000  |
| 6. Santa Cruz de la Sierra | 148,400        | 26,400    | S. Lorenzo de la Frontera | 30,000  |
| Total                      | 316,000        | 1,080,000 |                           | 123,000 |

Chuquisima is the capital city and seat of government.

*Surface, Mountains, &c.*—This large tract of country presents, in its various divisions, very different conditions of surface, elevation, and climate. On the W. it is traversed by lofty mountains, while on the E. it stretches out into immense plains. The Andes, which enter Bolivia at its S. extremity, give off, near lat. 24°, a lateral E. range of no great elevation, which forms the boundary for a considerable distance between Bolivia and La Plata. About lat. 20° the Andes divide into two great chains, which run parallel to each other between lat. 14° and 15° S., where they again unite. The farthest W. of these chains is called the Cordillera of the Coast, or of the Andes, and the farthest E. the Cordillera Real: including the intermediate country, they occupy a breadth of more than 330 m. N. of lat. 16°, and S. of that parallel of upwards of 300 m.; and cover at least 100,000 sq. m. of surface, which, however, is partly in Peru. Many lateral ridges, sent off by the Cordillera Real, cover the depts. of Cochabamba and Chuquisima, together with a part of those of Potosi and St. Cruz de la Sierra: the principal of these transverse ridges branches off from the Cordillera about lat. 17° 10', and, running N. past the city of Cochabamba, terminates within a few leagues of the town of St. Cruz de la Sierra. The summits of the W. Cordillera generally appear in the form either of a truncated cone, or of a dome, and are often volcanic: those of the E. Cordillera, as seen from the W., offer a succession of sharp, ragged peaks and serrated ridges, and are not volcanic, but in many parts highly metalliferous. The declivity of the Bolivian Cordillera is rapid on either side, but particularly so on the E.: the principal elevations of both Cordilleras are about lat. 15° 19' S., where that of the E. chain is 24,200 ft. (Illimani); of the W. 23,000 ft. above the level of the sea. Many of the passes across both chains are between 15,000 and 16,000 ft. in elevation, or near the limit, in this region, of perpetual snow; while beneath the peaks of the Illimani there is a gorge, or valley, perhaps 18,000 ft. below the neighbouring summit, probably the greatest difference in elevation that has ever yet been observed between any two similarly contiguous points. (*See Andes*.)

In the E. the country, which is, in many parts, very little above the level of the sea, is watered by the Beni, Mamore, Ubahy, Pico-Mayo, and other considerable rivers: a few isolated ranges of hills are scattered over it, and in its

## BOLIVIA.

E. part is the watershed between the sources of the Amazon and La Plata rivers, both of which receive considerable affluents from Bolivia; but neither this last-named tract, nor the isolated hills previously mentioned, appear to rise to any great height above the sea. The whole region is extremely fertile; but it is nearly in a state of nature, and covered with vast primeval forests. The desert of Atacama (see ATACAMA) occupies the country between the Andes and the Pacific: it extends for about 250 m. along the coast, having a variable breadth of from 30 to 60 m. It is never refreshed by rain, and is almost as sterile and worthless as the Sahara. The surface, which is undulating, and in parts hilly, is covered with loose sand; the only habitable parts being the narrow strips along the banks of the rivers.

There are numerous valleys in the Andes; the principal is the great valley of Desaguadero between the two Cordilleras, extending from lat.  $15^{\circ} 5'$  to  $19^{\circ} 39'$  S., having an area (including the lake of Titicaca in its N. part) of 16,000 geographical sq. m.

**Rivers, Lakes, &c.**—The principal rivers are the Beni, Mamore, and the others which unite to form the Madeira, the largest affluent of the Amazon, and which runs mostly in a N. direction; and the Pilcomayo, one of the chief branches of the Plata, which waters the E. part of the country, flowing mostly in an E. direction. Bolivia includes the E. and S. shores of the largest accumulation of fresh water in the S. American continent—the lake Titicaca, which occupies an area of 4000 sq. m., at the height of 12,736 ft. above the ocean, an elevation superior to that of the highest summits of the Pyrenees. (See TITICACA.) It contains numerous small islands, from one of which, celebrated for some Peruvian ruins, it derives its name: the only outlet for its waters is the river Desaguadero, running from its S.W. extremity through the valley to the lake of the same name; which latter, having no outlet, is kept at the same level by spontaneous evaporation. In the E., lakes are numerous, and some of them, as those of Uruy and Grande, 30 or 60 m. in length; but they have been little explored by Europeans.

**Climate.**—Rain, as already stated, never, or but very rarely, falls on the coast; in the plains to the E. of the Andes, the rainy season, which is identical with summer, lasts from Oct. to April, during which the rains are almost continuous, and the rivers inundate the country to a great extent. In the plains the climate is excessively hot, and far from healthy; but in the valley of the Desaguadero, 13,000 ft. above the level of the sea, it is temperate, and snow falls in Nov. and April, at the beginning and end of the summer season. The winter, from May to Nov., in the Desaguadero valley, is extremely dry, and although the nights are cold, the sky is serene and cloudless. Tremendous hail and thunder-storms are frequent on the mountains, and earthquakes on the coast. The reflection of the sun on the snow produces, in the higher regions in winter, a temporary blindness: few remarks as to comparative salubrity have met our eye, but the banks of the Beni have been particularised as remarkably healthy.

**Minerals.**—Gold is found in many places, especially on the E. declivity of the E. Cordillera, and in the sands of all the rivers which fall from that range into the Beni or its branches. Every one has heard of the riches of the silver-mines of Potosi, but it is supposed that they are nearly exhausted, and, at all events, they are now comparatively neglected. (See POTOSI.) Copper abounds at Coracueru, &c.: ores of lead and tin, salt, brimstone, nitre, and other volcanic products are also found.

**Vegetables.**—The mighty forests which cover the banks of the E. rivers abound in the finest timber, fit for every purpose of ship-building, carpentry, &c. The cocoa of Guyabamba, Moxos, &c., is infinitely superior to that of Guayaquil (Ecuador): it is used by all classes, and is celebrated for its nutritious and restorative qualities. Tamarinds, the chirimoya, oranges, lemons, figs, sugar-cane, pine-apples, plantains, &c., flourish in profusion on the banks of the Beni.

Cascarilla, indigo, cotton, rice, coffee, grain, cinchona, copaliba, mesquite, and other valuable drugs: gum-elastic, vanilla, dye-woods, tobacco, and canes of various kinds, are all produced in an extraordinary abundance E. of the Andes. Among other products, there is a species of cinnamon, called *canela de clase*, said to differ only in the greater thickness of its bark, and darker colour, from the true cinnamon. The vegetation of the Desaguadero valley is peculiar: it has no trees, but the lower districts, if uncultivated, are covered with a very fine turf. There are here extensive plantations of quinoa (*Chenopodium quinoa*, Linn.), and of potatoes, which are found wild on the adjacent hills; but it does not ripen the drier European grains, nor are there any peculiar seasons for sowing or harvesting, both these operations being carried on consecutively. In the narrow strips of land along the rivers that run through

the desert of Atacama, maize is raised, with excellent fruits, cotton, sugar-cane, and the plant called *Arundo donax*.

**Animals.**—The tapir, jaguar, leopard, and six or seven sorts of monkey, inhabit the banks of the Beni: guanaco, alpaca, a kind of hare, and a small animal of the family of *Reodontia*, whose burrowing often renders travelling on horseback unsafe, are found in the Desaguadero valley. Parrots, a bird of beautiful plumage, as well as a multitude of singing birds, including the thrush and whistler; several kinds of turkeys, &c.; several species of *Amphibia*, and an abundance of fine river fish, are met with in Bolivia: the E. plains are infested with myriads of annoying reptiles and insects. Vast herds of horned cattle feed on the banks of the rivers; horses, asses, and mules, are the other domestic animals: the climate of the plains is too hot for sheep.

**People.**—More than three fourths of the inhab. are said to be aboriginal Indians, who are divided into a great variety of tribes, presenting considerable differences in their physical and mental endowments, disposition, progress in civilisation, &c. Some, on the Beni, are wild and warlike, and go naked, even the women wearing nothing but a few leaves tied round the waist; another tribe, the Maropas, in the immediate vicinity of the former, although also a warlike and proud race evince considerable ingenuity and aptness for many sorts of work: they manufacture beautiful cloths; are pretty good carpenters; and are said to show a marked taste for music and painting, in which they were initiated by the Jesuits. The Indians are excellent sailors on their own rivers, and very dexterous in the management of their canoes, which are often 60 or 60 ft. in length, and of considerable burden; in these they frequently make long inland voyages, subsisting wholly on the wild animals and vegetables they may happen to meet with. Some of the Montene tribes on the Beni display a remarkable acquaintance with the medicinal qualities of plants, which they administer in cases of sickness. These, as well as some other tribes, are peaceable, friendly to strangers, and free from superstition. Not a few Indians, especially in the Desaguadero valley, and on the coast, where the Quechua language is spoken, have been converted to the Catholic faith; such as have embraced Christianity, instead of going naked, or leading a roving life, wear a light dress of cotton, have fixed dwelling-places, and apply themselves to agricultural pursuits, though in these they are said to make but little progress. The foreign settlers are mostly of Spanish descent in the mining districts, and the valleys of Cochabamba and Cacha Pileho: those of the pure African race are few; but those of mixed blood are numerous on the coast.

**Manufactures** chiefly consist of cottons, the best of which are made at Orpessa; woollens of the hair of the llamas and alpacas, the best at La Paz; hats of the wool of the vicuña, at St. Francisco de Atacama; glass at Orpessa; vessels of silver wire in the mining districts; fans, parasols, plumes, &c., of the feathers of the American ostrich, by the Indians.

**Commerce.**—The commerce of Bolivia is at present very inconsiderable. This does not arise so much from the low state of industry, or the apathy of the people, as from the difficulties they have to encounter in bringing their produce to market. They have not yet learned to avail themselves of the means afforded by the great rivers of S. America for opening an intercourse with the ports on its E. shore. At present, nearly all the commodities brought from Bolivia to Europe come through the ports on the Pacific, to reach which they have to be conveyed first by toilsome passages against the currents of the rivers to the foot of the Cordillera, so fatal by its rigorous climate to the Indians of the plains, and then across the Andes, the passage of which has been considered by Condamine as equivalent to 1000 leagues of transport by sea. The country W. of the Andes, besides being a desert, has no really good harbours, and is traversed by but one road, that from Oruro to Cobija (the only Bolivian port), and that is practicable only for mules and llamas. Cobija, though it has been made a free port, is, owing to these disadvantages, little frequented, the Bolivians preferring to obtain their small imports of foreign commodities through Arica and Tacna, notwithstanding they are there charged with a transit duty of 3 per cent, imposed by the government of Lower Peru, through whose territory they have to pass. The products of Chiquitos and Moxos are transported over the double range of the Andes to Lima, a distance of more than 900 leagues; or if sent to Europe by way of Buenos Ayres, the distance, not to speak of the difficulties of the road, cannot be calculated at less than 600 leagues. Nothing but ballion and gams can repay the enormous expenses of transport on beams of burden over such immense distances; and, in fact, the exports of Bolivia are nearly altogether limited to the precious metals, and different kinds of woollens and hats.

## BOLKHOF.

The imports, which are very few, are chiefly iron and hardware, silk, and a few articles of luxury.

But, notwithstanding this unfavourable state of things, the E. and most fertile portion of Bolivia is traversed by the Madeira, and other navigable affluents of the Amazon, on the one hand, and by the Pilcomayo, and other affluents of the Paraguay on the other; so that, if the extraordinary facilities which these great rivers afford for penetrating into the interior of S. America, be ever made use of, the products of Bolivia will meet with a ready and advantageous outlet; and her all but boundless capacities of production, which, at present, can hardly be said to be in any degree availed of, will receive a stimulus, of the influence of which we can form no adequate idea.

Within the Brazilian dominions, not very far from the Bolivian frontier, a short break, of 3 m. only, separates a tributary of the Amazon from one of the Plata river: were these streams connected by a canal, there would be a continuous water communication, for the most part navigable, through the heart of S. America, from Buenos Ayres in lat. 35° S., to the mouth of the Orinoco, in nearly 9° N! In 1835 the Bolivian government were represented as endeavouring to promote internal traffic, by offering grants of land to persons settling, and considerable premiums for the establishment of steam navigation on the S. affluent of the Amazon; but we have not learned whether these have had any considerable success.

The public revenue in 1832 is said to have amounted to 1,700,710 dollars; the public expenditure to 1,386,090 dollars; and the total public debt in the same year to no more than 1,500,000 dollars.

The standing armed force is limited to 9000 men; the country is divided into three bishoprics, but there is no established church. There is a university in the capital and other public academies.

*History, Constitution, &c.*—This country, under the name of Upper Peru, formed, previously to the battle of Ayacucho in 1824, a part of the Spanish viceroyalty of Buenos Ayres. The republicans, under Gen. Sucre, having then defeated the royalists, the independence of the country was secured. Its present name was given to it in 1825 in honour of the liberator Bolívar, who, on being requested, drew up a constitution, which was adopted in the year following. This constitution, which was exceedingly complicated, vested the executive power in a president for life, with the privilege of naming his successor; and the legislative functions in three bodies, a senate, tribunes, and commons. The code and constitution of Bolívar were soon after abandoned; but the legislative powers, are still, nominally at least, vested in the three bodies above named; and the executive power is in the hands of a president. Generals Sucre, Velasco, and Blanco, successively filled this last office, which is at present held by Gen. Santa Cruz elected in 1829. (*Pemland, Perish, Miller, Hatake, &c.*, in *Geogr. Journal*, v. vi. &c.; *Mod. Trav.*, xviii.; *American Almanac*, 1839, &c.)

**BOLKHOF**, a town of Russia in Europe, gov. Orel, cap. distr., on the Nougra, 36 m. N. Orel. Pop. said to exceed 10,000. It is well built of wood, has numerous churches, with manufactures of hats, gloves, and stockings, and a considerable trade in hemp, linseed oil, tallow, and hides. (*Schmittler, La Russie*, &c., p. 352.)

**BOLLENE**, a town of France, dép. Vaucluse, cap. cant., 24 m. N. Avignon. Pop. 4744. It stands on the declivity of a hill, and has filatures of silk and dye-works. Various remains of antiquity have been found in the vicinity.

**BOLOGNA** (an. *Bononia*), a city of N. Italy, the second in rank in the Papal States, cap. leg. same name, between the rivers Reno and Savena, on the verge of the valley of the Po, and at the foot of the hills forming the commencement of the Apennine chain; lat. 44° 30' N., long. 11° 29' E.; 92½ m. S.E. Modena, 25 m. S.W. Ferrara, and 360 ft. above the level of the Adriatic. It is nearly 1½ m. in length (1500 toises) by 1½ m. in breadth (1073 toises), and 4 m. in circ.; it is walled; and divided into four quarters. Pop. 69,000. Except one square, it is indifferently built; streets crooked and narrow; houses mostly three stories high, in a palace style of architecture, chiefly of brick fronted with stucco, with deep projecting roofs, and generally surrounded with arcades. The *Piazza Maggiore*, or principal square, boasts of many fine buildings; among them are the *Palazzo Publico*, the residence of the cardinal legate, and seat of the courts of justice: in the centre of the square is a fountain, adorned with a statue of Neptune, reckoned one of the best modern statues in Italy, the work of Giovanni di Bologna. In the middle of the city stands the two leaning towers, inclining in different directions: that of Asinelli, 320 ft. high, inclines about 3½ ft.; Garisenda, 145 ft. in height, 8 ft. It is said that from the top of the former 103 cities may be seen. Bologna has 74 churches, 85 convents for monks, and 36 for nuns. The cathedral,

## BOLSENA.

built A.D. 426, has the meridian line by Cassini traced on its floor, and possesses an Annunciation (the last work of Lodovico Carracci), and other fine paintings. The church of Madonna di San Luca, 3 m. distant, has a covered walk to it the whole way from the city. The university, one of the oldest and most celebrated in Italy, owes its origin to the Emperor Theodosius, A.D. 425, and was restored by Charlemagne; it has a library of 150,000 vols., and was formerly attended by many thousand students; but it has declined in celebrity, and at present is not attended by above 1000. There is another public library, the legacy of a clergyman, containing 63,000 vols. and 4000 MSS.; there are also cabinets of mineralogy, natural history, and other physical objects; academies of sculpture, science, music, and the fine arts: the whole city abounds in pictures, statues, and other works of native artists. There is a public school for the poorer classes, where the rudiments of education, with Latin, arithmetic, singing, drawing, &c., are taught gratuitously; 9 hospitals; a *monte di pietà*; and many other beneficent institutions. The manufacture of crapes, for which the city has been long famous, and which was at one time very extensive, has now declined, so as not to be worth more than 30,000 crowns a year. There are also manufactures of silk, glass, sulphuric acid, nitric dyes, kid gloves, wax candles, musical instruments, paper, &c., *mercatelle* or fairs, celebrated all over Europe, &c., &c., exclusive of preparations of wine, oil, hemp, flax, and other natural products, &c. Bologna is an archbishop's see, and has been so since the 4th century. The city and leg. are at present governed by a resident cardinal-legate; the court of appeal for the four provinces of Bologna, Ferrara, Ravenna, and Forlì, sits here, and consists of six judges. The Bolognese are courteous and affable, independent, and remarkable for their love of liberty; industrious, quick, ingenious; ardent alike in their friendships and enmities; the women handsome. The middle classes are well informed; they are fond of the casinos, or reading-rooms, conversational, and theatre, of which there are three. The higher classes are wealthy; the lower bold, turbulent, and noisy. The prevailing dialect is not in use elsewhere; there is a tendency to pronounce words with masculine terminations, and in other respects it is the closest in Italy. The proportion of illegitimate births is as 1 to 7. No Italian city, Florence excepted, has produced so many celebrated men in science and the fine arts. Bologna always assumed the title of "learned," and had the motto *Bononia doctus* on its money and public buildings, as well as the word *libertas*. It has given birth to 8 popes (including Benedict XIV.), nearly 900 cardinals, and to more than 1,000 literary and scientific men and artists; among them the naturalists Galvani and Aldrovandi; the anatomists Mondino and Malpighi; the astronomer Maraldi; the mathematicians Manfredi and Cantarini; the brothers Zanotti, Ghedini, and Guercino; and the painters Francia, Guido, Albano, Barbieri, Domenichino, the three Carracci, Zambecari, Aldini, &c. The air of Bologna is pure, but subject to sudden changes, which produce frequent inflammatory diseases. It is environs, both on the hills and in the plain, are studded with a number of country residences in a richly productive soil. For the natural productions of this region, see PAPAL STATES.

This city, originally built by the Etruscans, was anciently called *Feltria*; it was subsequently occupied by a Gallic tribe, the *Boii*, who designated it *Bononia*. It received a Roman colony A.U.C. 653. A Christian church was built here so early as the 3d century. Alaric besieged, but did not take it; it escaped Attila, and formed a part of the archbishopric of Ravenna. Pepin gave it to the Holy see, to which it belonged during the Carolingian dynasty; after which it was governed by its own magistrates; it was next governed by feudal nobles; but these having abandoned their pretensions, and been admitted as private citizens, it became a republic, extending its rule over all Romagna as far as Rimini. In the 13th century it fell again under the Holy see to which it was finally annexed in 1508. In 1796 it was taken by the French, but restored to the Pope in 1815, to which it still belongs; although at different periods revolts have occurred, especially one in 1831, suppressed by Austrian interference. (*Rampoldi Corografia dell'Italia*, p. 267; *Scholz, Allgem. Erdkunde*, xii., 426-440; *Bowring's Report on Statist. of Pontif. States*, &c.)

**BOLOTANA**, a town of Sardinia, bishopric of Alghero, 16 m. W. Bosa, near the centre of the island. Pop. 2374. It is situated on a hill, and the air is said to be good. The contiguous country is productive of corn and pastures. (*Smith's Sardinia*, p. 331.)

**BOLSENA** (an. *Vulturnum*), a town and lake (*Lacus Vulturnicus*) of the States of the Church, deleg. Viterbo, 11 m. W.S.W. Orvieto. Pop. 2000. The town stands near the N. shore of the lake, to which it gives its name. It is surrounded by a high wall, flanked with towers and a deep ditch; but it is remarkable only for the ruins, in or

# BOLTON.

near it, of the temple of the Etruscan goddess Nortia, a granite sarcophagus, ornamented with bas-reliefs, and other remains of antiquity. This was anciently a place of great wealth and luxury. Pliny says (*Hist. Nat.*, lib. xxiv., § 7) that when taken by the Romans, anno 906 B.C., it contained no fewer than 3000 statues. Having been destroyed by the conquerors and rebuilt, it was noted at a later period as the birthplace of Sejanus, the minister of Tiberius. The lake of Bolsena continues, as of old, to be surrounded by finely-wooded hills.

Antipath. memora. later. Jaga. Volatilis. — *Jus. Sat.*, lib. i, 181.

It is of an elliptical shape, about 12 m. long by 8 m. in breadth; its depth is various, but near the banks it is generally shallow; it is well stocked with fish. It has two islands, which, in Pliny's days, were believed to be floating. Its superfluous waters are carried off by the river Marta, to which it gives birth. The country round this lake is now become exceedingly unhealthy; a circumstance which has most probably occasioned the decay of Bolsena, as well as the total ruin of several other cities, that once gave life and animation to its banks. (*Cramer's Ancient Italy*, I, 281; *Cramer's Italy*, III, 84, and other authorities.)

BOLTON, or BOLTON-LE-MOORS, a flourishing bor. and manufacturing town of England, co. Lancaster, hund. Salford, par. Bolton, on the Croale, an affluent of the Irwell; 170 m. N.W. by N. London, 25 m. E.N.E. Liverpool, and 10 m. N.W. Manchester; lat. 53° 33' N., long. 9° 26' W. The progress of pop. has been as follows:

|                         | 1773. | 1801.  | 1811.  | 1821.  | 1831.  |
|-------------------------|-------|--------|--------|--------|--------|
| Bolton, Great . . .     | 4,568 | 12,549 | 17,070 | 32,037 | 35,490 |
| Bolton, Little . . .    | 1,096 | 4,976  | 7,079  | 9,266  | 12,606 |
| Towns with Hamlet . . . |       | 1,193  | 1,402  | 1,976  | 2,301  |
| Total . . .             | 5,664 | 18,523 | 25,551 | 32,973 | 43,397 |
| Bolton parish . . .     |       | 22,426 | 36,701 | 40,197 | 63,084 |

The appearance of the town scarcely corresponds with its real opulence and importance, a considerable portion of the houses being crowded in narrow irregular lanes, which are but indifferently paved and sewered. Within the last 30 years, however, great improvements have been effected, and are still in progress; flagged footpaths have been formed in most of the streets, and the whole town has been completely lighted with gas; 3 new squares have been formed; and a considerable number of handsome houses and villas have been erected, mostly near the S. entrance. It is well supplied with excellent water, from a reservoir covering an area of 15 acres, placed at such an elevation as admits of this indispensable fluid being conveyed into the upper rooms of every house in town. This important improvement was effected by a company, under an act obtained in 1824, at a cost of £40,000. The church, on an eminence at the E. end of Great Bolton, is a plain ancient structure with a low tower, built of the dark red sandstone of the district. There are besides this, three episcopal chapels of ease; two in Little, and one in Great Bolton: the last, an elegant Gothic edifice, built by the parliamentary commissioners in 1826, cost £13,400, and has 923 free sittings. The Methodists of various denominations, have seven places of worship; the Baptists, Independents, and Unitarians, have each two; and the Catholics, Friends, and Swedenborgians, one each. It has a free grammar school, founded in 1641, with an annual revenue of about £485; Alnsworth and Lempriere, compilers of the well-known dictionaries that bear their names, were masters of this school. Three other charity schools educate, in all, about 230 children, at an expense of £1200 a year, defrayed by subscription. The Sunday schools of the different sects educate upwards of 10,000 children. The other charities are—Gosnell's, which consists of lands producing £30 a year, 2-3ds of which is appropriated to a church lecturer, 1-6th to the grammar-school, the rest to the vicar; Hulton's lands and houses producing £277 a year, for a church lecturer, apprenticing poor boys, and providing a classical teacher; and various smaller ones, amounting in all to £67 a year, distributed among the poor. The above all belong to Great Bolton, the charities peculiar to Little Bolton being quite inconsiderable. But all parts of the town participate equally in the munificent donations left by Mr. Poppelwell, who died in 1823, and his sisters, amounting to £27,700 three per cent. consols, for the promotion of religion, learning, and charitable purposes.

Bolton has an exchange; a town-hall in Great, and another in Little Bolton; two cloth-halls, a theatre, assembly and concert rooms; a dispensary, established in 1825, and three public libraries, all well-built, modern structures. Two weekly newspapers, the *Bolton Chronicle* and *Bolton Free Press*, are published in the town.

The progress of Bolton has been greatly promoted by its command of coal, and its improved communications. The Bolton Canal extends to Manchester (12 m.), and a branch from it to Bury; a railway from Bolton to Leigh (8 m.),

and thence to Kenyon, where it joins the Liverpool and Manchester Railway, was completed in June, 1831. A railway along the canal banks, via Bury, to Manchester, has also been formed since 1833. The weekly market for general provisions is held on Monday, and is well supplied; there is also a market for store cattle, held every alternate Monday, between 5th Jan. and 13th May, and two annual fairs, one on the 30th and 31st July, the other 13th and 14th Oct. The first day of each is for cattle; the last for hardware and toys.

The entire consequence of Bolton is derived from its manufactures, which were carried on at a very remote period. As early as 1337, some Flemish clothiers established themselves in the town; and in the reign of Hen. VIII. it was famous for its cottons, that is, for a peculiar description of woollen goods that went by that name. Cotton goods, however, began to be produced in Bolton, in considerable quantities, about the middle of the last century. But the real prosperity of the town dates from 1770-1780, when the wonderful inventions of Arkwright, himself a native of Bolton, began to come into operation. From that epoch its progress has been rapid in the extreme; and it is now a principal seat of the cotton manufacture. The articles chiefly produced are—muslins, superfine printing calicoes, quiltings, and counterpanes, dimities, maitens, jeans, cotton shawls, &c. The average quantity of cloth bleached in the parish is estimated at between 6,000,000 and 7,000,000 pieces. The principal manufacturers have warehouses in Manchester, where they generally attend on the Tuesdays, to effect the sale of their goods; but sales are also effected on other days, though not to the same extent. In the town and its immediate vicinity, there were, in 1833, 44 cotton-mills, employing in all 7690 persons, and worked by 41 steam-engines and 10 water-wheels, of the aggregate power of 1419 horses; with 1065 power-looms weaving calico, and 546 weaving fustian; 1 large flax-mill, employing 480 persons; 23 bleacheries, 13 iron-foundries, some of them on a very extensive scale, and employed in the construction of steam-engines, mills, and machinery of various kinds; with paper-mills, flax and saw-mills, and chemical works, &c. In these, and the various coal-mines (of which there are about 30 in work), upwards of 3000 steam-engines, having an aggregate power of upwards of 2500 horses were employed, besides a number of water-wheels, worked by the river; to increase and equalize the power of which, reservoirs, covering an area of 136 acres, have been formed on the adjoining hills; whence, in seasons of drought, the stream is supplied.

There is a joint-stock banking company at Bolton; a private banking company, and branches of some other banks.

We have already noticed the fact, that Sir R. Arkwright, the inventor, or, at all events, the introducer, of the spinning frame, was a native of Bolton. He was the youngest of a numerous family, and was brought up to the humble occupation of a barber! With the exception, perhaps, of Watt, there is no individual to whom the manufactures of this country owe so much. Crompton, the inventor of the mule jenny, was a native of Bolton parish.

The Reform Act conferred upon Bolton the privilege of returning two mem. to the H. of C. The limits of the parliamentary bor. and municipal bor. coincide, the population of both, in 1831, being estimated at 42,395; the number of houses being 7633, of which 7612 were worth £10 a year and upwards. At present the pop. of the bor. is probably not under 50,000. Registered electors, in 1837-38, 14,035.

It is governed by a mayor, aldermen, and councillors, assisted by a recorder: the mayor is chosen by the aldermen; these, by the councillors; and the councillors, by such of the burgesses as are qualified to vote for members of parliament. Previously to the municipal act, the government of the two towns was distinct; the police of each having been managed by portreeves and constables, annually elected at the respective courts leet, in Oct.; and the paving, cleansing, and lighting of each, by trustees incorporated under distinct local acts. Petty sessions for the bor. are held every Monday and Thursday. Bolton is the centre of a union under the Poor Law Amendment Act which comprises twenty-six other townships and chapels. The poor-rates levied in 1836, in Great Bolton, were £2970 7s.; in Little Bolton, £1734 7s.

The parish within which this borough is comprised extends over 31,360 acres, and includes nineteen other townships, chapels, and hamlets; the entire population, in 1831, being 63,084. It is geologically situated in a large coal formation, and its surface is for the most part of a peaty nature. It contains numerous quarries, some of excellent flagstones, a few of roofing slate and veins of lead, none of which are worked at present. Three small streams (the Tonge, Croale, and Bradshaw) take their rise in the hills that overlook the town. It contains a few well-

## BOMBA.

wooded and romantic valleys, but its general aspect is barren and cheerless, with scarcely a tree visible. About one fourth part is under the plough; of the rest no inconsiderable portion consists of unreclaimed mosses; and though the land increases in value near the town, such is not the case in its northern townships. Bolton is a place of considerable historical interest; its inhabitants from a remote period were distinguished for their archery, which is still continued as a sport, there being a target ground near the E. entrance of the town, for the use of a society of archers, who shoot for prizes during the summer. The labouring classes have long been accustomed to settle their quarrels by single combat; or by what is called an "up and down" fight, which includes the right of kicking and throttling! Death has often followed from these brutal contests, which used to take place at all races, fairs, and such like occasions; but the practice is now, happily, on the wane, and will, it is to be hoped, be shortly known only as matter of history.

At the commencement of the last civil war, the inhabitants took the parliamentary side, and held out till 1644, when, after a desperate struggle and several repulses, the town was at length taken by the Earl of Derby, who held it till after the battle of Worcester. He was subsequently taken and beheaded here. (*Baines's Lancashire; Boundary Reports, and Municipal ditto, &c.*)

Bolton, p. l., Chittenden co., Va. 15 m. E.S.E. Burlington, 19 m. N.N.W. Montpellier, 321 W. Bounded S. by Onion or Winooski river. It contains four saw-mills, three schools, 70 scholars. Pop. 470.

Bolton, p. l., Worcester co., Mass., 33 m. W. Boston, 419 W. Watered by branches of Concord and Nashua rivers. It contains four churches, one Congregational, one Unitarian, one Baptist, and one Friends', three stores, three grist-mills, four saw-mills, two tanneries, eight schools, 298 scholars. Pop. 1183.

Bolton, p. l., Tolland co., Ct. 14 m. E. Hartford, 350 W. Watered by branches of Hop river. It contains a Congregational church, two stores, one fulling-mill, five saw-mills, one distillery, five schools, 230 scholars. Pop. 739.

Bolton, p. l., Warren co., N. Y., 73 m., N. Albany, 446 W. Schenck branch of Hudson river bounds it on the W., and Lake George on the E. It contains two stores, one grist-mill, thirteen saw-mills, one powder-mill, one fulling-mill, eight schools, 279 scholars. Pop. 937.

BOMBA, a village of Naples, prov. Abruzzo citra, cap. cant., on the Monte Pallano, watered by the Sangro, 18 m. W.S.W. Vasto. Pop. 2603. Its parish church is said to be one of the handsomest in the province. On the mountain on which Bomba is situated are the ruins of walls, gates, and towers, on the most gigantic scale. They are formed of enormous blocks of stone, united, without cement, after the Etruscan fashion. Large caverns have also been excavated in the rock, and coins of the most renowned cities of Magna Græcia have been found among the ruins. Nothing authentic is known with respect to the history of these extraordinary ruins. (*Del Re Descrizione de l'Abruzzo*, li. p. 431.)

BOMBAY (PRESIDENCY OF), the most westerly and smallest of the three presid. of British India; between lat. 14° 18' and 23° 38' N., and long. 71° 48' and 79° 25' E.; having N.W. and N. the Gulcoovar's dom.; N. E. those of Scindia; E. those of the Nizam; S. Mysore and the Madras presid.; W. the ocean and the territ. of Goa, exclusive of the detached territ. around Wyrang and Kurda, surrounded by the Nizam's dom.; area, 68,074 sq. m. Pop. 7,000,000. It nearly encloses the territ. of the rajah of Satarah, and the distr. of Baroda, Cambay, and others belonging to the Gulcoovar, and at its E. extremity, approaches within 50 m. the ceded Nerbudda distr. of the Bengal presid. It is divided into the following collectorates:

| Collectorates.     | Sq. m. | Pop.    | Collectorates. | Sq. m. | Pop.      |
|--------------------|--------|---------|----------------|--------|-----------|
| Bombay Island . .  | 18     | 230,000 | S. Concan . .  | 6,770  | 6,6357    |
| Poonah . . . .     | 8,281  | 558,313 | N. Concan . .  | 6,500  | 397,264   |
| Ahmednuggur . .    | 9,910  | 666,376 | Sural, &c. . . | 1,449  | 454,431   |
| Candesh . . . .    | 14,327 | 478,457 | Baroach . . .  | 1,251  | 239,527   |
| Dharwar . . . .    | 8,122  | 528,737 | Ahmedabad . .  | 4,978  | 623,073   |
| S. Jaghiredars . . | 2,978  | 778,183 | Kaira . . . .  | 1,887  | 484,733   |
| Sattarah, &c. . .  | 6,109  | 736,234 | Total . . . .  | 68,074 | 6,940,277 |

Aspect, &c.—The N.W. parts of this presid. are more level than the S. and E.: Ahmedabad, Kaira, and Baroach are well watered, and some parts among the best cultivated and peopled lands in India; Surat is more undulating, its E. part hilly and jungly, and much of it waste; Candesh is interspersed with low barren hills; some spots are in good cultivation, but much is covered with jungle; Ahmednuggur abounds in rocks, hills, and waters; Poonah is irregular and mountainous, but with many fertile valleys; Dharwar is an elevated table-land; and the Concan a long narrow tract stretching for 235 m. along the sea coast, having E. a chain of rocky hills, formerly crowned by a number of fortresses, and W. a low, straight shore, broken

## BOMBAY.

into numerous bays and harbours, till lately affording a resort to pirates, by whom it had long been infested.

The mountain ranges in the S. belong to the W. Ghats; in Candesh, to the Sydare (a continuation of the former); and Sautpoora ranges; and N. the Nerbudda, they are branches from the Vindhyan chain. The principal rivers are the Nerbudda, Taptee, Mhye, and Saubarnuttee, falling into the gulf of Cambay, in the N.; in the central parts the earlier branches of the Godavery and Beemah; and in the S. the Kistnah and Toombudda.

Porphyritic trap, extending as far N. as Bulsar, forms the inland hill ranges; sandstone, with many shells, and conglomerates containing fossils, are common in N. Concan, and the N. parts of the presid. A primitive range of red sandstone formation, extending from Dehli, terminates at the head of the gulf of Cambay. The great basaltic district of India, which commences at Nagpoor, occupies the whole coast from between Goa and Bombay to the head of the Cambay gulf; which coast has been the theatre of volcanic phenomena, earthquakes, and tremendous whirlwinds, even within the last few centuries. Basalt and amygdaloid, yellowish porphyry, and green claystone, are found at Saleste and Elephanta, and near Rattampoor, an abundance of corneal stones, imbedded in red gravel. A black soil, well suited to the culture of cotton, is widely diffused throughout the centre of this presidency.

Climate.—The mean temp. at Bombay, above the centre of the presid. is between 81° and 89° Fahr. But though Bombay be rather unhealthy, the Concan and Malabar coast, generally, is by no means so, except in the malarious below the Ghats. The climate of the N. distr. is reckoned among the worst in India: the thermometer, in the hot season rises sometimes to 116° Fahr.; and Europeans are affected with fever, ague, and other tropical complaints. Some amelioration must, however, have lately taken place, or greater care been adopted in guarding against it; since, between 1826 and 1832, the number of dead and invalided among the troops serving in the Bombay presidency had decreased from 357 to 136, while the average number of Europeans had been augmented from 3000 to 3700 nearly.

Vegetable Products.—Teak of very good quality grows on the Ghats and lower hill-ranges, and in some parts poon is plentiful; the district of Surat abounds with the wild date and babool. Cocos-palms cover an immense tract of sandy land, bordering the coast of the Concan; and various other trees of the same family are abundant. The N. part of this presidency is remarkable for the great variety of fruits it produces; the district of Ahmedabad, in particular, is noted for the size of its mango-trees, and their fruit. Rice, cotton, and the other chief articles of culture, will be mentioned presently.

Animals.—Wild elephants are met with in the Ghats, that is, in the woody chain of mountains running along the W. side of Southern India; and tigers, panthers, leopards, and hyenas, are numerous in the jungles and wooded parts; buffaloes, wild boars, deer, antelopes, jackals, generally so, and in the N. the flying macanoo is found. Birds in great variety inhabit this part of India.

People.—Besides Hindoos, Mohammedans, Parsees, Jews, and Europeans, many distinct tribes, some of whom are supposed to be aboriginal, inhabit this presidency. Shoals live E. of the Ghats, from the hills near Poonah to the banks of the Nerbudda and Taptee; the Ramoos meet these S. of Poonah; W. of the Ghats and around the gulf of Cambay, Koolies, a very barbarous tribe, reside; Cattles, Acheers, and Babroos, are found in Kattywar; Dhooblas and Koombies in Gujrat, &c. All these are met with in the Bombay British army. The Jain sect is very numerous in the Gujrat districts; and nearly all the Parsees in India have settled within the limits of the Bombay presidency. A tribe, called Boras, reside in the district of Surat and its neighbourhood, who are Mohammedans as to religion; but in all other respects are similar to Jews.

Agriculture and Cattle.—Rice and cotton are the chief articles of culture; compared with these, the other great staples of Indian produce are grown only in insignificant quantities. An important item in the public revenue is the sum derived from the transit duties on opium; but none of this drug is grown within the limits of the presidency, the whole being brought from Malwah, where the soil is peculiarly adapted for its culture, and where the native princes are under engagements to dispose of the whole of the produce to the British authorities. Rice is largely grown in the central parts of the presidency; and in S. Concan it constitutes 4-5ths of the whole crops. The culture of cotton is extensive, and the produce is an important article of export. The cotton of this side of India is decidedly superior to that of the other; that grown in Baroach is particularly good. Sugar and indigo are cultivated in Candesh; where the first occupies a considerable extent of country,

# BOMBAY.

and where late reports speak of an intention on the part of government to erect sugar-mills. The indigo of Candelah has been said to be as fine as that of Bengal, but wanting in depth of colour. The mulberry-tree grows in some parts with immense rapidity, and great exertions are being made by various private individuals to introduce the culture of silk, and to render it important as an article of trade. Wool has lately been imported in considerable quantities from Bombay, and efforts are making by the government to improve the breed of sheep, by importing stocks into the presidency from Caubul, Sind, and Cutch, and crossing them with Merino and Saxen breeds from the cape of Good Hope. The cattle of Gujrat are of a remarkably large size, and in great request throughout India; at Surat there is a diminutive species of ox, 2 ft. only in height. S. of Surat the ox supercedes the horse for both draught and carriage: below the Ghauts the only other domestic animal is the buffalo. Poultry is not generally kept by the natives.

**Public Revenue.**—The whole of the Bombay territories, excepting Surat and Kaira dist., where the ryotwary settlement is established, are assessed under the village land-revenue system. By this system an arrangement is entered into with the heads of the different villages, to which the various tracts of land belong in common. These heads are called *muaddims* or *potans*, and either by descent, or sometimes by personal influence, have obtained a superiority in the village, and the management of its affairs. They do not, however, hold this power by any hereditary right, but are appointed or removed at the pleasure of the villagers. The village communities are little republics, providing for all their own wants among themselves, and independent, generally, of any relations with other villages: certain rights are possessed by the schoolmaster, accountant, washerman, barber, blacksmith, watchman, &c., in the produce of the soil; some portions are also set aside for certain recognized expenses of the village, and for defraying the expenses of hospitality toward strangers, &c. The land-tax here is higher than in Bengal; and the portion of the produce paid to gov. is, besides, uncertain, and dependant on the crops, which have often failed extensively in many districts. The assessment is fixed, after inquiring into the prosperity of the village—what it has hitherto paid—what it is capable of paying—the state of the village lands—and what assessments they ought to bear with reference to the produce. Should any of the brotherhood fail to pay his portion, it becomes an internal village arrangement, with which government has nothing to do; the rest come forward and pay it for him, and the *muaddim* has no power from the government to enforce the assessment from the individual. In a great part of Poonah there are a number of acknowledged proprietors of usually small estates, called *muassars*, who generally cultivate their lands themselves, and pay their rent direct to government, unconnected with any village republic: in Surat and Kaira, although another is more general, the village settlement prevails pretty extensively. Col. Bykes (*Rep. Revenue*, iii. 164) thinks that the *muassars* or village system realizes more revenue to government than the ryotwary system; that it occasions the officers little trouble; maintains a class of respectable persons (*potans*, &c.) in society; prevents speculation; and advances the comfort of the cultivators generally: but, on the other hand, Mr. Campbell (*Rep.* p. 301) observes, that the *potans* often oppress the ryots; shut them out from communication with the government; “in good seasons pocket all the profits, and in bad cast upon them (the cultivators), by extra assessments, or saddling them with the waste land, the greater burden of the losses.”

**Manufactures** are not in a flourishing state, nor can they ever become so, until better means of transit for goods be constructed to afford a vent for their products: the principal are woollens and cottons. In Poonah city, silks, ornamented with gold and silver, are woven. A discriminating duty was formerly laid on Indian sugar imported into Great Britain, but that is now repealed, and its manufacture, as well as the manufactures of silk and indigo, is on the increase.

**Trade.**—This presid. is much less favourably situated than that of Bengal for commerce and internal communication. It has no large navigable river, like the Ganges, intersecting its richest provinces; the streams of the Deccan are too impetuous for navigation; and, notwithstanding the internal trade is thus wholly dependant on land-carriage, the entire length of all the roads which have been constructed does not exceed 450 m. Most of the roads are impassable for carriages, and merchandise has therefore to be conveyed chiefly by *pack-bullocks*: indeed, the only good line of road is from Panwell to Ahmednugur, a distance of 165 m.; and it is both unconnected with the S. of India, and at a distance unavailable for the produce of Candelah and Berar. Government has recently, however, ordered a survey for a road between Bombay and Agra.

For an account of the foreign trade of the presidency, see BOMBAY (City.)

The revenue and expenditure of the Bengal presidency, during the year 1835-36, were as follows:

| Revenue.                                |           | Charges.                                                                              |           |
|-----------------------------------------|-----------|---------------------------------------------------------------------------------------|-----------|
|                                         | £         |                                                                                       | £         |
| Land revenue . . .                      | 1,671,998 | Total civil and political charges . . .                                               | 368,417   |
| Customs, sea and inland duties . . .    | 405,078   | Total judicial and police ditto . . .                                                 | 238,770   |
| Mint duties . . .                       | 34,778    | Total military and naval ditto . . .                                                  | 1,436,412 |
| Post-office collections . . .           | 14,076    | Buildings, roads, &c. . .                                                             | 5,704     |
| Stamp duties . . .                      | 30,165    | Allowances, &c., in accordance with treaties, allowances to village officers, &c. . . | 407,861   |
| Sayer (duties on spirits, &c.) . . .    | 150,691   | Charges of collecting revenues . . .                                                  | 250,851   |
| Receipts from salt . . .                | 25,752    | Interest on debt . . .                                                                | 34,248    |
| Do. opium . . .                         | 191,824   | Total charges . . .                                                                   | 2,730,234 |
| Marine and dock dues . . .              | 13,735    | Total ordinary rev. . .                                                               | 2,504,093 |
| Judicial fees, fines, &c. . .           | 7,912     | Deficit for 1835-6 . . .                                                              | 167,237   |
| Miscellaneous civil receipts . . .      | 850       |                                                                                       |           |
| Subsidy from the Cutch government . . . | 17,022    |                                                                                       |           |
| Total ordinary rev. . .                 | 2,504,093 |                                                                                       |           |

The Government is vested in a governor independent of local control; but subordinate to the authority of the governor-general of India, in matters of general and internal policy, and the disbursements of the public revenue. He is assisted by three counsellors, and the whole administration is conducted by a single board.

**Military Force.**—The Bombay native army, although the smallest, is the most ancient of the three presid., sepoys having been disciplined toward the end of the 17th century. The sepoys are said to be brave, patient, capable of enduring fatigue, and bear the highest character for fidelity; still, however, it is very doubtful whether they would oppose any effectual resistance to an army of Europeans. The Bombay army has been always more ready than those of the other presid. to volunteer for distant expeditions. By recent returns the total armed force of this presid. is 30,190 of which number 6,252 are Europeans.

**Marine Force.**—The whole of the Indian marine is attached to this presid. It has been of late much diminished, with the diminution of piracy, and now (*Martin*, 1830) consists of only one frigate, four 18-gun ships, six 10-gun corvettes and brigs, two armed steamers, and some surveying vessels. These are manned by about 1900 seamen, with 143 officers; and the whole costs annually £311,128. Measures are now, however, taken for converting this force into an armed steam flotilla.

**Church Establishment, &c.**—Bombay is the see of a bishop, subordinate to the bishop of Calcutta, who has under him 14 chaplains: the total ecclesiastical charges in 1837 were £19,038. Roman Catholic Christians are more numerous in this than in either of the other presid., and their religious estab., which receives the aid of the gov., is subordinate to an apostolic vicar at Bombay, with authority direct from the pope. But the most numerous body of Christians within the Bombay gov. are Nestorians.

**Education, &c.**—Sir Lionel Smith, in his evidence before parliament, 1831, said, with regard to Bombay, “Education is in such extensive progress that I hardly think it could be more extended.” but this statement is evidently extravagant, and must be received with much modification. The Native Education Society, consisting of a nearly equal proportion of natives and Europeans, disbursed, in 1830-31, nearly £8000; and have about 56 schools, educating 3000 children: at Poonah there is a Hindoo college. The total number of public schools in this presid. is 1705; scholars, 35,153: in Candelah the boys receiving instruction are, to the whole male pop. of that distr., as 1 in 18.

**History.**—In 1617 Bombay was created a regency, and made supreme over all the company’s establishments in India, but in 1707 Calcutta was declared independent of it. In 1736 a chartered court for penal causes was established; and in 1775 Salsette, Raseein, and the revenues of Barooch, and other places, were acquired by treaty with a Maharrata chief. In 1780 Dohoy and Ahmedabad were taken, but restored to the Maharratas in 1782. In 1803 Barooch and Ahmednugur districts were acquired, and the latter, with Poonah and Ahmedabad, were formally ceded in 1817. Concan, Marwar, Candelah, and the remainder of the ex-peishwa’s dom., fell to the British in 1818. The seat of gov. was transferred from the city of Surat to that of Bombay in 1836. (*Hamilton’s E. I. Gaz.*, i. 1; *Rep. on E. I. Affairs before the Select Committees*, &c. 1830 to 1832; *Bombay Calendar*, 1838; *Reports of the Chamber of Commerce*, Bombay, 1838.)

BOMBAY (*Buon Bahia*, Portuguese, a good harbour), a marit. city of Hindostan, prov. Aurrangabad, cap. of the above presidency, and, after Calcutta and Canton, the greatest emporium of the East. It is built at the S.E. extremity of the small island of the same name, contiguous to the Concan coast, 650 m. N.W. Madras, 1050 m. S.W. Calcutta, and 150 m. S. Surat; lat. 19° 56' N., long. 72° 57' E.

## BOMBAY.

Pop. upwards of 230,000. Bombay Island belongs to a group, including Salsette, joined to it by a causeway, Caran-jah, Elephanta, Colabha, Buicher, Woody, and Cross islands, which, being disposed in a crescent manner, enclose its harbour. The island itself is of an oblong shape, 8 m. in length, N. to S., by about 2 or 3 m. wide; it is for the most part low, swampy, and barren, and was formerly very unhealthy; but in this respect it has been much improved, by means of drainage and embankments. The city consists of two portions: the old town, or fort, and the new town, or Dungaree. The fort stands on the S.E. extremity of the island, on a narrow neck of land immediately over the harbour; it is surrounded by extensive fortifications, which, toward the sea, are very strong; it contains some good buildings, but is, generally speaking, close and dirty, and little inhabited by Europeans; its streets are uneven and disagreeable, and the houses mostly built of wood, and mean in appearance. The Portuguese began to build the town within the walls in the same style that has ever since been followed: the verandahs of the houses are supported on wooden pillars, and shut up with Venetian blinds; the upper stories project beyond the lower, and the roofs are sloped and tiled.

Bombay bears no external resemblance to Calcutta or Madras, and its best streets scarcely equal their suburbs. There is no Asiatic magnificence; every thing has an air of dinginess, age and economy, though the shops and warehouses are built on an extended scale. The government-house, a large but dismal-looking structure, somewhat like a German free city *stadthaus*, is little used except for holding councils and other public business; there is a castle, now occupied as an arsenal, and near it are the capacious docks constructed by, and belonging to, the E. I. Company, capable of accommodating ships of any size. These establishments, together with the barracks and the other buildings within the fort, have cost the company very large sums. The supreme judicial court, or *rudder adawlat*, the Protestant church, and the office of the gov. secretary, on the Green, an open irregular area, are among the chief edifices; there are many Portuguese and Armenian churches, both within and without the walls, some synagogues, and a vast number of mosques and temples. The new town of Bombay is larger than that within the fort, and in a low, wet, unwholesome situation, N. of the latter, and separated from it by the esplanade; it extends in one part from the harbour, on its E., quite across the neck of land to Back bay: for seven or eight months of the year the inhab. suffer from inundation or its effects, few of the ground-floors of the houses being above high-water mark. The most remarkable structure in the new town is a pagoda, the largest in Bombay, dedicated to the worship of *Momba Devi*. Substantial buildings now extend to near 3 m. from the fort, outside of which most of the poorer classes live in huts of clay, roofed with mats of palmyra leaf. Ground in the city is very valuable, especially within the fort. Most part of the island now belongs to Parsees, who form a wealthy and influential part of the population, and are comparatively more numerous, perhaps, than in any other large town in India. They are the descendants of the Ghebers, driven out of Persia by Shah Abbas; a comely, tall, athletic, active race; fairer than the other natives; mild in their manners; bold, enterprising, intelligent, persevering, successful in the pursuit of wealth, and contributing greatly to the prosperity of the place. "There is not a European house of trade in which one of them has not a share; and generally it is the Parsee that produces the larger part of the capital." In every department connected with ship-building and the docks, the Parsees have the chief interest; the whole N. quarter of the fort is occupied by them; their country houses are furnished with European decorations; and they make no scruple to eat, drink, and hold constant communication with Europeans. They have many temples for the adoration of Fire; and moping and evening all the males repair to the esplanade, and prostrate themselves in worship to the sun: the females do not join in these devotions, but of whatever rank, continue, as in patriarchal times, to fetch water from the wells. The Parsees are firmly attached to their original customs; among which is that of exposing their dead to be devoured by vultures, in buildings open at the top for the purpose; they are extremely dirty in their persons; but their women, although enjoying more liberty than any others in India, are certainly the chastest. The Parsees provide for their own poor, and not a single courtesan of their sect is to be found. Of the rest of the population, about two thirds are Hindoos, one fifth part Mohammedans, and one thirteenth part Christians, besides about 2300 Jews: the floating pop., besides the native and British seamen, consists of Arabs, Persians, Goan-Portuguese, Parsees, and the crews of vessels belonging to most other nations frequenting the port. The harbour of Bombay is one of the largest, safest, and most commodious in India; it is 8 m. in diam., and affords

good anchorage and shelter for fleets of ships of the largest burden. It is also the only great inlet in India where the rise of the tides is sufficient to permit the construction of wet-docks on a large scale, the spring tides ordinarily rising 14, and occasionally 17 ft. Frigates and ships of the line may be built at Bombay in a very durable manner, and cost, it is said, 25 per cent. less than in England. This comparative cheapness is ascribed to the facility with which supplies of timber are obtained; but whether it be owing to a defect in the building, or to the weight of the timber, it is, we believe, generally admitted that Bombay-built ships are not so inferior to those of England as is observed, that if ships really cost more in England than in Bombay, the difference is wholly owing to our timber duties; were these repealed, it may be safely affirmed that British-built ships would be cheaper than those of any other country. Previously to 1819, a considerable fleet of small armed vessels was kept at Bombay, to check the piracy which had prevailed on the Malabar coast ever since the time of Alexander the Great; but at this epoch the nuisance was finally abated, by the capture of the strongholds of the pirates in the Arabian and Persian gulfs.

Bombay has a more extensive trade with China than either of the other presidencies: the rest of its commerce is chiefly with Great Britain, the Arabian and Persian gulfs, Calcutta, Cutch, Sind, and the Malabar coast. The imports from China consist principally of raw silk, sugar, and sugar candy, silk piece-goods, treasure, &c. The principal articles of export to China are, raw cotton (44,464,364 lbs. in 1836-7), opium (30,893 chests, 1836-7), principally from Malwa, pearls, sharks' fins, fish maws, sandal wood, &c. The exports to China being much larger than the imports, the returns for several years past have been made to a large extent by bills on London, drawn by America and other houses in China, and in bills on the Indian government, drawn by the agents of the E. I. Company in China. The trade with the United Kingdom has been regularly increasing since the abolition of the restrictive system. The chief articles of import thence are, cotton and woollen stuffs, cotton yarn, hardware, copper, iron, lead, glass, apparel, fur, stationery, wine, &c. The principal exports to Britain are, raw cotton (68,163,901 lbs. in 1836-7), raw silk from China and Persia, ivory, pepper, and spices, piece-goods, coffee, and wool; the export of the last has increased with wonderful rapidity of late years; it comes chiefly from Cutch, Sind, and Marwar. In 1837, twenty-eight ships, mostly owned by native merchants, were employed in the China trade; there are, besides, many large ships engaged in the trade to England and elsewhere; and a numerous class of native craft, the largest of which make five or six trips during the eight fair months, from Oct. to May, to the chief ports N. of Bombay. They carry thither the produce of Europe, Bengal, and China, and return laden with cotton, ghee, oil, pulse, wheat, cotton cloths, timber, fire-wood, &c.: the capital employed in this trade, exclusive of cotton, has been estimated to amount to £1,500,000 sterling. In 1836-7 there arrived at Bombay 253 ships (292 under British colours), of the aggregate burden of 104,913 tons: the value of the imports and exports in that year was as follows:

| Countries.                         | Imports.    | Exports.    |
|------------------------------------|-------------|-------------|
| Great Britain                      | 1,281,1910  | 1,282,517   |
| France                             | 6,25,553    | 2,27,428    |
| Malacca                            | 24,725      |             |
| Cape of Good Hope                  | 9,732       | 672         |
| Brazil                             | 92,490      |             |
| Coast of Africa                    | 2,50,442    | 6,18,212    |
| Isle of France                     | 1,30,343    | 1,07,671    |
| America                            | 46,998      | 2,51,006    |
| China                              | 1,40,79,952 | 2,38,75,047 |
| Manilla                            | 31,410      |             |
| Penang, Singapore, and the Straits | 9,88,152    | 7,05,457    |
| Calcutta                           | 25,35,101   | 11,26,584   |
| Coast of Coromandel                | 1,11,648    | 8,50,749    |

Wages are higher here than in Bengal; palanquin bearers, for instance, receive seven and eight rupees each per month; but provisions are also much dearer. The markets are not equal to those of Calcutta, but superior to those of Madras: there are fewer Europeans at Bombay than at the other presidencies, neither are their salaries so high. The Bombay Native Education Society have their central schools here; which, in 1838, were attended by 1067 native pupils. Two English newspapers are published here on alternate days, and ten other periodicals. Several literary societies, and

\* At this period called Goa and the Concan.

## BOMST.

many charitable and religious institutions, have been established. Bombay is the seat of a Protestant bishop. Roman Catholics are numerous, and their religious establishments enjoy the support of the E. I. Comp.; one of the four vicars apostolic of India, with direct authority from the pope, resides at Bombay, where the Catholic bishop has five different churches, all of which, except one at Colaba island, are endowed. Sir R. Rice, in his evidence before the lords, in 1830, says, that among a pop. of 150,000 in this city, there was but one execution in three years, which was that of an English sergeant; so that, if the police be not very bad, it may be fairly concluded that crimes of violence are very rare. The jurisdiction of the supreme court is confined to the island of Bombay, and to Europeans in the rest of the presid.; the civil and criminal laws are those of England; but this court is not one of appeal from provincial courts, like the *sudder adawlat* at Calcutta. The garrison consists of 2000 troops, one fourth of whom are Europeans.

Bombay is next to Madras, the oldest of our possessions in the East; it was founded soon after thecession of the island to the Portuguese, and was ceded to Charles II. as part of Queen Catharine's dowry, in 1661; but the Portuguese governor refused to deliver it up, and it was not until 1664 that it came into our hands. At this period it was extremely unhealthy, and subject to the depredations of the Mahatta pirates. In 1668 the city and island were transferred, by royal letters patent, to the E. I. Comp., at an annual rent of £10, and shortly after realized to the comp. a revenue of £2823 a year. The seat of government was removed thither from Surat in 1668, and two years afterward Bombay was closely besieged by the Moguls. These were ordered to withdraw by Aurungzebe, which they did in the succeeding year; but plague, piracy, and rebellion, continued for many years to devastate and disturb this colony. At present Bombay rules the whole N.W. coast of India, and its influence is felt along the shores also of Persia and Arabia. (*Hamilton's E. I. Gaz.*, i., 255-266; *Reports on E. I. Affairs*, 1830-1832; *Essay of Sir R. Rice and Hon. Mr. Elphinstone*; *Dictionary of Commerce*, &c., 1830, p. 135-138; *Mod. Trav.*, i., 241-254; *Bombay Oldenard and Directory*, 1836.)

BOMBAY, p. t., Franklin co., N.Y., 15 m. N.E. Malone, 323 m. N. Albany, 552 W. Drained by Little Salmon and St. Regis rivers. It contains the reservation and settlement of the St. Regis Indians, and has six stores, one fulling-mill, one woolen-factory, one grist-mill, five saw-mills, two tanneries, nine schools, 344 scholars. Pop. 1446. A village of whites near the post-office, contains one church, four stores, and twenty or thirty dwellings.

BOMST, a town of the Prussian states, prov. Posen, cap. civ., 10 m. N.E. Zullichau, Pop. 5000. The inhabitants are a motley breed of Germans, Poles, and Jews. There are some manufactures of coarse cloth.

BONA (an. *Aggradium*), called by the natives *Annekah*, i. e., place of jujubes, a marit. city of N. Africa, reg. Algiers, prov. Constantine, on a tongue of land projecting into a spacious bay (gulf of Bona), near the mouth of the Sebous, in a somewhat unhealthy country; lat. 36° 53' 30" N., long. 7° 48' 90" E. Pop. about 12,000. It is surrounded with walls (erected 1058) 30 ft. in height, and nearly 2 m. in circ., with four gates. The town and harbour are commanded by the citadel (*Kasba*), on a hill to the N. of the city, having thick walls and a circuit of about a quarter of a mile. This citadel was much injured in 1837 by an accidental explosion of gunpowder; but it has since been repaired, and made stronger than ever. Bona has been much improved since its occupation by the French. The streets are narrow and crooked, but there are several good houses, a good market, with shops, reading-rooms, coffee-houses, and even a theatre. The road of Bona is far from being safe, the N.E. and E. winds throwing in a heavy sea. The Sebous was navigable when the Romans possessed Bona; and it might be rendered so again by clearing away a bar which has accumulated at its mouth, where there are but 3 or 4 ft.; whereas, within this, there are 13 ft. water. Bona is the seat of a French judicial court; has manufactures of *borras* and other garments, tapestry, and saddles; exports corn, wool, or hides, and wax. It was formerly the centre of the French trade on this coast, and is at present the principal seat of the coral fishery. (*See ALGERIA*.) The *Kasba* was taken March 25, 1832, by a few French soldiers and sailors; the Turks left it, being dissatisfied with their leaders, having opened the gates to them. Bona was afterward pillaged and burned by the Arabs, but the French, having received reinforcements, took possession of it, and captured 115 pieces of cannon. About a mile to the S. are the remains of Hippo Regius, once a residence of the Numidian kings, and afterward the Episcopal see of St. Augustine. It was situated between the rivers Boosmah and Sebous, being about 3 m. in circ. Its chief relics are some large cisterns and part of the Roman walls. A swampy tract extends between it and Bona, probably its an-

## BONDOW.

cient haven. Hippo was taken by the Goths, and finally destroyed by Othman, the third caliph. Its materials served to build the modern town. (*Rozet*, iii., 195-206; *Saew*, p. 47, 48; *Traité de la Situation*, &c., p. 93.)

BONAVISTA, one of the Cape de Verde islands, which see.

BOND, county, Ill., situated S. of the centre of the state, and contains 360 sq. m. Organized from Madison in 1817. Drained by Shool and Sinking creeks, branches of Kaskaskia river. It contained in 1840, 7723 neat cattle, 5387 sheep, 15,986 swine; and produced 23,722 bushels of wheat, 1549 of rye, 299,130 of Indian corn, 23,450 of oats, 7486 of potatoes, 3065 pounds of tobacco. It contained ten stores, two woolen-factories, ten grist-mills, six saw-mills, two tanneries, two distilleries, twelve schools, 324 scholars. Pop. 5060. Capital, Greenville.

BONDENO (an. *Padinam*), a town of the States of the Church, deleg. Ferrara, at the confluence of the Panaro and Po d'Argento. Pop. 2500. It lies at the mouth of a defile which leads across the Apennines.

BONEFRO, a town of Naples, prov. Sannio, cap. cant. on the declivity of a mountain, 6 m. S.S.E. Larino. Pop. 3000. It has a fine palace and a magnificent parish church, with four houses of refuge.

BONIFACCIO, a town and sea-port of the island of Corsica, cap. cant. on a small peninsula at the S. extremity of the island, on the strait which bears its name, 45 m. S.S.E. Ajaccio; lat. 41° 22' 11" N., long. 9° 9' 18" E. Pop. 3031. It is well built and fortified, but not strongly. Its port, which lies between the peninsula on which the town is built and the mainland, stretches nearly 1 m. inward, has deep water throughout, and is one of the best in the Mediterranean. Its entrance, however, is not more than from 80 to 90 yards broad, which renders it a little difficult of access. (*Hugo, art. Corse*; *Norris's Sailing Directions for the Mediterranean*, &c.)

BONIFATI, a town of Naples, prov. Calabria Citra, 4 m. S.E. Belvidere. Pop. 3000. It has several churches, and a convent; and a great number of silk-worms are raised in its environs.

BONDOW, a country of W. Africa, which, like most others in the same part of the world, has not had its astronomical position precisely ascertained. On Rennell's map to Park's First Journey, it is placed between the lat. of 13° 40' and 14° 50' N., and between long. 10° 10' and 11° 30' W. On the map to Park's Second Journey, the long. remains unaltered, but the lat. is removed one degree more to the N., with the whole of the traveller's route, in order to make that route agree with the few observations which were taken. Though powerful among its barbarous neighbours, it is a small state, not exceeding in length, from E. to W., 78 m., nor in width, from N. to S., 70; it is, however, very compact in form, and its area is probably not less than 5000 sq. m. Its pop. may amount to 1,500,000 or 2,000,000. It is bounded E. by Bambock; S.E. and S. by Tenda and the Simbal wilderness (wooded, not desert); S.W. by the same wilderness and Woolli; W. by Foola Toria; and on the N. by Kijaga. (*Park's Maps and First Journey*, 44-57.) Bondow is tolerably elevated among the Senegambian system of mountain, and some parts of its surface rise into considerable peaks. The land slopes towards the N. and W., as is shown by the direction of the rivers, the Fo-le-me holding a N. course to the Senegal, and the Nericho a S.W. one to the Gambiá. The sub-tributaries of these affluents are so numerous, that though neither of the first-class rivers (Senegal and Gambiá) pass through Bondow, there are few districts better or more abundantly watered. As a natural consequence, vegetation is of a most vigorous kind; the hills are covered with thick woods, and in native fertility the soil is not surpassed by any in the world. The productions are the same with those of the neighbouring countries. (*See BANNAARA, BAMBOCK*, &c.); but a winter or dry season harvest, though not quite peculiar to this country, is sufficiently remarkable to attract the attention of travellers. The corn, called by botanists *Holcus cornutus*, from the depending position of its ear, is sowed about November, is in full vigour by the end of December, and is reaped in the early part of January. It is exceedingly prolific, and appears to bear a strong resemblance to the Arabic durra. In climate and division of seasons, Bondow agrees also with the surrounding countries (*see as above*), but it appears to possess the advantage of being more healthy, and (probably from its comparative density of population) it seems to be rather less infested by ferocious animals. Though close to the richest gold districts of Africa, it appears to be poor in metals; gold dust, in small quantities, and iron being part of the imports. (*Park*, 51, 58, &c.) The inhabitants differ essentially in complexion and manners from their immediate neighbours. They belong to the great Foulah family, next to the Mandingoes, the most considerable of all the W. African nations. They have tawny or, rather, yellow skins, with small features, and soft, silky hair. They hold

# BONN.

the negroes to be their inferiors; and, when talking of different races, always class themselves among *whites* people. They have, indeed, most of the distinctive marks of an Arab race; but, though many of them speak a little Arabic, their native tongue bears no resemblance to that language, nor have they any legends that trace their origin farther E. than Fouladoo (literally, "the country of the Foulahs"), near the sources of the Senegal. In industry, energy, and resources, they are superior to their negro neighbours; they are tolerably good agriculturists, and are said to be well versed in grazing and dairy husbandry, though they make no cheese. Cattle is their chief wealth, and they possess also a handsome breed of horses. There are, indeed, but few African countries where so many of the necessities, and even conveniences, of life are enjoyed, and that not by the rich only, but by the greater part of the population.

Centrally situated between the Senegal and Gambia, Bondou has become a high road for traffic; the slave dealers from the coast usually pass through it, and by their means a considerable commerce is carried on with the neighbouring and even distant countries. The native exports consist of cotton, cotton cloths, some sweet-smelling gums, and probably sometimes cattle. The trade consists of slaves, salt, iron, Shea butter, and gold dust. The government is monarchical, and the king is often at war with his Mandingoo neighbours, and generally to their loss. When Major Houghton was in the country, he had just stripped the king of Bamboouk of a considerable part of his territory.

The Mohammedan religion is very generally professed, but not exclusively; the king himself is a *kafr* (infidel), and it does not appear that any intolerance is practiced by either sect; but the uncharitable maxims of Islamism seem to have had some influence over the Bondou Foulahs, who are less hospitable than the poorer and more ignorant negroes.

Schools are established in the different towns, where children of all persuasions are taught to read and write. The character used is, of course, Arabic, and the instructors the Mohammedan priests; by this means Mohammedanism possesses a strong hold over the people, since the impression made on the pupils' minds in these schools are seldom eradicated.

Customs and duties on travellers are extremely high. An arm load of goods pays a bar (two shillings) at all places; and at Pathconda (the royal residence) a musket and six bottles of gunpowder, or the value of them, are exacted as the common tribute; besides which, neither the king nor any of his chief officers are delicate in requesting presents, which requests, under the circumstances, are, in fact, demands which cannot be evaded. (*Park*, p. 44-62; *Houghton's Afr. Assoc.*, cap. xiii., 8, 11, &c.)

BONN, a very ancient handsome town of the Prussian states, cap. circ., prov. Rhine, on the left bank of that river, about 15 m. S. Cologne. Pop. 13,000. The principal celebrity of Bonn is derived from its university, founded in 1818, and intended to replace that of Cologne, suppressed by the French. Niebuhr, the historian of Rome, was one of its professors; and it has still to boast of some very distinguished names. In 1836 it had 686 students. The electors of Cologne formerly resided here; and their castle, a building of immense extent, is now the university. The library that belonged to the university of Cologne, comprising from 80,000 to 100,000 vols., has been removed thither. In the museum of Rhenish antiquities, in the university, is an ancient monument, inscribed *Dea Victoria Sacra*, supposed by some to be the identical *Ara Ubiorum* mentioned by Tacitus. (*Assal.*, lib. i., § 39.) This, however, is doubtful. The cathedral, or metropolitan church, in the older Gothic style, with a high tower, has a statue of the Empress Helena, and is said to be built on the site of a church she had founded. There is also a good town-hall, theatre, &c. A fine avenue of chestnuts conducts to the *Chateau of Poppelordorf*, appropriated to the use of the university, containing the museum of natural history, and having attached to it a spacious and well-kept botanical garden. The situation of Bonn is delightful. It is one of the most desirable towns on the Rhine as a place of residence. Beethoven, the musician, was born here on the 17th December, 1770. (*Celleris, Notit. Orbis Antiqui*, l. p. 330; *Schreiber*, &c.)

BONNAT, a town of France, d.p. Creuse, cap. cant., on a hill not far from the little Creuse. Pop. 2738. It is distinguished by the old castle of Beaulvais.

BONNE FEMME, t., Howard co., Mo. It contains one school, 25 scholars. Pop. 988.

BONNE HOMME, t., St. Louis co., Mo. It contains one academy, 40 students, three schools, 92 scholars. Pop. 2516.

BONNET-LE-CHATEAU (ST.), a town of France, dep. Loire, cap. cant., 17 m. S. Montrion. Pop. 2156. This is a place of great antiquity; it is situated on a Roman road, constructed by Agrippa, and occupies a pictur-

# BOONE.

esque position on the summit of a hill, surmounted by a fortress, said to be of the age of the Romans. Part of the ancient walls and towers, by which the town was formerly surrounded, still exist. It has a handsome Gothic church. Locks of various sorts are made here, and some lace; and the place has a considerable trade in timber, forwarded to the building-wards at St. Lambert. (*Huge*, art. *Loire*.)

BONNETABLE, a town of France, dep. Sarthe, cap. cant., on the Dive, 16 m. N.E. Mans. Pop. 5746. It has a castle, constructed in the 15th century. The inhabitants are principally engaged in the cotton manufacture.

BONNEVAL, a town of France, dep. Eure et Loir, cap. cant., on the Loire, in a fertile valley, 19 m. S.S.W. Chartres. Pop. 2560. Streets broad and well laid out. It was formerly fortified, and had an abbey. The church is surmounted by a very high steeple. It has a cotton-mill, with manufactures of calicoes, carpets, coverlets, &c., and some considerable tanneries.

BONNORVA, a town of Sardinia, dioc. Sassari, 18 m. E.N.E. Bosa, in a healthy situation, on the declivity of a mountain. Pop. 4000. It has two convents, one of them for Jesuits. A *harna*, or *deputé d'Italia*, was established here in 1800. (*Smyth's Sardinia*, p. 330, and *Dict. Geog.*)

BOODROOM, BODRUN, a sea-port town of Asiatic Turkey, in Natolia, coast of the Archipelago, opposite the island of Cos, 100 m. S. Smyrna; lat. 37° 1' 21" N., long. 27° 35' 18" E. Pop. 11,000? It is beautifully and conveniently situated on a rising ground, at the bottom of a deep bay, commanding a view of the island of Cos, and the southern shore of the Ceraic gulf, as far as Cape Kria. It has a small but well-sheltered harbour, with from two to three fathoms water, resorted to by Turkish cruisers, and having generally a ship of war on the stocks. In the bay outside the harbour there are from 10 to 20 fathoms. Houses of stone, and irregularly scattered along the shore of the bay, being interspersed with gardens, tombs, and cultivated fields. Streets narrow and dirty, and the bazars wretched. The castle or fortress, situated on a projecting rock on the E. side of the harbour, was built by the Knights of Rhodes in 1408; it is still in tolerably good repair, and has 36 rows of marble sentes. Old walls, exquisite sculptures, fragments of columns, and other relics, evincing its ancient splendour and importance, abound in the town and its vicinity. (*Beaufort's Karmania*, p. 93; *Turner's Tour in the Levant*.)

It is supposed that Boodroom occupies the site of the ancient *Halicarnassus*, the country of Herodotus, and of Diodorus the historian. Above the town are the remains of a theatre, 980 ft. in diameter, and which seems to have had 36 rows of marble sentes. Old walls, exquisite sculptures, fragments of columns, and other relics, evincing its ancient splendour and importance, abound in the town and its vicinity. (*Beaufort's Karmania*, p. 93; *Turner's Tour in the Levant*.)

BOONDEE (Bumri), a rajahship of Hindostan, prov. Rajpootana, distr. Harotee, under protection of the British; area (*Sutherland*), 9391 sq. m. It was formerly much more extensive, but Kotah and its territory have been separated from it: in 1817 more than half the revenues were usurped by Scindia and Holkar, and the peasantry impoverished by endless exactions; but in 1818 the rajah recovered a considerable accession of dominion, and the town of Patun, from the hands of the British. Although small, this state is important, as it contains the principal passes from the S. into Upper Hindostan. The natives are of the Hara tribe, which has produced many celebrated men, and among others one of Aurangzeb's best generals.

BOONDER, a town of Hindostan, prov. Rajpootana, cap. of the above rajahship, and residence of its sov., on the S. declivity of a long range of hills, 90 m. S.E. Ajmeer, 390 m. S.W. Agra; lat. 25° 38' N., long. 75° 30' E. It is divided into New and Old Boondee: the former is surrounded by a high stone wall, which extends up the acclivity to some fortifications which crown the hill; the houses are mostly of stone, and two stories high. The palace is half way up the hill, and is a very striking stone edifice, supported partly by a perpendicular rock 400 feet high, but principally by solid piers of masonry. This city is also rendered picturesque by its numerous temples, magnificent fountains, and spacious mala street opening to the palace, at the lower extremity of which stands a great temple, dedicated to Krishna, with many groups in bas-relief, and other sculptures. Old Boondee is W. of the former, covers a considerable surface, and contains some fine fountains and pagodas, but is in a state of general decay. The passes N. of Boondee are strongly defended, and abound in natural beauties, in royal and religious edifices, and other works. (*Hemsten's E. Gaz.*, i., 268, 269; *Mod. Trav.*, x., 82.)

BOONE, county, Ky. Situated in the extreme N. part of the state, and contains 300 sq. m. Bounded N. and W. by the Ohio river. Drained by Gunpowder creek. It contained, in 1840, 8843 neat cattle, 15,619 sheep, 34,392 swine; and produced 101,502 bushels of wheat, 7977 of rye, 355,376 of Indian corn, 59,423 of oats, 13,310 of potatoes, and

## BOONESBOROUGH.

1,209,947 pounds of tobacco. It contained thirty stores, four flouring-mills, nineteen grist-mills, ten saw-mills, two tanneries, four distilleries, three academies, four schools, 65 scholars. Pop.: whites, 7894; slaves, 2183; free coloured, 27; total, 10,034. Capital, Burlington.

Boone, county, Ia. Situated in the central part of the state, and contains 408 sq. m. Drained by branches of Sugar and Raccoon creeks. It contained, in 1840, 10,381 neat cattle, 6945 sheep, 20,109 swine; and produced 35,017 bushels of wheat, 1256 of rye, 247,752 of Indian corn, 40,017 of oats, 14,865 of potatoes, 4007 pounds of tobacco, 92,135 of sugar, 360 tons of hemp and flax. It had twelve stores, two flouring mills, nine grist-mills, seven saw-mills, five tanneries, thirteen schools, 208 scholars. Pop. 8131. Capital, Lebanon.

Boone, county, Ill. Situated in the N. part of the state, and contains 400 square m. Drained by Klahawakee or Sycamore creek, a branch of Rock river. It contained, in 1840, 1264 neat cattle, 589 sheep, 5001 swine; and produced 19,373 bushels of wheat, 30,798 of Indian corn, 23,318 of oats, 40,816 of potatoes, 1148 pounds of tobacco. It had two stores, one grist-mill, four saw-mills, nine schools, 153 scholars. Pop. 1703. Capital, Belvidere.

Boone, county, Mo. Situated in the central part of the state, and contains 600 sq. m. Bounded S.W. by Missouri river, E. by Cedar creek. Drained by Boone or Roche Perce river and Petite Bonne Femme river, which afford water-power. It contained, in 1840, 13,915 neat cattle, 18,166 sheep, 37,900 swine; and produced 44,411 bushels of wheat, 8294 of rye, 506,673 of Indian corn, 74,945 of oats, 19,514 of potatoes, 73 tons of hemp and flax, 1,714,663 pounds of tobacco, 54,443 of sugar. It had twenty-seven stores, forty-six grist-mills, seventeen saw-mills, eleven tanneries, twenty distilleries, one printing-office, one weekly newspaper, one college, 15 students, three academies, 114 students, thirty-two schools, 1033 scholars. Pop.: whites, 10,529; slaves, 2008; free coloured, 94; total, 12,561. Capital, Columbia.

Boone, L. Warwick co., Ia. It contains four schools, 190 scholars. Pop. 1723.

Boone, L. Harrison co., Ia. It contains two grist-mills, four saw-mills, three tanneries, two distilleries, two schools, 36 scholars. Pop. 2023.

BOONESBOROUGH, p. v., Madison co., Ky., 53 m. S.E. W. Frankfort, 524 W. Situated on the S. side of Kentucky river.

BOONE'S LICK, L. Howard co., Mo. Pop. 1005.

BOONEVILLE, p. t., Oneida co., N. Y., 98 m. N. Utica, 114 m. W.N.W. Albany, 419 W. Drained by Black river and the head waters of the Mohawk river. Pop. 5516. The village is on the Black river canal, 31 m. N. of Utica, and contains two churches, five stores, one grist-mill, one saw-mill, one clothiers' works, eighty dwellings, and about 600 inhabitants.

BOONEVILLE, p. v., capital of Scott co., Ark., 190 m. W. by N. Little Rock, 1185 W. Situated on the N. side of Petite Jean river.

BOONEVILLE, p. v., capital of Warrick co., Ia., 173 m. S.E. W. Indianopolis, 707 W. It contains one school, 40 scholars. Pop. 340.

BOONEVILLE, city, p. v., and capital of Cooper co., Mo., 50 m. N.W. Jefferson city, 964 W. Situated on the S. bank of Missouri river. It contains a neat court-house, jail, and county clerk's office, a Methodist church, fifteen stores, two rope-walks, two academies, 108 students, two schools, 60 scholars. Pop. 2581.

BOORHANPOOR (*Barkhanpore*), a town of the Deccan India, prov. Candeah, of which it was the ancient cap., in the dom. of Scindia; built in a plain, on the N.W. bank of the Tuptee, 135 m. S.E. E. Oojein and 215 m. E. Surat; lat. 21° 19' N., long. 76° 18' E. This is one of the largest and best-built cities in the Deccan, though, as a whole, devoid of architectural beauty. Most of the houses are of brick, many three stories high, with neat facades, framed in wood, as at Oojein, and universally roofed with tiles; but the fort and palace of its ancient sovereigns, and many Mohammedan mosques, chapels, and tombs, are heaps of ruins. Some of the streets are wide, regular, and paved with stone; and there is a square of considerable extent: the finest building is a mosque, called Jamma Musjud, a pile of gray stone, with a handsome facade, and octagonal minarets, but destitute of a cupola, the usual appendage to Mohammedan structures. The Tuptee is a clear and beautiful stream, but here of no great breadth, and easily fordable in the dry season. Boorhanpoor is supplied with water by aqueducts, which bring it a distance of 4 m., and distribute it through every street below the pavement, whence it is drawn up by leathern buckets: 500 of the best houses are occupied by Bokrahs, a Mohammedan sect, who are the great merchants in this part of Hindostan, wear the Arabian costume, and call themselves Arabs by descent. This city was conquered by the Maharrats in 1780, since

## BOOTAN.

which it has progressively decayed. It was captured by the British in 1803, but afterward restored to Scindia. The grapes grown in its vicinity are said to be the best in India. (*Hamilton*, i., 260, 270.)

BOORO, an isl. of the E. Archipelago, 4th divis. (*Crawford*), between lat. 3° and 4° S., and long. 136° and 137° E., 50 m. W. Ceram; length, E. to W., 75 m., breadth 38 m. Rice, sago, a profusion of aromatic and other woods, tropical fruits, and the best cajapat oil, are found here; the interior is peopled by Horafoora, who subsist on sago and the chase. Some of the other inhabitants are Mohammedians. Chinese junks and S. Sea whalers visit it, and the Dutch have a settlement on the island.

BOOROOGIRD, a town of Persia, prov. Irak-Kerman-shaw, cap. govern., in a fine and fruitful valley, 190 m. N.W. Isfahan. Pop. 12,000 (*Kinnsir*). It has a fine castle and several mosques. The town and dist. attached to it belong to the tribe of *Lack*, who do not wander far from the spots to which they are partial, but settle in villages, and employ themselves in the improvement of their estates.

BOOTAN, or BHOTAN, an indep. state of N. Hindostan, between lat. 26° 30' and 28° 30' N., and long. 88° 30' and 94° E., having N. the Himalaya, which divides it from Tibet; E. and S. Assam and Bengal; and W. the river Teesta, which separates it from Sikkim; length, E. to W., about 350 m., by from 90 to 100 in width; but its limits would greatly exceed this estimate were it described as comprising all the country immediately adjoining the Himalaya, on both sides, from Cashmere to China, which is termed by the Hindoos *Baete*, and its inhabitants *Baotyas*. Assuming it to include the districts now referred to, its area has been estimated at about 64,500 sq. m., and its pop. at 1,500,000. The external appearance of Bootan is the very reverse of that of Tibet, which is a level table-land, whereas it is almost entirely mountainous or hilly.

*Mountains*.—Its N. portion, which is the S. declivity of the Himalaya, constitutes an almost impassable frontier, consisting of lofty mountains, either covered with snow, or black and destitute of all verdure excepting towards their base, where short and scanty herbage, a few bushes of holly, and occasionally a stunted pine, are all the signs of vegetation existing in this region.

About 10 m. from this boundary, the aspect of the country changes, becoming, although still bold and lofty, more picturesque and smiling: the hills are cultivated to a considerable height, or covered with verdure often to their summits, having on their slopes luxuriant forests. The valleys are mere wedge-shaped intervals, or water-courses, between the hills, and their vegetation is similar to that of the temperate parts of Europe. The country continues of this character for about 50 m. from N. to S., gradually becoming less striking in its features as it approaches the *terracine*, which divides it from Bengal. This is a tract of marsh land, 25 m. in width, and covered with jungle, being the only plain belonging to Bootan: its climate is most pestilential.

The principal river is the Tchinchien, which intersects the country N. to S., passing through the valley of Tassadon, receiving the waters of the Pachtien and Hatchien, and after a turbulent course of about 150 m., during which it forms several cataracts, and rushes over vast masses of rock, falls into the Brahmaputra, a few miles below Rangamatty, where it is called the Gadawhar. There are several rivers of less consideration, supposed tributaries of the Brahmaputra; but the violence of their course prevents the simplest form of navigation being practicable.

The primary rocks in the mountains are chiefly granite and an imperfect quartz, having the appearance of marble, but employed in the manufacture of a species of porcelain; good limestone is abundant, but not used either for agricultural or other purposes. It is conjectured that the mountain ranges contain much mineral wealth, but they remain almost wholly unexplored. Iron and copper are the only metals hitherto discovered, and the former alone is applied to any purpose by the natives.

The climate exhibits every variety, according to elevation, and summer heats and winter cold are severally felt in places within sight of each other. In the mountainous regions it is not unhealthy, and resembles the climate of the S. of Europe, not being subjected either to the burning suns or periodical rains of Bengal. Snow prevails during a great part of the winter, except in some few districts; showers are frequent in summer, and in consequence of the exhalations arising from the numerous springs and cataracts, a certain humidity pervades the atmosphere, even at this season. Panukka, although but a few miles distant from Tassadon, has a climate so much milder than the latter, that it has been chosen as the winter residence of the sovereign.

The mountain forests abound with beech, ash, maple, birch, yew, pine, fir, cypress, &c., but contain no oaks. Numerous fruits common to Europe flourish; as apples

## BOORHANPOOR.

(though of an inferior quality), pears, apricots, peaches, walnuts, melons, mulberries, strawberries, raspberries (the two latter fruits growing wild), oranges, and pomegranates, which are excellent. In the colder districts the cinnamon-tree, and a species of rhubarb, are found.

The marshes of the S. abound with elephants, rhinoceroses, tigers, buffaloes, and other formidable wild animals; but, excepting in these parts, they are not abundant. Captain Turner speaks only of a kind of monkey, which inhabits its vicinity, and the yak, or grunting ox, which is found among the mountains of the N. boundary, but descends into the lower country for pasture during the winter months. The Tangun horse, a species peculiar to Bootan, about 13 hands high, well formed, short bodied, clean limbed, deep in the chest, extremely active, and well suited to mountainous countries, is an object of considerable traffic with Bengal. These have a tendency to become piebald; those of one colour among them, although rare, and less valued by the natives, are much more esteemed by the British merchants.

**People.**—The Bootanees have been already noticed (see p. 198). In physical formation they differ greatly from the Bengalees, being hardy, robust, strong, and occasionally, in the mountain districts, attaining a height of more than 6 ft. Their skins are smooth, and often not darker than those of the inhabitants of the S. of Europe; faces broad, and cheek-bones high, from which point the face rapidly narrows downwards; the eye is small and black, with long, pointed corners, looking as if extended in width by artificial means; they have scarcely any eye-lashes, beard, or whiskers. They are often greatly afflicted with goitre, especially those who live near rivers subject to inundation. Though not deficient in courage, they are peaceably inclined and inept in the arts of war: the bow and arrow (in the use of which they are skilful), sword, and falchion are their chief weapons. No military discipline whatever is maintained, and ambush is more frequently resorted to than open conflict. They dress in woollen cloth; use animal food and spirits. Tea is the usual beverage, but so prepared as to suit few palates but their own. Their dwellings seldom exceed one story in height; the palace of the rajah, at Tamsudon, consists of several, and is magnificent, as compared with the other edifices. Much ingenuity is displayed in the construction of their bridges, which are composed either of timber or chains of iron: there is one of the latter kind across the Tchinchien, at Chuka, deserving of admiration, the founder of which is unknown. Their aqueducts are formed of the trunks of trees hollowed for the purpose. Both polygamy and polyandry are in practice; marriage is not ratified by any religious form, and it frequently happens that one female becomes the joint property of several members of a family; the dead are burned, and their ashes plunged into a river, on which occasion certain ceremonies are performed by the Gylonga, a numerous sect of recluses, who apply themselves exclusively to administering the duties of religion. There are two annual festivals; one in the spring, called the *hooli*, consisting of different sports, in which those of all ranks, sex, and age, mix with unrestrained freedom; and an autumnal festival, called *wallawa*, embracing a multitude of Hindoo allegories.

**Agriculture.**—In the culture of the land the natives display industry and care. Rice, wheat, barley, and a species of triangular seed bearing an affinity to the polygonum of Linnæus, are the chief agricultural products. The valley of Tamsudon, and some of the lands skirting the river, yield two crops annually; the ground on the slopes of the hills is levelled by cutting it into shelves, to enable it to be irrigated by the mountain streams. The most laborious offices of husbandry fall to the lot of the females. Notwithstanding the climate affords great advantages for the production of culinary vegetables, the turnip is the only one cultivated with much success; cucumbers, shallots, melons, &c., are grown; but potatoes have failed, and are now totally neglected.

The trade with the surrounding countries is a monopoly in the hands of the government. Coarse woollen cloths, horses, wax, ivory, gold-dust, silver ingots, musk, the various fruits of Bootan, and Chinese manufactures, form the chief articles of export to Bengal; and the same articles, with the addition of rock salt, leather, tobacco, paper, rice, &c., to Tibet. An annual caravan is sent by the deb-rajah into the Bengal presid., which returns laden with indigo (comprising half the cargo), English woollens, linen cloths, cottons, sandal wood, spices, assafœtida, sheet copper, tin, gunpowder, other skins, horns, hides, &c., the whole usually amounting in value to about 30,000 rupees. A small traffic with the E. division of the Rungpoor district is also maintained. A base silver coin, worth about 10d., struck in Cooh Bahar, is current throughout Bootan, where there is no mint.

**Manufactures.**—The principal is paper, made from the

## BORDEAUX.

bark of a tree, from which material a kind of silk and wool is also made. Pars is the only market in Bootan, and here are manufactured idols, swords, daggers, and the bars of arrows; the latter are dipped in a poison procured from a tree unknown to Europeans, which, however, seldom proves mortal.

**Religion.**—Buddhism, of the Lama sect, is the prevalent religion; but a difference of opinion exists on certain points, one sect permitting the use of food considered impure by the Brahmins. No interruption whatever, of a diplomatic or other character, is allowed to interfere during the period of the celebration of sacred rites: there are many similarities in religious customs here with those of Tibet.

**Government.**—The sovereign power, though vested in the hands of the dharma-rajah, who is regarded as possessing divine attributes, is exercised only by the deb-rajah, who resides at Tamsudon. The several passes into the country are under the jurisdiction of officers called *sahals*, who usually inhabit the fortresses of their peculiar districts, except in winter, when they visit the lower country, to escape from the rigour of the season, and for the purpose of establishing their authority, which is uncertain in its extent.

The interior and S. parts of the country are divided into different domains, each controlled by a resident functionary, whose duty consists in the exaction of the gov. dues, and general administration of his distr. The most subordinate of the public officers are called *maskers*, which situation, however, affords an opportunity for considerable preferment. The revenues of the rajah are paid mostly in articles of produce and merchandise. Tamsudon, Wandipoor, Tanukka, Ghassan, and Murichom, are the chief towns; but, with the exception of the first two, they are no better than small villages.

**History.**—Of this country, called by the ancient Brahmins Madra, no early record has been transmitted, nor was public attention much directed towards it until the deb-rajah's invasion of the neighbouring territory of Cooh Bahar, in 1773, which the British government opposed; but, through the intervention of the lamas of Tibet, a peace was effected; the disputed district being awarded to the Bootanees.

It is extremely difficult, and in some parts impossible, to determine the exact boundary of the country; a regular system of encroachment on the surrounding states having been long practised by the Bootanees, who have at different periods appropriated to themselves considerable possessions belonging to Bengal and Assam. Great alarm was created in 1816 by a supposed threatened invasion of the Chinese, who had entered Nepal; and the deb-rajah was excited by his fears to declare himself amicably towards the British, in the hope of gaining assistance, if required. A treaty was concluded in 1775, for carrying on the traffic of the E. I. Company with Tibet, through Bootan, by means of the native merchants, no other mode of communication being allowed. (*Hamilton's E. I. Gaz.*, 1, 370-376; *Turner's Embassy to Tibet, passim*.)

**BOOTEBAY**, p. L. Lincoln co., Me., 40 m. S. by E. Augusta, 601 W. It has the Atlantic ocean on the E., Damariscotta river on the E., and Sheepscot river on the W., which are here but arms of the ocean. It has an excellent harbour, and being surrounded on three sides by navigable waters, it possesses great facilities for navigation. It contains eighteen stores, one fulling-mill, two grist-mills, three saw-mills, nine schools, 1111 scholars. The fisheries employ 457 persons, and a capital of \$79,015. Pop. 933.

**BOOTON**, an isl. of the E. Archipelago, 2d division; lying off the S.E. extremity of Celebes; length, 10 to 85 m.; average breadth about 30 m.; between lat. 4° and 6° S., long. 123° E. It is high and woody, but well cultivated, yielding rice, maize, an abundance of tropical fruits, poultry, &c. The Dutch had formerly a settlement here, and sent an officer annually to destroy all the clove-trees on the island. (*Hamilton's E. I. Gaz.*)

**BOPPART** (an. *Boudobriga*), a town of the Prussian States, prov. Rhine, on the left bank of that river, 9 m. S. Coblenz. Pop. 3800. This is a very ancient town, its walls appearing to be built on the foundations of a fort constructed by Drusus. In the middle ages it was an imperial city, and several councils have been held in it. The houses are mostly of wood and plaster, with projecting upper stories; and the streets are narrow, ill-paved, and filthy. The large convent of Marienburg, founded in 1123, and some similar establishments, have been converted into the most useful purposes of cotton-factories. The parish church and the old church of the Carmelites are worth notice. (*Schreiber; Barrois's Tour, &c.*)

**BORDEAUX**, or **BOURDEAUX** (an. *Burdigala*), an important commercial city and sea-port of France; cap. dep. Gironde, in the centre of an extensive plain, on the left or W. bank of the Garonne, 35 m. S. E. from its embouchure, 103 m. N. N. E. Bayonne, and 1307 m. S. W. Paris;

## BORDEAUX.

lat. 44° 56' 25" N., long. 0° 33' 35" W. (Pop. ex com.) 65,114. The Garonne here describes a semicircle, along the outer side of which the city extends for about 24 m., with a breadth of about 1 m. in its greatest diameter. The city is divided into the old and new quarters: the former, or southern portion, which includes the ancient Roman town, contains only narrow, crooked, and dirty streets, with ill-built stone houses; while the latter, comprising the N. part of the city, has mostly risen up since 1743, when the Intendant, M. de Tourny, commenced his enlightened administration. It is extremely handsome, and deservedly celebrated. The Rue du Chapeau Rouge, which, with its continuations, divides the city into two nearly equal parts, is, in breadth, length, and appearance, not dissimilar to Portland Place, and has many elegant shops, and some noble edifices, as the Bourse, and Grand Theatre. The Allées and Cours de Tourny, the Cours du Jardin Public, the Cours d'Albret, and several other streets; and the Places, or squares, entitled Louis Philippe 1<sup>er</sup>, Royale, Dauphine, &c., may be particularized for their beauty or size. The Faubourg des Chartreux, which contains the Jardin Public, was spoken of as perhaps the finest suburb in Europe, till the extension of building made it part of the city. The approach to Bordeaux by water is very striking. The river, in its narrowest part, opposite the Place Royale, is 730 yards across, with a depth of 16 ft. at low, and nearly 5 fathoms at high water; the length of the port, from one end to the other of the city, is reckoned at upwards of a league; it is capable of accommodating 1300 ships; and such as do not exceed 500 or 600 tons may enter it at all times of the tide. The Garonne is skirted along the city by a succession of superb quays, which descend, by a gentle inclination, to the water's edge, and, besides their utility, are among the principal ornaments of the town, being lined with handsome buildings, whose façades have an imposing effect. "On viewing," says Mr. Agilis, "this magnificent crescent from any opposite point from which the eye may embrace its whole extent, one cannot hesitate in ascribing to it a decided superiority over any *crescent d'ail* presented to us either in the French or English metropolis." (*Switzerland, &c.*, p. 315.) On the opposite side of the river there is only the small suburb of La Bastide. The communication between the city and its suburb is maintained by the famous bridge of Bordeaux, one of the noblest structures of the kind that is anywhere to be met with. It is 5384 yards in length (or 1904 yards longer than Waterloo Bridge), by 48 ft. broad; has 17 arches, the piers being of stone, and the upper parts partly of stone and partly of brick. It was commenced in 1810, and completed in 1821, at a cost of £360,000. Owing to the depth and strength of the current, it was a most laborious undertaking. The road to Paris passes over this bridge. The public buildings most worthy of notice are the cathedral, the churches of St. Michel, St. Croix, St. Seurin, Paul, Bruno, and others; the Bourse (Exchange), Custom House, Grand Theatre, Hall of Justice, Palais Royal, Fort de Ha, synagogue, public baths, &c. The cathedral is a fine, but unfinished Gothic edifice, commenced, according to Hugo, in the 11th, and continued, by several different architects, in that and the succeeding centuries, from which circumstance, although beautiful in parts, it wants harmony and regularity. It is 4134 ft. in length; the height of its nave is 85 ft.; that arm of the cross in which its grand entrance is placed is adorned with two spires, each nearly 160 ft. in height. At a short distance from it stands the ancient belfry, formerly nearly 290 ft. high; but having been much dilapidated during the Revolution, it is now reduced to little more than 100 ft. high, and serves as a shot tower. The church of St. Michel, built in the 12th century, is in a more perfect architectural style than the cathedral; but, like other churches in Bordeaux, it is dark and gloomy. It also has an isolated belfry, which was 320 ft. high until mutilated, and in part destroyed, by a tempest in 1768. On its summit is now a telegraph, forming part of the line between Paris and Bayonne; and beneath it is a cavern in which dead bodies have been preserved for a lengthened period. The church of St. Croix is the most ancient of all, having been built before the middle of the 7th century, and restored by Charlemagne. The churches of Notre Dame, St. Paul, and the College Royal, are of much later date. The synagogue is a handsome building, erected in the time of Napoleon. There are two Protestant churches, but they present nothing worthy of remark. The Bourse is a large edifice, with a splendid staircase, and a hall in its centre, 964 ft. in length, by 634 ft. broad, lighted by a large glazed dome, 754 ft. high, and adorned with a gallery supported by a double rank of arcades. In the upper part of the building are the Council Chamber, Tribunal of Commerce, and rooms used for other public purposes. The Custom House, built on the corresponding side of the Place Royale, is, externally, like the Bourse. The Grand Theatre, built in the reign of Louis XVI., at an expense of £170,000, has, without exception, the handsomest exterior in France, and perhaps in Europe.

It will accommodate 4000 persons, and has a fine concert-room, a spacious hall, café, and other apartments. There are several other theatres, but none is particularly distinguished. The Palais, or Château Royal, built in 1778, and formerly the residence of the archbishop, is an extensive and fine structure, with a large quadrilateral court in its centre. Napoleon made it an imperial palace. The Palais de Justice, the seat of the royal court and civil tribunal, has a marble statue of Montesquieu. The modern town-hall is of Gothic architecture; of the ancient one, built in the 13th century, nothing at present remains but an oval tower, surmounted by a dome, flanked by two turrets, called the *Tour de l'Horloge*.

Bordeaux was for a long period fortified; but the new streets planned by M. de Tourny for the most part occupy the sites of the former works: the Port de Ha, constructed by Charles VII., is now converted into the prison; the Château Trompette, built by the same sovereign in 1453, was demolished in 1817; and its site, which now forms the Place Louis Philippe, laid out as a promenade, and planted with trees. There are some remains of antiquity in Bordeaux: the principal is what is called the "Palace of Gallienus," a vast amphitheatre of brick and stone, believed to have been erected about A.D. 260, but now much dilapidated. It stands in the N. half of the city, about ½ m. from the ancient Roman town. It appears to have been of an elliptic form, 144 yds. long, by nearly 115 yds. wide, and capable of accommodating 15,000 spectators; it suffered greatly during the revolutionary phrensy in 1792 (when the Palais d'Ombrière, or Castrum Umbrarie, another Roman edifice, was also, for the most part, destroyed); but its two principal entrances 268 ft. high, by 194 ft. wide, and a part of its circumference, are still nearly perfect. Most other relics of the Roman dominion have disappeared. The Temple of *Tutelle*, supposed to have been dedicated to the tutelary divinity of the place, and to have been erected early in the first century, was 88 ft. in length on each side, and contained 24 enormous columns, 17 of which were standing towards the end of the 17th century. It was much mutilated in 1649, and totally demolished under Louis XIV., in 1677, to make room for the glacis, constructed by Vauban, round the Château Trompette. No trace is found of the Temple of Diana and Fountain of Divona; and the stream *Divitia*, now La Devise, mentioned by Ausonius (*Clars Urbis*, xiv. B.),

Per mediumque urbis fontem fluminis altum;  
Quem pater Oceanus refuso cum impleverit ambo,  
Adlabi totum spectabile claudius aequor—

Instead of supporting fleets, is now arched over, and no vestiges are extant of its dock.

Bordeaux has many structures, &c., devoted to trade, arts, and manufactures. There are several building-docks, in which brigs, frigates, &c., and even ships of the line are constructed, though not so many of either as formerly. The *Abattoir Général* (slaughterhouse), commenced in 1827, is, like the Entrepôt for Colonial produce near it, a large building well adapted for its purpose. There is a very extensive snuff manufactory near the Fort de Ha, employing from 400 to 500 hands, and containing a warehouse capable of holding 30,130 cwt. of tobacco. There are numerous brandy distilleries, sugar refineries, vinegar, glass-bottle, shot, and cordage factories, iron and steel forges, potteries and tanneries, with manufactures of cotton, woollens, kid gloves, bonnets, corks, playing-cards, liqueurs, musical instruments, barrels, turpentine and other drugs, soda, alum, vitriol, mineral waters and other chemical preparations; and in the neighbourhood of Bordeaux some gunpowder fabrica.

The trade of the port is considerable in the produce of these manufactures, and in grain, cattle, and timber; but the chief articles of export are the famous red wines of the Gironde and brandy. A large portion of the inhabitants of the Quartier de Chartons are wine merchants, and a great part also of that quarter is occupied with cellars, some of which are capable of containing 1000 tuns of wine. The exports of wine from Bordeaux amount at present to from 50,000 to 60,000 tuns a year, and would doubtless be much greater were it not for the heavy duties imposed on most foreign articles. The trade of the port has also suffered severely from the depressed state of the French colonies, owing to the preference given to the growers of beet-root sugar. Besides wines and brandies, which are furnished to every country with which Bordeaux has any trade, the chief exports are liqueurs, walnuts, chestnuts, dried fruits, vinegar, tartar, skins, flour, cork, and various drugs to England. Spirit of wine, tartar, molasses, and colonial produce to the N. of Europe; fruits, verdigris, and a few manufactured articles to the U. States; to Spanish America and the W. India colonies of France, French manufactures, furniture, cattle, and flour; to the S. Seas, the E. Indies, and China, all sorts of manufactures, furniture, silver, &c. Bordeaux is the chief port of Southern France for colonial pro-

## BORDEAUX.

duce; it receives from America, India, and Africa, coffee, sugar, pepper, segars, casella bark, indigo, quinquina, tea, rice, cocoa, skins, dye-woods, &c.; iron, lead, and other metals are imported, especially from England; fish, glue, and tallow from Russia; timber from the Baltic; metals, oil, liquorice, saffron, &c., from Spain; zinc and steel from Germany; cheese and stock-fish from Holland; wines from England, and the two last-named countries, &c. In 1836, 2535 vessels, including their repeated voyages, arrived at Bordeaux; of which 689 were from foreign ports, and 2897 from French ports. Of the foreign vessels entering the port, 84 were English. There belonged to the city, on the 1st of January, 1837, 357 vessels, of the burden of 66,355 tons: of these 230 vessels, of the burden of 57,500 tons, were employed in foreign trade, and the others in coasting trade and river navigation. The trade with the interior, is greatly facilitated by the Canal de Midi. (See FRANCE.) The custom duties at Bordeaux, in 1831, amounted to £550,478.

Bordeaux possesses several charitable institutions. "The New Hospital, erected to replace that of St. André (built in 1360), is," says Mr. Ingia, "upon a scale of magnificence and comfort beyond what is to be found in any other town in Europe. I dedicated the second of my days at Bordeaux to a visit to this hospital and was equally surprised at its extent, and delighted with the admirable arrangements that pervade every part of it. There is nothing that this hospital does not contain. It includes 710 beds for sick persons, and 18 chambers for the accommodation of persons who pay for the attentions they receive. It contains baths, bake-houses, courts, an apothecary's shop, water-reservoirs, gardens, and accommodation for medical men. There are also in the hospital 34 reservoirs for water, as a provision against fire, containing 1410 hbls. I need scarcely add, that, in the cleanliness of every department, the hospital is perfect; and that in the smallest minute, everything is found that can contribute either to health or to comfort." (*Switzerland, &c.*, p. 318.) There are, also, hospitals for aliens, foundlings, the aged, insane, &c., *hospices de charité*, *dépôt de mendicité*, and other similar establishments. There are two buildings near the river, each 36 yards square, devoted to public baths; their exterior is crowned with an agreeable terrace, and the interior of both is fitted up with all the various kinds of baths, medicinal and otherwise. The vineyards of the former monastery of the Carthusians is now converted into a public cemetery: there are three others in Bordeaux, two belonging to the Protestants, and one to the Jews.

Bordeaux is the seat of an archbishopric, of a royal court and court of assize, and tribunals of primary jurisdiction and of commerce. It has numerous scientific and scholastic institutions. The Museum occupies a large extent of ground, and comprises the public library, cabinet of natural history and antiques, a picture-gallery, schools of design and painting, observatory, &c. The public library contains 110,000 volumes, among which are some rare works, and several valuable MSS.; the other departments are not very rich; the picture gallery, however, boasts of some good paintings of the French, Italian, and Flemish schools. There is a botanic garden, at which a course of lectures, recognised by the University of France, is annually delivered; a university academy, royal academy of arts, sciences, and belles-lettres, a royal college, a faculty of theology, with schools of navigation and medicine, a normal school, a school for deaf and dumb, &c.; an Athenæum; Linnæan, philomathic, and medico-chirurgical societies; a royal society of medicine; a society of commercial emulation, &c. In the vicinity of the city is an experimental farm, and a race-course or hippodrome: the country round is chiefly appropriated to the culture of the vine, but, from its flatness, is devoid of much picturesque beauty. There is a joint-stock bank with a capital of 3,000,000 francs, and a *mont-de-piété*, in Bordeaux. Since 1825, this city has been lighted with gas. The inhabitants are generally opulent, and live in a style superior to that common in any other French city, Paris excepted. The jurisdiction of the royal court of Bordeaux extends over the depts. Gironde, Charente, and Dordogne; its archbishopric, which originated in the third century, has for suffragans the bishops of Agen, Angoulême, Poitiers, Périgueux, La Rochelle, and Luçon. Bordeaux sends 4 deputies to the chamber, 3 for the city, and 1 for the arrondissement.

*History, &c.*—The epoch of the foundation of Bordeaux is unknown. It was the capital of the *Bituriges Fisci*, a Celtic nation of Gaul, and a celebrated commercial city in the time of Strabo. It was taken by the Romans in the reign of Augustus; and Hadrian made it the metropolis of the second Aquitaine. In the reign of Gallienus, Tetricus, the governor of this prov., one of the so-called thirty tyrants, assumed the purple here, and it is most probable (*Hugo*) that it was he who built the celebrated amphitheatre. In 417 the Visigoths, in 509 Clovis, and in 732 the

## BORMIO.

Saracens, possessed themselves of it; under Charlemagne, it was governed by a count of its own; in the ninth century it was ruined by the Normans. It subsequently became the cap. of Guenno, and fell, with the rest of that duchy, under the kings of England, to whom it almost unopposedly belonged till the English were finally expelled from France in the reign of Henry VI. Generally speaking, this city has in later times been attached to the interests of the Bourbon family; but in 1830, on the publication of the *ordonnances* of Charles X., the standard of revolt was hoisted here before news arrived of the same occurrence in Paris. Bordeaux and its vicinity have, in all ages, produced celebrated men: among others, Montaigne and Montaigne; the Latin poet Ausonius, in the fourth century; Chaptal de Bach, Edward the Black Prince, Jay, Desceze, &c.; Pope Clement V. and Richard II. of England, were also natives of this city. (*Hugo, France Pittoresque*, II., 63-73; *Guide du Voyageur*, &c., 1837, p. 155-156.)

BORDENTOWN, p. b., Chesterfield t., Burlington co., N.J., situated on a high bank, on the E. side of Delaware river, which prevents it from being seen to advantage from the river. The Delaware and Eastern canal has its western termination here, and the Camden and Ansbey rail-road passes through the place by a viaduct beneath its principal streets. It contains three churches, one Methodist, one Baptist, and one Friends'; five stores, 300 dwellings, and about 1800 inhabitants. Incorporated in 1825. Joseph Bonaparte here fixed his residence when in the United States, and erected a splendid mansion and other buildings, and expended several hundred thousand dollars in ornamenting his grounds, consisting of 1500 acres. The splendid mansion, with some of its rare pictures, was consumed by fire, and the present buildings are plain, but commodious. Bordentown is a favourite resort of the inhabitants of Philadelphia in the summer season.

BORGIA, a town of Naples, prov. Calabria Ultra, cap. dist., in a plain 6 m. W. Canzanaro. Pop. 3000. Having been almost totally destroyed by an earthquake in 1763, it was rebuilt by Ferdinand IV. Its environs produce highly-esteemed wines, and large quantities of silk-worms.

BORGO, a sea-port town of Russia, in Europe, princip. Finland, gov. Nyland, at the bottom of a bay of the gulf of Finland, 25 m. N.E. Helsinki; lat. 60° 39' N., long. 25° 45' E. It is the seat of a bishopric, and has a gymnasium. The harbour is indifferent, and it has but little trade. It was here that the emperor Alexander received the oath of fidelity tendered by the states of the principality.

BORGOMANERO, a town of the Sardinian states, prov. Novara, cap. arrond., on the Gogna, 18 m. N.N.W. Novara. Pop. 6000. It is surrounded by walls, and is well built; has a fine square, several convents, a hospital, and a *mont-de-piété*.

BORGO-SAN-DONINO, a town of the duchy of Parma, cap. distr., on the Sdrone, 22 m. S.E. Piacenza. Pop. 4000. It is surrounded by walls, has a ducal palace, a cathedral, four parish churches, a college, a seminary, a work-house, and some fabrics of silk and linen. It owes its name to St. Donino, who was beheaded here in 304.

Borgo is prefixed to the name of various small towns in different parts of Italy.

BORISOFF, a town of Russia, in Europe, gov. Minak, on the left bank of the Bérézina, 45 m. N.E. Minsk. Pop. 1000. Borisoff would be unworthy of notice in a work of this sort, but for the celebrity it has acquired from the disastrous passage of the Bérézina, effected near it, by the remains of the French army under Napoleon, on its retreat from Moscow, in 1812.

BORISSOGLEBSK, a town of European Russia, gov. Jaroslavl, on the right bank of the Volga, opposite to Romanof. Pop. 4000. It is picturesquely situated on a hill declining towards the Volga, and surrounded with dense forests. It is also the name of another small Russian town, gov. Tambov, on the left bank of the Vorona.

BORKHUM, a small isl. in the North sea, belonging to Hanover, off the mouth of the Ems, about 9 m. from the nearest point of the mainland. It is included in the bailiwick of Pewsum, is about 13 m. in circ., and has about 500 inhabitants. It is so low that at high water it is divided by the sea into two pretty equal parts. The inhabitants are mostly seamen, several of them being employed as harpooners in the ships engaged in the northern whale-fishery. They also raise corn, fruits, and cattle. It is an established custom, that a third part of all articles saved from shipwreck goes to the individual on whose land the disaster took place. Borkhum is a par., with a church and a school. The spire of the church serves also as a lighthouse. The lantern, which is furnished with reflecting lamps, is 150 ft. above the level of the sea, and is in lat. 53° 35' 20" N., long. 6° 40' 36" E. (*Dict. Géographique*, &c.; *Crozier, over les Phares*, 2d edit., p. 61.)

BORMIO, a town of Austrian Italy, prov. Valtellina, at the confluence of the Fiedroscio with the Adda, 30 m. N.E.

## BORNEO.

**Sondrio.** Pop. 5500. A large cattle fair is annually held here, from the 22d to the 25th of October; and in its vicinity, on the declivity of mount Braglio, are celebrated mineral springs, much frequented by patients from the Valtellina and the Grisons. This town was formerly much more considerable; but, being sacked, burned, and its inhab. put to the sword, in 1631, it has never recovered from the disaster. (*Rampoldi*.)

**BORNEO** (called by the natives *Tuma Klementan*), the largest island in the world, Australia being reckoned a continent, occupying nearly the centre of the E. archipelago; between lat. 4° 10' S., and 7° N., and long. 100° and 119° 30' E.; having N. and W. the China sea; E. the Celebes sea and straits of Macassar; and S. the sea of Java: form compact; length, N.E. to S.W., 750 m., breadth 350 m.; area, 260,000 sq. m. Pop. probably from three to four millions. The coasts are less indented by deep bays, or creeks, than those of most islands of the archip.; notwithstanding which, it has several fine and spacious harbours. The shores consist usually of mud banks, with numbers of minute and rocky islets around them; the land for several miles towards the interior continuing marshy and alluvial, interspersed with gentle acclivities, covered with underwood. In the maps a chain of mountains, running N.E. to S.W., have been represented as passing through the centre of the island; but Mr. Earl, who visited the interior in 1834, saw no traces of these, nor does he believe in their existence. Excepting the volcanic chain of mountains passing through Java, and the S. parts of the archipelago, to the E., all the hill ranges of those islands run N.W. and S.E., and seem to be continuations of the great ranges which run in that direction through the ultra-Gangetic peninsula, and of which the rocky island Pulo Condor and the Natunas seem to be connecting links. They are all of the same geological character—granitic; and in Borneo probably terminate in a range which lines the S.E. shore for 90 m., called the Hundred mountains. There are many isolated hills in Borneo, and a range stretching along the N.W. coast, of about 3000 ft. in height. (See *Earl's Map, &c.*) There are numerous and extensive plains, especially in the N.; but the most important yet known to Europeans is that of Montrado, near the W. coast. There are said to be upwards of 100 rivers, many being navigable, and some of considerable size. The principal is the Banjarmasin, which has a S. course nearly throughout the whole island, and falls into the sea not far from the town of the same name on the S. coast. The Pasir, Coti, and many others, are met with on the E. coast; on the W. the Sambas, Pontiana, Landak, Succadan, &c., are the principal; the first is 1 m. wide at its mouth, and much more a little farther inland. It has been ascended in small vessels by the Dutch for 60 m., and beyond that is said to be available for canoes to within two days' walk of Borneo Proper. The larger rivers, which come from the centre of the island, appear not to have their origin in any mountainous region, as they rise no higher during the rainy season: they seldom contain any sand banks or rapids.

Nothing satisfactory has been communicated respecting the geology of Borneo, except the granitic character of its primary mountains; its soil, in the neighbourhood of the European settlements lies in richness with that of any other island of the archip. In the N.E. it is said to be superior to all other parts. Borneo is rich in valuable minerals: it is the only island of the archip. where diamonds are found; the chief of which are from Landak, in the Chinese territory: one, in the rough state weighing 367 carats, and worth, according to the common but absurd method of estimating such articles, £299,378, has been found there, and was, in 1815, the property of a petty chief. Diamonds are most numerous in the alluvial soils, in which gold is also found; and are of good water, though usually small. The plain of Montrado is said to have formerly yielded 88,362 ounces annually of pure metal (*Hamilton*); the soil in which it is found is stiff, and the veins lie from 8 to 15 ft. below the surface. It is met with chiefly in small particles, nearly as fine as sand, although sometimes in irregular pieces of the size of a sixpence. There are inexhaustible mines of ore of antimony, of very superior quality, at Serawak; 1400 tons of which, at 16s. to 20s. per ton, are annually exported to Singapore: tin is plentiful in some parts, and a little iron is procured from the interior.

**Climate.**—The climate of the N. is similar to that of Ceylon, and not subject to the hot land winds that prevail on the coast of Coromandel: the W. coast has no rainy season in particular, but is refreshed by showers all the year round. Europeans have had but little intercourse with the eastern parts, and little respecting them is known.

Borneo is generally very fertile; but, except in Borneo Proper, the grain produced is not sufficient for home consumption. Timber is often very large, but not generally of the kinds suited for ship-building. No teak has been yet discovered: mangrove and rattans are plentiful on the

banks of the rivers: iron-wood, ebony, campher, dammer, and *tankamen* trees (from the latter of which wood-oil is obtained), coco-palm, betel, cinnamon, sugar, &c., are among the principal trees. The camphor-tree grows to 15 or 16 ft. in clrc., and proportionally high: it is cut down, split into pieces, and the produce (which is probably the best) found in the fibres: none of either the Borneo or Sumatra camphor is imported into England, which is supplied with that article from China only. Rice is excellent; but the Dutch are very jealous of its exportation, except through themselves. Maize and the sugar-cane are cultivated, as well as the plantain and many other tropical fruits.

**Animals.**—The elephant, rhinoceros, and leopard are confined to the N.E. corner of the island; the ox and wild hog are natives of the forests; and the jungles furnish an endless variety of the ape and monkey tribes, among which are the orang-outang, and a species of baboon, thought by Mr. Earl to be hitherto undescribed, 3 ft. in height, tailless, with short, glossy, brown hair, and an aquiline nose projecting 1½ in. from the face. The tapir, numbers of deer, and small bears, no larger than badgers, but with shaggy hair, inhabit Borneo.

Mr. Earl saw a small amphibious animal from 2 to 8 in. in length, with large pectoral extremities, leaping about in vast numbers on the mud of the W. coast, which very rapidly buried itself on the approach of an enemy: these are thought great delicacies, and caught in a singular manner by the Malays, who obtain a thin plank several feet long by about one foot broad, with spikes projecting from the end, and then, with the right knee resting on the plank, they push it rapidly forward, by means of the left foot, against the mud, and transfix the little animals before they have time to escape. The *Scolecus* sea is much frequented by English whalers for the sperm-cet whale. The seas abound with turtle, and plenty of fish, oysters, and other testacea, *holothuria*, &c.

**People.**—The interior and part of the N.W. coast are peopled by Dyaks, and, it is said, by a race with woolly hair, like the Papuan negroes; the W. coast by Malays, Chinese, and Dutch colonists; the N.W. by half-caste descendants of the Moors of W. Hindostan; the N. by Anamese (Cochin China); N.E. by Suluks; E. and S. coasts by Bugis, of Celebes. Besides these, three tribes live in small craft, in a wandering manner, about the shores; viz., the Lanuna, from Magindanao; the Orang-Badju, and Orang-Tidong; source unknown.

**Dyaks.**—The Dyaks (Orang-Benua), a savage race, believed to be the aborigines, are scattered all over the island in different small tribes. They are of a middle size, and, except when cramped up by being constantly in a canoe, are invariably straight-limbed and well-formed, muscular, though inferior to the Chinese in ability to carry burdens; feet short and broad; toes turned rather inwards; cheeks-bones high; forehead broad and flat; eyes rather long, and the outer higher than the inner angle; faces prominent, with a pleasant expression, and more like that of the Anamese than other Asiatic nations; hair straight and black; no beard. The women are interesting, often good-looking, and sometimes even fair: many are married to Chinese, and make unexceptionable wives and mothers. Their manners are mild and prepossessing, but as they dread the Malays, from whom they have suffered formerly, they commonly avoid strangers; yet it is said that there is no Eastern people more apt to make progress in arts. (*Earl*.)

In the N.E. and near Banjarmasin, their condition is the most ameliorated. At the latter place, and on the S. coast, they are said to possess a written character, and they are there ashamed to avow certain of their usages; such as that of seeking for and preserving human heads, &c. Rice is their chief food, with pork, fish, deer, and other wild animals, which they shoot by means of arrows blown through a tube. This is their general weapon, but they sometimes use crooked bows and arrows, the latter of which are dipped in poison. They spend much time in ill-built, shallow canoes, about 10 ft. long, and made by hollowing out a single tree; but on shore inhabit thatched bamboo houses, elevated on posts, and entered by a ladder, which is always drawn up at night: these habitations are often collected in small villages, and defended by stockades. The men wear but little clothing; the women much more, and are bashful and modest: both sexes love finery, especially beads and feathers. Tattooing is in use among some of the tribes.

Upon the banks of the larger rivers many tribes often unite together, under the rule of one stronger than the rest; but in the forests they keep separate, and speak dialects so different as to be often unintelligible to each other. The more civilized have adopted Mohammedanism; others less civilized believe in a Supreme Being and a future state, but suppose that, in the latter, the owner of a human head will have the former wearer of it as his slave! a belief which has naturally led to a widely-extended system of

## BORNEO.

human sacrifice. No one can marry without the head of some one having been first obtained by himself or his friends; and at the funerals of persons of consequence, or treaties of peace between chiefs, slaves or prisoners are decapitated to obtain these trophies; the heads are dried and hung up in the houses; and piratical expeditions are often undertaken with no other object than to obtain them. Some Dyaks are occupied in washing gold, and dispose of the gold-dust to the Malays for red and blue cotton cloths, beads, brass wire, salt, and other necessities of life, and tobacco, of which they are extravagantly fond. To avoid more intercourse than necessary with the Malays, they oblige them always to dispose of their merchandise at the nearest Dyak town. Next to human heads, which appear to them the most valuable of all articles, China jars are valued, and from some superstitious motives are so highly prized, that they have been known to fetch £300 or more. A circumstance, stated by Mr. Earl, which may be of use to individuals trading with Borneo, is, that if any one drink the smallest quantity of the blood of a Bornean in a cup of water, he, by doing so, binds him by ties closer than those of consanguinity. The Lanuns are a piratical people, who infest the N.W. coast for 300 m., and cruise in other parts of the archipelago, plundering villages, and often carrying off their whole population into slavery. Sometimes the Dyaks join with them in these predatory expeditions, and bring away the iron and human heads, while the Lanuns appropriate the rest of the spoil. The Orang-Badju are a kind of sea gipsies, in person like the Malays; living at the mouths of most rivers on the E. border, in families of about a dozen or fifteen, in boats of from 8 to 10 tons each, covered, when in harbour, with a roof of matting. They are employed chiefly in fishing, taking tripping, and making salt from burned sea-weed. They are generally Mohammedans, but by no means rigid in their tenets. The Orang-Tidong live to the N. of the latter, and cruise among the Philippines and Sooloo Isles, where they dispose of sago, on which they chiefly subsist. They are a hardy race, and are said to be occasionally cannibals.

The Dutch have two small stations on the W. coast, Sambas and Pontiana, about 90 m. apart. The town of Sambas is meanly built, and contains no habitation of stone, or other substantial material: the houses of the government officers are low, wooden, thatched buildings; the huts of the natives are chiefly raised on posts, ascended by ladders, but many are built on floats on the river, as in Siam. The Chinese *campang* is the only street; the fort is a mere embankment, surrounded by a stockade of poles, and mounted with a few nine-pounders; it contains the barracks, with a garrison of 40 men, half of whom are Europeans. Before the Dutch settled here, the place was a nest of pirates, destroyed by the British in 1812; the climate is not unhealthy, though the coast is covered with swamps and jungle. Sambas has the better river, but Pontiana is the better town. Between the two are the Chinese settlements of Montadok, Landak, &c. The gold mines near the former place are generally worked by companies of merchant clubbing together. Spades and mattocks are the only mining instruments in use; the ore is brought up in baskets, then washed (for the Chinese have no other method of treating it), and the gold-dust made into little packets, each weighing two Spanish dollars. About 3500 oz. troy a year are sent to Singapore, which Mr. Earl thinks may be about 1-10th of the present produce of the island. The Chinese appear to be of a class like the lowest at Canton: previously to the Dutch settlement here in 1833, 3000 of them arrived annually as settlers; but emigration has now ceased, owing to the treatment they have received from the Dutch. Mr. Earl reports that, in 1834, the Chinese expressed a great desire to trade with the British at Singapore, but the Dutch have interdicted all communication between them and foreign nations except through the medium of Sambas and Pontiana; and, being in possession of the coast line, they are enabled to prevent it. The consequence is, that the Chinese refuse to hold communication with the Dutch, and the whole trade of the W. coast has been much diminished through their illiberality. The W. coast was ceded to the Dutch by the king of Bantam in 1769: but the cession, for some time afterward, was resisted by the sultan of Succadana. In 1823, the Dutch settled at Pontiana, and purchased the monopoly of some diamond mines from the Malay sultan. Finding these unprofitable, they endeavoured next to take forcible possession of the Chinese mines, but being repulsed, they blockaded the Chinese between their two settlements, obliging them to trade by their ports, and guarding the coast by several vessels. The Dutch revenues are chiefly derived from monopolies of salt and opium, the former of which is imported from Java, &c., in vessels chartered by government, and sold at seven times the import price, the interior being entirely dependent on the coast for its supply: other resources are from capitation taxes on the Chinese, and imports on their entering or leaving the

## BORNHOLM.

Dutch settlement. The pop. (1834) of the Chinese and Dutch territories was estimated by Mr. Earl as follows:

|                                   |         |
|-----------------------------------|---------|
| Chinese                           | 150,000 |
| (90,000 in the Dutch settlement.) |         |
| Malays                            | 50,000  |
| Bugis                             | 10,000  |
| Arabs                             | 400     |
| Javanese and Amboynese soldiers   | 150     |
| Dutch                             | 80      |
| Dyaks                             | 250,000 |
| Total                             | 460,630 |

**Exports.**—The principal exports of the W. coast are gold, diamonds, antimony, camphor, bees' wax, deers' horns, dammer, ebony, wood-oil, rattans, pepper, bezoar-stones, and iron, to Java, for the manufacture of *kris*. The iron of the interior is either exceedingly good, or the Dyaks are able to temper it astonishingly well, for their steel cineters are capable of cutting through an iron nail or wire without difficulty. (Earl.)

**BORNEO PROPER.**—The state next in importance to the colonies is Borneo Proper, a Malay sovereignty in the N.W., probably the most ancient of all in the island, and from which the latter has derived its name: it is bounded N.E. by the Sooloo, and S.W. by the Dutch territory, and extends from 100 to 150 m. inland. The Malays here are distinguished for their haughtiness and indolence; and the sultan, who enjoys a high veneration, maintains more state and dignity than most Malay princes. The chief town has been much reduced by piracy and intestine commotion, which have driven away foreign settlers: it is on a river, and in appearance like other Malay towns, but not so large as either of the Dutch settlements: the inhab. are chiefly Mohammedans. The exports are camphor, sea-slug, tortoise shell, birds' nests, clove bark, pepper, gold dust, sandal wood, rattana, &c.; there is much fine timber on the banks of the rivers. There was formerly an extensive trade between Borneo Proper and China, as well as some commerce with the English in piece goods. Since the establishment of the Singapore colony, the British trade has recommenced; and if cultivated, Mr. Earl says, affords a fair prospect of a large consumption of our manufactures. The Malays are not destitute of some arts, among which is that of casting cannon: in this they are skilful, and arms and ammunition would be good articles for the British export trade.

Pappal, Malloda, Mangedara, Paltan, Tirun, &c., in the N.E., are mostly Suluk settlements. The country here abounds in forests of lofty trees, extensive plains covered with herds of large cattle, from breeds introduced by the Spaniards two centuries ago; many rivers, and much mineral wealth. Gold and diamonds are collected with little trouble; tin ore is sometimes picked up on the surface. Sago, rice, betel nut, coco-nut oil, camphor, wax, a little pepper and cinnamon, pearls, rattans, clove bark, and grain, from Malloda; birds' nests, lacksa wood, and tortoise shell, in Mangedara; timber, lime, stone, eagle wood, and sea-slug, in Paltan, are the chief products. Tirun yields more birds' nests than any other region of the East: its coast is generally a low swamp overgrown with mangroves; its rivers are numerous, large, and often navigable; its interior is covered with sago-trees, which form the chief subsistence of the people; and yields, besides, camels, rattans, wax, honey, bezoar, gold, and, it is said, salt-petre. Many Aamense have settled on the N.E. coast; emigration from Cochín China, in consequence of national disturbances, having prevailed lately to a great extent. Voyages hence, to and from Anam, may be made at any time of the year.

The chief state on the E. coast is that of Cod, or Codi-Lams, belonging to Bugis, from Celebes. Cod town stands 50 m. up the river of that name, the banks of which are inhabited by nearly 300,000 people. It is the chief place on this coast: its people are commercial, and many annually visit Singapore in their *prahus* or trading vessels. Passir stands on a large river a little S. of the former: it is a den of pirates. Banjarmasin, on the banks of the river of that name, is surrounded by a territory producing rattans of the best description in abundance, as well as gold, diamonds, and pepper. The pop. are mostly Bugis, who occupy nearly every river and creek on the E. and S. coasts. They have had some trade with Singapore, but which is discontinued by the Dutch authorities; all the S. coast being claimed by the latter, who, in 1747, established a factory at Banjarmasin. On this coast there are said to exist the remains of temples, images, &c., relics of a more civilized people formerly inhabiting it, but no detailed history of these has been given. (Earl's *Eastern Seas*, &c., in 1832-3-4, p. 252-343; *Lloyd's Sketch of Borneo*; *Crawford's Indian Archipelago*; *Hamilton's E. I. Gazetteer*, i. 375-385.)

BORNHOLM, an isl. belonging to Denmark, in the Baltic, about 24 m. E. by S. from the nearest point of Sweden,

## BORNOU.

and 90 E. from Zealand. It is of a rhomboidal shape, being about 20 m. in length by 14 in breadth. Pop. in 1834, 24,645. Bornholm differs considerably from the other Danish islands: it rises high above the level of the sea. Its shores are formed, for the most part, of steep, lofty rocks, surrounded by reefs, which render their approach not a little dangerous. It is well supplied with freestone, which is largely exported to Copenhagen and other places; and with limestone, blue marble, various species of clay, ochres, and coal. The clay is suitable for the making of coarse and fine pottery, and is used in the China factory at Copenhagen. Hitherto the coal has not been profitably wrought. Climate drier and more salubrious than that of Zealand. The centre of the island is occupied by an extensive heath; but elsewhere the soil is moderately fertile, producing all sorts of grain, but especially oats, with flax, hemp, &c. Cattle inferior to those of the other Danish islands, but the horses are strong and active. Timber is scarce; large trees being, however, frequently found in a state of perfect preservation imbedded in moss. There are a great many rivulets well stocked with fish, which are also very abundant round the coast. Exclusive of agriculture and fishing, brewing and distillation, tile and brick making, the manufacture of coarse and fine earthenware, &c. are carried on to a considerable extent. An ingenious native of the island having accidentally taken to pieces a wooden clock imported from abroad, took it for a model, and set about making another. His example was followed by others; and such was their success, that wooden clocks soon began, and still continue to be a principal article of export! Linens, spun and prepared in the houses of the peasantry, are also exported. Coffee, sugar, tobacco, and spices are the principal articles of import. Roenne, the capital, and the residence of the governor, is situated at its S.W. angle. It is defended by batteries, has a considerable trade, and a number of vessels and boats engaged in the fishing; but its harbour is shallow, having only 6 or 7 ft. water. Nexø, on the S.E. shore, is famous for its beer. A lighthouse, having the lantern elevated 272 ft. above the level of the sea, has been erected on cape Hammerson, the most N. point in this island. The feudal system never obtained any considerable footing in Bornholm. Persons accused of political offences used to be banished thither. (*Cateaux, Tableau de la Mer Baltique*, i., p. 277-284.)

**BORNOU**, a kingdom of Central Africa, is from 10° to 15° N. lat., and from 12° to 18° E. long.; it is bounded on the N. by Kanem and the S.E. corner of the desert; on the E. by Bagharmi; on the S. by Mandara; and on the W. by various small tribes extending to Houssa and the Fellata country. Bornou appears to have been formerly more extensive, both in lat. and long.; at present it may, perhaps, be about 400 m. in length, from E. to W., the same in extreme width, from N. to S., and its area is probably not less than 120,000 sq. m., of which, however, certainly more than 20,000 are covered by the waters of lake Tchad. (*Denham and Clapperton*, p. 314, &c.; *Lucas, Afric. Assoc.*, i., 131, &c.) The surface of Bornou is an immense plain, the greater portion of which is subject to annual overflow, from which circumstance, joined to the great heat of the climate, the soil has every capability of abundant production; owing, however, partly to the want of industry in the people, and partly to the state of warfare in which the internal countries of Africa seem constantly to live, little advantage is taken of this favourable state of things, and the Bornouese are not much superior as agriculturists to other negroes. Clapperton (*Journey from Kouka to Sokkato*, p. 19) found the natives of Houssa raising a second crop of wheat by irrigation; but such instances, while they prove the natural fertility of the land, are extremely rare in Bornou. The principal rivers are the Shary and the Yeou; the former apparently rising in the mountains of Mandara, the latter in those of Houssa. The smaller streams are very numerous, but all are received into lake Tchad, and unless that lake have an outlet on its E. shore, which, if not impossible, is very improbable, the whole water system of Bornou yields no supply whatever to the ocean. (*See LAKE TCHAD*.) Upon this point, however, it must be observed that something more than a suspicion is entertained of an indirect communication between the Shary and the Niger. The Tchadda, which falls into the latter river between 7° and 8° of N. lat., and between 8° and 9° of E. long., is positively affirmed by the natives to be connected with the lake of the same name. Lander, in his last expedition, sailed up this stream to 150 m. from its mouth, and found its upward bed constantly bearing towards the Mandara mountains. (*Travels of R. and J. Lander*, p. 789.) Major Denham also received information, on the Mandara frontier, of a river running W. through a country which his informant called Adomowa. (*Trav.*, p. 144.) In addition, likewise, to its identity of name with the distant lake, the Tchadda (river) has the second name of Shary given to it by the natives; and Capt. Allen, who ascended its stream

in 1833, has given many reasons for supposing that it is connected also with the Yeou, the other great river of Bornou. (*Geog. Journ.*, vol. vii.) From all these circumstances, the asserted communication appears to be highly probable, and, indeed, it is not easy, on any supposition, except that of its truth, to account for the prevalent belief on the banks of the Niger. The very considerable space of intervening country (600 m. direct distance) being considered, it is not very likely that the natives of that district should have even heard of the Tchad, unless its connexion with their river had really existed; but, at the same time, it is certain that the Bornouese waters and the affluent of the Niger flow in different directions (*Denham*, p. 236, &c.; *Lander*, p. 769), so that the possibility of a passage from the one system to the other implies the common origin of some of their branches to lie among lakes on elevated plains, from which the streams descend on different sides with a very gradual fall, and in considerable volume. Such a communication between independent basins was first established by Humboldt and Bonpland, with regard to the rivers of S. America. It will form an interesting feature in physical geography, should it be found existing also in interior Africa. (*See NIGRA*.)

The climate of Bornou is one of very great but not uniform heat. In summer, that is, from March to June, the thermometer stands at 105° to 107° at noon, and even at night is rarely lower than 100°, except before sun-rise, when it sinks to 80° or 88°. The winter temperature is, however, lower than the lat. would warrant the expectation of, rarely higher than 74° or 75°; it frequently falls in a morning as low as 39° or 60°. The N.W. wind is cold, the S. and S.E. hot and suffocating; which, considering that the first blows over the Sahara, and the others over the high mountains of Kong, is a remarkable fact, which seems to require explanation. The seasons may be divided into wet and dry, but the first can scarcely be denominated rainy, in a tropical sense. About April or May, indeed, a short period, varying from three to nine days, is marked by violent tempests, rain, thunder, lightning, and wind; but the remainder of this wet period, extending to October, by no means interferes with out-door labour, except in June, when there is another burst of falling weather, attended with a most oppressively sultry atmosphere. At this time it is that the lakes and rivers overflow their banks, flooding the land in their neighbourhood for many miles. The dry and cold season usually commences in October. (*Denham*, p. 181-225, 314; *Lucas*, p. 131.)

In a country devoid of mountains there are, of course, no minerals. Iron is procured from the neighbouring state of Mandara, in the hills of which it is very abundant, and gold dust is a principal article in Bornouese trade; but whether the last be brought down by the rivers, or procured from a distance, does not appear. (*Denham*, p. 146, 317; *Lucas*, p. 155.) Trees are extremely scarce throughout the country, except here and there upon the banks of rivers; though the neighbouring states, Kanem, Mandara, Houssa, &c., appear to be well wooded. The soil, which is chiefly alluvial, is highly productive, but its productions are by no means varied, consisting chiefly of millet, barley, beans, Indian corn, cotton, and indigo. The flooded lands on the shores of lake Tchad are peculiarly well adapted for the growth of rice, but none is cultivated; and there is no tropical country *not* so destitute of fruits and edible roots. (*Lucas*, p. 134; *Denham*, p. 50, 103, 316, &c.; *Clapperton*, p. 6, 15, &c.)

The wild animals of tropical Africa are all common in Bornou; and the ferocious kinds, lions, panthers, jackals, &c., which in the wet season approach the walls of the towns, are particularly dangerous. The buffalo, giraffe, elephant, hippopotamus, and crocodile, are animals of chase; the flesh of all of them is eaten, and that of the last three accounted a great delicacy. The civet cat is common, and the animal itself, as well as its secretion, is an important article of trade. Of domestic animals the number is immense: cattle and horses are of fine breeds, and plentiful; camels are rare, and sheep have a hairy instead of a woolly covering. Pelicans, spoonbills, cranes, stilts, ducks, geese, and, in short, almost every species of water fowl, are abundant in the extensive marshes: the ostrich traverses the plains, and partridges, grouse, guinea fowl, and other game are also very numerous, as are the domestic fowls, which constitute the cheapest kind of animal food that can be purchased. Reptiles are numerous, consisting, besides crocodiles, of scorpions, centipedes, enormous toads, and many varieties of serpents, one of which, measuring 14 or 16 feet in length, though said to be harmless, is probably of the boa or python species. In such a climate insect life is naturally abundant: bees are so numerous, that Lucas (p. 136) af-

\* In an Arabic MS. geography of interior Africa, composed by Sultan Bello, of Houssa, Bornou is described as "a country which contains rivers," but no mention is made of the lake. (*Denham and Clapperton, Appendix*, xii., 159.)

## BORODINO.

forms the wax is often thrown away, as an article of no value in the market; and Denham remarks (p. 330) that the honey is only partially collected. The curse of tropical countries, the locust, is a frequent visitor; and though a favourite article of food, is regarded with dread, since desolation always follows in its train. The rivers and lakes abound in fish, of many different species, most of them peculiar. (*Lucas*, p. 137; *Denham*, 329, 384, 319, 331, &c.)

The inhabitants of Bornou consist of two classes—the Shouas, descendants of Arab settlers from the N.; and Kanowry, as the native race is called, who are true negroes. The former, as in all similar conjunctions, are the dominant people; they have fine, open, aquiline countenances, large eyes, a light copper complexion, and bear a strong personal resemblance to the best specimens of English gypsies. They are divided into tribes, and still bear the names of some of the most powerful Bedouin hordes. Their language is Arabic, and to them is owing the introduction of the arts of writing and reading. They are shrewd, active, and courageous, but these are almost the only good traits in their character. Deceitful, arrogant, cunning, and dishonest, their superior attainments are used by them only as a means to rob and oppress their black neighbours. These last present, in their physical appearance, all the usual negro peculiarities—flat noses, large mouths, and ineffectual countenances. They are peaceable and orderly, but destitute of energy, cowardly, and appear to regard the Shouas as a superior race of beings. Nine different languages, or dialects (ten with the Arabic), are spoken in Bornou: *Lucas* says thirty (p. 132); but as he makes the limits of the country much larger than Denham, it is probable he included those spoken in some of the surrounding states.\* No estimate can be made of the population of this kingdom; but as towns possessing 30,000 inhabitants are met with, and markets are said to be sometimes attended by 80,000 or 100,000 persons, and the Shouas population alone can raise an army of 15,000 men, the number of inhabitants must be very considerable. (*Denham*, p. 79, 80, 330, &c.) The religion of the court is, of course, Mohammedanism; but no disabilities appear to attend the profession of fetichism, which is the faith of the bulk of the negroes. The government is absolute, and till lately was elective. The laws are arbitrary, and punishment summary, but usually administered with justice; and there is a kind of insolvent act, which relieves a man from his debts on proof of his poverty, leaving any future property he may acquire at the mercy of his creditor, without farther process. In other respects the Bornouese resemble the negroes generally; their arts are few, and apparently introduced, in most cases, by the Arabs. But the Arabs also introduced the slave-trade, which was unknown before their arrival, and is said to be reluctantly submitted to. The moors of Barbary, however, prefer slaves to anything else; and as Bornou is dependant upon them for all the comforts, and many of the necessities, of life, the slave-trade is carried on to a great extent. It is said that the natives are very anxious for a direct trade with England; but considering that their country is situated full 600 m. from the coast, and in a climate destructive to Europeans, we confess we are not of the number of those who entertain a sanguine expectation that any such trade will ever be carried on to any extent or to any profit. (*Denham*, p. 321-335 *et pass.*; *Lucas*, p. 146-150, &c.) The name Bornou is Arabic. It is literally *Barr-na*, "the Land of Noah," the Arabs believing that the mountains in its neighbourhood received the ark after the deluge, and that the patriarch first established himself in its extensive plains. (*Lucas*, p. 131.) The negro name appears to be *Kanowry*. (*Denham*, p. 316.)

BORODINO, a village of Russia in Europe, gov. Moscow, on the Kologa, 10 m. W. of Mojaik. This village will be forever memorable from its being the scene of the most sanguinary conflict, perhaps, that has taken place in modern times. On the 7th September, 1812, the French army under Napoleon, in its advance upon Moscow, attacked at this point the entrenchments of the grand Russian army, 120,000 strong, under Kutusoff. The Russians made a desperate resistance, but in the end their position was carried. The slaughter was immense; the Russians having lost above 40,000 men killed and wounded, and the French nearly 30,000. Few prisoners were made on either side.

\* Mr. Lucas's account of Bornou was derived from the reports of Sherif Imhammed of Fezzan, confirmed by the governor of Misurata, and remarkably corroborated by the independent statements of Ben Ali, a Moroccan merchant, to the African Association, about 1798. These are, therefore, the Arab descriptions of Bornou; and it is striking to remark how closely they agree, in general, with those of Denham and Clapperton. It is singular, however, that none of them mention the great lake Tchad, nor either of the great rivers which fall into it; though to the natives of a dry climate these would be supposed to form the most interesting features of the country. This is the more remarkable, since, from the notice of Begharni, it is clear that the Arab merchants must have reached the E. shore of the lake, and consequently been acquainted with its extent both in lat. and long. (*Afric. Assoc.*, p. 79, 80, 148, 149, &c.)

## BOSCO-TRE-CASE.

BOROFSEK, a town of Russia in Europe, gov. Kalouga, cap. distr., on the Prossa, 55 m. S.W. Moscow; lat. 35° 10' 30" N., long. 36° 33' 15" E. Pop. 5000. It is an old town, celebrated in Russian history for its defence by Prince Volkonski, in 1610, against the pretender Dimitri. It has four churches, a manufacture of sail-cloth, and its environs produce excellent onions and garlic. At a short distance is the convent Psemoutief-Borofski, founded in 1444, containing five churches and a considerable treasure. (*Schottler, La Russie*, &c., p. 120.)

BOROUGH-BRIDGE, a bōr., market-town, and township of England, W.R. co. York, Claret wapentake, par. Aldborough, on the S. bank of the Ure, 17 m. S.E. York. Pop. 950. It has some good houses and inns, its consequence being principally derived from its situation on the great road from York to Edinburgh. It enjoyed the privilege of sending two mem. to the H. of C. from 1553 down to the passing of the Reform Act, by which it was disfranchised. It has several fairs; of these the most important is held in June, for the sale of hardware, and, though much fallen off, is still attended by dealers from Sheffield, Birmingham, &c. The others are principally cattle fairs. Many remains of British and Roman antiquities are found in this town and its immediate vicinity. Of these, the most celebrated are the obelisks, called the Arrows, about  $\frac{1}{2}$  m. S. from the town. A beautiful tessellated pavement was discovered in 1831, a little to the W. of the town. At this town, on the 10th of March, 1323, the army of the rebel barons, under the Earl of Lancaster, was defeated by the troops of Edward II., in an attempt to cross the river; and their leader, being taken prisoner, was immediately beheaded.

BOROVITCHI, a town of Russia in Europe, gov. Novgorod, cap. distr., on the Msta, 100 m. E.S.E. Novgorod; lat. 59° 16' N., long. 33° 50' E. Pop. 3900. It has four churches, a convent, and a good deal of trade. In the neighbourhood are cataraacts that interrupt the course of the river; but the obstacles to its navigation, thence arising, have been successfully obviated by works undertaken for that purpose.

BORROMEAN ISLANDS, a group of small islands in the Lago Maggiore, Continental Sardinia, which see.

BORROWSTONNESS, or BONESS, a burgh of barony and sea-port of Scotland, co. Linlithgow, on the S. side of the Frith of Forth, 17 m. W. by N. Edinburgh. Pop. 2600. It is one of the oldest Scottish sea-port towns, and its name often occurs in history. The harbour is safe and commodious; but the revenue which it yields is insufficient to keep it in repair, even though an impost of 2d. Scotch has been levied for the purpose for nearly a century (17 George II.) on every Scotch pint of ale or beer brought into the town. Bone's carries on ship-building to a small extent, and has some little trade with the Baltic. It engages pretty extensively in the herring fishery, and has not unfrequently, of late years, sent one, two, or more vessels to the N. whale fishery. The town is the seat of the most extensive salt works on the Frith of Forth; and it exports about 30,000 bushels of salt a year. Here are two distilleries, an earthenware manufactory, and vitriol and soap works. Productive collieries abound in the immediate neighbourhood, and have been wrought for centuries. The mines extend nearly a mile below the bed of the frith, so as almost to meet those of Culross on the opposite side, which run in a S. direction to the distance of 2 m. Near Bone's is Kinnell House, a seat of the Duke of Hamilton, and long the residence of Dugald Stewart.

BOSA, a sea-port town on the W. coast of Sardinia, div. Sassari, near the mouth of the Terno: immediately opposite to the latter is the islet of Bosa, lat. 40° 16' 46" N., long. 8° 25' 31" E., between which and the shore small vessels lie in tolerable security. Pop. 3500. It is beautifully situated in a fine valley between two hills; is tolerably clean, and has several paved streets; but in summer it is ill supplied with water, and is then, also, very unhealthy. It is a bishop's see: has nine churches, a convent of Capuchins and one of Carmelites, with a seminary for the study of philosophy and theology. On a hill immediately above the town are the remains of a castle or acropolis, where the principal families used formerly to reside. The natives are very active, carrying their produce all over the island: and most part also of the travelling pedlars belong to the town. (*Smyth's Sardinia*, p. 287.)

BOSCAWEN, p. t., Merrimac co., N.H., 9 m. N.W. Concord, 490 W. Bounded E. by Merrimac river; Blackwater river, a branch of Contoocook river, affords water-power. Incorporated in 1760. It contains five stores, one fulling-mill, three grist-mills, seven saw-mills, three tanneries, sixteen schools, 514 scholars. Pop. 1965.

BOSCO-TRE-CASE, a village of Naples, prov. Naples, cap. cant., at the foot of Vesuvius, 12 m. E.S.E. Naples. Pop. 5000. It is one of four villages situated at a little distance from each other, comprised under the general term *Bosco*; has several churches and convents, a royal man-

## BOSNA-SERAI.

factory of arms, a powder-mill, and an extensive fabric of *pois d'Inde*.

**BOSNA-SERAI**, or **SERAJEVO** (an. *Theriacopolis*), a city of Turkey in Europe, cap. prov. Bosnia, on the N. bank of the *Mitlizza*, 246 m. S. Buda, and 575 m. N.W. Constantinople; lat. 43° 54' N., long. 18° 38' E. Pop. 60,000. It is well built, and has an agreeable appearance owing to the number of minarets, towers, and gardens which it encloses. It contains a *serai*, or palace, built by Mohammed II., to which the city owes its name; about 100 mosques, some of which are elegant structures; several Greek and Roman Catholic churches, with colleges, bazars, &c. Most of the houses are of wood; the *Mitlizza* is here crossed by a massive stone bridge. The city was formerly encompassed with walls, but these are now decayed, and its only defence consists in a large citadel, built on a rocky height at its E. extremity, and mounting 80 cannon. The inhabitants are industrious, and employed in the manufacture of arms, iron, and copper articles, horse-hair bags, morocco, and other kinds of leather, and cotton and woollen stuffs. Near *Bosna-Serai* are the principal iron mines in Bosnia. It is the chief mart in the prov., the centre of the commercial relations between Turkey and Dalmatia, Croatia, and S. Germany, and has considerable trade with the cities of Saloniki and Yanina. The most wealthy families in Bosnia reside in this city; two thirds of the pop. are said to be Turks, but the Jews monopolize the chief part of the trade. (*Cassanbach, Ritter, Malte-Brun, &c.*)

**BOSNIA**, or **BOSNA**, the most westerly pachaïc or eyalet of Turkey in Europe, comprising Bosnia Proper, Turkish Croatia, and Herzegovina. It lies between lat. 43° 30' and 45° 15' N., and long. 15° 40' and 21° 5' E.; having N.W. and N. the Austrian prov. of Croatia and Slavonia; E. Serbia, and S. and W. Albania and Austrian Dalmatia, the latter separating it from the Adriatic, to which, however, it approaches in certain parts very closely, if it do not actually come in contact with it. Area variously estimated at from 16,000 to 28,000 sq. m. Pop. from 800,000 to 1,000,000. It is almost entirely occupied by the Dinaric and Julian Alps, which, with their offshoots, separate it into several well-marked divisions. Principal river the Sava, forming the N. boundary of Bosnia, with its affluents the Una, which in part separates Turkish from Austrian Croatia, Verbas, Drina, and their forming its E. boundaries. The Bosna traverses Bosnia Proper, the Sanna, Croatia, and the Narenta, Herzegovina. It has numerous fertile valleys, but no lakes of importance, and only one plain of any size, that of Livno in Herzegovina. This country is supposed to be rich in minerals; but the Turks permit only the iron mines and a lead mine near Zvornik to be wrought. The former employ about 3,000 individuals. Gold and silver are said to exist in various places, and mines of the first of these metals were worked under the Romans: most of the large affluents of the Sava bring down gold-dust; but its collection by the inhabitants is prohibited. Quicksilver is also found; and there are quarries of millstone, freestone, alabaster, and marble; coal mines, and numerous mineral springs, some of which furnish salt, though not in sufficient quantity for the supply of the country. The climate is generally cold, but not unhealthy; the winter snows lie on the ground for a long time, and the spring is short. In the S. violent winds prevail in winter, and the summer is extremely hot. The mountain chains, especially in the N., are covered with dense forests of pine, oak, beech, linden, chestnut, &c.; but the E. branches of the Dinaric Alps present a remarkable deficiency of vegetation. The best soil in the valleys is devoted to pasture; and Bosnia is generally better adapted for the feeding of cattle than for agriculture. The Bosniaks, however, seem to prefer the chase to more settled pastoral occupations; and as the woods abound with wild animals, as deer, wild boars, bears, wolves, foxes, &c., they have every facility for carrying it on. The inhab. consist of several races distributed, perhaps, nearly as follows:

| Nations.     |         | Religions.      |         |
|--------------|---------|-----------------|---------|
| Turks        | 246,000 | Mohammedans     | 450,000 |
| Bosniaks     | 360,000 | Greek Church    | 230,000 |
| Servians     | 120,000 | Roman Catholics | 161,000 |
| Herzegovians | 75,000  | Gipsies         | 16,000  |
| Croat        | 40,000  | Jews            | 5,000   |
| Gipsies      | 16,000  | Armenians       | 1,000   |
| Jews         | 5,000   |                 |         |
| Armenians    | 1,000   |                 |         |
| Total        | 850,000 | Total           | 850,000 |

It is only in the valleys that any cultivation is carried on. Wheat, barley, maize, and legumes are grown in sufficient quantity for home consumption; and flax and tobacco near Zvornik and Novibazar. A great variety of fruit is met with. A liquor is made from plums, and a sweet drink called *pekmez* from pears. The olive and vine are both cultivated; but the wines are strong and fiery, and in order to be relished should be drunk while young. Bosnia has a

## BOSPHORUS.

breed of strong horses, but it is much neglected, except by the Turks: there are large herds of fine cattle, and flocks of sheep, the wool of which is greatly esteemed in the markets of the Levant. Goats, hogs, and poultry are everywhere plentiful; and in Croatia many bees are kept, which yield good honey, but inferior wax. The manufactures of Bosnia are limited to iron articles of common use, leather, coarse woollen stuffs, saltpetre at Jalcza, cannon balls at Kamengrad; gunpowder, fire-arms, and other weapons. The principal exports are leather, hides, wool, goats' hair, honey, cattle, dried fish, timber, mineral waters, &c.; the chief imports, linens, woollens, silks, lace, glass, and metallic wares; paper, colonial produce, salt, oil, dried fruits, and silver coin from Dalmatia. The transit-trade in Levant produce is not inconsiderable; the chief seats of commerce are the towns of Bosna-Serai, Novibazar, Zvornik, Bagna, Louka, Mostar, and Gradiska. The roads are generally very bad, and impracticable for wheel-carriages. The total government revenue derived from this prov. is estimated at £700,000 or £800,000 a year, but not half this sum is said to reach the treasury of the sultan.

Bosnia is under the government of a pacha of three tails; it is divided into six *sanjaks* or circles, and again into forty-eight subdivisions, each of which is subordinate to a military governor and a *cadi*, or judicial officer. Bosna-Serai is the capital of the prov.; but Travnik is the residence of the pacha. This officer is changed every three years; he has under his orders a military force of from 3000 to 4000 men. The Bosniaks are of Slavonic origin; though mostly Mohammedans, they yield but an unwilling obedience to the Porte, and differ from the Turks in many usages—having but one wife, and treating their women with consideration.

Bosnia was anciently included in Lower Pannonia. In the middle ages it first belonged to the Eastern empire, and afterward became a separate kingdom, dependant upon Hungary. The Turks conquered it in 1480, after a war of 17 years; but it was not till 1593 that Solymán the Magnificent finally annexed it to the Turkish dominions. (*Cassanbach, Lehrbuch der Geog.*, p. 745, 746; *Von Zedlitz, Brief Survey of Bosnia*, &c.)

**BOSPHORUS** (more properly **BOSPORUS**) OF THRACE, or CHANNEL OF CONSTANTINOPLE, the strait which connects the Black sea with the sea of Marmara, and separates the E. corner of Thrace from Asia Minor. The length of this remarkable channel is about 17 m.; its width varying from  $\frac{1}{2}$  m. to 2 m.; its course slightly winding; its direction very little W. of S., and its embouchure in the sea of Marmara is in 41° N. lat., 39° E. long.

A current sets constantly from the Black sea through the Bosphorus, but, though generally very strong, it is subject to considerable modifications; a long-continued wind from the S.W. renders it sometimes almost imperceptible; while, on the other hand, a breeze from the N.E. so adds to its force, that it is almost impossible, for a vessel under such circumstances, to make head against it. The inequalities of coast cause several changes of direction in the set, as the water is thrown from side to side by the numerous bold promontories that project from both shores; but these do not affect the general course, except by making it more tortuous; that course tending constantly towards the S. and the sea of Marmara. The depth of water is considerable; there is but one bank in the channel; consequently there is no danger in its navigation, nor any difficulty, except in an upward passage against its current; this is however, sufficiently baffling to the unskilled Orientals. At its N. mouth, on the Black sea, are two groups of islets, one on the European, the other on the Asiatic shore; these are the famous Cyanean Isles or Symplegades of the ancients, which it was once believed no vessel ever passed in safety, except by miracle. (*Apoll. Rhod.*, li. v. 435, &c.) They are now quite harmless, being, in fact, nothing but low continuations of the respective shores; they are in a continual state of decay, and might easily be overlooked, did not their ancient celebrity induce the modern navigator to search for them. In its freedom from all danger, its narrow channel, its strength and constant set of its current, and, in short, in most of its characteristics, the Bosphorus resembles a magnificent river more than an arm of the sea; and this resemblance is by no means impaired by the branch which it gives off at its S. end, and which, enclosing Constantinople on the N., forms what is justly called the Golden Horn, one of the finest harbours in the world. The country through which the Bosphorus flows is unrivalled for beauty; animals and vegetables of almost every variety abound, and the geology is peculiarly interesting, from the unequivocal evidences it exhibits of igneous action. The cliffs, which are stately and abrupt, consist of jasper, agate, cornaline, calcadone, porphyry, trap, and calcareous spath, in very great but picturesque confusion. They are all more or less in a state of decomposition, and traces of metals are seen in the colouring of the various stones. Appearances seem to warrant the conclusion that this strait was opened by a con-

vulsion of nature, and this belief was very generally entertained by the ancients. (See BLACK SEA.) At about half way between the two seas, or rather nearer to that of Marmara, at the narrowest part of the channel, stand two castles, one on each bank, named, from the Turkish provinces, Anadolu and Rumeli (Asia Minor and Thrace). They form almost the only defence to Constantinople on the N., and, if well manned, would be very difficult to pass. These appear to be almost the only public buildings, but private houses and gardens extend along nearly the whole length of the strait, especially on the European side. (*Chevalier, Voy. de la Prop.*, p. 43-49; *Olivier, Voy. dans l'Empire Ott.*, i., 130-134; *Jones's Trav.*, ii., 444-451.)

The name Bosphorus (*Bosphoros*), which has been improperly corrupted by modern orthography to Bosphorus (*Bosphoros*), is indicative of the narrowness of this channel, and comes from *bos*, an ox, and *ropos*, a ford. The passage across it of Europa, borne by Jupiter in the form of a bull, is a well-known Greek legend, and thence the ancients called these channels Bospori which were narrow enough to allow of kine swimming across them. Two especially were so distinguished, namely, the strait now under consideration, and the Cimmerian Bosphorus (Strait of Yenikale), between the Euxine and the Palus Mœotis. Over the Thracian Bosphorus, Darius Hystaspes threw a bridge of boats when he passed from Asia to his disastrous war with the Scythians; and the pillars of marble which he erected to commemorate that event are supposed, with great reason, to have stood upon the spots now occupied by the Turkish castles. (*Herodotus, Mætop.*, p. 85-88; *Strabo*, vii., 330; *Ptolemy*, iii., 11; *Pliny*, vi., 1, &c.)

**BOSSINEY-WITH-TREVENA**, a bor. of England, co. Cornwall, hund. Lenneth, par. Tintagel, 308 m. W. by S. London. Its area is 350 acres; its pop. is returned with that of the par., which, in 1831, was 1006; houses, 210. It is on a rugged exposed part of the N. coast of the county, and consists of two small villages  $\frac{1}{2}$  m. apart. There is a town-hall, now occupied as a charity school: an annual fair is held the first Monday after 19th Oct. It claimed to be a bor. by prescription, and returned 9 mem. to the H. of C., under a charter of 7 Edw. VI., till disfranchised by the Reform Act: the elective right is in burgesses holding freehold property in the bor.; of whom there were 94. The area of the whole parish is 3600 acres: annual value of property, in 1815, £3674. The remains of King Arthur's Castle are on the table summit of a huge rock, protruding into the sea, and connected, by a narrow isthmus, with the rest of the parish.

**BOSTAN** (EL) (an. *Cemene*), a town of Turkey in Asia, Natolia, pach. Marasch, at the N. foot of Mount Taurus, in a fine plain, on the Syhoun (an. *Sarus*), 60 m. N. from the bottom of the bay of Iskenderoon, and 115 m. S. by W. Sivas, lat. 38° N., long. 36° 30' E. Pop. 6000 or 9000. Mr. Bruce (*Appendix to Xenophon's Travels*, p. 560) says of El Bostan, that "it has 40 dependent villages in the adjacent plain, surrounded with fine trees and cultivated fields and meadows. Few spots in Asia Minor offer a sight more agreeable. There is a great trade in wheat, sold to the Turks, who carry it even as far as Aleppo. When fearful of being attacked, the inhab. lay the environs of the town under water. It has four mosques, one of which is supposed to be very ancient."

In antiquity Comana was famous for the worship of Mæ, the Cappadocian Belona. The population consisted, in a great degree, of soothsayers, priests, and slaves belonging to the high-priest, and employed in the service of the temple. The latter, in the time of Strabo, are said to have exceeded 6000 of both sexes. It received a Roman colony in the reign of Antoninus Pius, and perhaps, also, in that of Caracalla. (*Cramer's Asia Minor*, ii., 136.)

**BOSTON**, a sea-port, mar.-tow., and bor. of England, co. Lincoln, on the Witham, 90 m. N. London, and 28 m. S.E. Lincoln: lat. 53° 10' N. long. 6° 35' W. Pop. 1801, 5926; 1841, 94,680. The town is supposed by some, from antiquities found in its neighbourhood, to have been a Roman station, and to have taken its name from a monastery built by St. Botolph, A.D. 654, destroyed by the Danes in 870. That it became a place of considerable mercantile importance, after the Norman conquest, appears from the fact that, in 1304, its assessment towards a tax of a fifteenth, imposed on the ports, amounted to £780, while that of London, the only port taxed higher than it, was but £236. In 1381 it suffered by fire, and in 1386 by an inundation. Under an act of 37 Edw. III., it became a staple for wool, woollens, leather, and lead. About the same time its mercantile prosperity was much increased by several Hanseatic merchants settling in it, who, however, emigrated about a century after, in consequence of a quarrel with the townsmen, which terminated in bloodshed. During the intermediate period its shipping was so considerable that it furnished 17 ships, and 400 men, towards an armament for the invasion of Brittany, and ranked the twelfth, as to number of vessels, among the

88 ports which were assessed; but it fell off rapidly after the departure of the Hanseatic merchants. The dissolution of the monasteries by Hen. VIII., injured the town, though compensation, in some degree, was made to it by a grant of 511 acres of the sequestered lands. It afterward suffered by the plague, and by inundations, to which this flat country was particularly liable. During the civil wars, it was for some time the head-quarters of Cromwell's army.

The town, situate on the Witham, called by Leland the *Lindis*, about 5 m. from its mouth, and divided by it into two nearly equal parts, connected together by an iron bridge, of a single arch of 86½ ft. span, opened in 1807, consists of two long streets, one on each side the stream, from each of which others diverge. It is well built, contains many good dwelling-houses and shops, and extensive granaries and warehouses: the part within the borough is well paved and lighted under the provisions of a local act; but these advantages are not enjoyed by a small part, which has extended itself into the neighbouring parish of Skirbeck. It suffers much from the want of good water, that used being rain-water, collected in cisterns, or water raised from pits, or the river. The attempts made to procure spring-water have been unsuccessful, though borings have been carried to a depth of more than 600 ft. Its most remarkable building is the parish church of St. Botolph, erected in 1309. It is the largest church without aisles in the kingdom, being 245 ft. by 98 ft. within the walls. Its tower, 300 ft. high, built on the same plan as that of Iwerp, is capped with an octagonal transparent lantern, of very beautiful construction, and forms a remarkable landmark on this low coast, being visible at 40 m. distance. A chapel of ease was erected in 1822. The only traces of St. John's Church, taken down about two centuries ago, are found in its cemetery, still used as a place of burial. The other places of worship are those of the Unitarians, Wesleyan New Connexion, and Primitive Methodists, General and Particular Baptists, Independents, and Catholics. Each has a chapel, to most of which a Sunday school is attached. A free grammar school was founded in 1544; Laughton's, for the sons of poor freemen, in 1707; a blue-coat school in 1713, for 30 boys and 25 girls; and a national British and infant school, together educating about 500 pupils of both sexes: there is also a dispensary and a very handsome Union house, this being a "union" under the new Poor Law. The other public places are—three subscription libraries, assembly-rooms in the market-house, a theatre, and a public promenade at Vauxhall gardens. A weekly newspaper is also published. The new municipal borough contains about 1100 acres, 2780 houses, and a pop. of 12,185. Since the passing of the Municipal Reform Act the town has been divided into 3 wards, and is governed by a mayor, 6 aldermen, and 18 councillors. It has returned 2 mem. to the H. of C. since the reign of Edward VI. Previously to the Reform Act the franchise was vested in the members of the corporation, and in the freemen who resided a year and paid scot and lot in the bor. The number of houses charged with house-duty in 1853 was of £10 and under £28, 516; of £29 and under £40, 161; of £40 and upward, 77; total annual value of houses, £36,188. For electoral purposes it includes the whole parishes of Boston and Skirbeck, and the hamlet and fen allotment of Skirbeck quarter, extending in all over 7923 acres. Registered electors, 1857-58, 749. It is a polling place for the co. There were several guilds, both religious and civil, all of which have fallen into disuse; the hall of that of the Blessed Virgin Mary, which was one of the most important, is used by the corporation for their municipal meetings. Petty sessions are held on Friday. A court leet for the borough sits annually: its principal duty is to prevent nuisances. A court of record, which decides pleas in all actions, real, mixed, and personal, sits on Wednesdays and Saturdays. A court of pie-poudre is held at each of the fairs; a court of the clerk of the market has jurisdiction similar to that in London; and a court of requests sits for the recovery of debts under £5. The police consists of a chief and 11 petty constables, wearing a uniform similar to the London police. The jail, though sufficiently spacious, is ill arranged for classification; all the female prisoners, except debtors, being confined in the same ward.

The corporation has no concern in the management of the poor.

The assessments to which the inhabitants are liable are, 1, borough rates; 2, paving; 3, lighting and watching; 4, assessed taxes; and, 5, parochial taxes. The following statement gives the amount of each for three years; the first includes fines on convictions:

| Years. | Borough Rates. | Paving. | Lighting & Watching. | Assessed Taxes. | Parochial Taxes. | Total. |
|--------|----------------|---------|----------------------|-----------------|------------------|--------|
| 1830   | £74            | 863     | £                    | 5979            | 8611             | 14,227 |
| 1831   | 1854           | 829     | 802                  | 5923            | 8451             | 14,459 |
| 1832   | 1079           | 1208    | 923                  | 5005            | 6002             | 14,207 |

## BOSTON.

The parochial assessments increased from £4197, in 1835, to £8879, in 1833. The ann. val. of real prop. in the borough in 1815, was £30,403; and in 1853, £40,774. Its manufactures are mostly confined to sailcloth, canvas, and seaking; there are two iron and brass foundries, and three ship-yards, with patent sails, where vessels of 300 tons are built. Markets, well supplied with poultry and sea and river fish, are held on Wednesdays and Saturdays, in the new market-house, to which a corn-market is attached; fairs for cattle and sheep are on May 4 and 5; for fat cattle, on Aug. 11; for horses about Nov. 13, and three days after; and for horned cattle only on Dec. 11. Immense numbers of the finest cattle and sheep are sold at these fairs, the town being in the centre of one of the richest grazing districts in the kingdom. The banking establishments are—the National and Provincial Bank of England; a branch of the Stamford, Spalding, and Boston Bank; with two private banking houses. The principal drainages in the vicinity are those of the Holland fens made by a cut of 13 m. from the town to Dogdyke, near Tattersall, by which 32,000 acres were reclaimed; and the Wildmere fens, 41,000 acres, drained in a similar manner. Owing to the neglect of keeping the river clear, the trade fell off so as to be almost extinct. In 1731 vessels of 350 tons could discharge at the town; in 1751 ships of 6 ft. draught could not come up, except at springs. The drainages, already mentioned, revived attention to the state of the river, and under special acts of parliament, have improved it so far that vessels of 150 tons come up to town, whence the navigation is continued to Lincoln by small steamers and barges. A sluice was also erected to retain the water above the town; but, owing to the scanty supply in the upper part, it can seldom be opened for scouring and deepening the river, as was intended. The navigation to Lincoln is extended by the Fossdyke Canal to the Trent, as Truherby, and thence, either by salt water or river navigation, to Gainsborough, Nottingham, and Derby, thus opening a vent for the export of the manufactures of the midland counties. The foreign trade is chiefly confined to the importation from the Baltic of timber, hemp, tar, pitch, and wax. The coasting trade is chiefly in the export of oats, wool, and wood, of which large quantities are grown in the neighbourhood, the return cargoes consisting of coal and manufactured goods. There is a good custom-house, and a pilot establishment of a master and 19 pilots. Extensive powers are vested in the mayor and burgesses by two local acts for improving the port and harbour, under which they are empowered to collect tonnage, wharfage, and lashing, from vessels that enter; the receipts to be applied to its improvement. They are also empowered to make bye-laws, to which all vessels are to be subject. The expenditure, under these acts, for 31 years, commencing 1819–13, was £28,458. The fund was involved in a considerable debt, now in process of liquidation, a considerable portion of which was contracted on account of the works planned and carried on under the direction of the late Mr. Rennie, and his son, Sir John Rennie, chiefly consisting of a cut, commenced in 1808, about 1 m. long, and 3 m. from Boston. Its execution was extremely difficult, as it was carried through a shifting sand; but it has proved very beneficial both in deepening the harbour and draining the country. Another cut at the town, with a wall from the bridge to the quay, has since been executed on an effective plan by the corporation. Part of the port dues are collected at Spalding and at Wainfleet, to each of which the jurisdiction of the corporation extends. The former, a river port, is situate on the Welland, which unites with the estuary of the Witham, at the Scalp. Its inhabitants complain of the heavy duties imposed on them, for no advantage but that of the beacons and buoys below the Scalp. The following table shows the state of the shipping trade during a period of 7 years.

| No. and Tonnage of Foreign Trading Vessels. |        |       |          |          | No. and Tonnage of Coasting Vessels, including Irish. |       |        |          |        | Total No. of Vessels belonging to the Port. | Tonnage. |

(*Dugdale's Hist. of Embanking and Draining; Noble's Gazetteer of Lincoln; Thompson's History of Boston; Britton's Beauties of Eng.; Municipal Rep.; Boundary Rep.; Seasonal Papers.*)

BOSTON, city, capital of Massachusetts, the principal city of New England, the second city in commerce and the fifth in population in the United States, constitutes, with

the town of Chelsea, the county of Suffolk, Mass.; and is pleasantly situated, chiefly on a peninsula, three miles long and little over one broad, at the head of Massachusetts bay. It lies in 42° 31' 15" N. lat. and 71° 4' 9" E. from Greenwich, and 52° 55' 15" E. long. from Washington. It is 115 m. S.W. from Portland, Me.; 163 m. S.W. Augusta, Me.; 63 m. S.E. Concord, N. H.; 158 m. E. by S. Albany, N. Y.; 49 m. N.N.E. Providence, R. I.; 97 m. E.N.E. Hartford, Ct.; 307 m. E. by N. New York; 440 N.E. Washington. The population in 1790 was 18,053; in 1800, 24,587; in 1810, 33,550; in 1820, 43,908; in 1830, 61,391; in 1840, 93,353. Of these there were employed in commerce, 2040; in manufactures and trades, 5333; in navigating the ocean, 10,813; do. canals and rivers, 19; in the learned professions and engineers, 558.

Boston consists of three parts, Old Boston on the peninsula; South Boston, formerly a part of Dorchester, from which it was separated, and united to Boston in 1864; and East Boston, formerly Noddie's Island. The "Neck" or Isthmus, which, in early times, formed the only connexion of the peninsula with the main land, is over a mile in length, and was originally, in some parts, very narrow. At the commencement of the Revolutionary war, the British fortified this Neck, and were thus able, in a great measure, to control the communication of the inhabitants with the adjacent country, as there were then no bridges. This Neck, which connects Boston with Roxbury, still constitutes the main avenue to the city from the south; but by a number of extensive bridges and artificial avenues, it is connected, in various directions, with the surrounding country. The first bridge erected was that over Charles river, connecting Boston with Charlestown on the N., and was completed in 1788, and then considered the greatest work of the kind ever undertaken in the United States. It is 1503 feet long with its abutments, 49 feet wide, with a draw 30 feet wide for the admission of vessels, rests on 73 piers of timber, and cost \$50,000. There are four strong stone wharves, connected with three piers each, sunk in various parts of the river. The floor of the bridge is four feet above the highest tides, which rise 12 or 14 feet, and 644 feet above the bed of the river, in the middle. It is lighted by 40 elegant lamps at suitable distances. West Boston bridge, built in 1793, connects the city with Cambridgeport on the west, and is 9758 feet long, with a causeway 3344 feet long, and an abutment on the Boston side of 874 feet, making its whole length with the causeway 6190 feet. It rests on 180 piers, and cost \$76,087. South Boston bridge, completed in 1805, is 1551 feet long and 40 wide, connects the Neck with South Boston, and cost \$56,000. The proprietors sold it to the city in 1833, and after thorough repairs, it was made a free highway. Canal or Craigie's bridge connects Boston on the N.W. with Lechmere's Point, in Cambridge, and is 9796 feet long and 40 feet wide, and was completed in 1808. A lateral bridge extends from this bridge to Priscipoint, in Charlestown, 1821 feet long and 35 feet wide, having but one side railed in for foot passengers. The Boston and Lowell rail-road runs parallel with, and about 100 feet north of Craigie's bridge. Boston free bridge forms a more ready communication between Boston and South Boston than that by the Neck, and was completed in 1838, by a company of proprietors of lands in S. Boston, and by them presented to the city. It is 500 feet long and 36 feet wide. Warren bridge is the most elegant structure of the kind in Boston. It leads to Charlestown, is 1360 feet long and 44 feet wide, and the floor is Macadamized to the thickness of eight inches, making the whole thickness of the bridge 30 inches. In addition to these bridges, Boston is connected with Brookline on the west by a splendid avenue or mill-dam, a mile and a half long, and from 60 to 100 feet wide, composed of solid materials, and water-tight. It cuts off and encloses 601 acres of the southerly part of the back of Charles river bay, over which the tide formerly flowed to the depth of from seven to ten feet. From the main dam a lateral dam extends to a point in Roxbury, forming a full basin on the west and an empty or receiving basin on the east, creating an extensive water-power, between high and low tides. It was completed in 1821, and cost \$700,000. These dams constitute important avenues to the city on the west. All the bridges and avenues are lighted by lamps at convenient distances, and present an imposing appearance. No other city in the United States has an equally splendid collection of bridges; but happily no other city equally needs them.

Boston exhibits a picturesque and beautiful appearance when approached from the sea; and in surveying its several parts, the traveller finds much to admire. The peninsula had originally an uneven surface, and the place early received the name of Trimountain, from its three hills, and three principal eminences on Beacon hill. These eminences, though somewhat lowered, continue to adorn the city. Beacon hill, in the W. part, is 110 feet above high water mark, but was originally 30 feet higher. Fort

## BOSTON.

hill, on the E. side, fronting the harbour, is 80 feet high; and Copp's hill, in the N. part, is 50 feet above high water. On this hill the British had a battery in 1775, from which, during the memorable battle of Bunker hill, they bombarded and burned Charlestown.

South Boston constituted a part of Dorchester until 1804, when, by an act of the Legislature, it was united to the city, and has since been an integral part of it. It extends about two miles along the south side of the harbour. It contains nearly 600 acres, and is regularly laid out into streets and squares. Nearly in the middle of this tract are Dorchester heights or Mount Washington, 130 feet above the sea, which furnishes many fine sites for buildings, and presents a beautiful view of the city and its harbour. On these heights the Americans, under Washington, erected a fortification in 1775, which soon compelled the British to evacuate Boston.

East Boston is built on Noddie's Island, containing 690 acres of land, and a large body of sea. It is connected with Old Boston by a steam ferry, the boats of which start from each side every five minutes, and occupy about three minutes in crossing. It is connected to Chelsea, on the main land, by a bridge 600 feet long. The eastern rail-road commences here. A wharf 1000 feet long, called Cusard's wharf, has been liberally granted, free of charge for 90 years, for the use of the Liverpool line of steam-ships. East Boston has wholly grown up since 1833, and already constitutes an important part of the city.

The principal public ground in the city is the spacious Common on the west side, which contains 75 acres. It occupies the declivity of Beacon hill, and has a pleasantly diversified surface; and an eminence near the centre, still bears the marks of a British fortification, thrown up in 1775. North of this eminence is a beautiful sheet of water, called Crescent-pond, bordered with young and thrifty elms. The Common contains about 600 trees of different sizes, some of them 100 years old, which add much to its pleasantness.

The Common is surrounded by an iron fence, about a mile in length, on the outside of which is a broad street; and on three sides of it are rows of splendid edifices. A botanic garden, containing 95 acres, is separated from its W. part. The State-house, the most commanding building in the city, occupies its N. part. No other city in the United States has an equally splendid public ground. From the day when the peninsula was purchased of an Indian sachem, it has never been the property of any individual: it was early reserved by the citizens "for a training field and other public purposes," and by a clause in the city charter, the city council are forbidden to sell the Common or Faneuil Hall.

The city contains 585 streets and avenues. It was originally laid upon no regular plan, and the streets are often crooked and narrow; but these inconveniences have been avoided in the newer parts, and extensively remedied by improvements in the older parts. Boston is generally well built, mostly of brick, and many of its private residences are unsurpassed in elegance by those of any other city in the Union. Many of its public buildings are of a commanding character.

Among the public buildings of Boston, the State-house is the principal. It occupies a commanding situation near the summit of Beacon hill, 110 feet above the level of the sea, and fronts on the spacious Common. Few public buildings in the United States have so commanding a site. The edifice is 173 feet long and 61 wide. It consists externally of a basement story, and above it a principal story, 30 feet high. This, in the centre of the front, is covered with an attic 60 feet wide and 90 feet high, supporting a pediment. Immediately above this rises the dome, 50 feet in diameter and 90 feet high; and the whole terminates with a lantern, crowned with an elegant pine-cone. The basement story is finished plainly on the wings with square windows. The centre is 94 feet in length, and formed of arches, which project 14 feet, forming a covered walk below, which supports a colonnade of Corinthian columns of the same extent above. The walls are of brick, painted externally to resemble Portland stone, and the dome is of a bronze color. The lower story is divided into a large hall or public walk in the centre, 50 feet square and 90 feet high, supported by Doric columns. In the middle of the south side of this story is a beautiful statue of Washington, by Chantry, in a neat temple, erected for the purpose of containing it. The rooms above are, the Representatives' room in the centre, 55 feet square. It is finished with Doric columns on two sides, forming, at 13 feet from the floor, galleries; the whole supporting a bold and well-proportioned dome, the centre of which is 50 feet above the level of the floor. The Senate-chamber is 55 feet long, 33 feet wide, and 30 feet high, with two screens of Ionic columns supporting, with their entablature, a richly-decorated arched ceiling. In another part of the building is the Council-chamber, 37 feet square and 30 feet high, which is

a handsomely finished room. The dome is ascended by a spiral stairway on the inside; and from its top is presented the finest view in the United States, and which is probably unsurpassed in the world. Elevated 230 feet above the level of the harbour, the spectator looks down upon the city as on a map, and is able to trace its streets and to survey its buildings. Before him stretches the harbour and the extensive bay on the east, sprinkled over with its hundred islands; and in other directions numerous beautiful villages, with their numerous spires; and a highly cultivated country, with many elegant country seats, embowered in trees, fill up the beautiful scene. A few lofty mountains might add to its grandeur, but could scarcely enhance its beauty, to which nature and art have given their highest embellishment. Faneuil Hall was erected in 1742, by a gentleman whose name it bears, and was by him presented to the city. It is 100 feet long, 80 feet wide, and three stories high. The lower story is occupied by stores. The great hall in the second story is 76 feet square and 33 high, with galleries on three sides, supported by Doric columns, and the ceiling is supported by two ranges of Ionic columns. The west end is ornamented by a full length portrait of Washington by Stuart; and another, copied from an original picture, of Peter Faneuil, Esq., the donor of the building. Above the great hall is another in the third story, 28 feet long and 30 feet wide, devoted to military exercises, with apartments on each side for the deposit of arms and military equipments. This venerable building has been appropriately called "the cradle of American liberty," for here the orators of the Revolution stimulated the people, by their exciting eloquence, to resist British oppression. It is the property of the city, and secured by its charter from ever being devoted to any but public purposes. The City Hall, or old State House, at the head of State street, is 119 feet long, 38 feet wide, and three stories high, and contains the offices of the city government, the Post-office, the Merchants' Exchange, and a well-furnished news-room. It was built in 1638, has been twice destroyed by fire, and was the last time rebuilt in 1747. It was formerly occupied by the State Legislature. An elegant Merchants' Exchange, with a fine reading-room, has been recently erected in State street. Faneuil Hall market is a splendid edifice, 585 feet long and 50 feet wide, having a centre building 47½ by 55 feet, projecting 24 feet on the N. and S. fronts. It is directly E. of Faneuil Hall, between N. and S. Market streets, which are lined with splendid rows of stores and warehouses. The wings are two stories high, and at the E. and W. ends are fine porticoes of four Grecian Doric columns 30 feet 9 inches high, which support a tympanum, with a circular window for ventilation. On the centre building is a beautiful dome, which rises 77 feet from the ground. The lower story is occupied as a market for meat, fish, and vegetables; and the country does not furnish a more splendid market-house. The upper room of the centre building is denominated Quincy Hall, from the Hon. Josiah Quincy, now president of Harvard University, who was mayor of the city when the building was erected. It is 70 feet long and 50 feet wide. Each wing is divided into two halls by brick partitions, one room 44 by 47 feet, and the other 143 by 47, used as warehouses and for large sales. This building, exclusive of the ground, cost \$130,000, and is an ornament to the city. The new Court-house is constructed of hewn Quincy granite, is 176 feet long, 51 feet wide, and 57 feet high; and the N. and S. fronts are adorned with Grecian Doric porticoes of four columns, which weigh 25 tons each. The interior has four court rooms, each 50 by 40 feet, besides various public offices. A new Custom-house is erecting, which has an elegant Doric portico its whole length, and a fine dome in the centre, adapted to the wants of this commercial metropolis. The Houses of Industry, Correction, and Reformation, are pleasantly situated in South Boston, near the brow of Dorchester heights, having a fine view of Boston and its harbour, and surrounded by 61 acres of ground. Tremont-house is one of the finest hotels in the United States, and little inferior to the celebrated Astor-house in N. York. It has a granite front 180 feet long and three stories high, and has two wings, one 84 by 34 feet, the other 110 by 40 feet, and each four stories high. The building contains 180 rooms, and cost \$68,000, exclusive of the ground. Many of the churches possess considerable architectural beauty, among which Trinity church, St. Paul's church, Grace church, and the lofty and elegant steeple of Park-street church, 218 feet high, deserve particular notice.

Boston is the second commercial city in the Union, and possesses one of the best harbours in the United States. Including the outer harbour, it extends from Nantasket to the city, and spreads from Nahant to Hingham, containing 75 square miles. It contains a hundred islands or rocks above water, and receives Mystic, Charles, and Neponset rivers. The principal islands are Governor's island, containing fort Warren, and Castle island, containing fort

## BOSTON.

**Independence.** They lie  $\frac{1}{2}$  miles E. of the city and about a mile distant from each other, and the only channel for large ships passes between them. They divide the inner from the outer harbour. Deer Island and Long Island command the outer harbour. There is a light-house on Light-house island,  $\frac{1}{2}$  miles E.  $\frac{1}{2}$  S. of the city. Northwardly from the light-house there is a chain of islands, rocks and ledges, about three miles to the Graves rocks, between which no ships attempt to pass. The inner harbor has a depth of water sufficient for 500 vessels of the largest class to ride at anchor in safety, while the entrance is so narrow as scarcely to admit two ships abreast. Although no large navigable river flows into Boston harbour, yet, by means of the Middlesex canal, and locks and canals around the falls in Merrimack river, a boatable communication has been opened to Concord, New Hampshire; and recently the railroad to Albany not only brings to it the trade of the central and western portions of the State, but will cause it to share in the trade of the vast western country. The capital of Boston has also been largely invested in the manufacturing establishments of Lowell and Waltham, which are the most extensive in the State, and among the largest in the United States. Boston has over 90 wharves, many of which are lined with large and splendid stores and warehouses. The principal are India wharf, which is 980 feet long and from 246 to 280 feet wide, in the middle of which is an extensive row of stores four stories high. It was constructed in 1805. Central wharf is 1379 feet long and 150 feet wide. In the centre is a fine range of stores, and over the central hall, in the middle, is an astronomical observatory, with a telegraph, communicating, through an intermediate one, with another on Point Alderton hill, at Nantasket. It was built in 1816. Long wharf, at the foot of State street, is 1800 feet long and 200 wide, on which are 78 spacious warehouses. A well of fresh water, 90 feet deep in the centre of this wharf, extensively supplies the shipping with pure and wholesome water. This wharf was constructed in 1710, but has since been greatly improved. Other wharves are of great extent, and well furnished with stores and warehouses. The tonnage of the port, in 1840, was 290,943, which is exceeded by no other port in the United States but that of New York. The foreign imports are about \$16,000,000 annually, and the exports about \$10,000,000, and yet the balance of trade is greatly in favor of the city. The amount of trade coastwise is three or four times as much as the foreign trade.

There were, in 1840, 145 commercial houses and 89 commission houses engaged in foreign trade, with a capital of \$11,576,000; 579 retail stores, with a capital of \$4,184,290; 21 lumber yards, with a capital of \$371,010; the fisheries employed a capital of \$25,000; machinery was manufactured to the amount of \$125,000; articles of the precious metals to the amount of \$93,650; of various metals to the amount of \$284,400; there were six furnaces, employing a capital of \$90,000; three glass factories, with a capital of \$37,000; 17 distilleries and two breweries employed a capital of \$390,000; two sugar refineries and three ropewalks, a capital of \$101,500; one grist-mill, a capital of \$50,000; furniture was manufactured to the amount of \$320,000; ships were built to the amount of \$37,000; there were built, in 1840, 217 brick and stone, and 148 wooden houses, which cost \$1,061,100; 94 printing-offices, 26 binderies, 17 daily, seven semi-weekly, and 11 weekly newspapers and seven periodicals, employed 437 persons, and a capital of \$236,450. The total amount of capital employed in manufactures was \$2,770,250. There were fifteen academies or grammar schools, with 2639 students, and 137 common and primary schools, with 14,003 scholars. The foregoing will evince that the manufactures of Boston, though not equal to its commerce, are highly respectable; and that in the means of ordinary education, it is pre-eminent. The city contains 25 banks, with an aggregate capital of \$17,300,000; and 25 insurance companies, with a total capital of \$6,000,000, and two safety-fund insurance companies, without a definite capital.

From its first settlement by the Puritans, the cause of education has received great attention by the citizens of Boston, as it has everywhere among their descendants. The public schools of Boston are of a higher character, are better organized, and more liberally supported than in any other city or considerable town in the Union. It is estimated that about one fourth part of the entire population are kept at school during the year, at an expense of \$200,000. Of the public free schools, the Latin grammar school occupies the highest place. Its substantial commencement dates back to 1635. It is under the direction of a principal, vice-principal, and four assistants. For admission to it a boy must be at least nine years old; be able to read fluently, to write a running-hand, and grammatically to parse common sentences in prose. The regular course of instruction embraces five years. The next in order is the English High School, in which the mathematics and the higher branches

of an English education, together with the French language, are taught. It was organized in 1831. Next come the grammar and writing schools, ten in number. These schools are kept in commodious buildings, each having two departments; and they are under the direction of large and respectable school committees. And last, though not least in importance, are 75 primary schools and one African school. These schools are under the management of a board, consisting of one member for each school, and a standing committee of seven. Each school is visited once a month by at least one member of its district committee. They consist chiefly of children from four to seven years of age, after which, if they can read and spell the English language correctly, they are advanced to the grammar schools; and if they have made sufficient progress, they are admitted to the Latin school at nine, and the English high school at 15 years of age. Some of the brightest scholars at Harvard University have been received from the public schools of Boston. Besides the above, there are infant schools for teaching very young children, and Sabbath schools, in which nearly 5000 children are taught.

The Medical Institution of Harvard University is located in Boston, where its professors reside. It was founded in 1783, has six professors, 86 students, and over 5000 vols. in its library. The lectures commence on the first Wednesday of November, annually. The Institution for the Blind has been liberally patronized, has a splendid edifice on Mount Washington, South Boston, has 70 pupils, and is highly respectable and prosperous. Music, both vocal and instrumental, and the mechanic arts are taught in connexion with their studies, and printing in embossed letters is successfully practised. One of its pupils is now a member of the Junior class in Harvard University.

Boston has 106 literary and charitable societies. Among the literary societies of a high order is the American Academy of Arts and Sciences, founded in 1780, which has published four quarto volumes of its transactions, and has a library of over 2000 volumes. It has numbered among its members many distinguished persons. The Massachusetts Historical Society was incorporated in 1794; and its object is to collect the materials of a complete history of the state and of the country. Its collections have been published in 26 volumes octavo, in which are many valuable papers. Its library, consisting of books and manuscripts, amounts to over 6000 articles, many of them rare and valuable, besides some paintings, ancient and modern, of some distinguished characters. The Boston Athenaeum was incorporated in 1837, has an edifice worth \$30,000, a library of over 30,000 volumes, a collection of over 2000 coins and medals, ancient and modern, and a reading-room well furnished with American and foreign newspapers. It has an edifice in the rear of the main building called Athenaeum Hall, 60 by 58 feet, and three stories high, containing a large lecture-room, a complete apparatus for the illustration of scientific lectures, and a gallery of a fine collection of statuary and paintings, besides accommodations for several literary and scientific associations. The Boston Society of Natural History was instituted in 1830, and has a cabinet and a museum, which are an ornament to the city. The New England Museum occupies an extensive block of buildings in Court street, has two spacious halls, was opened in 1818; and by adding to its contents several other establishments of the same kind, it possesses a rare and valuable collection of curiosities. Among the charitable institutions of Boston, the Massachusetts Hospital deserves notice. It is built on Charles river, in the western part of the city. It has a beautiful edifice built of granite, 108 feet long and 54 wide, with a fine portico of eight Ionic columns, and it has a dome in the centre. It is surrounded by four acres of ground, which is highly ornamented with trees and shrubbery. Among the religious charitable societies are the Board of Commissioners for Foreign Missions, which has an agency, and holds its anniversaries in the city of New York; the Baptist Board of Commissioners for Foreign Missions; the American Education Society; the American Tract Society; the American Unitarian Association; the American Peace Society; the Seamen's Friend Society; the Massachusetts Bible Society; the Prison Discipline Society; the Massachusetts Missionary Society, and many others.

There were, in 1843, 36 newspapers, of which 12 were daily, some of which were also semi-weekly and weekly, and the others were weekly. Besides newspapers, there are a number of magazines and reviews, the most distinguished of which is the North American Review, which has contributed much to raise the character of American literature, not only in the United States, but also in Great Britain and other parts of Europe.

There are 75 churches in Boston, of which 15 are Unitarian, 12 Congregational, nine Baptist, three Free-will Baptist, two Christian and one African Baptist, eight Methodist, one Reformed Methodist, one Christian Methodist, four Universalist, one New Jerusalem, one Friends,

one German Protestant, four Roman Catholic, and some others.

There are two principal theatres in Boston, the Tremont Theatre, on Tremont street, is 135 feet long, 79 feet wide, and was completed in 1837, at a cost of about \$190,000. The National Theatre, at the junction of Portland and Travers streets, was built in 1831, and at first used as a circus. The Odeon, 156 feet long, 61 wide, and 40 feet high, was formerly the Boston Theatre, built in 1794; burned and rebuilt in 1798; and is now used as a place for concerts, lectures, and for public worship; and its interior has received such alterations as are suited to this design. So well are public lectures adapted to the taste of this literary emporium, that among its respectable citizens they are extensively superceding the entertainments of the theatre.

Boston is supplied with pure and wholesome water by the Aqueduct Corporation, formed in 1795. The water is brought in logs from Jamaica pond in Roxbury, four miles from the city. The logs are laid in the city for the total distance of eight miles, and are capable of supplying 50,000 gallons daily, which can be raised to the height of 40 feet above tide water. This supply is inadequate to the wants of the city. But within eight miles are several ponds and the water of Charles river, which might be brought to the city, and afford an abundant supply at a much less expense than is incurred by some other cities for the same purpose.

Boston, with the small but ancient town of Chelsea on the N.E. of it, constitutes the county of Suffolk. Chelsea is allowed to enjoy all the privileges relating to the administration of justice, but is exempted from all taxation for county purposes. For the county statistics, see Suffolk county.

Boston continued a town, and was governed by a body of select men, according to the common custom of the towns in the State, until 1833. Before this the people could not be brought to consent to the adoption of a city government. But the vote was at length carried by a majority of 916, and Boston received a city charter, dated February 23d, 1833. The city is divided into 13 wards, and is governed by a mayor, eight aldermen, and four common council-men, to represent each ward, making 48 members of the common council in the whole. Besides these, each ward chooses one warden to preside over its public meetings and to superintend its concerns; one overseer of the poor; one clerk; five inspectors of elections, and two school committee-men. The school committee-men, two from each ward, making 26 in the whole, with the mayor and the president of the common council, constitute the school committee of the city of Boston. The overseers of the poor, 13 in number, one from each ward, constitute the overseers of the poor in the city. Every male citizen, 21 years of age, who has resided in the State for one year and in the city for six months next preceding an election, or who has paid any state or county tax within two years next preceding an election, in any town in the commonwealth, or who is by law exempt from taxation, is entitled to vote for the municipal officers of the city. The mayor and aldermen constitute one board, and the common council another; and they hold their sessions separately, excepting when they meet in joint ballot. A city clerk is elected by the joint ballot of both boards.

The first European inhabitant of Boston was the Rev. William Blackstone, an Episcopalian, who, in 1630, built a cottage in what is now called Spring street. The original appearance of Boston was that of three hills, of which the western, afterward called Beacon hill, was the largest, and terminated in three summits. The Indian name was *Saemum*, but it was called by the English *Tremont*, from its three hills, and perhaps from the three summits of Beacon hill. By the intersection of three small streams, the peninsula, containing about 600 acres, thinly wooded, was divided into three islands. The first substantial foundation of Boston was in 1630, when a large number of emigrants arrived in Massachusetts, under Mr. John Winthrop, the first governor, who made his residence at Charlestown, but soon removed to Boston with a number of the principal settlers. The first Court of Assistants was held on board of the *Arabella*, one of the vessels which brought over the emigrants. The Rev. John Wilson was chosen minister of the church at Charlestown, including the people of Shawmut. Shortly after, at a second meeting of the court of assistants, it was ordered that Tremont should be called Boston, from a town of the same name in England, whence several of the settlers came, and where the Rev. John Cotton, whom they expected among them, was a minister. The church was removed to Boston, where a large number of the members had fixed their residence. The first General Court was held at Boston, October 19th, when 108 persons were made freemen. A vessel was sent to Narragansett to trade, and brought home 100 bushels of Indian corn. In 1631 the ship *Lion* arrived with provisions. The Rev. Roger Williams, afterward well known for his banishment, and as the first settler of Rhode Island, arrived.

The first fire happened March 16th, when a house took fire from the chimney, composed of sticks of wood plastered with clay, and the fire soon communicated to the thatched roof, and extended to a neighbouring house, both of which were consumed, and some valuable furniture was destroyed. They were among the best houses of the place. March 23d, the court of assistants ordered that all persons having cards, dice, or gaming tables, should put them away, before the next meeting of the court, evincing a strict supervision over the morals of their infant community. April 12th, the court ordered that the military captains should train their companies every Saturday. April 15th, Chickatabut, a chief sachem of the vicinity came to Boston, and the governor gave him an entire new suit of clothes, with which he was much delighted; and when meat was set before him, he refused to eat until the governor had first asked a blessing, and after the repast, he requested him to give thanks. Thus early did the colonists begin to exercise a religious influence over the natives. This chief, on the 24th of March previous, had visited the Governor, and presented him with a hoghead of Indian corn. This early exchange of kind offices deserves a commemoration. May 18th, Thomas Williams was allowed by the Court to commence the first ferry from Winesmill to Boston, and to have 4d. for each person; and June 14th, Edward Curves had liberty to commence a ferry to Charlestown, and to have 3d. for each person. July 30th, a night watch of six persons was established, of which Boston, Charlestown, and Roxbury furnished two men each. This was, doubtless, chiefly as a security against fires. November 4th, the ship *Lion* arrived with more provisions, to the great joy of the inhabitants. It is difficult in these days of plenty to enter into the feelings of the early colonists, in view of such an event. May 4th, 1633, a fortification was begun on Corn hill, now Fort Hill, and the inhabitants of Charlestown, Roxbury, and Dorchester, assisted in erecting it. This precaution was necessary, though their early intercourse with the Indians was of a friendly character. In August, the first meeting-house was begun, at the corner of what are now State and Devonshire streets. The windmill was removed from Cambridge to Boston, and located on Copp's hill. Oct. 3d, the court ordered that no person should take any tobacco publicly, under a penalty of one penny. March 4th, 1633, Boston was rated at £5 in a tax on the colony of £30. April 1st, 1634, the court ordered that Mr. Blackstone should have 50 acres of land, which was about one twelfth part of the peninsula, he being "the first European inhabitant." July 30th, the Governor and others met at Castle Island, and agreed to build a new fortification, now Fort Independence. The fortification on Fort Hill was already in a state of defence. September 1st, the first volume of the Town Records commenced. November 10th, the town purchased all Mr. Blackstone's "right and title to the peninsula of Shawmut" for £30, each freeholder paying six shillings, and some of them more; such was the fairly estimated value of one twelfth part of Boston at this period. March 4th, 1635, the court ordered that brass farthings should be discontinued, and that musket balls should pass for farthings—a kind of Spartan money. March 23d, the town voted that any persons making any hindrance in town meeting by private conference, should pay 12d. each. The pilgrims were characterized by a regard to order. In 1635, the Pequod war commenced, and in 1637, a considerable number of soldiers were sent against them; and on the 15th of June, and the 19th of October following, thanksgivings were kept for victories over them. Mrs. Ann Hutchinson, who for several years had preached her peculiar doctrines, which produced much disturbance, was banished from the colony in March, 1638. June 1st, 1638, the Ancient and Honorable Artillery Company was formed, which has been continued, with much reputation, to the present time. In September 1638, a training of 1200 men took place, and continued at Boston for two days, yet no one was drunk, nor an oath sworn. That was a period of strict morality. In October, 1645, the town made an allowance of £30 and a house for a schoolmaster, and £30 for an usher of a free school. This was the commencement of the free-school system, by which Boston has ever since been eminently distinguished. In 1646, the Liberty Tree, afterward so celebrated, was planted at the corner of the present Washington and Essex streets. It continued to flourish until the Revolution, when it was cut down by the British soldiers, and one of them (an ominous circumstance) was killed by its fall. October 17th, a ship of 300 tons was launched at Boston. March 9th, 1648, Governor Winthrop died, aged 69 years, and was buried in King's-chapel burying-ground, sincerely lamented by the colony, of which he had been a father. In 1651, the court ordered, that any person who was not worth £300, should not wear any gold or silver lace, or silk hoods or scarfs; so careful were they to repress luxury in dress. In 1656, the Quakers first came to Boston, and afterwards occasioned, often by improper conduct, great

## BOSTON.

disturbances in the colony, and experienced some severe and improper treatment. July 25th, 1664, the town voted to have the bell rung every day at 11 o'clock, to call the merchants together for one hour at the town-house. This was the first commencement of a Merchants' Exchange. In 1673, the first wharf at Boston was built. November 27th, 1674, a disastrous fire took place at North square, and consumed 45 dwelling-houses, and the North meeting-house. In May, 1677, the court appointed John Hayward, post-master, "to take in and convey letters according to direction," the first commencement of the post-office system. August 8th, 1679, a fire broke out in the night, near the town dock, and burned 80 houses, 70 stores, and several ships, at a total loss of £300,000; a great sum for that day. In 1681, the general court granted to Samuel Sewall the liberty to set up a printing press, and no one to set up another without license. In 1684, Massachusetts was deprived of its charter. April 19th, 1689, Sir Edmund Andros, the English governor, was seized by the people and put in prison. In 1690, the first paper money was issued. In 1694, the general court required the selectmen to post in all taverns in town the names of drunkards. In 1700, Boston contained 1000 houses and 7000 inhabitants. In 1701, the representatives of Boston were instructed by the town to endeavour to obtain the abolition of slavery; one of the earliest movements in the world on the subject. In 1702, the small-pox raged in Boston, and 313 persons died. In 1704, the *Boston News Letter*, the first newspaper, was published by John Campbell, post-master. In 1705, the western post went only once a fortnight. January 6th, 1706, Benjamin Franklin, the American philosopher, and an honour to his native town, was born, in a house which stood opposite to the old South church, in Milk street. May 18th, 1707, two vessels were launched in Boston. In 1708, Ezekiel Cheever, for 38 years a schoolmaster, who wore his beard, died, aged 93. He is called in the *Boston News Letter*, of October 18th, "the ancient and honourable master of the free school in Boston." In 1710, a fortification was built across the Neck, between Boston and Roxbury, and the wharf at the foot of State street was constructed. In 1711, a fire burned 100 dwellings, the Town house, and the First meeting-house. In 1731, 844 persons died of the small-pox. Dr. Zabdiel Boylston introduced the practice of inoculation, for which he was greatly persecuted, even by the faculty. In May, 1733, "a curious engraved Map of Boston" was published by Capt. John Bonner; probably the first map of Boston ever issued. June 4th, 1734, three markets were opened, a bell was rung at sunrise, and market hours were continued until one o'clock. September 18th, 1740, the Rev. George Whitfield arrived in Boston. Faneuil Hall was built by Peter Faneuil, Esq., and presented to the town for a market-house, and is secured by the recent city charter from ever being sold. In 1749, money arrived from England to the amount of \$316,318 in silver and copper coin, to defray the expense of the capture of Louisbourg. March 20th, 1760, a fire in Washington, State, and Water streets destroyed 174 houses, and 175 stores and shops, which was nearly one sixth part of the town. The stamp act was passed in the British parliament on the 23d of March, 1765; and August 14th, the effigy of the distributor of stamps was hung upon Liberty tree, and his office was assaulted and plundered by a mob. November 1st, the day on which the stamp act took effect, was ushered in by the tolling of bells and other demonstrations of dissatisfaction. June 29th, an act was passed by Parliament for imposing a duty on paper, glass, palates, and teas, which produced great dissatisfaction. October 1st, 1763, two regiments of British troops, consisting of 700 soldiers, were landed in Boston, and quartered in the state-house, now the city hall. March 5th, 1770, the Boston massacre occurred, in which the soldiers, after some provocation, fired on the inhabitants, killing three persons and mortally wounding three others. This caused the inhabitants to demand the removal of the soldiers from the town. March 31st, 1774, the Boston Port bill passed the British parliament, shutting the port of Boston, which produced great excitement and distress among the citizens. May 14th, the town voted to discontinue all commerce with Great Britain. September 4th, lamps were first lighted in the streets of Boston. Seventeen persons, disguised as Indians, and armed, went on board some India ships in the harbour, and emptied overboard 342 chests of tea, in testimony of their indignation against the conduct of the British. April 19th, 1775, occurred the celebrated battle of Bunker hill. The American loss was 145 killed and missing, and 304 wounded, and the British loss was 236 killed, including 19 officers, and 893 were wounded, including 70 officers; and Charlestown was burned. July 2d, Gen. Washington arrived at Cambridge, and took the command of the provincial troops. In February, 1776, the Americans, under Washington, took possession of Dorchester heights, and compelled the British, March 17th, to evacuate Bos-

ton, and the Americans entered it in triumph. March 25th, Congress presented a vote of thanks and a gold medal to General Washington, for his spirited conduct at Boston. April 11th, 1783, peace with Great Britain was proclaimed by the American Congress, after having established their independence. April 4th, 1787, a fire began in Beach street, which consumed 60 dwelling-houses and 40 other buildings, and the meeting house in Hollis street. The Marquis La Fayette contributed over \$1500 to the sufferers. April 17th, 1790, Dr. Franklin died at Philadelphia, aged 84 years, bequeathing to Boston, his native town, \$4444 for the benefit of young married artificers. In June, 1794, at the close of the embargo, Boston contained 23 ships, 36 brigs, 106 schooners, and 60 sloops. February 2d, 1798, the new state-house was first occupied. In 1800, the municipal court was established. In 1804, Dorchester Neck was set off from Dorchester, and called South Boston. Beacon hill was levelled. December 23d, 1807, the Boston Athenæum was incorporated. June 1st, 1813, the American frigate *Cheesapeake*, commanded by Capt. Lawrence, left Boston harbour on a challenge to meet the British frigate *Shannon*, commanded by Capt. Broke. The *Cheesapeake* was captured, Lawrence killed, and Broke was knighted; the only instance of capture by an equal British force during the last war. In 1815, the *North American Review*, which has conferred great honour on American literature at home and in foreign countries, was established at Boston. November 3d, 1818, the Exchange Coffee house, in Congress street, which cost \$500,000, was burned. February 23d, 1833, Boston was incorporated as a city, and on the 10th of April following, the Hon. John Phillips was chosen the first Mayor. May 1st, 1837, the statue of Washington, by Canova, arrived at Boston, and was placed in the State-house. September 24th, Tremont theatre was first opened. September 3d, 1839, Tremont-house, a splendid hotel in Tremont street, was opened. September 17th, 1830, the second centennial celebration of the settlement of Boston was observed with great parade. May 1st, 1833, a fair was held in Faneuil Hall by the ladies of Boston, for the benefit of the Asylum for the Blind, and continued for three days. The amount collected was \$12,918. In 1836, an iron fence was built, over a mile in length, around the common, which, with the regulation of the walks, cost \$100,000. It was commenced in July, and completed in December following. The number of deaths in Boston, in 1839 was 1812, of which 151 were in January, 159 in February, 106 in March, 145 in April, 139 in May, 196 in June, 148 in July, 117 in August, 183 in September, 186 in October, 141 in November, and 159 in December. June 5th, 1840, the city council gave a dinner to Mr. Edward Curran, the son of the proprietor of the Liverpool line of steam-packets, and to Capt. Douglas, the captain of the *Unicorn*, of which 350 guests partook. The mayor presided, and many elegant speeches were delivered on the occasion. September 9th, a fair for the Bunker-hill monument was opened in Quincy hall, and continued through the week. The net proceeds of it were \$23,000. February 1st, 1841, the *Acadia* steamer left Boston for Liverpool, with 65 passengers, about 30,000 letters, and wagon-loads of newspapers. September 30th, the steamer *Caledonia* arrived in 13 days 13 hours from Liverpool. January 14th, 1842, Governor Davis stated in his address, that in the last 16 years, the legislature had appropriated \$116,000 to the lunatic hospital; \$119,000 for the education of the deaf and dumb; \$12,000 for the hospital on Rainsford Island; \$65,000 for agricultural societies and premiums; and \$100,000 for revising the statutes. March 11th, the steamship *Unicorn* arrived, bringing 40,000 letters and 40 bags of newspapers; the largest mail which ever arrived in the United States. October 23d, Warren bridge, having been elegantly repaired, and paved with wooden blocks, was opened for travel, after having been closed nearly a year. Such is a summary view of the Annals of Boston, an "ancient and honourable" city, the parent of a large portion of New England, and even of the United States. For a more particular account, the reader is referred to Bowen's *Picture of Boston*, Snow's *History of Boston*, and the *Boston Almanac*.

**Boston**, p. t., Erie co., N. Y., 18 m. S.W. Buffalo, 303 m. W. Albany, 269 W. Drained by Cauquaga creek. It contains two stores, four fulling-mills, four grist-mills, four saw-mills, twelve schools, 496 scholars. Pop. 1745. The village on Cauquaga creek has two churches, one Baptist and one Presbyterian, two stores, two grist-mills, two saw-mills, one carding-machine and clothier's works, and about 500 inhabitants.

**Borox**, p. t., Summit co., O., 24 m. S. Cleveland, 139 m. N.E. Columbus, 243 W. The Cuyahoga river passes through it, and affords water-power. The Ohio canal passes along the river, and, at Peninsula or Boston Centre, crosses it in an aqueduct. It contains three stores, one flouring-mill, one grist-mill, three saw-mills, five schools, 165 scholars. Pop. 345. The village at the Centre contains one Episcopal

## BOSWORTH (MARKET).

church, and one Presbyterian and one Methodist congregation, and about 150 inhabitants.  
**BOSTON**, p. t., Iowa co., Mich., 146 m. N.W. Detroit, 631 W. Watered by Grand river. It has one saw-mill. Pop. 63.

**BOSTON**, t., Franklin co., Ark. Pop. 224.

**BOSTON**, p. t., Wayne co., Ia., 78 m. E. by S. Indianapolis, 429 W. It has one school, 49 scholars. Pop. 636.

**BOSWORTH (MARKET)**, a par. and town of England, co. Leicester, hund. Spartenhoe. Area of par. 8040 acres. Pop. of par., 1831, 3677; 1841, 13,000; of the town only, 1049. This neat little town is on an eminence, in the centre of a fertile district, 95 m. N.W. by N. London. It has a well-endowed grammar school, in which Dr. Johnson was once an usher; but his property, above £700 a year, has been the subject of a long chancery suit. It has two fellowships and four scholarships in Emanuel, Cambr. There are two cattle fairs held annually, May 8, and July 18. The Ashby canal passes within a mile, and conveys coals, &c. The knitting of worsted stockings employs many persons in the town and neighbourhood. It is the central town of a poor-law union of 38 parishes; has two guardians, and its average annual poor rates are £765.

The decisive battle between Richard III. and the Earl of Richmond, afterward Henry VII., in which the former lost his crown and his life, and which terminated the long-continued struggle between the houses of York and Lancaster, takes its name from this town, in the vicinity of which it took place, on the 22d of August, 1485. In the battle-field is a well, named from Richard III., with an inscription by the late Dr. Parr; and an elevation, called Crown Hill, where Lord Stanley is said to have placed Richard's crown on the Earl of Richmond's head. (*Nichol's Leicester*; *Hutton's Barren Field*.)

**BOZRA**, a town of Syria, formerly the cap. of the Auranites; 50 m. S. Damascus, 60 m. N.E. Jerusalem; lat. 33° 40' N., long. 36° 30' E. Though now almost deserted, the ruins are extensive and magnificent; the principal of these, or at least the most sacred, in Mohammedan estimation, is the Deir-Bohaira (House of Bohaira), so called from being consecrated to a monk of that name, who is said to have proclaimed the sacred character of Mohammed, when the prophet, in his 13th year, visited Syria with his uncle. The great mosque, a very ancient temple, a triumphal arch, a castle of great strength, remains of the city walls, and a reservoir 500 ft. long, 300 wide, and 30 deep, are among the remains of ancient grandeur; in addition to which the whole town and its environs are covered with pillars and other ruins of the finest workmanship. Bozra is very ancient: it is mentioned in the Sacred Writings as one of the cities which the half tribe of Manasseh, beyond Jordan, gave to the Levites (Josh., xxi., 37). At this time, and for ages subsequently, it was celebrated for its vineyards, which are commemorated on the Greek medals of *Kabouia Bozrypa*; but of these no vestige now remains. After the establishment of Christianity, it was an archbishop's see, with nineteen bishoprics under its jurisdiction. Its strong castle was built by the Saracens between whom the Latin kings of Jerusalem it several times changed masters, and under Baldwin IV. A.D. 1180, it was entirely ruined and depopulated. (*Abul-Feda, Vol. Ma.*, c. 4; *Th. Syr.*, p. 51, 92; *Adrichemius, Terr. Sanc.*, 79, 80; *Berckhardt, Trav. Syr.*, p. 324-325.)

**BOTANY BAY**. See AUSTRALIA and NEW SOUTH WALES.

**BOTETOURT**, county, Va. Situated S. by W. of the centre of the State, and W. of the Blue ridge, and contains 1000 sq. m. Drained by James river and its branches. It contained in 1840, 9321 neat cattle, 13,954 sheep, 30,453 swine; and produced 187,989 bushels of wheat, 51,970 of rye, 998,707 of Indian corn, 9321 of buckwheat, 185,018 of oats, 18,544 of potatoes, 707,865 pounds of tobacco. It had twenty-one stores, two furnaces, ten flouring-mills, twenty-six grist-mills, thirty-three saw-mills, three oil-mills, nine tanneries, seven distilleries, two printing-offices, two weekly newspapers. Pop., whites, 8357, slaves, 2925, free coloured, 377; total, 11,679. Capital, Fincastle.

**BOTETOURT SPRINGS**, p. v., Roanoke co., Va., 11 m. W. Fincastle, 168 m. W. by S. Richmond, 238 W.

**BOTHIA (GULF OF)**, the N. arm of the Baltic, which see.

**BOTHWELL**, a par. and village of Scotland, county Lanark, on the N. side of the Clyde. The village lies on the road from Glasgow to Hamilton, 8 m. E. of the former, and 3 m. N.W. of the latter. About 1 m. farther on towards the S.E., the road to Hamilton is carried over the Clyde by Bothwell-bridge, the scene of one of the most memorable events in Scottish history. The Covenanters, to the number of 4000 or 5000, having taken possession of the bridge, then much narrower than at present, were attacked, on the 22d of June, 1679, the bridge forced, and their army totally routed by the royal forces, under the Duke of Monmouth. (*Living's*

## BOUCHES-DU-RHONE.

*Scotland*, iv., 104.) Near the village is the magnificent ruin of Bothwell Castle, once an important Scottish fortress. The par. is well wooded and well cultivated.

**BOTTLE HILL**, v., Chatham t., Morris co., N.J., 4½ m. S.E. Morristown, 57 m. N. by E. Trenton, 323 W. It contains one Presbyterian church, an academy, three stores, and over 40 dwellings.

**BOTZEN**, or **BOLZANO** (an. *Pons Drusi*), a town of the Austrian states, Tyrol, cap. circ., in a pleasant, well-sheltered valley, at the confluence of the Elsenz and Teller, a little above where their united waters fall into the Adige, 30 m. N.N.E. Trent. Pop. 9008. It is a thriving, well-built town, in the Italian style; has a castle, several convents, a college, and some manufactures of silk stockings, &c. A strong dyke of masonry, nearly 3 m. in length, and in parts 24 ft. thick, has been constructed to defend the town from the irruptions of a neighbouring mountain torrent. Being intersected by high roads leading to Switzerland, Austria, and Italy, Botzen has an extensive transit trade. It is also celebrated for its fairs, commencing the 18th March, 14th June, 9th September, and 26th November, continuing each fourteen days, which are attended by a great concourse of French, Germans, and Italians. "Though still in Germany, the approach to Italy has become perceptible, in the falling off of cleanliness, the use of the Italian language, which now begins to be spoken, the southern vegetation, and the change of the climate." (*Severus*.) The country round produces excellent wine, and fruit in abundance. Botzen is supposed to occupy the site of the ancient Roman citadel, *Pons Drusi*.

**BOUCHAIN**, a fortified town of France, dep. du Nord, cap. cant., on the Scheldt, by which it is intersected, 12 m. S.E. Douai. Pop. 1149. The fortifications are of very considerable strength, and the adjacent country may be hid under water. The Duke of Marlborough took it in 1711, after a memorable siege; but, being retaken by Marshal Villars in the following year, it was finally ceded to France at the treaty of Utrecht. It was one of the frontier fortresses occupied by the allies after the peace of 1815.

**BOUCHES-DU-RHONE**, a merit. dep. S. of France, situated, as its name implies, at the mouth of the Rhone. It is bounded E. by the dep. of the Var; N. and W. by the Durance, Rhone, and the W. arm of the latter, which separates it from the dep. of Vaucluse and Gard; and S. by the Mediterranean. Area, 512,901 hectares. Pop. 269,333. Soil and surface very various, but the former is generally inferior. The last offices from the maritime Alps occupy the E. part of the dep.; but they are not remarkable either for their height or appearance. The highest summit, that of St. Victore, is 1449 metres (3490 ft.) above the sea. The plain of Le Crau and the lake of Camargue, occupy a large portion of the surface. The first is of great extent, stretching from Arles to the lagoon of Berre. It has very little vegetation, and is formed principally of flints and other small stones; during winter it furnishes pasture to large flocks of sheep and goats, the former being driven in summer, whence it is arid and waste, to the mountains. It is supposed by many that this plain, which was formerly a gulf of the sea, and various circumstances conspire to strengthen the supposition. The island of Camargue is the richest and alluvial land lying between the E. and W. arms of the Rhone, and is partly cultivated and in pasture, and partly occupied by marshes and lagoons. The latter, indeed, make one of the principal features of the dep. The principal are the lagoons of Volucris in the island of Camargue, and that of Berre or Marthe, 12 m. N.W. Marseilles. They and the contiguous marshes occupy a great extent of land, and in summer are very unhealthy. Principal rivers, Rhone and Durance; the latter rushes along with great violence, frequently overflowing its banks, and causing great damage. There are also some smaller rivers, and the department is intersected by several canals. Climate generally hot and dry, and the country in summer has a barren, scorched appearance. Agriculture bad, a consequence, no doubt, partly to the mischievous division of property, and the attachment of the little proprietors to routine practices; but more, perhaps, to the unfavourable nature of the soil and climate. In the mountainous parts in the E. and N.E. there is a good deal of spade husbandry; in the S. and N.W. mules are employed in field labour; and horses in the W. and the island of Camargue. The produce of corn is insufficient for the consumption; but the produce of wine is estimated at about 890,800 hectolitres, leaving a large surplus for exportation. The produce of silk in 1835 was estimated at about 330,000 kilog. Olives are largely cultivated; and the gathering of kermes continues to be a good deal attended to. The dried fruits of the dep. are much esteemed. Horses and cattle are few in number, and not of good quality. The great wealth of the dep. consists in its sheep, of which it possesses about 800,000. From 400,000 to 500,000 of these sheep are annually driven, about the beginning of spring, to the mountains of the Drome, the Berre, and the high and low Alps, where

## BOUIN.

they are depastured during the summer. When the period for setting out arrives, several proprietors join their flocks together, to the number sometimes of 25,000! Previously to the Revolution, the migratory flocks enjoyed privileges somewhat similar to those of the *Mesta* in Spain, but they were then abolished. The lagoons are resorted to in winter by myriads of aquatic fowl; which, when the frost sets in, are taken in vast numbers. Minerals, of little importance. There are brine springs, and salt is made in several places. This is more of a commercial than of a manufacturing dep. With the exception, indeed, of fabrics of soap and *seras facies*, hosiery, sugar refineries, some establishments for the manufacture of cutlery, coral-works, oil-mills, and silk filatures, with distilleries, tanneries, &c., manufactures are of little importance. The commerce of the dep. is, however, very extensive, Marseilles having been for several years past at the head of the commercial cities of France. (See Marseilles.) The herring and anchovy fisheries are extensively carried on. Principal towns, Marseilles, Arles, Aix, Tarascon, Aubagne, &c. Public revenue in 1831, 39,262,854 fr., of which the customs produced 25,813,000 fr. The dep. sends six mem. to the Chamber of deputies, is divided into three arrondis., and has above 2500 elections. (*French Official Tables*; *Hugo, France Pittoresque*, art. *Bouches-du-Rhône*; *Dict. Géographique*, &c.)

BOUIN, an island on the coast of France, between the depts. of Loire Inférieure and La Vendée, belonging to the latter, from which it is separated by a narrow channel. It is of a triangular shape, low and marshy. Area, 3 sq. leagues. Pop. 2700. It produces corn and cattle, but especially salt, obtained in large quantities from the salt marshes that surround the village of Bouin, in the centre of the island. According to some historians, it was here, in 880, that the Normans made their first descent on the coast of France. (*Hugo art. Vendée*; *Dict. Géographique*.)

BOULOGNE, or, as it is sometimes called, BOULOGNE-SUR-MER, a sea-port town of France, dep. Pas de Calais, cap. arrond., on the Liane, near where it falls into the English channel, 30 m. S.E.W. Calais: lat. 50° 43' 31" N., long. 10° 36' 30" E. Pop. 25,738. It is divided into the upper and lower towns. The former is pretty well built, but is irregularly laid out. It has two squares, ornamented with fountains, and contains the cathedral, the ancient episcopal palace, the Hôtel de Ville, and the courts of justice. It also contains the house where Le Sage, the immortal author of *Gil Bias*, lived and died. The fortifications, by which the upper town was formerly defended, have been mostly demolished, the old castle and the walls only remaining. The ramparts have been planted with trees, and afford a delightful promenade, commanding a view that extends to the coasts of England, which are distinctly visible. The lower or new town is situated at the bottom of the hill, and is intersected by the Liane: it is the most populous, most commercial, and best built. It is regularly laid out, and has several public buildings, among which may be specified the baths, the general hospital, founded in 1668, the barracks, a public library containing 25,000 volumes, a theatre, &c. A magnificent column, dedicated by the grand army collected here in 1805 to Napoleon, but not finished till 1831, stands on a hill nearly a mile from the town: it is crowned by a gallery surmounted by a dome, and is 164 ft. high. The harbour, which was formerly dry at low water, and nearly shut up by the bar at the river's mouth, has been vastly improved, though it still labours under a deficiency of water. It is formed of two large basins, connected by a quay. Ships may anchor at from  $\frac{1}{2}$  to  $\frac{3}{4}$  m. off the harbour, in from 6 to 9 fathoms. Boulogne is the seat of tribunals of primary jurisdiction and commerce, and has societies of agriculture, commerce, arts, and sciences; a museum of antiquities and natural history; a free school for navigation, &c.; with manufactures of coarse woollen stuffs, sailcloth, earthenware, and bottle-glass; and tanneries, rope-works, tile-works, &c. A good deal of trade is carried on from the town, and the herring, mackerel, and cod fisheries, all vigorously prosecuted. Notwithstanding the large quantities of fish that are constantly being sent to Paris, the supply in the town is always abundant and cheap.

Boulogne has been much resorted to since the peace by English visitors and families, and many of the latter have made it a permanent residence. A constant communication is kept up with London, Brighton, and Dover, by means of steam-packets; and the route from London to Paris by Boulogne is now frequently preferred to that by Calais. In consequence of this influx of English visitors and residents, the population of the town has nearly doubled since 1813, and it has now much of the appearance of an English town. Numerous boarding-schools have been opened, and balls, horse-races, &c., have been established for the instruction and amusement of the English. In 1837, 26,492 passengers entered, and 30,217 left, Boulogne.

Boulogne is a place of great antiquity. During the do-

## BOURBON (ISLE OF).

minion of the Romans it bore successively the names of *Georiscum Nobile*, and *Bononia*, whence its modern name is derived. During the middle ages, and in more modern times, it has undergone many vicissitudes, having been frequently besieged and taken. In the early part of this century it rose into great celebrity, from Napoleon having collected a large flotilla in its port, and made it the head-quarters of the army avowedly intended to invade England. (*Hugo, art. Pas de Calais*; *Priv. Information*.)

BOURBON, a vill. of France, dep. Seine, between the Seine and the wood of Boulogne, 4 m. W. Paris. Pop. 8016. The vill. is handsome: the adjoining wood is, in the fine season, the favourite promenade of the Parisian fashionables. The *Château de Madrid*, in this wood, built by Francis I., was demolished in the reign of Louis XVI.; and only a small part now remains of the *Château de la Muette*, some time occupied by Louis XV.

BOURBON BARR, p. v. Bridgewater t., Somerset co., N. J., 7 m. N.W. New Brunswick, 33 M. by E. Trenton, 300 W. It contains one Presbyterian church, an academy, four stores, one grist-mill, and about fifty dwellings. The Delaware and Maritan canal passes along the opposite side of the river.

BOURBON (ISLE OF), an island belonging to France, in the Indian ocean, between lat. 20° 50' S., and 21° 24' S., being 90 m. W.S.W. the island of Mauritius, and 440 m. E. Madagascar. Shape oval; greatest length, N.W. to S.E., 40 m.; greatest breadth, 27 m.; area near 900 sq. m. (331,550 hectares). Pop. (1836) 106,090. It is geologically formed by two systems of volcanic mountains, one at either extremity: the central point of the most northerly system, the *Piton des Neiges*, the highest summit in the island, is 3150 metres, or 10,355 ft. above the level of the sea; the highest point of the southerly system is the *Piton de Fournaise*, an active volcano, 7218 ft. in height. These two volcanic centres are connected by a chain of mountains running N. and S., which divides the island into two parts, that on the E. side being called the windward, and that on the W. the leeward division (*Parties du Vent and sous le Vent*), in consequence of the prevailing winds in Bourbon being from E. to S. There are no plains of any size; although the island is watered by many small rivers, none of which are navigable: there are several lakes, one occupying an extent of about 40 acres. The shores are not generally high; but the island has no safe roads, nor any harbour—circumstances which have always been felt as serious drawbacks. The climate is healthy and agreeable, especially that of the E. part: the air is pure, and the sky clear, though this tranquillity is sometimes broken by violent hurricanes. From Dec. to May is the hot and rainy season, when the mean temperature is 80° Fahr.; during the remaining or temperate months, the mean is 76° Fahr. The soil is very fertile, particularly in the vicinity of the shores, where there are extensive alluvial deposits, which, like the soils in other parts of the island, consist largely of volcanic matters. The surface in 1836, was supposed to be distributed as follows: cultivated land, 63,702 hectares; pasturage, 14,040 ditto; woods and forests, 35,921 ditto; waste lands, 95,387 ditto.—Total, 331,550 hectares.

The cultivated lands form a girdle round the island, and in some parts ascend the mountain slopes to considerably more than 3000 ft. above the level of the ocean: in 1836, they were estimated to be divided as follows:

| Articles of Culture. | Hectares in Culture. | Product.                                                        |
|----------------------|----------------------|-----------------------------------------------------------------|
| Sugar-cane . . .     | 14,800               | Raw sugar . . . 20,354,115 klog.<br>Molasses, &c. . . 1,548,840 |
| Coffee . . . . .     | 4,179                | Rum . . . . . 535,542 klog.                                     |
| Cloves . . . . .     | 2,380                | Coffee . . . . . 248,200 klog.                                  |
| Cacao . . . . .      | 98                   | Cloves . . . . . 153,500                                        |
| Tobacco . . . . .    | 471                  | Cacao . . . . . 10,000                                          |
| Grain, &c. . . . .   | 48,514               | Tobacco . . . . . 82,000                                        |
| Total . . . . .      | 65,702 hect.         | Grain (value) . . . 8,656,947 fr.                               |

The sugar-cane is mostly of the Betavian variety; it was not very extensively cultivated before 1818; but is now largely grown, especially in the E. division of the island, where it has almost entirely superseded coffee. The coffee-plant was introduced from Mocha in 1717, and was subsequently much cultivated; but having been found to suffer severely from hurricanes and insects, its culture has been in great part discontinued: the best coffee is produced on the leeward side of the island. The cloves are chiefly sent to India, where they are exchanged for rice: the tobacco obtained is not enough for home consumption, and the wheat, rice, maize, and other grain raised in the island, does not exalt the 4th part of the required supply. Potatoes, beans, and other leguminous plants, a great variety of fruits, &c., succeed remarkably well. The culture of cotton has been all but abandoned: manioc, introduced into the island by the celebrated M. de la Bourdonnais, forms the staple food of the blacks. In 1837, there were 32,980

## BOURBON.

hogs, 6500 deer and goats, 3350 horses; and mules, sheep, and oxen, nearly 5000 each. Pasture being deficient, oxen are imported from Madagascar; a great number of the cattle are fed for six months of the year upon the leaves of the sugar-cane. At the period at which Bourbon was first occupied by the French, the sides of the mountains were covered with forests, which reached even to the shores; the whole of the lower lands have been cleared, but the centre of the island is still covered with its primitive vegetation, which affords forty-one different species of woods serviceable for arts and manufactures. The coasts abound with fish and large turtles, and furnish also coral and ambergris. The fisheries occupy about 400 individuals, who take about 150,000 kilog. of fish annually,  $\frac{2}{3}$  of which are consumed by themselves and their families, and the other  $\frac{1}{3}$  sold in the island realizing about 300,000 francs a year. The pop. in 1836, consisted of 36,803 free colonists, and 69,306 slaves, of whom 57,346 were employed in agricultural labour. The colonists are, in general, humane and kind to their slaves, who are mostly blacks, with only a few individuals of mixed blood. In 1830, about 3000 Hindoo emigrants from Orissa came thither to settle; but the majority of them have returned to their native country. The island is divided into two *arrondissements*, six cantons, and thirteen communes; and contains two towns, those of St. Denis and St. Paul, and eight market-towns, heads of cantons, most of which are built on the coasts. The chief manufacturing establishments are brick and lime-kilns, tanneries, forges and foundries, tin-ware factories, a brewery, and manufactories of bags of palm-leaf (*sacs de vacans*). The annual value of the products of these establishments is estimated at £41,170. Most other European trades are pursued in the towns, the whole occupying about 900 masters, and 3,160 workmen. The following is a statement of the quantities and value of the principal articles of export in 1836:

| Exports.               | Quantities.       | Value.         |
|------------------------|-------------------|----------------|
| Sugar, Raw . . . .     | 18,173,091 kilog. | 15,751,164 fr. |
| Coffee . . . . .       | 890,013           | 1,586,018      |
| Cloves . . . . .       | 686,065           | 1,403,575      |
| Dye Woods . . . .      | 105,308           | 21,081         |

The chief imports are rice, wheat, oil, wines, cattle, timber, salt, glass, porcelain, &c., with cottons and other manufactured goods. The total value of the imports in 1836 was 13,766,541 fr. (£550,780); and that of articles exported of the growth and produce of the island, 16,743,899 fr. (£670,000 nearly). The government is similar to that of the other French colonies, and is administered by a governor, and a council of 30 members, elected by the domiciliated French colonists paying a direct contribution of 900 fr. annually, of whom, in 1837, there were 1145, composing eight electoral colleges. There is a royal court, with two courts of assize, two tribunals of primary jurisdiction, and a justice of the peace in each canton. The military force, in 1837, consisted of 6993 individuals, 378 of whom were officers. In the same year, the budget of the colony gave, as follows, the

| Expenses in 1837 . . . | 2,638,436 fr. = | £117,907 |
| Receipts ditto . . . . | 2,149,563 fr. = | 85,968   |
| Deficit . . . . .      | 788,863 fr. =   | £31,315  |

Bourbon contains a college and numerous schools, sixteen churches, two hospitals, two establishments for the relief of the poor, and two prisons. Four newspapers are published in it, and there is a public library at St. Denis. This island was discovered in 1545 by Mascarenhas, a Portuguese navigator, whose name it bore, till the French took possession of it in the next century. The English took it in 1810; but it was restored to France in 1815. The principal towns are St. Denis, St. Paul, St. Benoit, &c. St. Denis, the cap., is situated on a plateau on the N. coast of the island, at the mouth of the river of the same name; lat. 90° 51' 30" S., long. 59° 30' E. It has about 900 houses, and 19,000 inhab. (*Hugo*, III., 378.) It is mostly of wood, the *Hôtel du Gouvernement* being the only public building of any importance. It is the seat of a royal court, and of a court of primary jurisdiction, and has a college with about 180 pupils, a hospital, an arsenal, a celebrated botanical garden, &c. St. Paul, the second town in the island, on its W. coast, has 10,000 inhab, with a fine church, a tribunal of original jurisdiction, a hospital, &c. Neither St. Denis nor St. Paul have harbours, but only open and exposed roads. (*Notice Statistique sur les Colonies Françaises*, &c. p. 1—140; *Etat de Population des Colonies Françaises*, &c. 1838.)

BOURBON county, KY., situated centrally in the N.E. part of the state, and contains 535 sq. m. Drained by the S. fork of Licking river. It contained in 1840, 16,748 neat cattle, 23,719 sheep, 43,148 swine; and produced 90,999 bushels of wheat, 121,817 of rye, 1,354,436 of Indian corn,

## BOURBON-VEHDEE.

157,822 of oats, 15,485 of potatoes, 4361 pounds of tobacco, 37,139 of sugar. It had thirty-four stores, one fulling-mill, three woolen-factories, one cotton-factory with 1390 spindles, one flouring-mill, eight grist-mills, seven saw-mills, six rope-factories, thirteen distilleries, one printing-office, one weekly newspaper, six academies, 301 students, twenty-six schools, 709 scholars. Pop.: whites, 7845; slaves 6325; free colored, 208; total, 14,478. Capital, Paris.

BOURBON, L., Calloway co., Mo. It has three schools, 65 scholars. Pop. 1100.

BOURBON-LANCY, a town of France, *dép.* Seine et Loire, cap. cant., on the declivity of a hill near the Loire, 37 m. W.N.W. Charolles. Pop. 3814. It is commanded by an old castle on the summit of a steep rock. This town is celebrated for its mineral springs, of which there are seven (some say nine), six cold and one hot. They are employed in nervous affections and rheumatisms. These springs were known to the Romans by the name of *Ague Nivine*; and remains of the baths they had erected are said still to exist, while numerous Roman medals and an entire and beautiful statue have been dug up. The present baths were begun by Hen. III. and finished by Hen. IV. and Louis XIII. (*Hugo*, art. *Seins et Loire*.)

BOURBON-L'ARCHAMBAUD, a town of France, *dép.* Allier, cap. cant., 13 m. W. Moulins. Pop. 2017. It is situated at the bottom of a valley, in a rich and finely watered country. The towers are all that now remains of the Château de Bourbon, rebuilt in the 13th century. The Holy Chapel, erected in the 15th century, by Anne of France, and so much admired, was destroyed at the Revolution. The town is now celebrated only for its mineral springs and baths, said to be of great efficacy in cases of paralysis, rheumatism, gun-shot wounds, &c. They are frequented from May to September. There is good accommodation for visitors, and a hospital for the indigent.

This town had for a lengthened period lords of its own, who bore the title of barons. Almar, who lived in 991, in the reign of Charles the Simple, is the first of these barons of whom there is any authentic account. Having been succeeded by his third son Archambaud, his name became that of all his successors in the seignory. Archambaud IX., the last of the name, having accompanied St. Louis to the East, died in Cyprus. Beatrix of Burgundy, his granddaughter, married Robert of France Count of Clermont, one of the sons of St. Louis, bringing to him in dowry the lordships of Bourbon, Charolais, and St. Just, in Champagne. Their posterity, according to the custom of the house, took the surname of Bourbon, and now fills the thrones of France, Spain, Naples, and Lucra: (*Dict. Géographique*.)

BOURBONNE-LES-BAINS, a town of France, *dép.* Haute Marne, cap. cant., at the confluence of the Borne and the Apance, 31 m. E.N.E. Langres. Pop. 3551. It is agreeably situated on the plateau and acclivity of a hill; and having been nearly burnt down in 1717, has been rebuilt on a regular plan, and has some fine promenades and fountains. It owes its entire celebrity to its hot baths, which occupy the site of a thermal establishment of the Romans. The modern buildings connected with the baths, including the Hôtel de Ville, a recent erection, most part of which is appropriated to the use of the company using the waters, are the finest of the kind in France. A hospital, founded here in 1732, for the use of the military attending the baths, has been much enlarged, particularly since 1815, and is now capable of accommodating 500 soldiers and 100 officers. The heat of the water varies from 40° to 52° Reaumur, or from about, 105° to 150° Fahrenheit. They are principally employed in cases of paralysis and rheumatism, spasms, ill-reduced fractures, &c. (*Hugo*, art. *Haute Marne*.)

BOURBON-VEHDEE, a town of France, *dép.* Vendée, of which it is the capital, on the right bank of the Yon, nearly in the centre of the *dép.*; lat. 46° 41' N., long. 10° 23' W. Pop. 5537. This town occupies the site of Roche-sur-Yon, a strong feudal castle, having near it a miserable little town. The castle, after undergoing many vicissitudes, was dismantled by Louis XIII. and finally destroyed in 1793. After the establishment of the imperial government, and the pacification of Vendée, it became necessary to select a place for its capital, and Roche-sur-Yon was fixed upon. Napoleon gave the town, which had to be entirely created, his own name, which it bore till 1815. Large sums were expended in the construction of a prefecture and other public offices, an elegant parish church, &c. The most imposing, however, of the public buildings, is the barracks; a large and noble structure, occupying the hill on which the old castle formerly stood. Streets broad, and well laid out; but though the population has increased rapidly within the last half dozen years, still many of the streets are merely laid out, and exist only by name. The old town, which is small and *assez triste*, occupies the space between the barracks and the new town. The town has a tribunal of primary jurisdiction, a departmental college, a society of agriculture, sciences, and arts, a public library with 3500

## BOURBOURG.

volumes, a hospital, and a theatre "*fort laid et fort petit.*" (*Ligez, art. Faudie, &c.*)

**BOURBOURG**, a town of France, dep. du Nord, cap. cant., on the canal of Colme, communicating with Dunkirk, 8 m. S.W. Dunkirk. Pop. 2537. Its name is derived from the silty nature of the soil (*bourbeux*) on which it is built. It has fabrics of tobacco, potteries, and tile-works. Previously to the revolution there was here an abbey for noble ladies, of which the unfortunate Marie Antoinette was patroness.

**BOURG**, or **BOURG-EN-BRESSE**, a town of France, dep. Ain, of which it is the cap., on the Reymouse, 31 m. S.E.E. Mâcon; lat.  $46^{\circ} 19' 31''$  N., long.  $5^{\circ} 14' 10''$  E. Pop. (ex cant.) 8818. Situation pleasant; streets narrow and crooked: formerly almost all the houses were built of wood, and many of them are so still, but within the last half-century the use of stone has become more general. It is traversed by the little rivulet Cône, and has several fine fountains. The ditches by which it was surrounded, were dried in 1771, and have been converted into gardens. Principal public buildings—the cathedral or high church, the *halle-au-blé* or granetto, theatre, Hôtel de Ville, prefecture, a monument in honour of Gen. Joubert, &c. It has a court of primary jurisdiction, a departmental college, a primary normal school, a public library with 18,000 volumes, a society of emulation and agriculture, a departmental museum, a botanical garden, and several gratuitous courses of instruction in different departments of science and art. Six high roads meet here; but being situated in an agricultural district, it is not distinguished either for trade or manufactures. The celebrated astronomer Lalande was a native of Bourg.

Adjoining Bourg is the church of Brou, a vast edifice, begun in 1511, and containing some fine tombs. There is attached to it a diocesan seminary, with 140 scholars.

Bourg is very ancient, being supposed by De Thou to occupy the site of the *Forum Segutinerum* of the Romans; but according to D'Anville, Fours on the Loire is identical with the *Forum Segutinerum*. After being long subject to the house of Savoy, Bourg was united to France in 1601. (*Hugo, art. Ain; Dict. Géographique, &c.*)

**Bourne**, a town of France, dep. Gironde, cap. cant., on the Dordogne, near its confluence with the Garonne, 15 m. N. Bordeaux. Pop. 2466. It has a small port, where the corn, wine, and other products of the environs, are shipped.

**BOURGNEUF**, a town of France, dep. Creuse, cap. arrond., agreeably situated on the Thorion, 18 m. S.S.W. Gueret. Pop. 2946. It has two porcelain-works, and a paper manufactory. This town was, for a considerable period, the residence of Zizim, or Djem, the younger brother of Bayazid II., emperor of the Turks, who was confined in it and other places in France, in consequence of a dishonourable treaty negotiated in 1482 between Bayazid and Pierre d'Autousson, grand master of the Knights of St. John, lord of Bourgneuf, who had given Zizim a safe conduct. A large tower, in which the latter is said to have been confined, still exists. Having been liberated from his imprisonment in this place, the unfortunate prince was carried to Italy in 1487, where he is said to have been poisoned in 1495, by an agent of his brother and the infamous Pope Alexander VI. (*Malte-Bran; Biographie Universelle, art. Zizim.*)

**BOURGAS**, or **BOURGHAS**, a sea-port town of Turkey in Europe, Roumelie, on the Black sea, at the bottom of the gulf of the same name, 70 m. N.E. Adrianople; lat.  $40^{\circ} 59' 20''$  N., long.  $27^{\circ} 29' 29''$  E. Pop. 6000. It is built on a promontory of a moderate height, and has a neat clean appearance. Its fortifications are in ruins. It has a celebrated manufactory of pottery. "A fine clay is found in the neighbourhood, which is formed into pipe bowls, cups, and other vessels. These are unglazed, but highly polished, and ornamented with gilding. In this state they are exposed for sale in the shops of the bazaar, which forms the principal street of the town; and as these shops are matted, and kept clean and neat, the whole has a rich and showy appearance. They pride themselves on this little manufacture, and sell it proportionally dear." (*Wells's Travels, p. 190, 4th ed.*) The town has also some trade in corn, wine, butter, cheese, iron, and other productions of the contiguous country. The gulf of Bourgas is open to the E.; the anchorage is to the S. of the town, and has a depth of from 19 to 5 fathoms.

**BOURG-DE-PEAGE**, a town of France, dep. Drôme, cap. cant., on the Isère, 10 m. N.E. Valence. Pop. 2609. The river separates it from Romans, of which it is properly a suburb. It is neat and well built; and has manufactures of hals and coarse silk, with dye-works, rope-works, tanneries, &c. (*See Romans.*)

**BOURG-DOYBANS**, a town of France, dep. Isère, cap. cant., on the Rive, near where it falls into the Romanche, in a deep valley at the bottom of a steep hill, 18 m. S.E. Grenoble. Pop. 3029. It principally consists of two long

## BOURGNEUF.

streets, with ill-built houses, many of which have their windows fitted up with oiled paper instead of glass. The valley in which the town is situated seems to be on all sides enclosed by mountains, and was for a while completely submerged and formed into a deep extensive lake! This inundation was occasioned by the course of the Romanche having been obstructed, in the 11th century, at the point where it escapes from the valley, by rubbish brought down from the adjoining mountains. This natural mound, having been gradually undermined, at length gave way, and the waters of the lake made their escape on the 15th Sept. 1219, sweeping all before them as far as Grenoble, which was laid under water. (*Hugo, art. Isère.*)

**BOURGES** (an. *Avericum*), a city of France, dep. Cher, of which it is the cap., in an extensive plain at the confluence of the Auren and the Evre, 124 m. S. Paris; lat.  $47^{\circ} 4' 38''$  N., long.  $2^{\circ} 33' 40''$  E. Pop. (ex cant.) 19,846. It is agreeably situated on the declivity of a hill, and is surrounded by a thick wall flanked at regular distances with lofty towers in good preservation. (*Malte-Bran.*) Streets sufficiently broad\*, but dirty; houses mean-looking, being low and having their gables to the streets. Large tracts, occupied by gardens, nurseries, promenades, &c., are enclosed within the walls, so that the streets have a deserted aspect, though less so at present than formerly, the population having increased rapidly during the last 10 years. Bourges contains some fine old public buildings. At the head of these is the cathedral, one of the noblest Gothic edifices in France, begun in 845, but not finished for some centuries afterward. It is 248 ft. in length by 193 in breadth, and has several towers, the highest of which has an elevation of 221 ft. The palace of the archbishop is also a fine edifice; its garden, laid out by Lenotre, has an obelisk in honour of the Duc de Charost. The Hôtel de Ville, built by Jacques Coeur, famous alike for his skill and success as a merchant and financier, his immense wealth, and the injustice of which he was the victim, is a splendid Gothic mansion, that cost a vast sum. Besides the mayoralty, it furnishes accommodation for the courts of law. The prisons are built on the ruins of the ancient palace of the ducs de Berry; and the remains of the old tower that formerly commanded the town, and which was demolished in 1651, serve to enclose the courts of the prison. There are also the Hôtel de Prefecture, formerly the Hôtel de l'Intendance, barracks, a small but elegant theatre, a college, two large hospitals, a public library with 13,000 volumes, &c. Bourges is the seat of an archbishopric, of tribunals of primary jurisdiction and commerce, of a royal college with about 940 pupils, a primary normal school, a diocesan seminary with above 100 pupils, and a secondary ecclesiastical school; it has also a society of agriculture, commerce, and arts; a course of geometry and mechanics applied to the arts, and a school of midwifery. It has manufactures of fine and coarse cloths, hosiery, &c., and its cutlery has been long in high estimation. There are in the town two mineral springs.

Bourges was formerly the seat of a celebrated university established by Louis XI. in 1463; but this having been suppressed at the Revolution, its place has been supplied by the royal college already alluded to. Louis XI. was born in this town; and it is also the birth-place of the celebrated preacher Bourdieu, Jacques Coeur, and other distinguished persons. The house occupied by the famous jurist Cujas has been purchased by the city authorities for a barrack for *gens d'armes*!

To mark his respect for his native place, Louis XI. not only gave it a university, but also conferred on its mayors and magistrates the privilege of nobility. This, however, was anything but an advantage; inasmuch as it served only to fill the town with poor gentlemen, and to discourage manufactures and commerce. The clergy were also exceedingly numerous. But most of the religious establishments were suppressed at the revolution, when the privileges and distinctions of the nobility and gentry were also abolished.

Bourges is one of the most ancient cities of France. It was taken by Cesar, anno 59 B.C., and was for 475 years the capital of Aquitaine. It has suffered much at different periods from war, fire, and pestilence. Several councils have been held in it; and here, in 1483, the ecclesiastical constitution, denominated the Pragmatic Sanction, was accepted by the French clergy. (*Martiniani, Grand Dictionnaire Géographique; Malte-Bran; Hugo, art. Cher; Dict. Géographique, &c.*)

**BOURGNEUF**, a sea-port town of France, dep. Loire Inférieure, cap. cant., 23 m. S.W. Nantes. Pop. 2699. The port dries at low water; and the bay, which is extensive, is gradually filling up with sand. To such an extent is this the case, that above 500 hectares of land are now under cultivation in the single commune of Bourgneuf that,

\* This is the statement of Hugo; Malte-Bran says they are narrow.  
D 2

## BOURGOIN.

25 years ago, were under water; and the channel between the town and the opposite island of Bodin, formerly 5700 yards across, is now narrowed to less than 100 yards! There were formerly in the vicinity very extensive salt marshes, the produce of which was largely exported; but these, though still very considerable, are now materially diminished. There are on the coast large beds of oysters. (*Hugo, art. Loire Inferieure.*)

**BOURGOIN** (an. *Berguism*), a town of France, dep. Isere, cap. cant., on the Bourbe, in a fine situation, surrounded by beautiful hills, 9 m. W. La Tour-du-Pin. Pop. 4385. It is neat and well built; has a tribunal of original jurisdiction, and manufactures of calicoes, bagging, &c., with paper-mills and flour-mills. It is favourably situated for commerce, being traversed by the roads from Grenoble to Lyons, and from the latter to Chambery.

**BOURG-ST.-ANDEOL**, a town of France, dep. Ardèche, in an agreeable situation on the Rhone, 9 m. S. Viviers. Pop. 4290. It has several good buildings, and neat, well-kept streets; a quay along the river, and a handsome suspension bridge over it, with some trade in corn, wine, and silk. It is named from St. Andeol, who suffered martyrdom in the Vivarais, in the beginning of the 3d century. Within a short distance of the town is a remarkable monument of antiquity, sculptured on the face of a rock, but now a good deal defaced. It has been very variously interpreted; some antiquaries having supposed it to be Diana in chase of a stag, and others that it represents a sacrifice in honour of the god Mithras. The latter is believed to be the correct explanation. (*Hugo, art. Isere; Mitlin, Voyages dans le Midi de la France.*)

**BOURGUEIL**, a town of France, dep. Indre-et-Loire, cap. cant., in a fine valley on the Loire, 9 m. N.N.W. Chinon. Pop. 3500. It has a communal college, and is surrounded by fruitful gardens, where anise, coriander, liquorice, and other plants are cultivated to such an extent as to supply materials for a pretty extensive trade. Its vicinity also produces fine red wine. (*Hugo, art. Indre-et-Loire.*)

**BOURLOS** or **BOORLOS** a lake or lagoon of Egypt, between the Damietta and Rosetta branches of the Nile, parallel to the Mediterranean, from which it is everywhere separated by a narrow neck of land, except at one point where it communicates with the sea by a narrow channel, evidently the Silebitic mouth of the Nile. It is about 33 m. in length, and 17 m. in its greatest breadth. It is connected with the Nile by several canals; and is mostly shallow and marshy, being navigable only along its N. shore.

**BOURNE**, a par. and town of England, co. Lincoln, par. of Kesteven, wapentake Aveland, 21 m. N. London. Area, 6190 acres. Pop. of par., 1891, 4949; 1841, 19,830; of which the town had in 1831, 9255. It is situated in a level district adjacent to the fens, the town consisting chiefly of one long street of well-built modern houses; the church is the remaining portion of a much larger structure, in the Norman style, with two towers. There are Baptist and Wesleyan chapels; an endowed free school for 30 children; two almshouses, one supporting six old men, the other six women; and a town-hall, a handsome modern edifice, on the site of one built by Lord Burleigh in the reign of Elizabeth. It has a market-place under. The weekly market is on Saturday. Annual fairs are held April 7, May 7, and Oct. 29. A navigable canal extends from the town to Spalding and Boston, by which coal, timber, and other commodities, are supplied. The chief trade of the place is in leather and wool. There are several large tan-yards. The ann. value of real prop. in 1815 was £10,129. It is the central town of a union of 37 parishes; its own average poor rates are £1843, and it has five guardians. Petty sessions for the par. of Kesteven are also held in the town, and it is a polling place for that district and Holland. The name is derived from a small stream of remarkably pure water, which gushes from a source near Bourne. Roman coins and tessellated pavements have been found on the site; trenches and mounds of a Saxon castle are traceable; a priory of Augustine monks was founded in Wm. II.'s reign, whose revenue, at the general suppression, was £197 17s. 3d. Wm. Cecil, Lord Burleigh (Elizabeth's minister), was born in this town in 1550. Dr. Dodd, once celebrated as a popular preacher, but now principally remembered by his disgraceful death, was also a native of Bourne.

**BOURTANG**, a fortified town of the Netherlands, prov. Groningen, in the extensive morass of the same name, 31 m. E.S.E. Groningen. The morass, though it increases its strength, renders it unhealthy. It was taken by the Spaniards in 1593, and by the French in 1793.

**BOUSSA**, a city of Interior Africa, and cap. of a prov. of the same name, on an isl. of the Niger; lat. 10° 14' N., long. 6° 11' E. Pop., according to Clapperton, 10,000 or

## BOUSSA.

12,000; but, according to Lander, 14,000 or 18,000. The country in the neighbourhood is bold and rocky, which renders Boussa a place of considerable strength; for its walls (which are tolerably well built, and kept in good repair) extend to, and are united with, the two extremities of a rocky precipice which skirts the W. branch of the enclosing river. The houses are, however, built in detached patches, and do not occupy more than a sixth part of the walled area, presenting the appearance of several small villages, rather than of one continuous town. The prov. of Boussa extends about 50 m. N. of the river, and is about the same length from N. to S., the city lying about 15 m. from its S. extremity. The soil is very fertile, especially that of the isl., producing corn, yams, cotton, rice, timber trees, and other African vegetation, in great abundance: it also abounds in the usual African animals; elephants, hippopotami, lions, tigers, &c. Boussa is considered, politically, as part of the great kingdom of Borgoo; but it appears as if the different states were perfectly independent of each other, though all speaking the same language; at all events, the communications of the sultan of Boussa with Clapperton and Lander seem to have had no reference to any controlling power. Of the Borgoo states, Boussa is, if not the largest, the most populous and more powerful. (*Clapperton's Second Exped.*, p. 65-106; *Lander's Records*, i. 142-143.)

Boussa possesses a melancholy interest for Englishmen, from its being the spot where the enterprising Mungo Park met his death. It is well known, that after his first successful expedition in the service of the African Association, that adventurous traveller was employed by government to complete his own partial discovery of the course of the Niger. This commission he did not live to effect; after traversing a far larger portion of Africa than had before been traversed by any European, his boat was attacked by a native army at this place, where the river is shut in by two high rocks, leaving barely passage room for the current as through a door. (*Adam's Universal Journal*, p. 214.) Assailed from the top of these rocks, Park defended himself for a long while, throwing all his provisions overboard to lighten his boat; till, finding all hope of successful resistance at an end, he, with his remaining companions, leaped into the water, in a last attempt to escape by swimming, and was drowned, or, as is perhaps more probable, dashed to pieces by the missiles hurled down upon him. The boat subsequently drifted on a reef of sunken rocks, not half a stone's throw from Boussa; and a slave of Park, the only living remnant of his unfortunate expedition, was made prisoner. The cause of this murderous attack is represented by Ismael and Adami Fatomah, Park's native friends, to have been owing to the knavery of a chief, who, excited the passions entrusted to him by Park for the king, excited the indignation of the latter, by telling him "the white man had left nothing for him." The explanation given to Lander on the spot, twenty years later, however, was, that the natives took the adventurers for a party of Fellatahs, which nation had just then commenced that series of usurpations which they have since carried to an extreme height. Be this as it may, the destruction of the traveller was signalled by feasting and rejoicings; but before the revelries were ended, it so chanced that an infectious disorder broke out among the Boussians, sweeping off the sultan and a great number of his subjects, among whom, it is reported, the murderers of the party were included. The effect of this upon a superstitious people may be conceived; prayers and sacrifices were offered to the white man's god, and an expression grew into use among the surrounding nations, of which subsequent travellers have felt the full benefit, "Do not hurt the white men, unless you would perish like the people of Boussa." The Boussians themselves share fully in this feeling; they are overwhelmed with shame at a recurrence to the subject, and plead their youth at the time, or their personal innocence, without attempting the slightest exculpation of their fathers. The death of Park involved the loss of his papers. This was to be the more regretted, as he had passed far beyond Timbuctoo, that native city of which such marvels had been reported in ancient times, but of which no European had ever obtained a glimpse. The recovery of these papers was long attempted by every means that could be used; and Lander in his second expedition thought he had succeeded: an old man was found who possessed a book and papers taken from the river at the time of the murder, but, on inspection, the former proved to be an old nautical publication of the last century, and the latter a few memoranda of no consequence, such as rough observations on the height of water in the Gambla, a tailor's bill, an invitation to dinner, and the like. Great anxiety was displayed on this occasion by the sultan and his subjects to restore the journal; but in all probability, it either sank with Park to the bottom of the Niger, or was dispersed upon its surface among the other ruins of the time: in either case, it was irretrievably lost. (*Ismael and*

## BOUSSAC.

*Alliant Fatorna; Park's 2d Journal*, p. 173-219; *Clayton's*, p. 100; *Lander's Records*, i. 144-146; *Travels*, p. 264, 265.

BOUSSAC, a town of France, dep. Creuse, cap. arrond., on a steep rock, near the confluence of the Veron and the Laine Creuse, 21 m. N.E. Gueret. Pop. 962. "Boussac," says M. Malte Brun, "contains fewer inhabitants than the capital of any other arrondissement in France. It stands on a rock, and is almost inaccessible to carriages; surrounded with walls flanked with bastions, commanded by an old embattled castle, from which the view extends along a defile formed by arid and wild mountains. The town is as gloomy a residence as can well be imagined." (Vol. viii, p. 260. *Eng. Trans.*)

BOUXWILLER, a town of France, dep. Bas Rhin, cap. cant., near the Moder, surrounded by mountains and forests, 30 m. N.W. Strasbourg. Pop. 4676. It is commanded by a fine old Gothic castle, and has manufactures of cotton, linen, arms, and braziers' ware, hats, &c., with breweries and bleachfields.

BOVA, an inland town of Naples, prov. Calabria Ultra, cap. cant., on a mountain, 17 m. E.S.E. Reggio. Pop. 3500. This town suffered severely from an earthquake in 1783, but was rebuilt in better taste under the patronage of Ferdinand IV. It is the seat of a bishopric; has a cathedral and several churches, a seminary, a hospital, and two *monasteri di patti*.

This, as well as several other towns in the Neapolitan states, is believed to have been founded, or, at all events, to have been occupied, by fugitives flying from Ephesus and the Mores to escape the cruelty of the Turks. The foundation of Bova is ascribed to the great immigration which took place in 1477, when John Castriot, son of the famous George Castriot, or Scanderbeg, was expelled from his hereditary dominions by the Turkish conqueror, Mohammed II. At later periods, similar immigrations took place from Coronea, Maina, &c. The immigrants and their descendants have continued to be a distinct race, and have preserved the language and dress, though not the religion, of their forefathers. They occupy several towns and villages in different parts of the kingdom, their total number being at present supposed to amount to about 32,000. (*Swinhurn's Two Sicilies*, i. 250, 4th. edit.; *Craven's Tour in Naples*, p. 314; *Biographie Universelle*, art. *Scanderbeg*.)

BOVEY, t. St. Genevieve co., Mo. It has one academy, 29 students, one school, 90 scholars. Pop. 946.

BOVEY TRACEY, a par. and town of England, co. Devon, hund. Teignbridge, 186 m. S.W. by W. London. Area, 6480 acres. Pop. of par., 1891, 1685; 1831, 1097. The town stands on the slope of a hill, at the base of which the Bovey flows, and is crossed by an ancient bridge of three arches. There is one main street, which branches off at the ancient market-place like a Y, one part continuing up the ascent, the other extending to the bridge. There are a few respectable modern houses, but the greater part are ancient and meanly built. The church is a Gothic structure, with a good tower, at the E. end of the town; there are also Baptist and Wesleyan chapels, and an endowed free school for twenty-four children. Annual cattle fairs are held on Easter Mon., Holy Thurs., 1st Thurs. July, 1st Thurs. Nov. The market (granted in 1259) has been discontinued within the present century. There are two potteries, which employ many of the inhabitants; the remainder are engaged in agriculture: serge-weaving and wool-combing were once carried on to a considerable extent, and have become extinct only within a recent period. The ann. value of real prop. in 1815 was £2714. The average poor-rates amount to £282. A portreeve and bailiff are annually appointed at a court held by the lord of the manor.

The Bovey headfield, extending at the base of the town, is a low, mossy tract between 7 and 8 m. in circ., surrounded by hills which open to the S.E., in which direction the Teign flows after being joined by the Bovey. The granite hills on the outskirts of Dartmoor rise on the W. side, and the green sand range of Haddon on the E. The Bovey coal and clay formations traverse this plain in a S.E. direction, their outcrop being at the foot of the hill on which the town stands. There are seven beds of lignite, in all forming continuous strata of about 70 ft. in thickness, and dipping at an angle of 33 ft. at the part where they are worked for the use of the pottery, which stands on the spot, and which is almost the only purpose to which the fuel is appropriated, the imperfect combustion and large proportion of ashes rendering it unavailable for general purposes, though occasionally used in the cottages of the neighbouring poor. The clay beds overlie the lignite: there are five in all, running parallel with each other, and alternating with beds of sand and gravel; the four western beds are

## BOXFORD.

potter's clay; the other pipe clay: shafts are sunk on and through them, at intervals, for 6 or 7 m. along their course, at such parts as are found sufficiently pure for the market; they vary in depth from 40 to 90 ft., the lignite being always arrived at in sinking through the four western beds, and a fine sand under the eastern one. From 30,000 to 40,000 tons of this clay are shipped annually at the port of Teignmouth for the Staffordshire potteries, the greater portion of which is excavated in the parish of Kingsteinton, and conveyed thither by the Stover canal, formed through this island basin, and locking into the Teign, about 3 m. above the place of shipment. This canal effectually drained the greater part of what had previously been an unhealthy morass, and fitted it for cultivation; a railway from the Haytor granite quarries traverses the heathfield, and terminates at the head of it: both were creations of the Templar family, whose mansion and property have since been transferred to the Duke of Somerset.

BOVINA, p. t. Delaware co., N. Y., 10 m. E. Delhi, 78 m. S.S.W. Albany, 350 W. Drained by Little Delaware river and its branches. It has four stores, one fulling-mill, three grist-mills, one saw-mill, thirteen schools, 478 scholars. Pop. 1408.

BOVINO (n. *Fibiana*), a town of Naples, prov. Capitanata, cap. distr., on the declivity of a mountain, watered by the Cervaro, 19 m. S.S.W. Foggia. Pop. 5200. It is fortified, is the seat of a bishopric, and the residence of a judge of primary jurisdiction; it has a cathedral, two parish churches, and several convents. A battle took place near this town, in 1734, between the Spaniards and the Imperialists, in which the former were defeated.

BOW, p. t. Merrimac co., N. H., 7 m. S. Concord, 477 W. Drained by Turkey river, which enters the Merrimac in the N. part of the town. A canal, three fourths of a mile long, passes round Bow Falls in the Merrimac, overcoming a descent of 25 feet by 4 locks. It was finished in 1812, and cost \$25,000. The town contains one store, one grist-mill, six saw-mills, twelve schools, 228 scholars. Pop. 1001.

BOWDOIN, p. t., Lincoln co., Me., 17 m. W. Wiscasset, 18 m. S.S.W. Augusta, 577 W. Incorporated in 1788. It contains three stores, one fulling-mill, three grist-mills, eighteen schools, 849 scholars. Pop. 9073.

BOWDOINHAM, p. t., Lincoln co., Me., 21 m. S. by W. Augusta, 13 m. N. Beth, 579 W. Incorporated in 1762. The lumber trade and ship-building are considerable. It contains several foreign commission-houses, fourteen stores, one grist-mill, two saw-mills, eighteen schools, 976 scholars. Pop. 9402.

BOWEN, t. Madison co., Ark. Pop. 453.

BOWERSVILLE, p. v., Franklin co., Ga., 194 m. N. by E. Milledgeville, 385 W. Situated on the E. side of the N. fork of Broad river.

BOWERBANK, t., Piscataquis co., Me. Bounded S.W. by Sebect pond. It contains three schools, 75 scholars. Pop. 165.

BOWLES, t. Franklin co., Mo. It contains five schools, 90 scholars. Pop. 1449.

BOWLINGGREEN, p. v., capital of Caroline co., Va., 40 m. N. Richmond, 80 W. It is built around a fine grove, ornamented with trees and shrubbery, and contains a court-house, jail, two churches, one Episcopal and one Reformed Baptist, forty dwellings, and 250 inhabitants.

Bowlinggreen, p. v., capital of Warren co., Ky., 144 m. S.W. Frankfort, 668 W. Situated on Big Barren river, a branch of Green r., and is accessible by steam-boats of 200 tons through the year. It contains a fine court-house, a jail, a college, a female seminary, three churches, one Presbyterian, one Methodist, and one Baptist, and fourteen stores. It has considerable trade, particularly in tobacco. Pop. 1400.

Bowlinggreen, t., Licking co., O. It contains one school, 25 scholars. Pop. 1464.

Bowlinggreen, p. v., capital of Clay co., Ia., 60 m. S. by W. Indianapolis, 631 W. It contains a court-house, jail, seven stores, one grist-mill, two saw-mills, two tanneries, one academy, 45 students, two schools, 185 scholars. Pop. 235.

Bowlinggreen, t., Pettis co., Mo. Pop. 410.

Bowlinggreen, p. v., Oglethorpe co., Ga., 63 m. N.N.E. Milledgeville, 586 W.

Bowlinggreen, t., Marion co., O. Watered by a branch of Scioto river. It contains two schools, 60 scholars. Pop. 394.

BOXBOROUGH, p. t., Middlesex co., Mass., 98 m. N.W. by W. Boston, 476 W. Hops are extensively cultivated. It contains three churches, one Congregational, one Methodist, and one Universalist; two stores, two grist-mills, two saw-mills, four schools, 100 scholars. Pop. 426.

BOXFORD, p. t., Essex co., Mass., 25 m. N. by E. Boston, 13 m. S.W. Newburyport, 408 W. Incorporated in 1685. It contains one Congregationalist and one Unitarian church, three stores, one cotton-factory with 429 spindles;

\* That portion of Park's observations which is published was entrusted to Sumner's care at Bussand, before the departure of the traveller for Timbuctoo.

## BOXTEL.

four grist-mills, four saw-mills, six schools, 205 scholars. Pop. 922.

**BOXTEL**, a village of the kingdom of Holland, prov. Brabant, on the Dommel, 7 m. S. Bois-le-Duc. Here was fought, on the 14th Aug., 1794, an obstinate action between the French and the allied British and Dutch troops, under the command of the Duke of York. The latter were defeated with considerable loss, and obliged to retire behind the Meuse.

**BOYDTON**, p. v., capital of Mecklenburg co., Va., 100 m. S.S.W. Richmond, 222 W. It contains a court-house, jail, two churches, one Methodist, and one Presbyterian; four-stories, and about ninety dwellings. It is the seat of Randolph Macon college, which is situated one mile west of the village, and is chiefly under the direction of the Methodists, and contains a president, five professors, or other instructors, and 98 students. The commencement is on the 3d Wednesday in June.

**BOYLE**, an incl. town of Ireland, co. Roscommon, prov. Connaught, on the Boyle, 94 m. W.N.W. Dublin. Pop. (1821) 3407; (1831) 3433; pop. parish (1834) 11,810 of whom 1047 were of the Estab. Church, five Prot. Diss., and 10,763 Rom. Cath. The river divides it into two portions, which are connected by a fine modern bridge; and there are two other bridges near the town. The public buildings are the parish church, two Rom. Cath. chapels, and Baptist and Methodist meeting-houses; a new market-house, a lecture-room, and large barracks. It is a constabulary station, and has a dispensary, bridewell, savings' bank, and loan fund. The chief articles of trade, which is wholly carried on by land carriage, are grain, butter, and flax: some coarse woollens are manufactured. The butter-market is on Mondays, but the principal market-day is Saturday: fairs on March 6, April 3, May 9 and 30, July 9 and 25, Aug. 10, Oct. 1, and Nov. 25.

The corporation, under a charter granted by James I., in 1613, consists of the borough-master, twelve burgesses, and an indefinite number of freemen. It returned two mem. to the Irish H. of C. until the Union, when it was disfranchised. General sessions are held every nine months, and petty sessions on Mondays. A seneschal's court in the town has jurisdiction in several adjoining baronies, but none in the borough. Branches of the Belfast and Agricultural banks were opened here in 1835 and 1836. The post-office rev. in 1830 was £250, and in 1836, £306. The mail coach from Dublin to Sligo passes through thrice a week, and a mail car piles every day to French Park. (*Stat. Surv.*; *Railway Rep.*)

**BOYLE**, county, Ky. Taken chiefly from Mercer co. in 1842. Situated in the central part of the state, and contains 175 sq. m. Bounded N.E. by Dick's river, a branch of Kentucky river, and watered by its tributaries. It has a very fertile soil. The statistics are included in those of the counties from which it was taken. Capital, Danville.

**BOYLSTON**, p. t., Worcester co., Mass. 30 m. W. Boston, 406 W. Watered by the S. branch of Nashua river. Incorporated in 1786. It contains three churches, two Congregational, and one Universalist; five schools, 264 scholars. Pop. 797.

**BOYLSTON**, t., Oswego co., N. Y., 146 m. N.W. Albany. Drained by Little Sandy and Trout creeks. It contains six schools, 150 scholars. Pop. 451.

**BOYNE**, a river of Ireland, which has its source in the bog of Allen, near Carberry, in Kildare, 225 feet above the level of the sea. It flows N.E. by Trim, Navan, and Slane, to Tulloughallen, whence it follows an E. course to Drogheda, uniting with the sea about two miles lower down. The bar at its mouth has only 2 ft. water at low spring-ebbs, and from 9 to 10 feet at high water: hence only the smaller class of vessels can come up to Drogheda. It has been rendered navigable for barges as far as Navan.

The Boyne will be ever memorable in British history for the important victory gained on its banks, about 3 m. above Drogheda, on the 1st of July, 1690, by the forces under our great deliverer, William III., over those of James II. This victory, by securing the triumph of the liberal principles of government established at the Revolution, may be said to have been the great cause of the subsequent progress of the British empire in wealth, power, and population. In 1736 an obelisk, 150 feet in height, was erected in commemoration of this great event, on the point facing the ford at Oldbridge, 3 m. W. Drogheda, where King William was wounded in the arm on the evening previous to the battle.

**BOZRAH**, p. t., New London co., Ct., 33 m. E.S.E. Hartford, 359 W. Yantic river affords water-power. It contains the manufacturing villages of Bozrah and Fitchville. It has three churches, one Congregational, one Methodist, and one Baptist; four stores, two cotton-factories with 5424 spindles, three grist-mills, four saw-mills, two tanneries, six schools, 298 scholars. Pop. 1067.

**BRA**, a town of the Sardinian States, prov. Alba, cap. 683

## BRADFORD:

mend, near the N. bank of the Stura, 22 m. N. Mondovì: Pop. 7000. It has three parish churches, a hospital, wool fabrics of silk and linen, and a considerable trade in corn and cotton. It is reckoned particularly healthy.

**BRABANT**, N. and S. provinces of the Low countries the first making part of the kingdom of Holland, and the latter of that of Belgium, which see.

**BRACCIANO**, a town (an. *Sebeto*) and lake (an. *Lacus Sebastianus*) of the Papal dominions, 25 m. N. Rome. Pop. 1746. The town is situated on the W. side of the lake, is well built, has a flourishing paper-manufactory, and an appearance of prosperity. It has a magnificent feudal castle belonging to the Torlonia family, now dukes of Bracciano.

The lake is nearly circular; its circumference, without following all the windings of the shore, being about 20 m. It is not generally deep, but is well stocked with fish. The Monte Rocca Romana, covered with wood, rises on the N.E. side of the lake, and it is in most parts bordered by hills. Besides Bracciano, it has on its margin Trivignano (an. *Trivincennus*), Anguillara (an. *Angulera*), Vicovalle (an. *Vicus Aurelii*), San Stefano, near which are the ruins of several Roman villas, &c. It gives rise to the river Arone (an. *Aro*), which falls into the sea about 8 m. N. from the mouth of the Tiber. The scenery round the lake is of the most pleasing and sylvan kind. Without being positively unhealthy, the air of Bracciano is, in summer, what the natives call "suspected." (*Golf's Rome and its Vicinity*, l. 292.)

**BRACEVILLE**, Trumbull co., O., 154 m. N.E. Columbus, 310 W. It contains five schools, 340 scholars. Pop. 880.

**BRACKEN**, county, Ky. Situated in the N.E. part of the state, and contains 520 sq. m. Bounded N. by Ohio river, and S.W. by Licking r., by the N. branch of which it is drained. The surface is uneven; soil, productive. It contained, in 1840, 4953 neat cattle, 7993 sheep, 12,865 swine; and produced 163,500 bushels of wheat, 8331 of rye, 269,018 of Indian corn, 76,425 of oats, 6121 of potatoes, 341,465 pounds of tobacco, 4406 of sugar. It had thirteen stores, one woolen-factory, four flouring-mills, seven grist-mills, seven saw-mills, four tanneries, three distilleries, one college, 104 students, one academy, 103 students, nine schools, 233 scholars. Pop.: whites, 6993; slaves, 819; free-colored, 151; total, 7053. Capital, Augusta.

**BRACKLEY**, a bor. and town of England, co. Northampton, hund. King's Sutton, 36 m. N.W. London. Area of par., 2790 acres. Pop. of par., 1821, 1851; 1831, 2167. The town stands on a slope, on the N. bank of the Ouse, which is here crossed by a two-arched bridge. Houses, mostly rude buildings of unburnt stone. There are two churches of great antiquity; a national school; almshouses founded in 1663; and a good town-hall. A weekly market is held on Wednesday, and an annual fair on St. Andrew's day. Under a charter of 3 James II. it had a mayor, seven aldermen, and twenty-six capital burgesses; and these, until the passing of the Reform Act, when it was disfranchised, had the exclusive privilege of returning two mem. to the H. of C. The charter authorized courts of record and of quarter sessions, but they have long been disused. The borough comprises two distinct parishes, only ecclesiastically united, Brackley St. James, and Brackley St. Peter; the poor-rates of the former, in 1836, were £228 14s.; of the latter, £266 15s. It is the union town of thirty parishes. (*Bridge's Hist. Northampton.*; *Behr's 344.*)

**BRADFORD**, a par., market town, and pari. bor. of England, W. Riding co. York, wapentake of Morley. The par. contains 32,710 acres, and had, in 1841, 132,164 inhab. The township of Bradford, comprising 1680 acres, had, in 1801, a pop. of 6393; in 1831, of 12,064; and in 1831, of no less than 22,233; but it has increased even more rapidly since 1831. And, in addition to the township of Bradford, the townships of Manningham, Bowling, and Horton, including the hamlets of Great and Little Horton, are included in the pari. bor., which has an area of 6930 acres, and had, in 1831, a pop. of 43,557.

Bradford is situated on an affluent of the Aire, at the junction of three extensive valleys, 163 m. N.N.W. London, 31 m. S.W. by W. York, and 8 m. W. Leeds. Though the streets in the older parts be in general narrow, those of a more recent date, which are by far the most extensive, are sufficiently broad, and they are all well paved and lighted. Houses wholly of stone, and well supplied with water. The town has an evidently thriving appearance, indicative of its really flourishing condition. The parish church of St. Peter is a structure in the pointed style of architecture, built in the reign of Henry VI.; the other churches are Christ-church: St. James's, built and endowed at the sole expense of John Wood, Esq.; and a new church, now erecting at the cost of — Berthou, Esq. The Wesleyan and Primitive Methodists, Unitarians, Independents, Baptists, Roman Catholics, and Society of Friends,

## BRADFORD.

have all places of worship. A free grammar school, chartered and liberally endowed by Charles II., was rebuilt in 1530. It is open to all boys belonging to the par., and has attached to it a library and a writing school: it does not, however, appear to be very popular, and at present (1839) there are only thirty boys attending the grammar school. There are, also, schools on the systems of Bell and Lancaster, a school of industry, and an infant school. The Baptists and Independents have each a college or academical institution within  $\frac{1}{2}$  m. of the town, for the preparation of candidates for their respective ministries; and the Methodists have a school for the sons of their preachers at Woodhouse Grove 4 m. distant. A philosophical society has been established. The Exchange, a handsome new building, has attached to it a library and news room. A mechanics' institute, founded in 1833, had, in 1839, 513 members and subscribers: a hall for this institute is now (1839) being erected; it is to cost £3000, and will contain a library, reading rooms, lecture rooms, &c. A dispensary is liberally supported; and there are numerous other charitable institutions. The poor-rates in Bradford township amounted, in 1836, to £2545 2s. 4d. It may be worth mentioning, that the first temperance society in England was established there.

The town is governed by two constables, elected at a vestry meeting, one of whom retires annually. Four overseers are chosen annually, two for the east and two for the west end. A court for the honour of Pontefract is holden on the first Wednesday of every month, for the recovery of debts under £15, in the new court-house, a commodious and elegant building: a court of requests is also holden in its own court-house. The Reform Act made Bradford a parish, borough, and conferred on it for the first time the privilege of returning two mem. to the H. of C. Its boundaries, as fixed by the Boundary Act, have been already specified. It had, in 1831, 1063 houses of £10 a year and upwards. Registered voters, 1837-38, 1249. The returning officer is named by the co. sheriff. It is also a station for receiving votes at elections of members for the Riding.

The present importance and rapid growth of Bradford are wholly owing to the spirit and success with which it has engaged in manufacturing industry. The production of worsted yarn and stuff constitutes the staple business of the town. The spinning of the yarn employs a great number of hands, and when spun, it is now mostly woven in power-loom factories. There were in the town, in 1839, above 1500 power-looms, producing, at an average, from three to four pieces each week; each piece being thirty yards in length, and from twenty to twenty-four inches in width. Norwich was formerly the great seat of the worsted manufacture, which, indeed, is supposed to have derived its name from the par. of Worsted in Norfolk, into which it had been early introduced. But the superior facilities for the prosecution of the manufacture enjoyed by Bradford, chiefly in consequence of the unlimited command of coal, have given it in this respect, a decided advantage over Norwich; and in fact, the greater part of the yarn wrought up in the latter is now made at Bradford. The stuffs, when finished at the loom, are partly brought by traders from Leeds, to be dyed there; this, however, is not nearly the case so much now as formerly, some very extensive dye-houses having been recently erected in and near the town. Sales are effected at the Cloth Hall, a building of two stories, each 144 by 36 feet. Thursday is the sale day, and during business hours the hall presents a most animated scene. But of late years, the hall has been used as a place of deposit and sale principally by the smaller class of manufacturers; and a much larger amount of goods is sold at the rooms and warehouses of the leading manufacturers.

The hands engaged in the woollen manufacture in the parish were estimated, in 1831, at 7000. The following table shows the number of resident families engaged in agriculture, manufactures, and trade, and in other avocations in the township, according to the pop. returns of 1831 and 1831:

| Ocupations.                      | 1831. | 1831. |
|----------------------------------|-------|-------|
| Agriculture . . . . .            | 2,468 | 25    |
| Manufactures and trade . . . . . | 17    | 2,807 |
| Other occupations . . . . .      | 50    | 608   |
| Totals . . . . .                 | 2,515 | 4,612 |

There were in the par. of Bradford, and principally in the town, in 1839, 149 worsted-mills, employing 10,866 hands; nine woollen-mills, employing 681 do.; and two cotton-mills, employing 98 do.: making in all, 153 mills, and 11,675 hands. Of 190 engines belonging to these mills, 96 were wrought by steam, and 94 by water. The average rate of wages in the principal employments in the same year, was, men, from 15s. to 35s. a week; women, 8s. to 15s.; and children, 2s. 6d. to 7s.

The entire par. of Bradford is very densely peopled, and

along all the principal roads there is an almost uninterrupted succession of towns and villages. Besides the woollen trade, which is the principal employment, and others more recently introduced, the iron trade has existed from time immemorial, as is proved by the discovery of a number of Roman coins, in the midst of a mass of scoria, the refuse of an ancient bloomery in the neighbourhood of the town. The supply of ore is abundant: the principal works, in which articles of the largest and most complicated description are manufactured, are at Bowling and Lowmoor. There were connected with the iron trade, in 1831, in Bradford town, 351; and engaged in the mines in Bradford, Bowling, and N. Bierley 1178 individuals.

A festival numerously attended, and celebrated with much gaiety, is held at Bradford every seventh year, in honour of Bishop Blake, said to be the inventor of wool-combing. The manufactures produced here are conveyed to all parts by means of the Leeds and Liverpool canal, which communicates with the town by a branch, 3 m. long, and by the Aire and Calder canal to Hull, and thence to all parts of the world. Markets are held on Thursdays; fairs on March 3, 4, July 17, 18, 19, and Dec. 9, 10, 11; the last is a great mart for pigs. The banks are the Bradford Banking Company, Bradford Commercial Banking Company, branches of the Leeds and W. Riding and of the Yorkshire district banks, a private banking-house, and a savings bank, established in 1815, which had on the 30th Nov. 1838, a gross sum of £21,298 19s. 10½d., deposited by 1830 subscribers.

In modern times, Bradford has been chiefly remarkable for having (in 1819) been a principal seat of Luddism, or of those misguided individuals who supposed that their interests would be promoted by the destruction of that machinery to which, more than anything else, Bradford, in common with other manufacturing towns, is indebted for its wonderful prosperity. The outrages committed by the Luddites were, however, finally suppressed, though without some severe examples. It is to be hoped that the more general diffusion of sounder information on such subjects may prevent a recurrence of such *folie des esprits*.

In 1835 the trade of Bradford was completely stopped, for nearly the whole year, by a most obstinate strike on the part of the workmen; but since then the business of the town has been prosecuted without interruption. (*Atlas's Hist. of Yorkshire; Baines's Hist. and Direct. of Yorkshire; Parl. Reports; Priv. Inform.*)

BRADFORD (GREAT), a par. and town of England, co. Wilt., hund. Bradford, on the Avon, 93 m. W. by S. London. Pop., par. 1831, 10,931; 1831, 10,109: houses at the latter date, 2894. The river divides the town into two parts (called the New, and Old town), and is crossed by two bridges, one ancient, with nine arches; the other modern, with four. The old town consists chiefly of three streets, each above the other, on the slope and brow of a hill, rising abruptly from the N. bank; most of the streets are very narrow, but in this respect many improvements have been made within a recent period. The houses are all of stone, and many of them very respectable structures. The church is an ancient building, at the foot of the hill. Six of the principal sects of dissenters have places of worship in the town: there is a charity school for 60 boys, founded in 1719; and two sets of almshouses, one for men, one for women. A weekly market is held on Saturday, and an annual fair on Trinity Monday. There is also a cattle fair at Bradford-leigh, a hamlet in the par., the day following that of St. Bartholomew. The chief manufactures of Bradford are fine broad-cloths and kerseymeres—for these it has been noted for a very long period: there are several manufactories in the town; and in 1838 it had four woollen-mills, employing 418 hands. The stone quarries in Winsley tithing employ above 100 men. It enjoys an extensive water communication with the towns to the E. and W., by means of the Avon and Kennet canal. A court of requests for debts under £5 is held every third Tuesday: its jurisdiction comprises three adjoining hundreds, and it is held on the intermediate Tuesdays, at Trowbridge and Melkham. Bradford is a union town, under the Poor Law Act; its own rates average £5147. The ann. value of real prop. of the parish in 1815 was £26,847. The area of the whole parish 11,740 acres, comprising, besides the town, four chapels and one tithing. There is much picturesque scenery along the windings of the river and the dells of its wooded hills, and many fine old mansions. About one third of the entire pop. reside in the town, which must have been of some consequence in the Saxon period, for St. Dunstan was elected bishop of Worcester at a synod held in it. Bradford sent members to one parliament in Edward I.'s reign, but never since; nor is there any record of its ever having been incorporated.

BRADFORD, p. L. Penobscot co., Me., 94 m. N.E. Augusta, 689 W. Watered by Passaw river, which flows into Pe-

## BRADING.

moose river. It contains one store, one grist-mill, twenty saw-mills, seven schools, 306 scholars. Pop. 1000.

**BRADFORD**, p. t., Merrimac co., N. H., 35 m. W. Concord, 473 W. Watered by Warner river. It has a pond in the E. part, 500 rods long and 150 wide, which flows into Warner river. Incorporated in 1787. It contains six stores, one grist-mill, two saw-mills, one academy, 38 students, nine schools, 369 scholars. Pop. 1331.

**BRADFORD**, p. t., Orange co., Vt., 38 m. S.E. Montpelier, 513 W. At first called Moretown, received its present name in 1768; first settled in 1768, chartered in 1791. Wait's river affords water-power, and flows into Connecticut river. It contains four churches, one Congregational, one Methodist, one Christian, and one Union; five stores, two fulling-mills, one woollen-factory, one paper-mill, two grist-mills, two saw-mills, one academy, 138 students in male and female departments, ten schools, 447 scholars. Pop. 1853. The first artificial globes manufactured in the United States were made here, by Mr. James Wilson, in 1812, which have since been made at Albany, and are extensively known.

**BRADFORD**, p. t., Essex co., Mass., 35 m. N. Boston, 496 W. Bounded N.W. by Merrimac river. A bridge across the Merrimac connects it with Haverhill, where is a village which contains a Congregational church and thirty dwellings. In the E. parish is a village which contains a Congregational and a Methodist church, and a flourishing academy. Boots and shoes are manufactured to the amount of 300,000 pairs annually. It contains twelve stores, two grist-mills, one saw-mill, four tanneries, four academies, 216 students, ten schools, 1166 scholars. Pop. 3323.

**BRADFORD**, t., Steuben co., N. Y., 13 m. E. Bath, 304 m. W.S.W. Albany. Drained by Mud creek, a branch of Conchocton river. It contains three stores, three grist-mills, seven saw-mills, one distillery, nine schools, 306 scholars. Pop. 1547.

**BRADFORD**, county, Pa. Situated in the N.E. part of the state, and contains 1200 sq. m. Watered by the Susquehanna river, which receives Chemung river in its N. part, and in other parts Sugar, Towanda, Wyalusing, and other creeks. Bituminous coal is found on Towanda creek. The surface is hilly; soil generally not very fertile. It contained, in 1840, 34,000 neat cattle, 63,767 sheep, 32,253 swine; and produced 154,986 bushels of wheat, 45,738 of rye, 140,630 of Indian corn, 77,863 of buckwheat, 390,963 of oats, 363,412 of potatoes. It had ninety-one stores, two furnaces, fifteen fulling-mills, seven woollen-factories, eighteen tanneries, forty-three grist-mills, 313 saw-mills, one oil-mill, four distilleries, four printing-offices, four weekly newspapers, three academies, 179 students, 190 schools, 7948 scholars. Pop. 33,769. Capital, Towanda.

**BRADFORD**, t., McKean co., Pa. It contains one store, two grist-mills, five saw-mills, four schools, 78 scholars. Pop. 373.

**BRADFORD**, t., Lincoln co., Mo. It has one academy, 73 students. Pop. 1319.

**BRADING**, a par. and marit. border-town of England, co. Southampton, div. Isle of Wight, liberty E. Medina, 73 m. S.W. London. Pop. in 1891, 8023; in 1897, 8267; houses at the latter date, 338. It is situated at the head of Brading Haven, at the E. extremity of the island, and consists of one long street, of irregular buildings. The church is said to have been built in 704, but it must have undergone extensive alterations and repairs: there are also two Dissenting chapels, a national school for 60 children, and a small town-hall, under which is a market-place, but the market has ceased to be held: there are still annual fairs, May 1, September 21. There is a quay for the accommodation of small vessels, the place being approachable by such at high water; but the tract which forms the estuary (about 900 acres) is uncovered at every tide. An attempt to embank it, and shut out the sea, was made by Sir H. Middleton (the projector of the New River), but unsuccessfully. The town was incorporated, and a market and fair granted in 11 Edw. I.; there was another in 6 Edw. VI., under which the town was governed by two bailiffs and two magistrates, the former elected annually; the former were the bailiffs of the preceding year.

**BRADLEY**, county, Tenn. Situated in the S.E. part of the state. Drained by Hiwassee river. The surface is uneven. It contained, in 1840, 6426 neat cattle, 3417 sheep, 19,136 swine; and produced 16,854 bushels of wheat, 490,968 of Indian corn, 48,480 of oats, 10,450 of potatoes, 13,335 pounds of tobacco, 31,609 of cotton, and 9481 of sugar. It had fifteen stores, eleven grist-mills, nine saw-mills, five tanneries, six distilleries, two academies, 80 students, eleven schools, 173 scholars. Pop.: whites, 6971; slaves, 401; free colored, 13; total, 7385. Capital, Cleveland.

**BRADLEY**, t., Penobscot co., Me. Bounded N.W. by Penobscot river; Matawampscog river runs on its N. border.

## BRAHILOW.

It contains twenty saw-mills, has \$157,000 employed in manufactures, and 125 scholars in schools. Pop. 303.

**BRADLEYVALE**, t., Caledonia co., Vt. It has one school, 18 scholars. Pop. 50.

**BRADNINCH**, a par. and bor. of England, co. Devon, hund. Hayridge; 150 m. W. by S. London. Pop., 1821, 1511; 1831, 1824; houses, 334; area, 4330 acres. It is pleasantly situated on an eminence, surrounded by higher hills, except on the S., and consists, for the most part, of a collection of neat, thatched cottages. The church is an ancient structure; and there is a guildhall, with a jail under, built subsequently to a fire that nearly destroyed the place a few years since. There are three paper-mills in the parish, which employ 80 or 90 hands; the rest are mostly engaged in agriculture. It once had a considerable woollen trade, but this has ceased, and its ancient weekly market has been discontinued. There are still two annual fairs held, May 6, and Oct. 2. It had a charter of incorporation, granted by Reginald, Earl of Cornwall, which was renewed and extended by James I. and James II.; under it were appointed a mayor, recorder, twelve masters, twenty-four inferior burgesses, &c.; and courts of quarter sessions and record were held, which have been abolished by the Municipal Reform Act. It returned two mem. to the H. of C. from the reign of Edw. II. to that of Hen. VII., when inability to pay their wages was pleaded, and admitted, on paying a fine of five marks.

**BRADY**, t., Clearfield co., Pa. Pop. 622.

**BRADY**, t., Williams co., O. It has two stores, one grist-mill, one saw-mill, one school, 93 scholars. Pop. 351.

**BRADY**, p. t., Kalamazoo co., Mich., 146 m. W. Detroit, 608 W. Watered by Forage river, flowing from several small lakes. It contains four stores, two saw-mills, four schools, 139 scholars. Pop. 1173.

**BRAGA** (an. *Augusta Bracara*), a city of Portugal, cap. prov. Entre Douro e Minho, and of the comarca of the same name, on a hill in the middle of a large and fertile plain, between the Cavado and the Dieste, 33 m. N.N.E. Oporto, lat. 41° 49' N., long. 8° 50' W. Pop. 14,300. It is defended by a citadel, and is surrounded by walls flanked with towers. The skirts are rather narrow, and the houses old: it is the seat of an archbishopric, and has a large cathedral, several parish churches and convents, an archiepiscopal palace, and seminaries, seventy-eight fountains, some of which are highly ornamented. It has great numbers of silversmiths, harness-makers, and hatters, who supply with their wares all the fairs in the adjoining Portuguese districts, as well as most of those in Galicia in Spain.

Braga is a very ancient city, its foundation being ascribed to the Carthaginians. Down to a recent period it had the ruins of a Roman amphitheatre and aqueduct, but these are now nearly all obliterated, and it possesses few remains of its ancient grandeur, except some coins found in the vicinity, and some Roman millstones. About 1½ m. E. from the city, on a hill, is the renowned sanctuary of *S. Victor de Monte*, annually resorted to by crowds of pilgrims. (*Mifano*; *Diet. Geographique*.)

**BRAGANZA**, a town of Portugal, prov. Tras-os-Montes, cap. comarca, in a fertile plain, on the Ferrenza, 35 m. N.W. Mirandaella. Pop. 4000. It is partially fortified, has a good citadel, is the seat of a bishopric, has two churches, a college, and some manufactures of silk and velvet. It was erected into a duchy in 1449; and in 1640, John II., 8th duke of Braganza, ascended the Portuguese throne under the title of John IV. His descendants continue to enjoy the crown of Portugal, and have also acquired that of Brazil.

**BRAHLOW** or **BRALOFF**, a town of Turkey in Europe, in Wallachia, on the left bank of the Danube, 19 m. S.S.W. Galatz, and about 105 m. by water from the Black sea. Pop. 6000? This may be said to be the sea-port of Wallachia, and in it all the foreign trade of the province centres. All vessels capable of entering the Danube may ascend to Braloff; and its port, on one of the arms of the river, being defended by a small island from the drift ice carried down by the current in the spring, ships may winter here in perfect safety. Houses regularly built, principally from the ruins of the castle, which has been demolished; and the importance of the town having increased with the independence of the province, and the increasing commerce and navigation of the Danube, several handsome new streets and edifices have been recently erected. The warehouses are capable of containing about 300,000 chests of corn. The great articles of export are the raw products of the country; as corn (particularly wheat), tallow, hides, beef, wool, salt, timber, staves, &c. In 1833 the exports of corn amounted to from 250,000 to 300,000 chetwerts, and those of tallow to about 60,000 poods. In 1832, 200 ships of different burden sailed from Braloff; and the number has since increased. In 1834, 183 vessels arrived at the port from the Black sea, by the Southern mouth

## BRAHMAPUTRA.

of the Danube. The trade has been principally managed by Greek houses; but merchants from England and other foreign countries are now beginning to establish themselves here and at Calcutta. (See *Hugueniot's Report on the Trade of the Black Sea*, Eng. trans., p. 80, and *passim*; and the arts. *DANUBE*, *GALACE*, and *WALLACHIA*, in this work.)

**BRAHMAPUTRA** (the son of *Brahma*), vulg. **BURHANPOOTER**, one of the largest rivers of Asia, forming the proper E. boundary of Hindostan; the peninsula beyond which should, therefore, rather be called "India beyond the Brahmaputra," than "beyond the Ganges," since the former separates two regions, for the most part unlike, not only in their topographical features, but also singularly so in the races of people who inhabit them, their religion, customs, &c. The Brahmaputra has three separate sources, viz. the Dihong, Dibong, and Lohit rivers, which unite in Upper Assam; the first has been traced by Capt. Bedford and Wilcox, and Lieut. Burton, through the Himalaya chain to lat. 26° 15' N. and long. 95° 10' E., and is, in all probability, a continuation of the great Sa-po of Tibet. (See *SAK-PO*.) The Dihong, at the point to which Lieut. Wilcox and Burton penetrated, was 360 ft. wide, had considerable depth, and contained many rapids; one of which being found impassable, and the adjacent country wild and difficult in the extreme, prevented the future prosecution of the survey: the Dihong carries twice as much water as the Lohit into the Brahmaputra. The Dihong is the central and smallest of the three rivers; it rises N. the Himalaya, near lat. 26° 10' N., and long. 97° 0', and passes through the mountains into Assam, near lat. 26° 15', and long. 96° 0'. The Lohit, called by the Assamese "holy stream," and considered by the Brahmans as more especially the origin of the Brahmaputra, is formed by the union of the Taluka and Taluding, two streams rising in the high mountain region of Tibet, between lat. 26° and 29° N., and long. 97° and 99° E., which having joined, the river thence resulting takes a S.W. course, penetrating the Lang-tan chain of mountains (a continuation of the Himalaya), and passing through a remarkable basin of rocky hills, a place of pilgrimage often frequented by Brahmans, in which it is augmented by the waters of the Brahmakund, a holy pool fabled to owe its origin to an intrigue between Brahma and the wife of a seaman. At its exit from this basin the river receives the name of Brahmaputra, and is 200 ft. broad: for the next 60 m. its course is mostly W.; 15 m. below Suddya, in lat. about 27° 30' N., and long. 96° 30' E., at a height of 1150 (Paris) ft. above the level of the sea, the streams of the Dihong and Dibong join it. It now flows in a S.W. direction through the centre of Assam, with a very variable width, since its channel is continually subdividing to enclose a considerable number of islands, the largest of which, that of Majuli, in central Assam, is nearly 70 m. long, and 10 m. in its greatest breadth. While in Assam the Brahmaputra is said to receive as many as sixty tributary rivers. It enters Bengal in the Rungpoor district, and soon after changes its direction, flowing at first S. and S.E., encircling the W. extremity of the Garrow mountains, and finally, S.S.W., to fall into the bay of Bengal by a mouth 5 m. wide, in lat. 22° 50' N., long. 90° 40' E., in conjunction with the largest branch of the Ganges. The chief tributary streams it receives in Bengal are the Soomah, Barak, and Gomty, on the left, and the Gadada, Neelcomer, Teesta, and Megna, on the right hand; the latter of which rivers, though not one tenth part of its size, communicates its own name to the Brahmaputra after their junction. The affluents of the Brahmaputra bringing down vast quantities of mud, its waters are usually extremely thick and dirty, and its surface, during the floods, is covered with foam, intermixed with logs of wood, large masses of reeds, and carcases of men and cattle. Its rise commonly begins in April; it attains its greatest elevation at the beginning of August, towards the end of which month its inundation subsides. Some rise, but no overflow, is experienced in September and October. In Bengal it is not fordable at any season, but it is by no means so readily navigated as the Ganges; the direction of the wind, which blows for so many months contrary to the course of the latter river, is commonly coincident with the direction of the Brahmaputra, and adverse to all progress upwards. Its banks are mostly covered with jungle or marsh-land, and in many places quite destitute of tracks; and its current is so strong, that one mile a day against the stream is, for a canoe, considered a tolerable advance. (*Ritter's Erdkunde von Asien*, vol. iii.; *Hemilton's E. I. Gaz.*, i. 296-298.)

**BRAINTREE**, a par. and town of England, co. Essex, hund. Hinkford, 36 m. N.E. London. Area, 2500 acres. Pop. of par. in 1821, 9083; 1841, 16,018. The town is built on an eminence, and consists of several narrow, irregular streets, in which a few good houses, of modern date, are dispersed, but the greater part are ancient, mean buildings, many of them wood; the village of Bocking, in the parish

## BRANCH.

of that name, is a continuation of this town on its N. side, and consists of one long street, in which are three Dissenting chapels, and many well-built houses. Bocking parish includes 3900 acres, and had, in 1831, a pop. of 3158, mostly in the village. Braitree church is a spacious Gothic structure, with a tower and spire, on the elevated site of a still older encampment. There are four Dissenting chapels; an endowed school for 10 boys (in which Ray, the naturalist, was educated), and several charities: the principal one produces £350 a year, which is shared by the poor of this and two adjoining parishes. A weekly market is held on Wednesday; and two annual fairs, each lasting three days, which commence May 7 and October 2. The manufacture of silk and crapes forms the chief employment of the inhabitants. These have latterly been a good deal extended, and have superseded the woollen manufacture, previously carried on. There are several manufactories on the course of the Blackwater, which flows N. of the town. Ann. val. of real prop. in 1815, £4495; of Bocking, £2697. Braitree is the central town of a poor law union of 14 parishes: its own rate average £2817; it has four guardians. Those of Bocking average £2910; it has a like number of guardians. The former is also a polling town for the N. division of Essex. (*Wright's Hist. of Essex; Parl. Papers and Rep.*, &c.)

**BRAINTREE**, p. t., Orange co., Vt., 23 m. S. Montpelier, 404 W. Watered by a branch of White river. Chartered in 1781. It contains three churches, one Congregational, one Baptist, and one Christian; two stores, three grist-mills, ten saw-mills, twelve schools, 400 scholars. Pop. 1233.

**BRAINTREE**, p. t., Norfolk co., Mass., 14 m. S. Boston, 448 W. Maniquet river affords water-power. It contains excellent granite, which is extensively exported. First settled in 1635, incorporated in 1640. It contains three churches, two Congregational and one Unitarian; sixteen stores, one woollen-factory, one cotton-factory, with 1000 spindles; one paper-mill, six grist-mills, thirteen schools, 564 scholars. Pop. 3166.

**BRAINTREE**, p. t., Luzerne co., Pa., 163 m. N.N.W. Harrisburg, 373 W. Bounded S. by Susquehanna river, branches of which afford water-power. It contains three stores, one fulling-mill, three grist-mills, six saw-mills, six schools, 275 scholars. Pop. 1335.

**BRACKEL**, a town of the Prussian states, prov. Westphalia, reg. Minden, cap. circle, on the Brucht, near its confluence with the Netze, 33 m. N.N.W. Camal. Pop. 3000. It has a Catholic parish church, a hospital, a work-house; and fabrics of linen, tobacco, and a glass-work.

**BRAMBER**, a par. and bor. of England, co. Sussex, hund. Swayning, on the Adur, which is navigable for small vessels, 45 m. S. by W. London. Pop. 1831, 97; houses, 27; area, 870 acres. It claims to be a bor. by prescription, and was of sufficient importance to give its name to the rape in which it is situated. It sent two mem. to the H. of C. from the 23 Edw. I. with occasional omissions between that date and 7 Edw. IV.; and subsequently, without interruption, till it was disfranchised by the Reform Act; the right of election was in burgage tenure, voters paying scot and lot, of which there were about 20.

**BRAMPTON**, a parish and market town of England, co. Cumberland, Eskdale Ward. Area of par., 16,970 acres. Pop. 3345; pop. of township of Brampton, in 1841, 10,903. The town is situated 10 m. N.E. Carlisle, in a deep, narrow valley. It has a town-hall, built by the Earl of Carlisle in 1817, in which courts are held for the barony of Glaisland. The par. church, now in ruins, is at the village of Irthington, about 1½ m. distant; but it has a parochial chapel, built in 1789, and repaired and enlarged in 1827: it has also four Dissenting chapels, a grammar school, a national school, erected by the Earl of Carlisle; an infant school, and twelve almshouses for six old men and as many women. At the E. end of the town is the moat, a conical mount, rising 360 ft. above the level of the streets. The weaving of checks, ginghams, and other descriptions of cotton goods, on account of the Carlisle manufacturers, is carried on to a considerable extent. Market-day, Wednesday.

**BRANCH**, county, Mich. Situated in the S. part of the state, and contains 598 sq. m. Drained by St. Joseph's river and its branches. It contained, in 1840, 5211 neat cattle, 744 sheep, 13,294 swine; and produced 67,317 bushels of wheat, 69,063 of Indian corn, 1189 buckwheat, 4073 of barley, 70,228 of oats, 74,243 of potatoes, and 46,005 pounds of sugar. It had eleven stores, one furnace, three flouring-mills, five grist-mills, fifteen saw-mills, one brewery, one printing-office, one weekly newspaper, forty-seven schools, 769 scholars. Pop. 5715.

**BRANCH**, p. v., Coldwater t., cap. of Branch co., Mich., 113 m. W.S.W. Detroit, 561 W. Situated near the W. branch of Coldwater river.

**BRANCH**, t., Schuykill co., Pa. It contains eight stores, two grist-mills, fourteen saw-mills, three schools, 145 scholars.

## BRANCHPORT.

ers; 103,500 tons of anthracite coal were mined in 1846. Pop. 1422.

**BRANCHPORT**, p. v., Jerusalem t., Yates co., N.Y., 501 m. W. Albany, 537 W. Situated at the head of the W. branch of Crooked lake, and contains one Presbyterian and one Baptist church, three stores, twenty-five dwellings, and about 150 inhabitants.

**BRANDENBURG**, an important prov. of the Prussian states, consisting principally of the ancient mark or marquisate of Brandenburg, having N. Mecklenburg and Pomerania, E. the provs. of Prussia and Posen, S. Silesia and the kingdom of Saxony, and W. Prussian Saxony, Anhalt and Hanover; between 51° 10' and 53° 37' N. lat., and 11° 13' and 16° 13' E. long. Area, 15,590 sq. m. Pop. 1,537, 1,694,048, of whom 1,000,338 are Protestants, 15,808 Catholics, and 12,533 Jews, &c. It is divided into two regencies and thirty-four circles. Principal towns, Berlin, Potsdam, Frankfurt, Brandenburg, &c. It consists principally of an immense sandy plain, watered by the Oder, Spree, Havel, Wara, Netze, and other rivers, and by numerous lakes. Soil generally poor: in many parts, indeed, it consists of vast tracts of barren sand, diversified with extensive heaths and moors; but in other parts, particularly along the rivers and lakes, there is a good deal of meadow, marsh, and other comparatively rich land. Forests very extensive. Estimating the whole extent of the prov. at 15,500,000 morgen, it is supposed to be distributed as follows: Water, 300,000 morgen; woods, 3,500,000 do.; arable lands, 6,700,000 do.; gardens, 65,000 do.; waste lands, 3,350,000 do.; building roads, &c., 550,000 do. Corn of all sorts is raised. Buckwheat, however, succeeds better than any other sort of grain on the sandy soils, and next to it rye. Potatoes are now very extensively cultivated. The other principal products are wool, hemp and flax, tobacco, timber, &c. Agriculture, though backward, has made great advances since 1815. The breeds of horses and sheep have been materially improved; particular attention is paid to the raising of wool, which has become a most important product. In 1837 the stock of black cattle amounted to 554,000 head; horses, 180,000; sheep, about 2,500,000; hogs, 175,000. The average rent per Prussian morgen of cultivated land of a medium degree of fertility may be about 24 rixdollars (7s. 6d. sterling). Agricultural labourers receive from 7d. to 9d. a day in summer, but in winter they are seldom employed by the day. With the exception of lime and gypsum, the minerals are of no importance. Manufactures were introduced by the refugees from France subsequently to the revocation of the edict of Nantes, and are pretty extensive. They are principally carried on at Berlin (which see, and *PRUSSIA*). Breweries, distilleries, glass-works, brick-kilns, tanneries, potash, charcoal and lime manufactories, are very numerous, and employ a great many hands. The internal trade of the prov. is very considerable, and is much facilitated by the rivers and navigable canals by which they are united. The roads, also, have latterly been very greatly improved. (See *PRUSSIA*.) "Whether," says an intelligent traveller, "it be owing to the extreme nigardliness of the soil, which is for the most part sandy and unproductive, the Brandenburgers are in general extremely abstemious in bread, butter, and potatoes being the principal articles of consumption. The latter with the lower classes; and the former I have seen all ranks partake of half a dozen times a day. If you visit a friend, it is more than probable the lunch will be *butter-bread* (bread and butter): if you go to an inn and order refreshment, without specifying anything particular, this will certainly be brought. Still, however popular, it divides its empire with potatoes, which a stranger taking notes might with every justice enter in his pocket-book as the national food. They are served up in an immense variety of forms." (*Germany and the Germans*, i., 97, Lond. 1836.)

**BRANDENBURG**, a town of Prussia, prov. same name, reg. Potsdam, cap. circ. W. Havelland on the Havel, 35 m. W.S.W. Berlin, and 36 m. N.E. Magdeburg; lat. 53° 37' N., long. 13° 23' E. Pop. 13,000. The river divides it into three parts: the old town on the right, and the new on the left bank; while on an island between them is built the "Cathedral Town," which, from standing on piles, is also called "Venice." Streets of the old town narrow and crooked; but those of the new town are comparatively broad and straight; both are walled, and connected by a bridge. On the island is the cathedral, a structure of the 14th century, the castle, and an equestrian academy. It has eight churches, five hospitals, a council-house with a public library, a gymnasium, a citizens' school (*Bürger-schule*), a superior female school, with numerous elementary and charity schools; a work-house, a theatre, and three public squares, in one of which stands the Rolandssäule, a column hewn out of a single block of stone. The font and monuments in St. Catherine's church are worthy of notice, as are also the works of art in the cathedral. There are manu-

## BRANFORD.

factures of woollens, fustians, linens, stockings, paper, &c.; with numerous breweries, distilleries, tanneries, and some boat-building; and it has a brisk trade both by land and water. It has been several times besieged—by Henry the Fowler, Albrecht the Bear, Gustavus Adolphus, &c. It was the birth-place of Julius Von Voos. (*Von Zedlitz, Der Preussische Staat*, 1838, i., 186, 187, &c.)

**BRANDENBURG (New)**, a town of the grand duchy of Mecklenburg Strélitz, on a rivulet which falls into the lake Tollen, 17 m. N. by E. New Strélitz. Pop. 6000. It is walled and well built; has a castle, a grammar school, schools for the sons and daughters of townspeople, a work-house, and some woollen and cotton fabrics; but the business of distillation is the most important carried on in the town.

**BRANDENBURG**, p. v., capital of Mead co., Ky., 94 m. W. by S. Frankfort, 634 W. Situated on the S. bank of Ohio river. It contains a court-house and several stores and dwellings.

**BRANDON**, a par. and town of England, co. Suffolk, hund. Lackford; 73 m. N.N.E. London. Pop. 1521, 1770; 1631, 2005; houses 405; area 5670 acres. It is on the S. bank of the Little Ouse, or Brandon river, which forms the N. boundary of the county, and is here crossed by a neat stone bridge, about a mile below which is a ferry, where goods are deposited for conveyance by the river, to and from the Isle of Ely. Gun-flints are made in the town, and sent to various parts of the kingdom: they are procured about a mile W. of it, from beds traversing a chalk stratum, and alternating with others of pipe-clay: many labourers are employed in quarrying these flints. There is also some traffic carried on in corn, malt, coals, timber, &c. In the neighbourhood are some extensive rabbit warrens, which, in part, supply the London markets. Fairs are still held, Feb. 14, June 11, Nov. 11; but the market has been discontinued. There is an endowed free school. Brandon camp, a quarter-work in the vicinity, is supposed to be the *Brannion* of the Romans. The Duke of Hamilton and Brandon derives his English title from this town.

**BRANDON**, p. t., Rutland co., Vt. 16 m. S. Middlebury, 6 m. S.W. Montpelier, 479 W. Waterbury by Otter creek. Mill river, a branch of it, affords good water-power. Bag iron ore, manganese, and marble are found abundantly. First settled in 1778. It contains three churches, one Baptist, one Congregational, and one Episcopal, six stores, five farms, one printing-office, one academy, 80 students, thirteen schools, 763 scholars. Pop. 2194.

**BRANDON**, p. v., capital of Rankin co., Miss., 13 m. E. Jackson, 1003 W. It contains a court-house and several stores and dwellings. A rail-road connects this place with Vicksburg, passing through Jackson.

**BRANDON**, t. Oakland co., Mich. Drained by the head waters of a branch of Flint river. Pop. 442.

**BRANDON**, t. Franklin co., N.Y., 10 m. S.W. Malone, 315 m. N. by W. Albany. Drained by Saranac, St. Regis, and Racket rivers. It contains two saw-mills, three schools, 44 scholars. Pop. 192.

**BRANDT**, t., Erie co., N. Y., 20 m. S.S.W. Buffalo, 390 m. W. Albany. Bounded W. by Lake Erie and S. by Cattaraugus creek. It contains one store, six schools, 220 scholars. Pop. 1068.

**BRANDY**, t. Williams co., O. Pop. 351.

**BRANDYWINE CREEK**, Pa. and Del. rises in Chester co., Pa., by two principal branches, which unite and flow south-easterly through Delaware; and at Wilmington it forms a junction with Christians creek, and the united stream enters Delaware river thirty-five m. below Philadelphia. In the course of four miles above Wilmington, it has a fall over 100 feet, and on it are many manufactories of wool, cotton, paper, powder, &c.; and through its whole course, it furnishes many excellent mill seats. The celebrated battle of Brandywine, between the Americans and British, Sept. 11th, 1777, by which the latter gained possession of Philadelphia, was fought near its bank, at Chad's Ford, in Birmingham t., Chester co., Pa., where vestiges of the battle are yet found.

**BRANDYWINE**, t., Hancock co., Ia. It has one grist-mill, one saw-mill. Pop. 693.

**BRANDYWINE**, t., Chester co., Pa., 30 m. N.W. Philadelphia, 63 m. S.E. Harrisburg. Watered by Brandywine and Beaver creeks. It contains six stores, one flouring-mill, two grist-mills, five saw-mills, one paper-mill, two tanneries, one distillery, six schools, 300 scholars. Pop. 1673.

**BRANDYWINE**, hundred, Newcastle co., Del. It contains nine stores, one woollen-factory, three cotton-factories, with 7319 spindles; five flouring-mills, four grist-mills, two saw-mills, seven schools, 415 scholars. Pop. 3367.

**BRANDYWINE MILLS**, p. v., Northfield t., Summit co., O., 141 m. N.E. Columbus, 341 W. It contains a saw-mill, carding-machine, woollen-factory, and several dwellings.

**BRANFORD**, p. t., New-Haven co., Ct., 43 m. S. by W. Hartford, 7 m. E. New-Haven, 307 W. Bounded S. by

## BRANTOME.

Long Island sound. Settled in 1644. It contains three churches, one Congregational, one Episcopal, and one Baptist; seven stores, one grist-mill, three saw-mills, one paper-mill, one academy, 60 students, seven schools, 319 scholars. Pop. 1322.

BRANTOME, a town of France, dép. Dordogne, cap. cant. on the Drôme, near its confluence with the Coile, 12 m. N.W. Périgueux. Pop. 2500. It is agreeably situated, and is a neat, handsome town. The walls and ditches by which it was formerly surrounded have been demolished. It has some fabrics of woollen stuffs, hosiery, and cotton. Near the town is an abbey of the Benedictines, the foundation of which is ascribed by some to Charlemagne, and by others to Louis-le-Debonnaire. This abbey was held in commendam by the historian Brantome, who retired thither after the battle of Jarnac, and composed in this retreat a part of his works. (*Hugo, art. Dordogne.*)

BRASHUR, t. St. Lawrence co., N. Y., 30 m. N.E. Canton, 336 m. N.N.W. Albany, 520 W. Watered by St. Regis and Deer rivers, which afford extensive water-power. It contains three stores, one furnace, one grist-mill, six saw-mills, thirteen schools, 436 scholars. Pop. 2118. The post village is denominated *Brasher's Falls*, on Deer river.

BRATTLEBOROUGH, p. t. Windham co., Vt., 121 m. S. Montpelier, 79 m. E.N.E. Albany, 62 m. W. by N. Boston, 422 W. Bounded E. by Connecticut river, watered by West river. First settled in 1724, at Fort Dummer in the S.E. part of the town, which was the first English settlement in Vt. A bridge across Connecticut river connects this place with Hinsdale, N. H. The town contains an east and a west village. The East village is situated on the Connecticut river, at the mouth of Whetstone brook, which passes through it, and affords water-power. It is one of the most considerable and flourishing villages in the state. It contains four churches, one Congregational, one Unitarian, one Methodist, and one Baptist, a bank, numerous stores, an extensive printing and publishing establishment, called "the Brattleboro' Typographic Company," with a capital of \$150,000; another printing-office, and an asylum for the insane. The West village contains an academy and a number of dwellings. There are in the town twenty stores, one furnace, three tanneries, one paper-mill, three grist-mills, seven saw-mills, three printing-offices, two weekly newspapers, two academies, 245 students, sixteen schools, 636 scholars. Pop. 2624.

BRUNSBURG, a town of Prussia, prov. E. Prussia, cap. circ. on the Passarge, about 3 m. above where it falls into the Frische Haif. Pop. 7600. The river is navigable as far as the town by vessels of small burden, and it has some shipping, and exports corn and timber. It is the residence of the bishop of Ermeland, the seat of a royal court of justice, and has several churches, a monastery, a normal school, and four hospitals. But it derives its principal claim to notice from its seminary, the *Lyceum Hosianum*, for the education of Catholic clergymen. It is so called from its having been founded and endowed by the learned Stanislaus Hosius, bishop of Ermeland. It has six professors, and had, in 1837, 27 students.

BRAXTON, county, Va., situated in the N.W. part of the state. Watered by Elk and Little Kanawha rivers. It contained, in 1840, 2890 neat cattle, 3097 sheep, 5614 swine; and produced 8960 bushels of wheat, 68,627 of Indian corn, 20,929 of oats, 5866 of potatoes, 4155 pounds of tobacco, 19,420 of sugar, 4000 bushels of domestic salt. It had two stores, twenty grist-mills, twenty saw-mills, two tanneries, five distilleries. Pop.: whites, 2509, slaves, 64; free coloured, 2; total, 2575.

BRAXTON, C. H., p. v., capital of Braxton co., Va., 321 m. W.N.W. Richmond, 299 W. Situated on the N. side of Elk river. It contains a court-house and a few dwellings.

BRAY, a township of England, co. Berks, hund. Bray. Pop. 1000? This place would be unworthy of notice in a work of this sort, were it not that it has attained a proverbial notoriety. The person who held the living, a vicarage, in the reigns of Henry VIII., Edward VI., Mary, and Elizabeth, appears to have been gifted with a most accommodating conscience. He commenced a Papist, then became Protestant, next Papist again, and then Protestant again! On being taxed with inconsistency, he defended himself by saying that he had always adhered to his principle, which was "to live and die Vicar of Bray." The well-known song represents this worthy vicar as living in the reign of Charles II. and his successors; but the above is Fuller's account of the matter (vol. i., 79, ed. 1811).

BRAY, a marit. town of Ireland, cos. Wicklow and Dublin, prov. Leinster, on the Bray or Dargle, 12 m. S.E. by S. Dublin. Pop. in 1821, 2029; in 1831, 3656; pop. in 1834 of the parishes of Bray and Old Connaught, in which the town is situate, 5176 of whom 1184 are of the Estab. church, 29 Prot. Diss., and 3963 Rom. Cath. The town, which takes its name from Bre, or Bree, a headland at the foot of which

## BRAZIL.

it stands, is divided into two portions by the river, which also separates the counties of Wicklow and Dublin. The part on the N., or Dublin side, is called Little Bray: the communication between the two divisions is kept up by an old bridge. It has a parish church, a large and elegant Rom. Cath. chapel, a Presbyterian meeting-house, and several schools, one of which, an infant school, is a spacious building: it has also a savings' bank, a loan fund, a hospital, and a dispensary. An old castle in Little Bray has been converted into a barrack. A constabulary and a coast-guard force are stationed here, and near the town is a martello tower. The town is neatly built, and is become a fashionable watering-place. It was formerly incorporated, and parliaments were held here, but its chartered privileges have fallen into desuetude. A manorial court is held monthly, and petty sessions on alternate Mondays. It manufactures small quantities of linen and coarse woollens; there is also a brewery and flour-mill. Markets are held on Tuesdays and Saturdays; fairs for freezes on Jan. 13, May 4, Aug. 5, and Nov. 12; and for cattle on March 1, May 1, July 1, Aug. 15, Sep. 30, and Dec. 14. Post-office revenue in 1830, £243; in 1836, £585. A mail coach, several stage coaches, omnibuses, and cars, pass daily through the town, or ply from it to neighbouring places, chiefly to Kingstown. The harbour is barred by a bed of shingle, which has to be cut through annually, in order to admit vessels of any size. The imports are coal, to the amount of 5000 tons, and freestone and limestone of 7,000. A considerable fishery of cod, haddock, and herring, was formerly carried on, which has been completely annihilated. The salmon fishery has also declined. Trout, caught in the Bray river, is abundant and highly esteemed.

BRAZIL,\* an empire of S. America, second only in extent to the giant empires of China and Russia, stretches along about two thirds of the E. coast of that continent, while its superficial area occupies nearly half its whole extent. It lies between 4° 17' N. and 33° S. lat.; its most easterly point is Cape St. Augustin, in 34° 58' W. long, but the longitude of its W. frontier cannot be determined with accuracy, since its boundary-line on that side is in countries hitherto unexplored by Europeans: it probably verges upon 75°. The length, from N. to S., is between 2800 and 2700 m., and its breadth, from E. to W., between 2300 and 2400 m. Its extent of coast along the Atlantic ocean exceeds 4600 m.; its area has been estimated at from 2,300,000 to 2,700,000 sq. m. It is bounded E. and S. by the Atlantic ocean; N. by French, Dutch, and British Guiana, and the republic of Colombia, from which it is separated by a chain of mountains, under the various names of Serra de Tuhuny, Serra Pecaraimo, &c., and the Rio Oyapoco; E. by the Atlantic ocean; and W. by the states constituting the federal republic of La Plata, with Bolivia, Peru, and Ecuador or Quito. The country which was formerly included under the name of Brazil is proved by ancient maps to have extended only from the sea-coast to Rio San Pedro. The Portuguese, however, have never ceased adding fresh acquisitions to the country which they already possessed, and their possession has from time to time been confirmed to them by treaties with Spain.

The following statement of the area and population of the different provinces is borrowed from the *Weimar Almanac* for 1839.

| Provinces.            | Area in sq. m. (Eng.) | Pop. 1822. | Ch. Towns.   |
|-----------------------|-----------------------|------------|--------------|
| 1 Para                | 680,000               | 143,073    | Para.        |
| 2 Rio Negro           | 484,000               | 48,297     | Barcellos.   |
| 3 Maranhão            | 65,073                | 186,986    | San Luis.    |
| 4 Piauí               | 80,547                | 45,296     | Deiras.      |
| 5 Ceará               | 70,185                | 172,718    | Aracati.     |
| 6 Rio Grande do Norte | 81,237                | 66,736     | Natal.       |
| 7 Paraíba             | 19,789                | 246,232    | Paraíba.     |
| 8 Pernambuco          | 20,535                | 692,205    | Pernambuco.  |
| 9 Alagoas             | 19,282                | 325,626    | Porto Calvo. |
| 10 Sergipe            | 18,147                | 807,523    | Sergipe.     |
| 11 Bahia              | 54,675                | 659,650    | Bahia.†      |
| 12 Espírito Santo     | 37,505                | 73,996     | Vitoria.     |
| 13 Rio Janeiro        | 180,316               | 696,650    | Rio Janeiro. |
| 14 San Paulo          | 191,012               | 610,632    | San Paulo.   |
| 15 Minas Geraes       | 253,572               | 925,283    | Mariana.     |
| 16 Goyaz              | 313,760               | 150,000    | Villa Rica.  |
| 17 Mato Grosso        | 426,419               | 88,000     | Villa Bella. |
| 18 Fernando           | 1,060                 | 600        |              |
| Total                 | 2,783,942             | 6,180,418  |              |

Nearly two thirds of Brazil consists of high land and mountains. Estimates have been given of the compar-

\* It is commonly supposed that the wood yielding the red dye *Cassipouira Brasiliensis*, derived its common name of Brazil-wood from its being principally imported from, and produced in, Brazil. This, however, is not the fact. It has been shown that woods yielding a red dye were called Brazil-wood, previously to the discovery of America; and that the early voyagers gave the name of Brazil to the part of that continent to which it is still applied, from their having ascertained that it abounded in such woods. (*Bancroft's Philosophy of Colours*, ii., 316-321.)

† Both the area and pop. of this prov. are much underrated: the table, in fact, is but little to be depended upon.

## BRAZIL.

tive quantity of the country under tillage and that still in a wild state, as well as of that occupied by rivers, swamps, &c., &c.; but from the very limited knowledge which Europeans possess of by far the larger portion of Brazil, it is plain such estimates can be good for nothing, unless it be to throw ridicule and discredit on all statistical computations. It is, however, abundantly certain that the extent of cultivated land bears but a very small proportion indeed to that of the whole country; perhaps not more than 14 or 2 per cent.†.

Perhaps no country is more favoured by nature, as regards the requisites for carrying on an extensive commerce, than Brazil. All its principal cities are on the coast: its harbours are among the finest in the world, and are connected with the interior by numerous large rivers, most of which are navigable for a considerable way inland.

The principal rivers are—1. The Amazon, generally considered the largest river in the world, supposed to be formed by the junction of the modern Marañon (Tunguragua) with the Ucayali, or ancient Marañon. It enters Brazil at San Francisco do Tabatinga, and flows from W. to E., along the immense northern province of Para, discharging itself into the Atlantic in about 59° W. long. Its principal tributaries are—the Madeira, which takes its rise in Potosi, and flows a distance of 700 leagues; the Xingu, in the province of Mato Grosso itself, encompassing several smaller tributary streams; the Rio Negro, which rises in New Granada, and loses itself in the N. of Brazil, after a course of 700 leagues; the Tapajós, which rises in Mato Grosso. In addition to these are upwards of sixty others of less importance. 2. The Rio Para, which traverses a portion of the province of San Paulo, rises in the district of San João del Rey, and empties itself in the Parana. 3. The Rio Doce, traversing the province of Espírito Santo, and serving as a sort of means of uniting the interior of Minas Geraes with the coast. 4. The Para de Tocantins, formed by the junction of the Araguaia and the Tocantins, properly so called; the former is the principal branch. N. of this junction, being the smaller section of its course, it is known by the name of the Para, and S. by that of the Araguaia; it rises in the province of Goyaz, which it traverses, together with part of Para, and empties itself into the Atlantic Ocean. At the mouth of the Para, the phenomenon of the *bera*, to which the Indians have given the name of *pororoca*, manifests itself in a very striking manner. Three days previously to the new or full moon, when the tides are highest, an immense wave, upwards of 15 ft. in perpendicular height, rushes from shore to shore with a tremendous noise, and is succeeded immediately by a second and a third, and sometimes by a fourth. The tide, instead of occupying six hours to flow, attains its greatest height in a few minutes. The roaring of the *pororoca* is heard at a distance of nearly two leagues. (*Dennis, Brazil*, p. 253, Paris, 1837.) 5. The Rio San Francisco, one of the largest of the Brazilian rivers, rises in the vicinity of the Parana, in the prov. of Minas Geraes. It is the only river of importance between Bahia and Pernambuco. Its course is interrupted by the cascade of Paulo Afonso. 6. The Rio Grande do Sul, in the province of San Pedro. 7. The Parana, or La Plata, which separates Brazil from Paraguay and the states of La Plata, and forms also the boundary-line between the province of San Paulo, Mato Grosso, and Goyaz. The Rio Pardo, the Itahy, and the Aguapehy, empty themselves into it.

In addition to the above, we may succinctly enumerate—1. The Parnahyba, in the prov. of Maranhão; 2. the Oyapoco, dividing French Guiana from that portion belonging to Brazil; 3. the Paraguary, emptying itself into the bay of Bahia; 4. Rio Itapicury, known, also by the name of Jacobians and Rio do Peixe, in the province of Maranhão; 5. the Rio Grande do Norte; 6. the Jaguarina, so celebrated for its diamonds: it empties itself into the ocean after having watered the province of Minas Geraes; 7. the Jaguaribe, &c., &c. Many of the rivers of Brazil, especially the Marañon, like the Nile, overflow their banks, and subject the country, until the middle of January, to extensive inundations, attended with an injurious effect upon the health. The navigation of many of the Brazilian rivers, at a distance from the coast, is interrupted by dangerous falls and rapids, and the mouths of many of the smaller rivers are subject to winds and currents, which render them extremely unsafe.

**Lakes.**—The lakes of Brazil are few and inconsiderable in extent: the principal are those of Los Patos and Mirim, the former of which is merely a widening of the Rio Grande de San Pedro. There are also those of Juparanam, Jiguba, Mangraba, Parapitinga, Jaguarassu, &c.

The form of Brazil may be said almost to resemble that of a heart, of which the greatest diameter, from E. to W.,

in a straight line from Cape Roque to Peru, approaches an extent of 35 degrees. The E. side of Brazil is traversed, from N. to S., at more or less distance from the coast, by a mountainous range, of which the average height is about 3000 ft.: it is known by the name of Serra do Mar, and its greatest height is 3000 ft. This range serves to divide the coast-land from the high land, consisting of Campos, the average height of which is about 2500 ft. It gradually becomes lower in the direction of Paraguay, until it be lost in the low and mostly marshy plains inhabited by the Indian tribe of Guaycurus. Many geographers have fallen into the error of supposing that the prov. of Mato Grosso contains the highest mountains, and that they form a junction with the Cordilleras of Peru and Chili. But Eschwege, who resided in the country for ten years, during which period he visited the greater part of it, confutes the supposition, in his *Brazilien des ners Welt* (vol. i., p. 185; Braunsch., 1839). He observes that broad extensive plains lie between, and that the sources of the Madeira, which flows in a northerly direction towards the Amazon, and of the Paraguay, taking a southerly course towards the La Plata, are both within a few miles of each other, and that the elevation of their sources is inconsiderable. The highest range of the Brazilian mountains is that which traverses the centre of the country, and its greatest altitude is about 6000 ft. The mountains of Brazil may be subdivided into three different ranges: 1. The coast range, or Serra do Mar, above mentioned. This is by far the most picturesque of the Brazilian chains, and in some parts approaches within 16 or 18 m. of the sea, while in others it sweeps inwardly to a distance of from 120 to 140 m. The soil near the coast displays evidences of the richest cultivation, and teems with abundance of the choicest productions. At a distance, and in the vicinity of the mountains, are found ancient forests (*matto virgem*), whose giant trees, and countless plants and shrubs, of luxuriant growth, so thickly interwoven as almost to defy the attempts of man to force a passage, sufficiently attest the excellence of the soil on which they grow. On crossing the Serra do Mar, we meet with a barren table-land, called Campos Geraes, with few traces of cultivation. In the valleys, gold and diamonds are frequently discovered. The Serra do Mar chain commences in the Campos de Vacaria, sinks abruptly in the direction of the Rio Doce, and loses itself completely at Bahia. The celebrated Monte Pascoal, which was seen by the early navigators, forms a part of the Serra do Mar. It is known by various names in the district through which it runs. On the E. side it is styled Serra dos Aymeres, while in the neighbourhood of Rio it is styled Serra dos Orgãos. It is worthy of remark, that the plants growing in the Campos are altogether distinct from those on the other side the Serra do Mar; and the zoologist may discover quite a new race of animals as well as birds, in this region.

2. The central chain, called in some parts Serra do Mantiqueira, and in others Serra do Espinhaço, is more extensive than the former, and comprises the highest points in Brazil; viz. the Itacolund, near Villalria; the Serra do Caracani, near Caldas Altas; and the Itambé, near Villa do Principe. This range traverses the prov. of Minas Geraes, running in its northerly course, through Bahia and Pernambuco, and in its southerly course through San Paulo and Rio Grande. It is not only remarkable as comprising the highest points in Brazil, but is highly interesting in a geological, botanical, and zoological point of view. In different parts, it bears the various local names of Serra do Lopo, Serra Salgado, Serra de San Geraldo, Serra dos Esmeraldas, &c., &c.

3. The Serra dos Vertentes, or the Water-separating mountain, so called because it divides the E. tributaries of the rivers Amazon and La Plata from the river San Francisco. This chain is sometimes called the Brazilian Pyrenees. Its loftiest and most remarkable points are those of Serra de Canastra and Marcella, where, on one side, the Rio San Francisco, and on the other, the most important tributaries of the Rio Grande, take their rise; and the Pyrenees, in the province of Goyaz, where the tributaries of the Parana are found.

**Soil.**—The soil of Brazil is of various descriptions. In the neighbourhood of Rio Janeiro, it consists in a great measure of plains, which bear every trace of former inundations: those which, during high tides, are covered by the sea have degenerated into swamps, upon which we find the *Echinophora* of Linnaeus; those that lie higher consist of quicksands, and seem almost incapable of cultivation. The marshy plains at a distance from the sea might perhaps, by dint of draining, be made available for the purposes of growing rice and the sugar-cane. The soil upon the heights which surround these plains consists of a mixture of clay

† Eschwege enumerates upwards of 40 tributaries to this single river. (*Brazilien des ners Welt*, ii., 156, 157.)

‡ The Brazilians give this name to all tracts of country, whether plains or hills, that are destitute of wood. The designations such tracts as are diversified by occasional wood by the name of *campos serrados*.

## BRAZIL.

and coarse quartz sand; it retains but little moisture, and in times of drought becomes extremely hard. A few miles from the town, traces of considerable improvement are observed. A pretty deep layer of rich quartz sand rests upon a bottom of granite or decayed feldspar. The soil is much injured, however, by the universal growth of the *Mandioca*.<sup>\*</sup> In the mountainous districts in the interior of the provinces, which are still covered with their native woods, the excellence of the soil is amply proved by the size and abundance of the trees. Neglected for centuries, a layer of the richest mould has been formed of their fallen leaves and decayed trunks, which resting again upon a rich and deep bed of clay, is of a red or yellow colour, as it contains more or less oxide of iron. Between Rio Janeiro and Villarica, the soil is everywhere of hard and excellent white clay; the mountains are of granite, in which the amphibole predominates.

*Climate, &c.*—The great extent of Brazil will, of course, account for a considerable variation of climate. Along the coast, the ordinary temperature is from 18° to 30° Reaumur, with some modifications, according to the localities. Thus, while the thermometer seldom rises above 30° at Bahia, it sometimes stands as high as 39° and 37° at Rio Janeiro. Winter is severe in the S. provinces, and it even freezes at Rio Grande de San Pedro and San Catharina. The climate, in the vicinity of San Paulo, is usually accounted the most agreeable, and the temperature permits the growth of European fruits. The west wind, in the interior of Brazil, is unwholesome, as it passes over vast marshy forests. The sea-coast, from Para to Olinda, appears to possess a similar climate to Guiana. Notwithstanding the position of Brazil between the equator and the tropics, the air, owing to the height of the greater portion of the country, is in general temperate, rather than hot. Pernambuco and a few of the other provinces suffer occasionally from drought; to which, however, the coast lands are seldom subject.

The seasons may be properly reduced to two, the rainy and the dry, although some divide them into four; viz. the spring, commencing in Sept.; the summer, in Dec.; the autumn, in March; and the winter, in June. The rainy season usually sets in about Oct. or Nov., and is preceded in some parts by fog, thick groups of clouds, and sudden gusts of wind, as well as by occasional showers, and the temperature is also extremely variable. This season generally lasts till March. The period of its commencement and termination varies according to latitude and natural position.

Prince Maximilian observes (*Reise nach Brasilien*, ii. 134) that in the region of Campos Geraes, Feb., March, April, and May, are usually the rainy months; June, July, Aug., and Sept., are called the cold season; and that during Oct., Nov., Dec., and Jan., the greatest heat prevails.

Mr. Von Langsdorff, formerly Russian consul at Rio, makes the following remark upon the seasons in Brazil, in a letter to a friend, given in *Eschwege's Journal* (ii. 166): "Winter, in this country, resembles summer in the N. of Europe; summer appears one continuous spring; while spring and autumn are unconsciously lost in winter and summer." It may therefore be more truly said of Brazil than, perhaps, of any other country—

Stern winter smiles on this auspicious clime;  
The fields are fertile in eternal prime;  
From the bleak pole no winds inclement blow;  
Mould the round hail, or flake the fleecy snow;  
But from the breezy deep the groves inhale  
The fragrant murmurs of the eastern gale!

*Products.*—The most celebrated, though not the most important of the natural productions of Brazil, are diamonds. The provinces known to possess them are Minas Geraes, Minas Novas, Goyaz, and Mato Grosso; but it is supposed that several of the other provinces are furnished with these highly prized gems. The diamonds found in Minas Geraes are generally the largest, but they are not of the purest water. The most celebrated diamond mines in Brazil are those of Serrado Frio,<sup>†</sup> which are also known by the name of the Arraial Diamantino, or diamond district, properly so called. This district is surrounded by almost inaccessible rocks, and was formerly guarded with so much vigilance that not even the governor of the province had the liberty of entering it without the special permission of the director of the mines.

The mines are wrought by accumulating the *cascahal*, a kind of ferruginous earth (in which the diamonds are found mixed with filins), and washing it. The former operation is generally performed during the hot season, at a time when the beds of the rivers and torrents are dry, and the diamond-

sand can be easily extracted. When the wet season arrives, the operation of washing commences. It is performed in the open air, and frequently under sheds, where the action of the sun is least likely to injure the health of the negroes. At the bottom of the shed glides a small stream, which occupies one of its sides. Seats, raised, and without backs, are arranged along the shed, in such a manner that the subaltern officers (*fleiteiros*) are enabled to watch the negroes at work. One *fleiteiro* superintends eight negroes. Each negro works in a compartment of the shed, separated or walled off, as it were, from the others. The *cascahal* to be examined is placed in troughs close to the stream, and the negroes are introduced entirely naked, excepting in time of extreme cold, when they are allowed a kind of waistcoat, but without either pockets or lining. They are furnished with an *alavanca*, a kind of hand-spike, by means of which they separate the earth from the flint, and then, taking the largest stones in their hands, they proceed to search for the diamonds. Notwithstanding the precaution of making the negroes work naked, robberies of diamonds are of frequent occurrence. When a negro discovers a diamond, having first shown it to the *fleiteiro*, he deposits it in a large wooden vessel suspended in the middle of the shed. If any negro is fortunate enough to discover a diamond weighing 17 carats, he is purchased by the government, and receives his liberty. The discovery of a stone of less weight also confers liberty upon the finder, but with some restrictions. Various premiums are distributed, according to the value of the stone, even to a pinch of tobacco. (*Davis Brazil*, p. 345.) Notwithstanding every imaginable precaution, negroes find means to purloin diamonds, which they dispose of to smugglers (*contrabandistas*) at a very low price. The latter dispose of them chiefly at Tijuca and Villo do Principe. They obtain a higher price at the latter, because their risks are greater in transporting them thither. The negroes frequently contrive to impose upon the *contrabandistas*, as they have the means, by some simple process, of giving crystals the appearance of rough diamonds, so as effectually to deceive them. Formerly there were as many as 30,000 negroes employed in the mines, but, according to Freyre, the number employed at the time of his visit to Brazil (about 1833) did not exceed 90,000.

The diamonds differ greatly in size. There are some so small that 16 or 90 would scarcely make a carat. It is rarely that, in the course of a year, more than two or three are found weighing from 17 to 50 carats; and two years may pass without discovering one of the weight of 30 carats. The administration of the diamond mines is regulated by a law of the 9d Aug. 1771, entitled, "Regimento para a Real Extração dos Diamantes do Arraial do Tijuco, do Serrado Frio," consisting of 54 articles. Down to the date of this law, the right of working the diamond mines was farmed out; but from that period, the government have taken it into their own hands, and they are all under the superintendence of a board, *Junta Real para a Administração dos Diamantes*.

Eschwege (*Brasilien des neuen Welt*, i. 190) gives the following table of the weight of the diamonds extracted from the first discovery. As little is known respecting the weight of those discovered during the first ten years (from 1730 to 1740), he commences with the latter year:

|                                                                                                                                                                                                                                                                | Carats.   | Average per year. |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------|-------------------|
| From 1740 to 1772 . . . . .                                                                                                                                                                                                                                    | 1,666,569 | 52,080            |
| — 1773 — 1806 . . . . .                                                                                                                                                                                                                                        | 910,511½  | 26,826            |
| In the years 1811, 14, 15, and 16 . . . . .                                                                                                                                                                                                                    | 74,147    | 18,537            |
| During the 11 years of which there are no statistical accounts to which he could gain access (i. e., from 1806 to 1823, deducting the above), and during which the produce remarkably decreased, it cannot, at an average, be estimated at more than . . . . . | 232,000   | 19,000            |

Eschwege estimates the total value of these, at the rate of 8000 reis the carat, to be 23,869,534,000 reis, = 59,673,835 cruzadoes, = 39,769,556 Prussian dollars, or £3,475,537; so that, supposing this estimate to be tolerably correct, it follows that the total value of the diamond-washings, during a period of above 90 years, was hardly equal to 18 months' export of sugar or coffee. The crown receives one fifth of the total value.

After Mexico and Peru, Brazil has furnished Europe with the greatest quantity of the precious metals. Gold is supposed to exist in great abundance throughout the district which extends from the neighbourhood of San Paulo and Villarica as far as the confines of the river Ytanes. The greater portion, however, of the supposed mines remain at present untouched. The most celebrated mine is that of Congo Boco, situated in a beautiful valley, at the distance of about 40 leagues from Villarica. The first person who worked this mine was a Portuguese, named Bethancourt,

\* Although the soil of Brazil is generally well adapted for the cultivation of this plant, its tendency is, nevertheless, to exhaust it completely in the course of a few years. A plantation never yields more than three crops, after which it is abandoned.

† These mines were not actually discovered until the government of Dom. Leopoldo d'Almeida, although the diamonds were known to have been in the possession of the negroes, who met with them accidentally while employed in gold-washing, and other persons ignorant of their value, long before that period. They were first brought from Brazil to Lisbon in 1728, by Bernardo da Silva Lobo. He showed them to the Dutch resident consul, who recognised them as diamonds, and informed him of his important discovery.

## BRAZIL.

who commenced, about 1740, to labour with his own hands. In a short time he amassed a splendid fortune. In consequence, however, of the want of care and activity on the part of his descendants, to whom he bequeathed his mines, they ceased to be productive, and were therefore disposed of, about 95 years since, to a capitalist now named José Alves, for the sum of 9000 cruzadoes. The latter disposed of them, in 1835, after a good deal of bargaining, to a company of Englishmen, known as the "Anglo-Brazilian Mining Company," for 270,000 sterling, his first demand being 250,000 = 1,000,000 cruzadoes (*Obispo, Brazil, p. 338*). The affairs of this company extend also to Inficionado, the Catas Altas, and Antonio Pereira. In the first six months of the year 1839, the mine of Congo Soco are stated to have yielded 9037 lbs. 4 oz. 15 gr.; and there seemed to be little doubt, that in this district, the working of the mines would be attended with great advantage, although in other parts the company had not been so successful. Malte-Brun estimates the value of the ingots exported from Rio Janeiro to England, from 1st Jan. to 1st July, 1832, by the company, at 4,166,000 francs.

About Villarica the gold is found in the form of powder and fine dust, in crystals, and sometimes, though rarely, in whole lumps. Spix and Martius (*Proc. Trans. II, 182*) mention an instance of a mass of pieces weighing 16 lbs. having been found. They state that it is related to have been discovered in heaps under the roots of plants pulled out of the ground, whither it had been accidentally washed by the rains.

The following account of the administration of the gold mines; the manner of procuring the gold; the dress and mode of working of the mines, &c., has been compiled from Spix and Martius, as it was thought advisable to preserve some account of the practices in use prior to the establishment of the Anglo-Brazilian Mining Company.

It is washed out of streams and rivers from the clayey surface of the soil, or out of iron stone strata, or quartz veins. The dress of the gold-washers (*fiscadores*) is a leather jacket; they use a round bowl, cut out of the wood of the fig-tree, from a foot and half to two feet in diameter and a foot deep (*gamella*), and have also a leather bag fixed before them. They generally select those places where the river is not rapid, where it makes a bend and has deep holes. They commence by removing the large stones and upper layers of sand with the feet, or the *gamella*, and then take up a bowlful from the deeper and older gravel of the river. They continue to shake, wash, and strike off the stones and sand at the top, till the heavy gold dust appears pure at the bottom of the vessel, on which a little water is thrown with the hand, and the gold at length put into the leathern bag. A man may earn in this way several forins per day.

The gold formations differ much in various parts of the country. The produce of the gold mines was most considerable in the first half of the last century. Towards its close, from 70 to 80 arrobas were annually smelted in Villarica; while, previously to the arrival of the English company, the quantity had dwindled down to 40.

The royal fifth, which is separated from the gold immediately on its arrival at the smelting-house, amounted, in 1753, from the productions of Minas, to 118 arrobas; and down to the year 1814, the total amount was 6633 arrobas = 85,000,000 cruzadoes. The gold, however, had decreased so much, that in 1815 the royal fifth did not amount to more than 30 arrobas. The total value, therefore, down to the year 1814, would be 34,665 arrobas. Stein (*III, 780*) computes the amount of what had been smuggled from time to time at 10,000 arrobas. All the gold in the district of Villarica is brought into the palace of the governor, where it is smelted. For this purpose 18 persons are employed, under the superintendence of an *escrivã* contador, who receives a salary of 3000 cruzadoes. When the bars are smelted, and their weight and fineness are determined, they are returned to their owners, but cannot pass instead of coin without the Brazilian and Portuguese arms, the number of the list, the mark of the smelting-house, the date of the year, and the degree of fineness, being stamped upon them. A printed ticket is also given with each bar, which, in addition to all the above particulars, states the value in reis, the weight which the proprietor gave in gold dust, and how much was deducted for the king. It is only natural to suppose, that a soil abounding in mines of gold and diamonds, must have excited the cupidity of adventurers. Several years ago, bands of contraband miners, usually of desperate character, and forced to shun society, roved about the country, in search of gold and diamonds. They frequently discovered diamond mines, and river-courses abounding with gold, which they worked until they had exhausted them, unless previously dispossessed by the emissaries of government. The crowing of a cock is said to have been the means of putting one mine into the possession of the latter, in the district now called, from that circumstance, *Canta Gallo*.

The eagerness of all classes to engage in mining pursuits,

formed, for a lengthened period, a powerful obstacle to the improvement of the country. But happily this rage is now greatly abated; and the energies of the population being directed to the safer and infinitely more productive occupations connected with the culture of the soil, mining has become an object of very inferior importance; and the value of the gold and diamonds that are now produced is quite inconsiderable, compared with that of various other articles. (See post.)

Iron abounds in the mountain-chain of Morro, near Villarica, and in the district lying between Inficionado and Concoello for a distance of 150 m. In the prov. of Minas Geraes, near the village of Ypanema, in the mountain of Aracajuva, is a mine of magnetic iron-stone, the ore to contain from 80 to 90 per cent. pure iron. (*Stein, p. 730*.) The first discovery of iron in Brazil took place near Villa Sorocaya, in the province of San Paulo. It was not properly worked till 1810, when the Conde de Linhares brought over a company of Swedish workmen. In the prov. of San Paulo are also the rich and extensive mines of Garacouva, Bomada, and Sorocaya, just mentioned.

The working of the iron mines was, for unknown, but certainly bad reasons, long prohibited by government; but that prohibition no longer exists, having been repealed after the arrival of the court in Brazil. Malte-Brun has omitted to mention the latter fact; and the reader might infer from his account, that the prohibition had not been removed. As evincing the importance attached by the Brazilians to the opening of the mines, a gigantic pyramid has been erected upon the summit of the Aracajuva, in commemoration of the event. In the smelting and other operations, the Swedish method is practised.

Among the other mineral productions of Brazil, may be mentioned platina, found in the prov. of Minas Geraes, and copper, found near St. Domingo. In the same prov. Precious stones abound in Brazil, especially topazes, of which there are a great many varieties, found principally in the district of Capad. In some parts of Minas Novas, white and blue topazes are found, though the usual colour is yellow.

**Vegetable Products.**—Among these are sugar, coffee, cotton, rice, corn, tobacco, maize, wheat, mandioca, beans, camara-root, bananas, ippecacuanha, ginger, yams, oranges, figs, &c., &c. Of these, the most important are sugar and coffee, which are now, in fact, the staple products of the empire, and the culture of which has increased with almost unexampled rapidity. Sugar is principally raised in the prov. of Bahia, the soil of which is admirably suited for its growth; but it is also extensively produced in some of the other provinces. The value of the sugar exported from the different parts of the empire is believed to be at present (1839) little short of £2,000,000. The coffee of Brazil was formerly not liked in Europe, owing to defects in its treatment. The merit of having introduced a better system is due to a Dr. Leceime, a planter from St. Domingo, who, having established himself in the vicinity of Rio, instructed the cultivators in the most approved methods of treating the plant. The effects of this liberal conduct have been most striking. Coffee is still principally produced in the vicinity of Rio; and so rapidly has its cultivation been extended, that while its produce in 1818 only amounted to 74,915 bags, it amounted in 1836 to 704,385 bags. Estimating the average crop at 700,000 bags, worth at the port of shipment, £3 lb. a bag, the total value of the coffee exported would be £2,450,000! And notwithstanding its extraordinary extension, such are the boundless capacities of the country that the culture of both sugar and coffee may be said still to be in its infancy, and to admit of an indefinite increase.

Cotton ranks next to coffee and sugar, as one of the principal products of Brazil. It is mostly grown in the province of Pernambuco, and in respect of quality, is inferior only to sea-island cotton. Its cultivation has not, however, been increasing for several years past. The exports may amount, at an average, to about 170,000 bags of 160 lbs. each, worth about £5 per bag, making in all the sum of £850,000. It is grown chiefly in the province of Bahia, in the low lands round the bay; but partly also in the province of Maranhão. Tobacco is principally grown in the islands in the bay of Rio Janeiro, in that of Angra dos Reis, &c., on the lowest coast-land; it is, however, inferior in quality to that of the U. States, and the cultivation has rather decreased. Rice is largely cultivated in some places, and is exported; but the principal dependence of the population is on the mandioca, regarded by the Indians as a bequest from their prophet Suné, and which, on that account, has sometimes been supposed not to be indigenous. The culture of the tea-plant has been tried in Brazil, and the soil and climate have been found suitable to its growth; but its culture has not made, and could not rationally be expected to make, any progress, inasmuch as it can only be successfully carried on where labour is abundant and cheap; whereas it is here both scarce and dear.

The forests of Brazil, which are of vast extent and lux-

## BRAZIL.

variance, furnish almost every variety of useful and ornamental wood; their products being adapted alike to ship-building, carpenter's work, cabinet work, dyeing, &c. The cocoon-tree is plentiful in the sandy soils along the coast. It is thicker and taller than in the East Indies: cocoa is in general use among all ranks, and forms one of the chief articles of the internal trade. The carraçato or castor-tree, is an indigenous production, and is much cultivated for the sake of the oil extracted from its seed, in general use for lamps and other purposes. The jacarandú, or rose-wood, is peculiarly valuable for cabinet work. One of the most valuable woods the *Casapinia Brasileira*, or Brazil wood (called *seripitanga* by the natives), producing a beautiful red dye, has been already referred to. It is found in the greatest abundance, and of the best quality, in the province of Pernambuco; but being a government monopoly, it has been cut down in so imprudent a manner, that it is now seldom seen within several leagues of the coast. There are also cedars, logwood, mahogany, &c. The forests of Brazil yield large quantities of coudchout, now become an article of much importance, with nuts, &c.

**Animals.**—The Brazilian forests are full of rapacious animals; among which are the tiger-cat, the hyena, the sarata, an animal about the size of a fox but far more ferocious; the jaguar, or tiger of S. America, the sloth, and the porcupine. The plantain is much annoyed by omices; wild dogs are common, and the singular animal called the anta, or tapir: the latter resembles the hog in shape, but is much larger; it is, in fact, the largest of the native quadrupeds, is timid and harmless, feeds like a horse, is amphibious, and capable of remaining for a long time at the bottom of lakes without coming up to breathe. When killed, its flesh is generally eaten, and is said to differ but little from that of the ox.

The useful animals, as the horse, ox, and sheep, are all descended from the stocks brought from Europe by the early settlers. Their increase, especially that of cattle and horses, has been astonishingly great. Vast herds of wild cattle are met with in all the open parts of the country, particularly in the *hamas*, or plains of the S. provinces. Some idea of the numbers of these cattle may be formed from the fact stated by Mr. Luccock, that a single individual, Jose Antonio dos Anjos, slaughtered, in a single season, 54,000 head of cattle! Hides, tallow, jerked beef, horns, and bones, have long formed, and still continue to form, leading articles of export from Brazil. Above 300,000 hides have frequently been exported from Rio only in one season; and their total export from all the ports of the empire may be estimated at from 650,000 to 800,000 a year! It is only in particular situations that any use is made of the beef, which mostly becomes the prey of vultures, wild dogs, and other ravenous animals. Sheep being less able to defend themselves from attack, and being probably, too, not so well suited to the country, have not increased so rapidly as cattle and horses. Horses are of middle size, strong, active, and fleet. From 40,000 to 50,000 are said to be annually sent to the North. (*Modern Traveller*, xix, 392.)

The emu, or American ostrich, is found in the Brazilian plains; and the forests swarm with innumerable varieties of birds, monkeys, &c. In the marshy countries the boa attains to an enormous size, and they are also infested with the coral-snake, and other venomous reptiles.

**Manufactures.**—These, unless we call the preparation of sugar a manufacture, can hardly be said to exist in Brazil, and are restricted to the production of the coarsest species of cotton cloths, the tanning of leather, and a few of those that are simplest and most necessary; but a great number of trades are necessarily carried on. "The European stranger in Rio," says Dr. Von Spix, "is astonished at the number of gold and silversmiths and jewellers, who, like the other tradesmen, live together in one street, which calls to mind the magnificent *rues de Ours* and *de Prats* of Liebon. The workmanship of these artisans is, indeed, inferior to that of the European, but is not destitute of taste and solidity. Many trades which are very necessary in Europe are, at present, almost superfluous in the interior of this country, on account of the circumscribed wants of the inhabitants. In the capital, however, and the other towns on the coast, joiners, whitesmiths, and other artisans, are numerous; but tanners, soapboilers, and workers in steel, are scarce. There is a great demand for mechanics to build sugar and other mills, to construct machines for working the gold mines, &c.; and very high wages are paid them. Hitherto no glass, china, cloth, or hat manufactures, have been established in the capital; and their erection would not be advisable in a country which can obtain the productions of European industry on the lowest terms, in exchange for the produce of its rich soil." (*Travels*, i, 198.)

**Commerce.**—The trade of Brazil is very extensive: her existing commercial system is one of great freedom and liberality, and is well calculated to accelerate the development of her resources. The duties on imports and exports are both moderate, and are imposed for the sake of revenue,

and not for prohibition: her imports comprise most sorts of manufactured goods suitable for her population and climate, particularly cottons, linens, woollens, and hardware, from England; flour, coarse cottons, beef, pork, &c., from the U. States; wine, silks, salt, brandy, olive oil, &c., from France and Portugal; linens, lace, pitch, &c., from Hamburgh, &c. Cottons, which are by far the principal article of import, are mostly all brought from England; and the importance of the Brazilian market may be learned from the fact that, in 1837, when the trade of this country was unusually depressed, the declared value of the various descriptions of cotton goods shipped for Brazil amounted to £1,014,483. During the same year, our exports of all sorts to Brazil amounted to £1,824,083; but in ordinary years they now generally amount to about £2,500,000. The total amount of the exports from the U. States to Brazil, during 1837, was \$1,743,909; of which \$1,301,217 were domestic, and 441,998 foreign produce. Perhaps we may estimate the total value of the imports of ordinary merchandise at £4,000,000 or £4,500,000 a year.

But the largest and most valuable of all the articles imported into Brazil does not appear in the list of imports. According to a convention entered into by this country with the Brazilian government, the importation of slaves into Brazil should have entirely ceased in 1830. Far, however, from this being the case, the belief is, and it appears to be perfectly well founded, that their importation is carried on to as great an extent at present (1839) as at any former period. There is, in fact, no reason to think that it has sustained any material interruption from the convention alluded to, and the measures we have taken in relation to the trade. It is difficult, on such a subject, to get at anything like accurate information; but Mr. Fowell Buxton, who has carefully inquired into the facts, is of opinion that the importation of slaves into Brazil, since 1830, cannot be estimated at less than 78,000 annually: (*African Slave Trade*, 1839, p. 12.) And, immense as this amount may appear, there seem to be pretty strong grounds for thinking that it is but little, if anything, above the mark. It is affirmed, by those who have had good means of coming at the truth, that recently upwards of 50,000 slaves have been imported in a single season into Rio only!

Whatever may be the ultimate effect of this prodigious importation of Africans, there appears little hope of its speedy reduction. The boundless extent of fertile and unoccupied land in Brazil admirably suited for the growth of sugar, coffee, cotton, and other colonial staples; the growing demand for them, and the thinness of the existing population, which prevents the planters from extending their concerns so rapidly as their interest requires, constitute irresistible temptations to the importation of slaves; while the limited extent of the voyage, and the facilities which the all but interminable coasts and numerous bays of Brazil afford for their secure landing, enable them to be introduced with as ease and expedition unknown anywhere else. The making the trade piracy, and the capital punishment of those engaged in it, might, perhaps, do something to check it; but we doubt whether anything short of this will be found to be effectual.

The articles of export from Brazil have been already enumerated in our account of the productions of the country. The principal are coffee, sugar, and cotton; and then follow hides, and other animal products, gold and diamonds, cabinet and dye-woods, drugs, gums, nuts, &c. The export trade of Brazil is principally carried on with Hamburgh and the other Hanse towns, and the United States. This would not, however, be the case, were it not that Brazil sugar and coffee are virtually excluded from our markets. Were the duties on these articles reduced, so as to admit of their being brought into home consumption, our trade with Brazil would be very much increased. At present we obtain payment for the principal part of our exports to Brazil, at second hand, by drafts on Hamburgh and New-York.

For some account of the money, weights, and measures of Brazil, see PORTUGAL.

On the next page is a statement, derived from the best authority, of the average amount of the exports of Brazil, specifying the amounts shipped from each province, and the values at the port of shipment.

**Population.**—The population of Brazil, in 1830, is stated by Canebah, upon the authority of documents existing in Brazil, to amount to 5,735,592. Malte-Brun estimates it for the same year, at 5,340,000. Balbi computes the total at 5,300,000, subdivided as follows:

|                                              |           |
|----------------------------------------------|-----------|
| Portuguese, or Filhos do Reino, Creoles, &c. | 900,000   |
| Mestizos (free) and mulattoes                | 600,000   |
| (slaves)                                     | 250,000   |
| Free negroes                                 | 180,000   |
| Negro slaves                                 | 2,936,500 |
| Converted Indians                            | 300,000   |
| Independent Indians, European settlers, &c.  | 150,000   |

# BRAZIL.

A Statement of the Average Amount of the Exports of Brazil, specifying the Amounts shipped from each Province, and the Value of the Shipment.

| Middle Provinces.                                                                                        |                  |    |                  | £       | £       | £         |

| Northern Provinces.                                                                                      |                  |    |                  |         |         | 2,850,000 |
| BANIA.—Coffee . . . . .                                                                                  | bags, 10,000     | —  | 3 10 0 per bag   | 35,000  |         |           |
| Cotton . . . . .                                                                                         | — 47,000         | —  | 4 0 10 —         | 190,000 |         |           |
| Sugar . . . . .                                                                                          | cases, 58,000    | —  | 10 0 0 per case  | 580,000 |         |           |
| Tabacco . . . . .                                                                                        | packages, 15,000 | —  | 3 5 0 per pck.   | 50,000  |         |           |
| Drugs, hides, leather, rice, rum, &c.                                                                    |                  |    |                  | 30,000  |         |           |
| CEARA.—Cotton . . . . .                                                                                  | bags, 14,000     | —  | 4 12 0 per bag   | 65,000  | 875,000 |           |
| Hides . . . . .                                                                                          |                  |    |                  | 5,000   |         |           |
| MACAO.—Cotton . . . . .                                                                                  | bags, 10,000     | —  | 4 10 0 per bag   | 45,000  |         |           |
| Sugar . . . . .                                                                                          | cases, 3,000     | —  | 10 0 0 per case  | 30,000  |         |           |
| MARANHAM.—Cotton . . . . .                                                                               | bags, 75,000     | —  | 4 10 8 per bag   | 340,000 | 75,000  |           |
| Rice . . . . .                                                                                           |                  |    |                  | 60,000  |         |           |
| PARA.—Cocoa . . . . .                                                                                    | bags, 60,000     | —  | 0 16 8 per bag   | 50,000  |         |           |
| India rubber . . . . .                                                                                   | tons, 300        | —  | 66 13 4 per ton  | 20,000  |         |           |
| Isinglass, rice, drugs, and cotton                                                                       |                  |    |                  | 180,000 |         |           |
| PERNAMBUCO.—Cotton . . . . .                                                                             | bags, 60,000     | —  | 5 0 0 per bag    | 300,000 |         |           |
| Hides and dye-woods . . . . .                                                                            |                  |    |                  | 190,000 |         |           |
| Sugar . . . . .                                                                                          | cases, 20,000    | —  | 10 0 0 per case  | 200,000 |         |           |
| PARAIBA.—Cotton . . . . .                                                                                | bags, 20,000     | —  | 5 0 0 per bag    | 100,000 |         |           |
| Sugar . . . . .                                                                                          | cases, 5,000     | —  | 10 0 0 per case  | 50,000  | 150,000 |           |
| Southern Provinces.                                                                                      |                  |    |                  |         |         | 2,430,000 |
| RIO GRANDE OF THE SOUTH.—Hides and tallow (chiefly coastwise to other ports, but), foreign export, about |                  |    |                  | 100,000 |         |           |
| SANTOS.—Sugar, rice, and coffee (much direct to Rio, but), foreign export .                              |                  |    |                  | 100,000 |         |           |
|                                                                                                          |                  |    |                  |         |         | 300,000   |
|                                                                                                          |                  |    |                  |         |         | 5,580,000 |

But we are satisfied that the highest of these estimates is very decidedly under the mark, and that the population of Brazil may at present (1839) be safely estimated at from 6,500,000, to 7,000,000. Exclusive of the immense importations of negroes from Africa, amounting, as previously seen, to about 80,000 a year for several years past, the white immigrants have, in some late years, amounted to from 8000 to 9000. But, supposing the entire immigration of whites and blacks to have averaged 80,000 a year since 1829, that would make, in the interval, an addition to the population of about 800,000; for, owing to the indulgent way in which slaves are treated in Brazil, the presumption seems to be that their natural increase, during the period in question, will have, at least, equalled the deaths. Even if we were not aware of this extraordinary immigration, the rapid increase of commerce and wealth would leave no doubt of there being a nearly corresponding increase of population.

In Brazil, unlike the Spanish and English colonies, there is hardly any political division of castes, and very few of those galling and degrading distinctions which have been made by all other nations in the management of their colonies. This was not intended by the mother country, but has arisen from the circumstances connected with the colonisation of this vast territory, which rendered intermarriage with the natives inevitable. It is true that, according to the old code, people of colour are not eligible to some of the chief offices of government, nor can they become members of the priesthood; but, from the mildness of the laws, the mixed classes have gained ground considerably, and the regulations against them are evaded, or rather have become obsolete. Marriages between white men and women of colour are by no means rare; and the circumstance is scarcely observed upon, unless the woman be decidedly of a dark colour, for even a considerable tinge will pass for white. The laws as to slaves are peculiarly humane. (*Modern Traveller*, xlix., 91, and the authorities there referred to.)

It will be seen, from the previous table, that the number of the aborigines is very inconsiderable, and the diseases introduced by Europeans are said to produce a fearful mortality among them. At the time when the Jesuits, Anchieta, and Nobrega, exerted themselves to introduce European civilization, an epidemical smallpox suddenly carried off two thirds of the population. (*Southey's Brazil*, i., 394.)

The Brazilerios, or native Brazilians—those born of Portuguese parents in Brazil—amount to about 600,000. They

appear to inherit all the idleness and inactivity of their European ancestors. Weech remarks, "that the very narrow compass in which the necessities of the poorer classes are confined is almost incredible. A hut, constructed of thin poles of wood, plastered together, as it were, with earth, and covered with straw, is ample security against the sun and rain; a straw mat serves them as a bed, seat, and table; a dish and pot complete the house and cooking apparatus; a couple of cotton shirts, a pair of linen trousers, a calico jacket, a pair of wooden shoes, and a coarse straw hat, complete a wardrobe that furnishes them handsomely for a year; and a kitchen garden, a few fruit-trees, and a maridic field, furnish them with a plentiful subsistence. Give them but a viola (a small guitar strung with metal strings), and some tobacco to make their much-loved paper cigars, and their dearest wishes are gratified. Smoking the latter, and strumming on the former, they can beguile entire half-days in a state of enviable forgetfulness, vegetating like the plants. A few fowls, sent to the city from time to time, furnish the necessary supplies; and thus are thousands of families, whose annual income does not exceed 30 milreis" (54 florins—£4 10s.).

The wealthy inhabitants of the country differ only from those of the city in their greater ignorance. Wealth alone possesses value in their eyes; knowledge and character appear to them almost superfluous. The stranger, therefore, who cannot boast of wealth is, in their estimation, a very insignificant person.

Denis gives the following quotation from an unpublished voyage in Brazil, by M. de Tollenare, in which he distinguishes between the vanity of the Parisian and the Brazilian: "The vanity of a Frenchman," says he "peeps out in his conversation, by his pretensions to wit; if he be rich, he wishes everybody to believe that he owes his wealth to his talents, although it is more frequently due to chance. His luxury will be the expression, more or less happy, of good taste. He refines upon the conveniences of life; follows the most absurd fluctuations of fashion; pretends to an admiration of the fine arts, while he admits within the circle of his friends only those who manage flattery with address."

"The Brazilian, infected with the sin of vanity, is self-satisfied, and does not care to conceal it; whatever may be the source of his wealth, he never considers the means by which he obtained it as any reproach to him; he never strives to disguise them; let him be rich, and he is in-

## BRAZIL.

amenable to shame; when he is poor, he is perpetually exhibiting 'maldress.' His luxury is rude and solid; his admiration rests upon substantial ornaments and massive jewels. Both men and women bestow much attention on their toilet, when they appear in public; 'Madame' repairs to mass, attended by a numerous retinue of slaves, richly attired; and on her return, she perhaps squats upon a mat, to eat, with her fingers, dry fish and mandioc!"

The planters of Brazil are very similar to those of other countries. The possession of an *engenho* (sugar plantation and manufactory) establishes, among the cultivators, a sort of nobility. A *senhor d'engenho* is always spoken of with respect; and to attain this rank is the object of every one. When the *senhor* is in the company of his inferiors, or even of his equals, he is reserved, holds his head high, and speaks in that loud and commanding tone, that betokens the man accustomed to be obeyed. (*St. Hilaire*.)

The mulattoes (commonly called *Pardos*, signifying of a brown colour, for the term *mulatto* is regarded as a reproach in Brazil) are the offspring of Europeans and negroes. They show considerable ingenuity and perseverance in the mechanical arts, and are even said to display a taste for painting.

There can be no doubt of the effectual influence of the mulatto in the political affairs of the country; a physical organization essentially energetic, and which fits him to bear up against the heat of the climate; his activity and his intelligence point him out as a person likely to make a conspicuous figure in a revolution, if not to organize a movement.

The Creoles are those born in Brazil of African parents; the *Mamelucos* are the offspring of whites and Indians; the *Curiobocos*, of negroes and Indians; and the *Cubros* of mulattoes and negroes. The African negroes form, as has been seen, a very large proportion of the population. Their condition, though not equal to that of the slaves in Buenos Ayres and the adjacent countries, is upon a far better footing than in many other colonies. It varies, however, in the different provinces, and the course of restraint is milder in those situated in the interior. In the provinces formerly inhabited by the less warlike races among the Indians, who formed early alliances with Europeans, the introduction of negroes has been less necessary. Such, for example, is the case with Rio Grande do Sul, Uruguay, San Paulo, and the countries traversed by the Amazon. The negro population is most numerous in the provinces devoted to the raising of sugar and coffee, as Bahia and Rio Janeiro; and in these probably they have the greatest facilities for obtaining their liberty. The negroes brought to Brazil belong generally to Angola, Angula, Benguela, Cabinda, Mozambique, and Congo. Since the recent attempts to repress the trade, Koro-mantinos, or negroes from the Gold Coast, who are thought to possess a greater degree of intelligence, are not so frequently met with. There are three modes by which the negroes of Brazil obtain their liberty: it may be granted them by their master while living, or he may bequeath it to them by his will, or they may obtain it by ransom.

There is a practice said to be common in Brazil, which tends in some measure to alleviate the horrors of slavery. If a stranger passing in the street, or being in a dwelling, hear the cries of a negro undergoing the *bestinado*, his voice may immediately arrest any further chastisement. Every one, however incensed, is bound to cease instantly, under pain of committing a grave injury against the party who implores his clemency, and whose words possess all the force of an official command. "Basta, basta, Senhor!" Enough, enough, sir! are the words employed upon this occasion. The free negroes, of whom the larger number are found in Rio and San Salvador, do not prove such useful members of society in the cities as in the country, where they not unfrequently become wealthy farmers.

The Brazilians divide the Indian races into "Indios *mancos*," civilized or converted Indians speaking the Portuguese language, and *Tavios* or *Gentios*, or wild hordes.

The general opinion has been that the whole American race, from the polar regions to the straits of Magellan, offered no distinctive traits, and that it was almost impossible to subdivide it. There appear, however, to have been two dominant races in Brazil, which, though analogous as regards certain customs and traditions, seem nevertheless to be pretty distinct.

The *Tapuyas*, or natives of Brazil, are robust and well made; the colour of their skin, somewhat resembling copper, is found to be of various shades among the different tribes; they have prominent cheek-bones, their hair is black and sleek, and hangs over the shoulders, and instances are related by Roulox Baro of its growing so luxuriantly as to form a sort of garment. They are in the habit, like other American races, of painting themselves red and other colours; they pierce the under lip, for the purpose of introducing a light wooden ring or some other ornament, which they prize beyond precious stones, and never remove. It

has not been clearly ascertained whether all the tribes of the *Tapuyas* were anthropophagi in the full extent of the word; that is to say, that they sacrificed their enemies to their vengeance. There is no doubt, however, that the greater part of them were cannibals. It has been said that it was the custom of the *Tapuyas*, when very old, to give themselves as a burnt-offering to their children, who devoured them after having put them to death!

The other dominant race consisted of the collective tribes known under the common name of *Tupis*. The chief of these was the *Tupinambas*. Before the conquest of Brazil, they formed establishments of towns, containing from 5000 to 6000 inhabitants, of which, however, at the present day, no vestiges remain. Like all the other natives, the *Tupinambas* painted their skins a bluish-black and red, and though the devices were arbitrary, they bestowed much care upon them, and a whole day was not unfrequently occupied in delineating those singular combinations in which they delighted. Among the *Tupinambas*, the chief was at the same time elective and hereditary; that is to say, that the preference was generally given to the son as his father's successor, though the custom does not appear to have been immutable. It is related that Montaigne, on meeting an Indian chief at Havre, inquired, through an interpreter, what was his right among his tribe; upon which the latter replied, "It is that of marching foremost to the battle;" and this might be said to express succinctly the extent of power assigned to him by his people. The *Tupinambas* inhabited chiefly the coast from the river Camama to that of San Francisco. The *Corvados* were formerly very numerous, but are now reduced to a number comparatively insignificant. They dwelt chiefly on the banks of the Rio *Xipoti*, in the prov. of Minas Geraes. They have one trait that distinguishes them from most other Indian tribes, i. e., they bury their dead. The *Corvados*, it appears, have lost much of their primitive ferocity, but also much of their former courage and intelligence. They have a curious festive dance, which they perform round a large vessel of liquor. The chief holds a maraca or castanet in his right hand, and dances round the vessel; his motions are accompanied by a low monotonous singing; all the rest stand motionless round the vessel, staring at him, and sometimes break out into immoderate cries. After the chief has partaken of the liquor, he hands it round to the others, and they generally continue drinking until they become intoxicated.

The *Cafusos*, a mixture of Indians and negroes, are a very singular race. What gives them a peculiarly striking appearance, is the excessively long hair of the head, which, especially at the end, is half curled, and rises almost perpendicularly from the forehead to the height of a foot or a foot and a half; thus forming a prodigious and very ugly kind of peruke. This strange head of hair, which seems more artificial than natural, is merely a consequence of their mixed descent. (*Spiz and Martins*, i. 324.)

The *Puris*, at the commencement of the present century, are supposed to have amounted to about 4000, and were at that time very troublesome enemies to the Brazilians. Not less than 144 *fazendas* have been from time to time destroyed by them. The Rio Doce, the S. banks of the Parahyba, San Fideli, and the country watered by the Rio Fomes, in Minas, are the chief points exposed to their incursions. This race is more implacable than any of the Indian races of Brazil.

The *Botocudos*, descended from the *Aymores*, occupy at present the territory lying between the Rio Doce and the Rio Pardo. In the savagery of their nature they can scarcely be exceeded by the *Puris*. The name given to them by the Portuguese is derived from *botoku* or *botocue* (literally the bung of a cask), and is in consequence of the circular ornament which they wear in their ears and lips.

There are many other tribes, such as the *Cottas*, *Toponazes*, *Carthas*, *Maconis*, *Chiquitos*, &c., &c.

The Indians of Brazil are generally of a short or middle stature, and mostly of a robust build make. It is seldom that some of a taller and more slender shape are seen among them. They generally go naked; some, however, have a slight covering round the hips, and even where this is not the common practice, the women of particular races frequently use a sort of covering in the presence of Europeans. They almost universally paint their skins, and are fond of ornamenting their heads with feathers. The colour of their skin is a darker or lighter copper, differing according to the age, &c., of the individual. Their skin is very fine, soft, and shining. They live in irregular monogamy or polygamy. While the man is solely occupied with the chase, war, and making his arms, all the cares of the domestic concerns fall on the women. They subsist chiefly on the products of the chase, fishing, roots of various kinds, fruits found in the woods, and honey.

The general language is the Guarani or Brazilian, called also *Tupi*, and may be considered as one of three chief dialects of a primitive idiom. The three languages known as

## BRAZIL.

the Guarani form a family, which differs not only from all the languages of S. America, but also from all those of the New World.

*Literature, &c.*—It was not till 1806 that a printing press was introduced into Brazil, at Rio, by John VI., on his arrival from Portugal. A newspaper was immediately established, and it is a curious fact, that only thirty years ago there should not have been a single journal in a country where more than thirty periodical publications are now regularly issued.

The first work of importance published in Brazil did not, however, appear, until 1817. It was the *Corographia Brasileira, ou Relações historicas geograficas do Reino de Brazil*, by Manoel Ayres de Caxal, printed at Rio, in 9 vols., 4to. The work of Henderson, "A History of the Brazil," 4to. London, 1831, is almost wholly translated from the above. The few works written by Brazilians prior to the commencement of printing in Brazil, were printed at Lisbon.

Minas Geraes has produced a poet in the person of Gonsaga, whose songs are extremely popular among the people. His poems, chiefly lyrical, under the title of "Músicas do Dracão," por T. A. G., were published at Bahia, in three parts and have gone through numerous editions. The first part had reached a fourth edition in 1812. When Brazil shall one day have a literature of its own, Gonsaga "will have the glory of having attempted the first Anacronistic tunes of the lyre on the banks of the pastoral Rio Grande and of the romantic Jequitinhonha."

Notwithstanding Pedro I. has founded two universities, literature appears to make no progress in Brazil. The journals would seem to engross all the literary talent of the country, though none of them can be said to be conducted with ability, or to have attained an extensive circulation. The *Mercantile Gazette*, at the head of the periodical press, numbers about 3000 subscribers. An imitation of the "Penny Magazine" has been attempted at Rio, but the projectors having fixed the annual subscription at 50 francs per annum, its success has not been very great. The three journals which have the largest number of subscribers are the "Aurora" (about 800), the "Official Courier" (about 700), and the above-mentioned "Commercial Gazette of Rio de Janeiro" (about 9000). A "Journal of the Parliamentary Debates" was attempted, but did not pay the cost of printing. In the year 1833, thirty-five journals were published in Brazil, of which five were of a literary and scientific tendency; four of the latter being printed in Rio itself. None of the journals devote much space to criticism, and they are all of a very inferior description.

A Portuguese translation of the French work, "The Art of being Happy" (of which five editions were speedily exhausted in the original), met with very little success, although the impression was only 500. Not so, however, with the celebrated Portuguese work, "The Art of Stealing," which is to be found in nearly every house in Brazil!

It is very rarely that any work is a source of profit to its publisher, with the exception of a journal; it is the custom here for the writer to pay for the insertion of his articles in the journals, instead of receiving any remuneration for them.

It is a difficult matter to find compositors in Brazil, and when found, they will only hire themselves for the lightest possible works. They are generally young mulattoes. Printers usually employ their slaves.

There are some good French booksellers at Rio, who keep, for the most part, epitomes and manuals. A Portuguese translation of "Fables" appeared in 1836, and was bought up with avidity.

We are indebted to the journal "Das Aualand," 1838, Nos. 62, 63, for the greater portion of the above information.

*Education.*—The greatest want of Brazil at the present moment seems to be that of good elementary instruction. Hitherto most schools established in the country have been under the control of ecclesiastics, alike bigoted and uneducated. The increase of such schools would be an evil rather than a good. Luckily, however, the influence of the clergy is every day becoming less powerful; and several respectable academies have been opened in most of the large towns by parties not under their guidance. But, speaking generally, there are as yet no means in Brazil by which even the children of the middle classes can acquire anything like a really good and useful education. Till some efficient measures be taken to supply this defect, but little improvement need be looked for either in the morals or literature of the people.

*Income and Expenditure.*—At an average of the years 1832-33, 1833-34, and 1834-35, the income and expenditure of Brazil were as follows:

|         | Income.             | Expenditure.        |
|---------|---------------------|---------------------|
| 1832-33 | 12,332,265 dollars, | 12,602,975 dollars, |
| 1833-34 | 12,978,029          | 12,016,601          |
| 1834-35 | 14,819,561          | 12,908,250          |
| 440     |                     |                     |

The budget for the year ending the 30th of June, 1839, was fixed as follows:

| Ministry of the interior | 1,527,073 dollars, |
|--------------------------|--------------------|
| Do. justice              | 806,945            |
| Do. foreign affairs      | 163,446            |
| Do. marine               | 2,131,030          |
| Do. war                  | 3,113,234          |
| Do. finance              | 5,877,965          |
| Total                    | 12,622,686         |

The revenue for the same year was estimated by the minister at \$12,663,969. It principally arose out of the customs' duty of 15 (now 30) per cent. on imports, and 2 per cent. on goods exported, including transshipments, &c.; from tenths and duties on the sale of lands and houses; the mining duties, and the revenue of the diamond district; 15 per cent. on the export of hides from the Rio Grande; and a variety of other items. In 1835-36, the customs' duty of 15 per cent. on imports produced, exclusive of the provinces of Rio Grande and Para, \$6,921,489. The total debt of Brazil may be estimated at \$15,000,000.

*Government and Administration of Justice.*—Prior to 1808, Brazil was merely a Portuguese colony, but on the arrival of John VI., it was raised to a kingdom. In August, 1822, Brazil was forcibly separated from the mother country, and erected into an empire, and Don Pedro declared emperor. In 1824, the present constitution was drawn up, and on the 30th March, in the same year, was accepted by the emperor, who, conjointly with the two chambers, took the oath of allegiance to it. The spirit of the constitution is monarchical, and its principal heads are as follows:

"The empire of Brazil is free and independent. Its government is monarchical, hereditary, constitutional and representative. The reigning dynasty is that of Don Pedro. The Roman Catholic is the established religion; all other religions are tolerated, but their places of worship can receive no ecclesiastical marks of distinction. The political powers recognised by the Brazilian constitution are four in number: The legislative or two chambers, the moderating or the emperor, the executive, and the judiciary. The emperor and the general assembly represent the Brazilian nation; all their power flows from the nation. In the general assembly resides the legislative power, subject to the sanction of the emperor. The general assembly is composed of two chambers, the chamber of deputies and the senate. The senators are elected for life, and chosen by the provinces. The chamber of deputies is elective and temporary. To the chamber of deputies alone belongs the right—1st, of imposing taxes, and regulating all matters of finance; 2dly, of choosing a new dynasty in case of the failure of issue of the reigning. The proceedings of each chamber are public, excepting where the exigency of the state demands their being secret. No senator or deputy can be arrested during the continuance of his mandamus. It is not lawful to be at the same time member of both chambers. The power of judging the individual offences of members of the royal family, ministers, councillors of state, senators, and deputies, belongs solely and absolutely to the senate. The executive power resides with the emperor, which he exercises by means of responsible ministers. The emperor calls together the general assembly, declares war, and concludes peace; but whenever the safety of the state allows, he has recourse to the advice of the general assembly. The ministers are responsible, and are impeachable on the ground of treason; embezzlement of the public money, or property; of corruption, or extortion, or abuse of power, or violation of the freedom, safety, and property of the citizen. Any elector is eligible for a deputy, provided he derive from his property, trade, or employment, a specified net revenue.

The number of senators is 54, and of deputies 548. Each senator and deputy receives a certain amount of salary. Parliaments are quinquennial, and each meeting lasts four months. The executive power is delegated to six ministers, under whose control are placed all matters connected with the interior, foreign affairs, justice, marine, war, and finance.

Brazil is divided into eighteen provinces, for the purposes of district government, and their affairs are administered by as many presidents, who are styled "presidentes de provincias."

The affairs of the emperor's palace employ 255 persons. The diplomatic body is composed of two envoys-extraordinary, one resident at the court of France, the other at that of England; there is also a resident in Austria, and a chargé d'affaires in Portugal, Spain, Belgium, the Hanseatic Republics, Prussia, Rome, Naples, Florence, &c. In America there are three; viz., in the U. States, at Buenos Ayres, and at Monte Video. The secretaries and attachés amount to 18.

The Brazilian aristocracy, in 1837, was composed as follows: 16 marquises, 6 counts, 19 viscounts, 30 barons, and

## BRAZIL.

22 ladies, preserving the titles of their deceased husbands. The nobility is not hereditary.

Brazil was recognized as an independent empire by Portugal, Sept. 7, 1822, and subsequently by the other cabinets of Europe.

Don Pedro II., the present emperor, was born Dec. 2, 1825, and therefore is not of age to govern in Brazil until 1842. A provisional council of regency was formed on the abdication of Don Pedro, consisting of three members, nominated by the senate. This council was soon succeeded by another, but the power was shortly afterward vested in an individual, in which manner it is still exercised. The present regent is Don Diego Antonio Feijó. His authority comes in the course of 1839, and the regency then devolves upon the heir apparent to the crown, Donna Januária, sister of the emperor, born March 1, 1821.

As regards legislation, everything remains to be done in Brazil. Where a statute-book is wanting, the administration of justice must be fluctuating and uncertain. The criminal code is a curious memorial of the turbulent times of 1830, when it was compiled, state offences being treated in it with the greatest indulgence. In consequence, government found it imperatively necessary, on the increase of crime in the provinces, and the progress of disaffection in the disturbed districts of Para, Rio Grande do Sul, and San Pedro, to have recourse to far stronger punishments than were warranted by the letter of the law.

As the prosecution of criminals is left to the parties who have been injured, it not unfrequently happens that crime goes altogether unpunished, parties being unwilling to undergo the expense and trouble of prosecution. The consequence of this system of administration of the law is, that private revenge very often supplies the place of public justice. Mathison (p. 138) mentions an authenticated case of an individual who had committed no less than four assassinations in one year, from motives of private revenge, and in every instance he escaped without being called to any account.

**Religion.**—The established religion of Brazil is the Roman Catholic; but all other religions are tolerated. One of the chief sects at Rio is that known under the name of Sebastianists, in honour of the patron saint of Rio. Their chief point of belief is the re-appearance of the king Don Sebastian of Portugal, killed in the disastrous battle of Alcazarquivir, in 1578, who they suppose did not perish, but are firmly persuaded that he is still alive! This, in fact, was long the popular belief in Portugal.

Ecclesiastical affairs are under the direction of an archbishop, at Bahia (originally a bishopric, being the first founded in Brazil, in 1533, and raised to the archiepiscopal rank in 1607); six bishops: viz., at Rio, Pernambuco, Maranhão, Para, and San Paulo; and two "prelacies," with episcopal powers: viz., Goyaz and Cuyaba. The church of Brazil has been for some time engaged in a dispute with Rome, as to the appointment of the bishops, the pope claiming the sovereign right of nomination, which the church rejects.

Monasteries and nunneries are extremely numerous in many parts of Brazil. The saints' days are represented by many to be celebrated in a manner as splendid as at Rome herself. A recent writer (Dénis, p. 132) observes, that neither the carnival at Venice, nor the declining masquerades of Paris, can convey an exact idea of the tumult and extreme absurdities which prevail during the days of the "entrudo," or carnival, not only at Rio, but throughout the cities of Brazil. Luckily, however, measures have been taken for lessening the number of these nurseries of vice and idleness. The revenues of many of them revert to the crown after a certain period, and no new member can now be admitted.

**Army and Navy.**—The land forces amount to from 60,000 to 65,000 men; of whom 15,000 are regular troops. The latter have received considerable additions of late years, for before the last insurrection they did not exceed 8000.

The remainder of the military force consists of regular and local militia: the former may be despatched on foreign service, while the latter does not leave the place of their abode.

The local militia, in which every man from sixteen to sixty, who is not already enrolled in the regular militia or the troops of the line, may be called upon to serve, constitutes an important defence, and is chiefly employed in maintaining internal order. One great use may be said to be that of keeping up a certain military order among the people. Its chief officers are the "capitão mor," or colonels.

The navy numbers 1 ship of the line, 5 frigates, 6 corvettes, 13 schooners, 4 steamers, &c.; but they are all in a very inefficient state.

**Discovery and Historical Sketch.**—It is generally believed that the first discovery of Brazil was made on the 29th of January, 1500, by the Spaniards, under Vicente Yáñez

Piçarro, a native of Palos, and one of the companions of Columbus. He is said to have touched at cape St. Augustin, and to have subsequently coasted along the shore as far as the river Amazon, and thence to the mouth of the Orinoco. His discovery does not appear to have been attended by any important results, for he made no settlement, but merely claimed the country for Spain.

In the same year, Pedro Alvarez Cabral was appointed admiral of a large fleet sent out by Emanuel, king of Portugal, to follow up the successful voyage of Vasco da Gama in the East. Adverse winds drove the expedition so far W. that, on the 25th of April, Cabral fell in with the coast of Brazil, which he supposed at first to be an island; and on Good Friday the fleet cast anchor in a commodious harbour, to which he gave the name of Porto Seguro. Having taken possession of the country for the crown of Portugal, by erecting a cross, and giving it the name of Terra de Santa Cruz, Cabral proceeded on his voyage, taking care, however, in the first place, to send information of his discovery to his sovereign. Soon after this intelligence reached Portugal, Emanuel despatched a small squadron to explore the country, under the command of the famous Amerigo Vesputi, who had been invited from Seville for that purpose, in 1498, and who made a second voyage in a subsequent year. In 1504, he again returned to Europe, bringing with him a cargo of Brazil wood, &c.

It was not until 1506 that a third voyage of discovery was undertaken to Brazil, as the advantages which had accrued on the former voyages did not appear to have answered the expectations of the projectors. Amerigo Vesputi was then despatched by the king of Spain, to whose service he had returned, to take possession of the country. But this produced a remonstrance from Portugal; and a dispute having arisen among some of the leaders of the expedition, it returned to Spain, without effecting anything of importance. In 1515, another expedition was fitted out from Spain, the command of which was assigned to Juan Diaz de Solís, with the ostensible purpose of finding a passage to the great Pacific ocean. To this navigator is supposed to belong the honour of having discovered the harbour of Rio Janeiro, on the 1st of Jan., 1516, though the priority in this respect has been disputed by the Portuguese admiral, Martin Affonso de Souza. On the return of the expedition to Spain, the Portuguese government claimed the cargoes, and again remonstrated on this interference on the part of Spain.

In the reign of Joan III., the coast was divided into captaincies, many of which extended 50 leagues. It is needless to follow step by step the rising fortunes of the Brazilian territory. Various towns sprung up along the shore, which were subject to the vicissitudes that then usually awaited newly-founded colonies. They were successively taken and plundered by the French, Dutch, English, &c., who, if not expelled, usually contested themselves with a short possession, and abandoned them, after frequently committing the most barbarous atrocities. Notwithstanding these calamities, the colony continued to increase in prosperity and importance under the superintendence of the Portuguese government. But it experienced a severe check on the annexation of Portugal to the crown of Spain in 1580, during the reign of Philip II. As the mines that had been discovered, down to that period, yielded less wealth than those of the Spanish possessions in S. America, Brazil did not receive much favour from that monarch. The Dutch took advantage of this indifference on the part of Spain; and it was not, indeed, until they had made considerable inroads, that an expedition was fitted out, in 1640, to expel them from the territory. About this period, the house of Braganza was restored to the throne of Portugal. After a long and desperate struggle, the Dutch were compelled to evacuate Brazil in 1654. Henceforward it continued in the possession of Portugal, but the latter country being in a very abject, impoverished state, instead of rendering assistance to its colony, was compelled to rest its principal hopes of being able to maintain an independent existence on the wealth and resources of Brazil, which it subjected to all the galling and vexatious restraints of the old colonial system.

In 1806 a new era began in Brazil. The French having invaded Portugal in the course of the previous year, the prince regent, John VI., and his court, accompanied by a large body of emigrants, set sail for Brazil, where they arrived on the 25th of Jan., 1808. Brazil immediately ceased to be treated as a colony. In the course of the same year, her ports were thrown open to all friendly and neutral nations; and by a decree, dated the 15th of Nov., 1814, all nations were allowed to trade freely with them.

The revolution in Portugal in 1820 was very speedily followed by a revolutionary movement of the same description in Pernambuco; and to restore tranquillity, and anticipate the farther progress of revolution, the government, in 1821, proclaimed the adoption of the Portuguese constitution. Soon after this, the king having left Brazil for Portugal, a

## BRAZZA.

struggle commenced between the Portuguese, who wished to recover their former ascendancy over Brazil, and the Brazilians, who were resolved to preserve their newly acquired liberties, which ended in the complete separation of all connexion, other than that subsisting between independent states, between the two countries. The government of Brazil having been entrusted to the crown prince, Don Pedro, he refused to admit the troops sent out by Portugal to support her authority, or to obey the instructions of the king, his father. In the following year, 1822, Brazil was declared to be a free and independent state, and Don Pedro assumed the title of emperor. After several stormy debates, the project of a constitution (see *anti*), submitted by the emperor, was accepted; but the disputes between the emperor and the chamber of deputies having continued, the former abdicated the throne in favour of his son, a minor, in 1831, and, singular as it may seem, the rights of the latter have hitherto been preserved; and some attempts at insurrection by the republican party have been suppressed without much difficulty, and internal tranquillity has been successfully maintained.

Considering the lengthened period during which Brazil has been colonized; its vast extent and fertility; the variety of its productions, and its favourable situation for commerce, its progress in the accumulation of population and wealth has been extremely slow. This apparent anomaly may, however, be easily explained. The slow progress of Brazil, like that of the contiguous *ci-devant* Spanish colonies, is entirely owing to the vicious principles on which it was governed by the mother country; to the rigid exclusion of foreigners from the country; the oppressive restrictions laid on the trade and industry of the colonists; and, more than all the rest, to the ignorance of the Portuguese, and their inferiority, in respect of science and art, to most other nations of Europe. Portugal could bequeath nothing to her colonies but pride, superstition, and intolerance. But since the downfall of the old colonial system, consequent on the emigration of the court to Brazil, the foundations of a new and better order of things have been laid. *Novus seculorum nascitur ordo*. The settlement of thousands of foreigners in Brazil, and the unfettered intercourse she now carries on with all the most civilized countries in the world, have already had the best effects. And though it will require a lengthened period to counteract the joint influence of ignorance, slavery, and a debasing superstition, Brazil is rapidly rising, not merely in the scale of wealth and population, but also in that of civilization.

BRAZZA, an island of the Adriatic sea, near the coast of Dalmatia, dependant on the circle of Spalatro. It is about 24 m. long, by from 5 to 7 broad, and contains twenty villages, with 15,000 inhabitants. It is very mountainous and rocky: in the most elevated parts there are large tracts quite stony, and hardly fit to bear the wildest plants. Great labour and expense are necessary to bring the ground to a fit state for tillage; yet the inhabitants go on progressively increasing their cultivated land, and consequently their vintage, and diminishing their woods and cattle. Its wine is accounted the best in Dalmatia; the other vegetable productions are oil, figs, almonds, and saffron. The corn crop is extremely scanty, scarcely affording subsistence to the inhabitants for three months in the year; hence they are obliged to import to a large extent from the mainland. The stony nature of the soil, and the scarcity of fresh water, subject the island to frequent droughts. Brazza was famous in ancient times for its kids, which still continue in their former perfection. The pastures here give to the flesh not only of kids, but of lambs, a particular delicacy of taste; the milk, too, of this island is far superior to that of the neighbouring countries, so that its cheese is in great repute in Dalmatia, and wherever it is known. Bees and silk are cultivated with some success; and the berries of the lentisk furnish the peasants with oil during a scarcity of olives. This island belonged formerly to the republic of Venice, and was ceded to Austria at the peace of Campo Formio.

BREATHITT, county, Ky. Situated in the E. part of the state, and contains 700 sq. m. Drained by the N. fork of Kentucky river and its branches. It contained, in 1840, 3517 neat cattle, 2894 sheep, 9674 swine; and produced 1692 bushels of wheat, 91,185 of Indian corn, 7749 of oats, 2994 of potatoes, 2648 pounds of tobacco, 4370 of cotton, 12,377 of sugar, 21,017 bushels of bituminous coal. It had nine grist-mills, one saw-mill, nine distilleries. Pop.: whites, 2076; slaves, 119; total, 2195. Capital, Breathitt.

BREATHITT C. H. p. v., 121 m. E.S.E. Frankfort, 530 W. Situated on the E. side of the N. branch of Kentucky river. It contains the county buildings, and a number of dwellings.

BRECHIN, a royal burgh of Scotland, co. Forfar, on a sloping bank on the left side of the S. Esk, 7½ m. W. from its junction with the sea at Montrose. Pop. of the town 5000; of the town and par., 6508. The main street, which runs nearly N. and S., is about a mile in length. Some

## BRECON.

portions of the town are very steep, particularly about the Cross. It was formerly walled, and was also a bishop's see: the bishopric was founded by David I. about the middle of the 11th century; and the portion of the cathedral which now forms the parish church still remains. It was originally a stately Gothic structure, but its architectural beauty and symmetry have been defaced by the bad taste displayed in modern repairs. It is surmounted by a square steeple 120 ft. high. In addition to the parish church, which is collegiate, there are in the town no fewer than four Presbyterian dissenting chapels, and one Episcopal chapel; there is also a new place of worship, recently built, in connexion with the established church. There are various schools in Brechin, all of them conducted on the best principles. In the churchyard, near the cathedral, is one of those round towers, of which there is only another in Scotland, at Abernethy, and which, it is supposed, were built by the Picts, but for what purpose is unknown. It is 106 ft. high, is surmounted by a conical roof of gray slate, and has no staircase, either without or within. In another part of the town is an ancient hospital, called the *Widow's Diet*, now used as a stable; but certain funds which belonged to it afford weekly allowances to poor inhab. being the widows or children of burgesses. The Red Friars seem to have had a monastery here, but all traces of it have disappeared. (*Keith's Scot. Bishops*, edit. 1894, p. 397.) But, interesting and venerable as Brechin is for its antiquities and its historical and ecclesiastical name, it is no less important now, though in a very different department—that of manufactures. Its staple manufacture is linen, partly bleached (hence the number of bleaching-grounds in the immediate vicinity), and Osnaburghs, sackcloth, coffee and cotton bagging, &c. "The particular branches of manufacture," to quote from the *New Statistical Account* (No. 1. § Brechin), "are heckling, spinning, weaving, and bleaching." There may be employed in heckling about 30 men and women; in spinning, 500; in weaving, from 1000 to 1500; in bleaching, from 40 to 50. Besides the above branches of manufacture, two distilleries for spirits, three nurseries, and three lime-works, have been for some time in full operation in the immediate neighbourhood of the town." Brechin unites with Montrose, Forfar, Bervie, and Arbroath in sending a mem. to the H. of C. Registered electors, in 1838-9, 335. Of the eminent men which this place has produced, the late Dr. John Gillies, author of a valuable history of Greece, a translation of the *Poetics* of Aristotle, and royal historiographer for Scotland, deserves special mention.

Brechin castle, which has been for many years the residence of the Mailes of Panmure, stands on a precipice overlooking the Esk, and is separated from the town by a deep ravine. This castle was formerly a fortress. In 1298 it withstood a siege of twenty days by the English under Edward I.; and surrendered only when Sir Thomas Maule, its brave commander, was killed.

BRECKENRIDGE, county, Ky. Situated in the N. part of the state, and contains 700 sq. m. Bounded N.W. by Ohio river, and S. by Rough creek, a branch of Green river. It contained, in 1840, 8557 neat cattle, 13,846 sheep, 23,931 swine; and produced 75,430 bushels of wheat, 3093 of rye, 358,359 of Indian corn, 119,932 of oats, 30,327 of potatoes, 1,807,104 pounds of tobacco, 4115 of sugar. It had twenty-nine stores, two flouring-mills, fifteen grist-mills, twelve saw-mills, one oil-mill, eight tanneries, one distillery, one academy, 53 students. Pop.: whites, 7230; slaves, 1891; free coloured, 14; total, 8094. Capital, Hardensburg.

BRECKNOCK, t. Lancaster co., Pa., 20 m. N.E. Lancaster. Drained by branches of Muddy creek, which afford water-power. It contains two stores, one fulling-mill, one woolen-factory, two flouring-mills, four grist-mills, six saw-mills, five schools, 145 scholars. Pop. 732.

BRECKNOCK, t. Berks co., Pa. Watered by Big and Little Muddy creeks. It contains one store, three grist-mills, three saw-mills, one oil-mill. Pop. 925.

BRECON, or BRECKNOCK, an inland co. of S. Wales, having N. the co. of Cardigan and Radnor; W. Cardigan and Cernarthen; S. Glamorgan and Monmouth; and E. the latter and Hereford. It is about 35 m. in length, by about 30 m. in breadth, and contains 429,500 acres. It is pervaded by two principal mountain chains, which, with their offshoots, occupy a large portion of the surface. The highest summits are the beacons of Brecknock, Capelant, and Cradle mountain; respectively 2929, 2394, and 2545 ft. above the level of the sea. There are, however, a number of beautiful and fertile valleys. The Wye skirts the co. for a considerable distance on the N.W., and it is traversed by the Usk, Taf, and other lesser streams. Climate rather severe and humid. Though a good deal improved, agriculture is still in a very backward state; and no proper rotation of crops is observed. Oats and barley are the principal objects of attention, but a good deal of wheat is also raised. Turnips are more extensively cultivated than any

## BREDA.

mercy, and the stock of cattle and sheep is also improved. Farms mostly small, and generally occupied by tenants at will. Average rent of land in 1810, 5s. 2d. an acre. Manufactures unimportant, consisting principally of woollen cloth, the produce of domestic industry. There are iron-works on the S. confines of the co., adjacent to those of Merthyr Tydvil, Hirwain, and Rumney, which employed, in 1831, 470 men. Principal towns, Brecon, Crickhowell, and Builth. The Welsh language, though still spoken in different parts of the co., is falling rapidly into disuse. Brecon is divided into six hund. and sixty-six par. In 1841 it had 10,634 inhab. houses, and 53,295 inhab. It returns two mem. to the H. of C., one for the co., and one for the bor. of Brecon. Registered electors for co., 1837-38, 2295. Expenditure for the relief of the poor in 1837-38, £12,946.

Buxton, a bo. and town of S. Wales, cap. of the above co., at the confluence of the Honddu and Tarell with the Usk; 144 m. W. by N. London. Pop. 1831, 4193; 1831, 5026; houses at the latter date, 1150. It is an ancient, irregularly-built town, on a very beautiful and picturesque site; there are three principal streets, which diverge from the high street, and contain many well-built houses: the meanest buildings are towards the approaches, on either side; which, however, on the line of the chief thoroughfare, have been much widened and improved within a recent period: it is paved, and lighted with gas. There are four churches—St. John's, originally attached to the priory; St. Mary's, a chapel of ease (both Gothic, and nearly rebuilt in Henry VIII.'s reign); St. David's, built soon after the Conquest, and one of the oldest in the county; and Christ Church, a collegiate church, established by Henry VIII.: it is extra-parochial, and has a grammar school attached to it. There is an endowed free school for 50 boys, and three or four small charities (the principal of which amounts to £36 a year, for apprenticing poor children), and a borough and county hall, rebuilt in 1770, a good spacious building, in the high street, with the market place under it. There is a promenade along the Usk, under the old town walls, which commands a noble range of mountain scenery; and a more retired one through the priory woods. The Brecknock and Abergavenny canal (35 m. long) commences at this town, and joins the Monmouthshire canal (18 m. long), which last joins the Usk near Newport. There are on it wharfs for coal and lime at Brecon; and a tram road (35 m. in length) at the head, for conveying these and other articles inland. Regular passage and trading boats ply on the canal. Weekly markets are held on Friday for cattle; Saturday and Wednesday for general provisions; and five annual fairs, for stock and agricultural produce (each preceded by a leather fair), 1st Wednesday in March, 4th May, 5th July, 9th September, and 16th November: those of May and November are also statute fairs for hiring servants. There are no manufactures; and its trade chiefly consists in the supply of articles of general consumption to the neighbourhood, which comprises the greater part of the co. The limits of the par. borough comprise the parishes of St. David's, St. John's, St. Mary's; the Castle, and Christ's church precincts, and the ward of Treacast, which is 10 m. off, and only connected with it for election purposes. Its present municipal limits are restricted to about one third of the former, and comprise only the town and some small portions immediately contiguous. It has four aldermen and twelve councillors. Previously to the Municipal Reform Act, courts of petty and quarter sessions for the borough were held, but the business was of trifling extent: there was also a court of record, for the recovery of debts, held weekly, on Mondays and Thursdays, and much resorted to. This and the petty sessions are still held. The assizes and quarter sessions for the county are held in Brecon. Brecon has returned one mem. to the H. of C. since the reign of Mary. Previously to the Reform Act the privilege vested in 11 burgesses. There are 356 qualifying tenements of £10 and upwards: registered electors in 1838, 339. Brecon is the chief polling town of the co. The castle of Brecon was built in 1094, from which period the town also dates its origin; many Norman families then settled in the co., whose descendants still remain. It was surrounded by strong walls: these and the castle were destroyed in the last civil war, by the inhabitants, to prevent a siege, or being saddled with the maintenance of a garrison.

BREDA, a fortified town of the kingdom of Holland, prov. Brabant, cap. arrond. and cant., on the Merk, 24 m. W. S.W. Bois-le-Duc, and 30 m. N.N.E. Antwerp. Pop. 13,000. It is one of the strongest places in the kingdom, being regularly fortified, and defended by a citadel rebuilt by William III. king of England; its position, in the middle of a marsh that may be laid under water, contributes materially to its strength. It is well built, with broad and well-paved streets; has four squares, a fine quay, several canals, an arsenal, town-hall, two Protestant and four Catholic churches, an orphan hospital, &c. The principal Protestant church has a spire 363 ft. in height. The ram-

## BREMEN.

parts are planted with trees, and afford fine promenades. It is the seat of tribunals of primary jurisdiction and of commerce; and has some manufactures of woollen goods, linen, hats, &c., with breweries and tanneries.

Breda was taken from the Spaniards by Prince Maurice, in 1609, by means of a stratagem suggested by the master of a boat who sometimes supplied the garrison with fuel. With singular address, he contrived to introduce 70 chosen soldiers into the town, under a cargo of turf; who, having attacked the garrison in the night, and secured the gates, their comrades came to their assistance, and gained possession of the town. It was retaken by the Spaniards, under the Marquis of Spinola, in 1623; but was finally ceded to Holland by the treaty of Westphalia, in 1648. (*Dict. Geographique, &c.; Watson's Philip II.*, lib. 158.)

BREDE (La), a village of France, dép. Gironde, cap. cant., near Bordeaux. Pop. 1531.

This village would be unworthy notice in a work of this sort, were it not that in its environs is the *Château de la Brède*, where the illustrious author of the *Esprit des Lois* was born, and where he composed the greater part of his immortal works. It is a large gloomy-looking building, in the middle of extensive plains and meadows, and is surrounded by a deep ditch filled with water, over which is a drawbridge. In the chamber used by Montesquieu, the furniture has been carefully preserved as in his time: it consists of a plain bed, a few easy chairs of a Gothic shape, and some family pictures; the room is wainscotted, and from the window there is a fine view over the surrounding country. Montesquieu was much attached to this retreat. "Je puis dire," says he, "que la Brède est un des lieux aussi agréables qu'il y ait en France; un château près, la nature s'y trouve en robe de chambre, et pour ainsi dire au lever du lit." (*Hugo, art. Gironde; Ingis's Switzerland, &c.*, p. 322.)

BREMEN, one of the three free German Hanseatic cities on the Weser, by which it is intersected, 60 m. S.W. Hamburg, and about 37 m. direct distance from Bremerhaven, at the mouth of the Weser; lat. 53° 4' 45" N., long. 8° 48' 3" E. Pop. 43,000. The larger portion of the city, called the *Altstadt*, or old town, lies on the right, and the *Neustadt*, or new town, on the left bank of the river. The streets in the latter are comparatively straight and broad, but those in the former are mostly narrow and crooked, and the houses being high, they have a gloomy appearance. An island in the river is included within the city; the communication between its two great divisions being kept up by a bridge, which crosses this island. The ramparts by which the town was formerly surrounded, have been levelled, planted, and converted into fine gardens and promenades. It has nine churches, of which the cathedral, built in 1160, is the principal: the church of St. Augustinus has a spire 325 ft. in height. The new town-hall, formerly the archiepiscopal palace, is a building of the same elaborate character as the town halls in Bruges and other cities of the Netherlands. There is also an old town-hall, built in 1408, beneath which are the famous wine cellars, containing vats filled with hock, said to be considerably more than 100 years old. It has also an exchange, with concert and ball-rooms; a museum, built in 1801, containing a public library, lecture and reading rooms, &c.; a theatre; a building called the *Schäffling*, or place of meeting of the elder merchants (*Conventiculum Seniorum*); a weighing-house; a *pädagogium* (for scientific instruction), gymnasium, high school, school of commerce and navigation, school of design, &c.; two orphan asylums, and numerous other charitable institutions. One of the most interesting objects in the town is the observatory, from which Dr. Olbers discovered the new planets Pallas and Vesta, in 1802 and 1807. Both sides the river are lined with handsome and convenient quays.

The manufactures of Bremen are pretty considerable. The principal are those for the preparation of mull and cigars, which employ a great many hands. There are also about 100 distilleries; numerous factories for weaving, and establishments for bleaching linen; two factories for the spinning of cotton; nine sugar refineries; with tanneries, sail and canvas factories, soap and candle do., cordage do., oil works, &c. A considerable trade is also carried on in the building and fitting out of vessels.

The situation of Bremen renders her the principal emporium of Hanover, Brunswick, Hesse, and other countries traversed by the Weser. In consequence, she has an extensive and increasing trade. Vessels of large size stop at Bremerhaven, on the E. side of the river, where a new and excellent harbour has been formed on a piece of ground ceded, in 1827, by Hanover to Bremen.

Vessels drawing 13 to 14 ft. water ascend the river as far as Vegesack, 13 m. below Bremen; and vessels not drawing more than 7 ft. water come up to the city. The great articles of import are tobacco, coffee, sugar, and other colonial products; whale-oil, cotton, and cotton yarn, vegetable oil, cheese, butter, wine, tea, rice, iron, spices, dye-woods, &c.

## BREMEN.

Of the articles of export *linens* occupy by far the most prominent place; and next to them are snuff and cigars, with hams and bacon, oak bark, rapa, bones, chicory, oil-cake, refined sugar, quills, soap, lead, vitriol, &c. We subjoin a list of the principal articles imported into, and exported from Bremen, in 1838, specifying the quantity or (where that is not given) the value of each article.

### Principal articles of import in 1838:

|             |                 |                |                |
|-------------|-----------------|----------------|----------------|
| Tobacco     | 23,818,000 lbs. | Pepper         | 95,000 lbs.    |
| Coffee      | 14,498,000      | Tar            | 6,594 tons.    |
| Sugar       | 14,000,000      | Butter         | 1,000,000 lbs. |
| Train oil   | 45,090 tons.    | Cheese (1836)  | 793,417        |
| Cotton      | 6,607 bales.    | Tallow         | 153,000        |
| Cotton yarn | 99              | Rape oil       | 900,000        |
| and twist   |                 | Linsseed ditto | 500,000        |
| Wine        | 11,017 hhds.    | Hemp ditto     | 14,500         |
| Tea         | 900,000 lbs.    | Iron, bar and  | 4,000,000      |
| Rice        | 2,500,000       | plate          |                |
| Hides       | 1,180,000       |                | £c. &c. &c.    |
| Indigo      | 33,000          |                |                |

The total value of all the articles imported by sea into Bremen in 1838 was 15,000,000 rix-dollars, or at 3s. 2d. per rix-dollar) £2,517,500.

### Principal articles of export in 1838:

|                              |                     |
|------------------------------|---------------------|
| Linens, fine fabrics (value) | 3,445,900 rix-doll. |
| bagging                      | 43,319              |
| ticking                      | 164 bales.          |
| Lead                         | 31,437 centners.    |
| Iron and steel ware          | 57,407              |
| Corn and legumes             | 6,821 lasts.        |
| Tobacco, snuff, &c.          | 5,546,479 lbs.      |
| Cigars (value)               | 804,326 rix-doll.   |
| Wheat flour                  | 369,041 lbs.        |
| Butter                       | 334,511             |
| Cheese                       | 965,597             |
| Bones                        | 3,184,742           |
| Leather                      | 149,556             |
| Oak bark                     | 1,767,549           |
| Rapa                         | 1,886,556           |
| Cotton goods                 | 941,787             |
| Chicory, green and dry       | 355,125             |
| Starch                       | 640,730             |
| White lead                   | 109,568             |
| Sugar, refined and coarse    | 366,973             |
| Oil cake                     | 4,691,741           |
| Rape oil                     | 198,638             |
| Ditto seed                   | 211 lasts.          |
| Quills                       | 13,318,800 no.      |
| Tobacco-pipes (value)        | 30,418 rix-doll.    |
| Soap (brown)                 | 9,299 tons.         |
| Ditto in bars                | 334,697 lbs.        |
| Hams                         | 701,530             |
| Syrup                        | 697,953             |
| Bacon                        | 977,890             |
| Juniper berries              | 38,308              |
| Vitriol                      | 137,661             |
| Wax                          | 67,171              |
| Wood                         | 38,085              |

Total value of exports by sea in 1838, 11,508,000 rix-dollars, or £1,920,833. But, exclusive of her trade by sea, Bremen has a very extensive internal trade, on which, indeed, her external trade is almost wholly bottomed.\*

The shipping of Bremen has increased rapidly since 1830. About that period, most colonial and foreign goods were imported in English and American ships, as consignments on foreign account; but since then, the shipping of the town has been so much augmented that a comparatively small portion of its trade is conducted in foreign bottoms. Since then, also, the Bremen merchants have formed establishments in New York, Rio de Janeiro, Havana, and other emporia, both in N. and S. America; so that they have become better acquainted with the state of foreign demand and credit, and are able to conduct their business with greater advantage and security. In 1827, Bremen had only 74 merchant ships, whereas, in January 1839, she had 151; viz., 32 ships of 900 tons and upwards, 26 of from 150 to 900 tons, 54 from 100 to 150 ditto, 43 from 50 to 100 ditto, and six under 50 lasts. She had then also 66 river ships, of from 12 to 43 lasts. Bremen is the principal continental port for the despatch of emigrants for America, as many as 10,000 having embarked in the course of a single year. In 1837 there entered the port of Bremen 699 ships (including repeated voyages), of the burden of 105,003 tons, from foreign countries. Of these, 90 ships of 3049 tons' burden were British; and 24 ships of 7688 tons' burden, American. Of the Bremen ships no fewer than 96 of 28,975 tons' burden, were from the United States; and 37 ships, of 6340 tons' burden, from Cuba.

\* The Bremen rix-dollar = 4s. 8d. sterling; the pound = 7,860 English grains; so that 100 lbs. Bremen = 109-6 lbs. avoirdupois.

## BRESCIA.

Bremen is possessed of a tract of territory lying round the city, on both sides the Weser, containing in all about 74 sq. miles, with a pop. exclusive of that of the city, of 16,600; making the total pop. of the state 56,000. The land, which is low and marshy, intersected by canals, and very fertile, is mostly appropriated to pasture. The inhab. of the city and country are all Protestants, with the exception of about 1500 R. Catholics and a few Jews. The executive government is vested in a senate, consisting of four burgo-masters, two syndics, and 34 councillors; but the principal legislative authority is in the hands of the assembly of burgo-masters (*Witteth*), composed of all resident citizens that pay a certain amount of taxes, without regard to their religion. The senate chooses senators for life, from a list of candidates proposed by the burgo-masters. In 1837, the ordinary and extraordinary revenue of the republic amounted to 573,843 rix-dollars, and the ordinary and extraordinary expenditure to 597,006 rix-dollars, leaving a deficit of 23,163 rix-dollars. There is an export duty of 1 per cent. *ad valorem*, on all goods shipped from, and an import duty of 1 per cent. on all goods imported into Bremen. The port and shipping charges are very moderate. Bremen contributes 485 men to the army of the Germanic confederation.

Bremen is said to have been founded in 788. She was long one of the leading towns of the Hanseatic league. In 1640, she was summoned to the diet, and allowed a seat and vote on the Rhenish bench, in the college of Imperial cities. In 1648, at the treaty of Westphalia, the arch-bishopric to which Bremen had given name was secularized in favour of Sweden, who held it till 1719, when it was taken possession of by Denmark, by whom it was ceded to Hanover in 1731. Bremen acquired from the electors of Hanover a full recognition of its independence and other prerogatives, which had sometimes been disputed by the Swedes. In 1806, it was taken by the French; and from 1810 to 1813, it was the cap. of the department of the Mouths of the Weser. In 1815, it was restored by the congress of Vienna to its old franchise. (*Von Roden's Statistics of the Kingdom of Hanover*, II, 116, &c.; *Conversations Lexicon*; *Board of Trade Papers*, viii, 254, and *private information*.)

BREMEN, P. L. Lincoln co., Me., 40 m. S.E. Augusta, 15 m. E.S.E. Wiscasset. Taken from the E. part of Bristol. It contains four stores, one fulling-mill, one grist-mill, one saw-mill, seven schools, 250 scholars. Pop. 837.

BRENTFORD, a town of England, co. Middlesex, bound. Osulton and Elthorne, at the junction of the Brent with the Thames, eight m. W. by S. London. Pop., 1831, 2844; 1841, 37,054; houses at the latter date, 6725. It consists of one long indifferently-built street, on the great W. road from the metropolis: a modern stone bridge connects it with the S. bank of the Thames, and another (built in 1894, on the site of one very ancient) spans the Brent, which divides the town into Old and New Brentford; the former in the parish of Ealing, the latter a distinct parish. The church at Old Brentford is dependant on that of Ealing; that of New Brentford is a chapel of ease to Hanwell: both are modern structures. There are four dissenting chapels, three endowed free schools, and two national schools. A weekly market is held on Tuesdays, and annual fairs 17th May and 12th September. There are flour-mills, a distillery, and an iron-foundry, in the town; the malting business is also carried on to some extent. These employ many of the inhabitants, the market gardens of Ealing employ others; and the traffic arising from its thoroughfare is considerable, and occupies another portion. The Grand Junction canal joins the Brent a little below Hanwell, and its communication is continued by it to the Thames, on which there are several wharfs, between the town and Kew gardens. Annual value of real prop. in 1838, of Old Brentford and Ealing, £37,463; of New Brentford, £7418. It is the central town of a poor-law union of ten parishes: the average rates of the former are £3136, of the latter £1159; the former has five, the latter two guardians. Brentford is usually considered the co. town, but it has no public hall, nor separate jurisdiction. There is a court of requests for debts under 40s. held during the summer half year in the town; during the other at Uxbridge: its jurisdiction extends over the hundreds of Elthorne and Spellthorne. It is the chief polling town, where the co. members are nominated.

BRENTSVILLE, C. H. p. v., capital of Prince William co., Va., 101 m. N. Richmond, 45 W. It contains the county buildings and several dwellings.

BRENTWOOD, p. t., Rockingham co., N. H., 35 m. S.E. Concord, 485 W. Drained by Exeter r., which affords good water-power. Incorporated in 1742. It contains two stores, one fulling-mill, one cotton-factory with 500 spindles; four saw-mills, four schools, 25 scholars. Pop. 286.

BRESCIA, (an. *Brixia*) a city of Austrian Italy, cap. prov. same name, on the Garza, and near the left bank of the Mella, at the foot of the Alps, on the margin of the great plain of Lombardy, 51 m. E. Milan, and 30 m. N.N.E.

## BRESLAU.

**Cresmons**; lat. 49° 38' 18" N., long. 10° 13' 34" E. Pop. 35,000. It is surrounded by walls and ramparts, and has a castle on a hill on an eminence within the walls: the streets are broad and straight, and its numerous squares, public buildings, palaces and fountains, give it an air of grandeur and magnificence. It is the seat of a bishopric; and has a fine modern cathedral of white marble, begun in 1604, and finished only in 1825; an elegant modern episcopal palace, and many churches and convents, some of which are said to be ornamented with pictures by the masters of the Venetian school. The Palace of Justice (*Palazzo Publico*), built on the site of an ancient temple, is curious, as exhibiting that incongruous mixture of Gothic and Grecian architecture to be found in so many of the edifices of northern Italy: it has also a fine museum of antiquities, a large theatre, a *monte-de-pieta*, a public library, lyceum, gymnasium, an atheneum, or academy of science and belles-lettres, with numerous hospitals and eleemosynary establishments, and no fewer than 73 public fountains. It is distinguished by its industry and trade. Near it are large iron works, and the arms and cutlery of Brescia have been long reckoned the best in Italy: it has also fabrics of silk, flax, paper, &c., with numerous oil-mills, tanneries, &c. A fair commences annually on the 6th of August; and a large building is constructed outside for the accommodation of those frequenting the fair. Brescia has produced many eminent men, among whom may be specified Tartaglia, Marzocchielli, Agoni, &c.

This city is very ancient. It is supposed to have been the cap. of the *Comenensi*, and subsequently became a Roman colony and *municipium*. It was sacked by Attila. Being declared by Otto I. a free city, it was governed for nearly 300 years by its own consuls; but being distracted by the contests of the Guelphs and Ghibellines, it placed itself in 1426 under the Venetian government. It was taken by the French during the League of Cambray, and having revolted, was retaken by them by storm in 1519, when it was given up to military execution. On this occasion, the Chevalier Bayard, the knight *sans peur et sans reproche*, was severely wounded. It has also been repeatedly laid waste by the plague and small-pox; and was in part destroyed, in 1703, by the explosion of a powder magazine. During the ascendancy of Napoleon, it was the cap. of the dep. of Meila.

The chief interest of the town is derived from its antiquities. During excavations begun in 1830 and continued till 1836, there was discovered a beautiful temple of white marble, adorned with columns of the Corinthian order; and under the pavement was found a bronze statue of Victory, between 5 and 6 feet high, represented as a very fine specimen of art. (*Rampoldi; Conder's Italy*, II., 90, &c.)

**BRESLAU**, the second city of the Prussian dominions, cap. prov. Silesia, and of a regency and circ. of the same name, at the confluence of the small river Ohlau with the Oder; lat. 51° 6' 30" N., long. 17° 9' 18" E. Pop. (1837) 88,969, of whom about 60,000 were Protestants, 34,000 Catholics, and the remainder Jews, &c. It comprises the old and new towns, with various suburbs, some of them built on islands of the Oder, and united to the body of the town by numerous bridges. Streets in the old town mostly narrow; but those in the newer parts are broad, and the houses good; while the number and magnificence of the squares and public buildings give it an air of splendor. Among the latter may be specified the cathedral, founded in 1148; the church of St. Elizabeth, with a spire of 364 feet (*Murres*) in height; and several other churches; the *ci-devant* convent of the Augustines; the palace, now the government-house, built by Frederick the Great; the archiepiscopal palace, town-house, mint, Catholic gymnasium, theatre, Exchange Buildings, university, barracks, &c. A colossal statue in cast-iron of Marshal Blucher, by Rauch, was erected opposite to the Exchange Buildings in 1837, to commemorate the decisive and important victory gained by the Marshal and the Prussian landwehr under his command over the French under Macdonald, on the Katsbach, in 1813. The university was founded in 1709, and had, in 1834, 990, and, in 1837, 791 students—a decline, we may remark, not peculiar to this, but which extends to all the other Prussian universities. Breslau is the seat of government for the province, has a court of appeal for the latter and for the regency, a supreme council of mines, and other administrative establishments. Besides the university, it has a school of industry, of deaf and dumb, of surgery, one Catholic and three Protestant gymnasia, a seminary for the instruction of schoolmasters, a school of architecture, a school of arts, and an immense number of inferior schools, a society for the promotion of public utility, &c. The library of the university contains above 130,000 volumes, and there are several smaller collections all open to the public. There are a great number of richly-endowed hospitals and other charitable institutions, among which may be specified one for faithful servants. It has numerous breweries and dis-

## BREST.

tilleries (of the latter nearly 100), with manufactures of linen, cotton, wool, and silk; alum, soap, plate, jewellery, &c.; and is the centre of a very extensive commerce, being in some measure the *entrepôt* of the province. Exclusive of its own products, the greater part of the linaens, cottons, cloth, &c., manufactured in Silesia, are disposed of at its fairs. Metals from the mines, and timber from the forests in the upper part of the province, are also brought here in large quantities, with flax and hemp, madder, and osen from the Ukraine and Moldavia. Exclusive of its other fairs, two great fairs for the sale of wool are held annually in June and October. The first of these is the greatest fair of its kind in Germany, the quantity sold being usually about 6,000,000 lbs. During its continuance, the town, owing to the number of persons in the Oriental costume, has a good deal of the appearance of an eastern city. The Bank of Berlin has a branch here. The conveyance of goods to and from Hamburg by water occupies from 30 to 34 days.

The fortifications with which Breslau was formerly surrounded were demolished by the French. The ramparts have since been levelled, planted, and laid out in public walks; the bastions have been converted into terraces; and the ditch into an ornamental sheet of water, to the great embellishment of the city.

Breslau is the most bustling animated town in the Prussian dominions. The inhabitants are evidently wealthy; and the increasing number of new buildings, ornamented villas, and pleasure grounds in the vicinity, attest its growing prosperity. It is said to be a desirable place to live in. It is salubrious; provisions abundant and cheap; education excellent, and to be had for almost nothing; the people intelligent, frank, and sociable; the literary institutions numerous and easily accessible; and the country round beautiful. The *condottieri* (see *BRASIL*) are very splendid. Drunkenness is very prevalent, spirits constituting the principal beverage of the lower classes.

**BRESSY**, one of the Shetland islands, *see* *see*. **BRESSUIRE**, a town of France, dep. Deux Sèvres, cap. arrond., on a hill, at the foot of which is the Dolo; 10 m. N.W. Parthenay. Pop. 1804. It is the seat of a tribunal of primary jurisdiction, and of an agricultural society. It was formerly a fortified town, defended by a castle, destroyed in 1793 when the town was burned to the ground, with the exception of the church and of a single house. (*Hugo, art. Deux Sèvres*.)

**BREST**, a strongly-fortified marit. town of France, dep. Finistère, cap. arrond. of the same name, occupying the foot and declivity of a steep hill, on the N. side of a spacious bay, near the extremity of the peninsula of Brittany; 30 m. N.W. Quimper, 139 m. W.N.W. Rennes, and 314 m. W.S.W. Paris; lat. 48° 33' 14" N., long. 4° 38' 45" W.; pop. 90,772. Inclusive of its suburb Recouvrance, from which it is separated by the river Penfeld, it is situated 3 m. in circuit, and of a triangular shape. Brest proper (about on the E. as Recouvrance is on the W. side of the river) is naturally divided into the upper and lower town: in the first, which is the most ancient portion, though containing a considerable number of good modern edifices, the streets are irregular, crooked, and narrow, and the houses so unevenly placed, that the gardens of some are on a level with the 5th stories of adjacent ones. In some places the declivity is so rapid, that the road to the lower town is formed by flights of steps. In the lower town many of the streets near the port are well laid out, clean, and healthy; elsewhere they are quite the reverse. Recouvrance, although improved latterly, offers but an unfavorable contrast to Brest. The ramparts which surround the town are planted with trees, and form a pleasant promenade, with fine views towards the harbour. The port, or inner harbour, formed by the mouth of the Penfeld, is lined by good quays adorned with large and handsome stone buildings. It is landlocked, capable of accommodating 50 frigates and other vessels, and is protected by formidable batteries, and by an ancient castle on a rock at its entrance. A large portion of Brest is occupied by marine establishments. It has a noble arsenal established by Louis XIV., excellent docks for building and repairing ships, large rope walks, and various magazines for the stores necessary to the fitting out of a navy, with marine barracks and a hospital. In the upper part of the town is the *Bagne*, a building for the reception of convicts sentenced to the galleys; and the largest edifice of its kind in France. It is 377 yards in length; its centre and extremities are occupied by the various officers having charge of the convicts; the intermediate spaces are separated into four divisions, each capable of lodging 500 men. It combines security with salubrity. But despite the severe discipline enforced in this prison, it is said to be *peu sûr* *une école de démolition qu'un lieu de punition et d'expiation*. (See the interesting account given by Hugo of this prison, II., 30.) Among other public buildings are the parish church of St. Louis, with a handsome altar, the town hall, and the theatre. There are several public fountains, one of which

## BRETEUIL.

is ornamented with a fine statue. Brest is the seat of a tribunal of original jurisdiction, and the residence of a sub-prefect, a maritime prefect, and other functionaries. It contains two public libraries, a cabinet of natural history, botanic garden, and observatory, schools of naval artillery, navigation, medicine, surgery, and pharmacy, societies of agriculture and emulation, a tribunal of commerce, and an exchange.

The outer harbour or road of Brest, is, without any question, one of the finest in the world. It is of great extent, being capable of accommodating the largest navies, and has deep water throughout. The channel, *Le Goulet*, by which it communicates with the ocean, is only 1805 yards across, defended on either side by very strong batteries; and it is farther strengthened by having a rock in its centre, which obliges ships to pass close under the guns of the batteries. Several small rivers discharge themselves into the outer harbour, by one of which, the *Châteaulin*, there is an inland communication with Nantes. Brest has some tanneries and manufactures of glazed hats; and a fleet of fishing boats for pilchards, cod, and mackerel. Its commerce is comparatively trifling, and mostly confined to supplying provisions to the marine: there is, however, some trade in grain, fish, salt, &c.; and a fair for cattle, leather, cloth, &c., is held monthly.

This town is affirmed by some authorities to be the *Brevis Portus* of the Romans; but of this there is considerable doubt. It was of little consequence till it was fortified by a duke of Brittany in the 11th century. It was assigned to the English, in 1372, by John IV., duke of Brittany, and was held by them till 1397. In 1499 it was taken by the French; and was soon after permanently united to the monarchy by the marriage of Charles VIII. with Anne of Brittany. Cardinal Richelieu, being sensible of its great natural advantages for a naval station, began, in 1631, the construction of the fortifications and magazines, which were completed by Vauban, in 1680. In 1694, an English and Dutch force that had attacked Brest, was defeated with great loss. The space included within the fortification was considerably enlarged in 1772. (*Hugo, art. Finistère; Guide du Voyageur, &c.*, 307, 308.)

BRETEUIL, a town of France, dep. Eure, cap. cant., on the Iton, 16 m. S.W. Evreux. Pop. 1980. The country round abounds in iron mines, the working of which, and the smelting, &c., of the ore, afford abundant employment for the inhabitants.

BRETEUIL, a town of France, dep. Oise, cap. cant., at the source of the Annoy, 16 m. N.E. of Beauvais. Pop. 2414. It is ill built, ill paved, and dirty. There are manufactures of woollen stuffs, paper, and shoes, for the use of the troops and hospitals of Paris. It is very ancient, and was once fortified and had a castle; but few vestiges of the latter or of the fortifications now exist. Its ancient abbey still remains. There are some fine nurseries in the environs. (*Hugo, art. Oise; Dict. Géographique.*)

BRETIGNY, a hamlet of France, dep. Eure et Loir, 6 m. S.E. Chartres. It is remarkable for a treaty of peace, concluded between France and England in 1360, which restored John, king of France, to his freedom, lost at the battle of Poitiers, in 1356, when he was made prisoner by the English.

BRETEN, or BRETHEIM, a town of the grand duchy of Baden, cap. bailiwick, 12 m. E. Carlsruhe. It is remarkable as being the birth-place of the learned and amiable reformer Melancthon. The house where he was born, in 1497, is still to be seen in the market-place, with a statue and an inscription erected to his memory in 1705. This town suffered much during the wars of 1635 and 1689.

BREWER, p. t., Penobscot co., Me., 70 m. N.E. Augusta, 665 W. Bounded N.W. by Penobscot river. It lies opposite to Bangor, and partakes in the same facilities for navigation. It was formed from the N. part of Orrington in 1813, and contains four stores, one grist-mill, six saw-mills, one rope-factory, three tanneries, thirteen schools, 741 scholars. Pop. 1736.

BREWER, T. Pike co., Ark. Pop. 284.

BREWSTER, p. t., Barnstable co., Mass., 90 m. S.E. Boston, 16 m. E. by N. Barnstable, 499 W. Situated on Cape Cod bay, and separated from the N. part of Harwich in 1830. It contains four churches, one Congregational, one Unitarian, one Methodist, and one Baptist; seven stores, two grist-mills, three tanneries, six schools, 578 scholars. Pop. 1362.

BRIANCON, a strongly-fortified town of France, dep. Hautes Alpes, cap. arrond., on the Durance, 50 m. E.S.E. Grenoble. Pop. 3455. This is the highest town in France, being nearly 4500 feet above the level of the sea. From its commanding a practicable defile, leading from Piedmont into France, it has always been looked upon as one of the keys of the kingdom on the side of Italy. In consequence no expense has been spared on its fortifications, which are now deemed all but impregnable. They consist principally of strong forts built on the contiguous heights, and which com-

## BRIDGENORTH.

mand all the approaches to the town.\* The two principal forts, *Trois-Têtes* and *Rendouillet*, communicate with each other and with the town by a bridge of a single arch 120 feet (40 metres) in span, thrown over a deep ravine. With the exception of a single street, the town is ill built, gloomy, and dirty. It has a tribunal of primary jurisdiction, and a departmental college; with fabrics of cotton goods, hosiery, steel and cutlery, pencils, &c. (*Hugo, art. Hautes Alpes.*)

BRIANBK, a town of Russia, in Europe, gov. Orel, cap. distr., on the Desna, 55 m. W. Orel; lat. 53° 16' N., long. 34° 34' E. Pop. 5000. It has numerous churches, a foundry of cannons, tanneries, &c.; and there is in the vicinity a manufactory of arms. The neighbouring forests supply fine timber.

BRIARE, a town of France, dep. Loiret, cap. cant., on the Loire, at the point where it is joined by the canal of Briare, 25 m. S. Montargis. Pop. 2977. The canal, to which the town is indebted for its importance, is the oldest work of the kind in France, having been begun in the reign of Henry IV., though it was not finished till 1740. It establishes, by means of its junction with the canal of Loing at Montargis, a communication between the Loire and the Seine; and consequently conveys the various products of the province watered by the former to Paris. (*Hugo, art. Loiret.*)

BRICKSVILLE, p. t., Cuyahoga co., O., 140 m. N.E. Columbus, 333 W. The Ohio canal passes through its N.E. corner. It contains one store, two fulling-mills, one flouring-mill, one grist-mill, five saw-mills, seven schools, 465 scholars. Pop. 1154.

BRICQUEBEC, a town of France, dep. La Manche, cap. cant., 8 m. W.S.W. Valognes. Pop. 4414. It has in its environs a copper mine.

BRIDGEHAMPTON, p. v., Southampton town., Suffolk co., N.Y., 54 m. S.S.E. Albany, 293 W. Situated in the S.E. part of Long Island, and contains one church, one store, two wind-mills, and fifteen or twenty dwellings.

BRIDGENORTH, a bor. and town of England, co. Salop, hund. Stottenden, on the Severn, 115 m. N.W. London. Pop. of old bor. in 1821, 4345; in 1841, 5986; but the par. bor., the limits of which were extended by the Boundary Act, had, in 1841, 16,118. It is divided by the river into the upper and lower towns; the former is built up the acclivity and on the summit of a rock, rising abruptly from the W. bank of the stream to the height of 180 feet. Ranges of detached houses, many of which are handsome modern structures, are built each over the other, so that the roofs of one range are lower than the foundations of the next above it, from the base to the summit of the precipice; with these are intermixed other dwellings, excavated in the rock itself; rude caverns, gardens, and trees. Crowning the summit, at the S. end, is the square, ruined tower of the ancient castle, leaning considerably from the perpendicular; and the church of St. Mary Mag., a handsome structure, with a lofty tower and cupola, built in 1792. At the N. end is the ancient church, St. Leonard, built in 1448. Half way between the two churches is a flat, square reservoir raised on lofty brick columns, and looking at a distance like a handsome portico: to this tank, water is forced by machinery from the river, to supply the upper town. There are several good streets leading from the high street to the churches; and parallel over these are others of a like character. A carriage road winds round the rock, and several flights of almost perpendicular pebbled steps, secured in iron framing, lead up through the rock into the interior of the town. The whole has a singularly picturesque effect, and from the pallidated wall round the castle hill, extensive and diversified views are commanded over a fertile and romantic district. A handsome stone bridge of six arches connects the lower with the upper town. Its streets have an intermixture of ancient and modern houses. St. Leonard's church is endowed with £200 private benefaction, and £1100 public grant. St. Mary's, formerly the castle chapel, and exempted by King John from all ecclesiastical jurisdiction, is endowed with £200 private, and £1500 public grant: both are curacies in private patronage. The Baptists and Independents have each a chapel. There is a free grammar school, founded in 1503, which educates 10 scholars, and has three exhib. to Christ Church, Oxford; a blue-coat school, in a building over one of the ancient gateways, where 30 boys are clothed, educated, and apprenticed; and a national school, supported by subscription, for 200 boys and 150 girls. The hospital of St. Leonard supports 10 aged widows; and endowed almshouses, with £158 a year, maintain 12 burghesses' widows. The town-hall, in the middle of the principal street, is a spacious old building of timber frame-work and plaster, raised on brick pillars and arches: the corporation meetings and courts are held in it, and the market in the covered area underneath. There is

\* According to the *Dict. Géographique*, the town is quite open, not being surrounded with either walls or ditches; whereas, according to *Hugo*, it has a "triple enceinte de murs."

## BRIDGEPORT.

a mill, built by the corporation in 1832. A neat theatre, built about the same period; and a public library, with a good collection in general literature. The weekly market is held on Saturday; and there are seven annual fairs. There is a carpet manufactory, and another for tobacco pipes, in the town. Its iron trade has declined, but nails are still made to some extent; and vessels are also built for the navigation of the Severn. The greater part of its labouring pop. are employed upon the river. It has a spacious line of quay N. of the bridge, and offers every facility for the transit of goods, so that large quantities of corn, malt, beans, &c., are sent thither from various parts of the country, and it has become a thriving inland port: its retail trade is also very considerable.

Previously to the Municipal Reform Act the government was nominally vested in two bailiffs, twenty-four aldermen, and the whole of the burgesses, whose number (including the former) was 634; but in reality it was a self-electing body of fourteen. Petty sessions for the bor. are held every alternate Monday, and general sessions once a year; but no felonies are tried. A court of Record is held on the same days as the petty sessions, which takes cognizance of actions to any amount; but not more than three a year are entered. The revenue of the corporation, derived from lands and tenements, averages about £266 a year. The tolls of markets and fairs, formerly levied by them, were given up in 1835. They hold the Severa water-works in trust for the benefit of the town, and levy a rate on the inhab. to support them: they are also trustees of an estate, producing £100 a year, for the benefit of the two church ministers.

Bridgeport has returned two mem. to the H. of C. from the 33d of Edward I. Previously to the Reform Act the elective franchise was vested in the corporation and freemen, of whom there were 634. Parl. constituency, in 1837-38, 745.

*Bruges* was the ancient name of the borough, from a Saxon bridge over the Severn, which was destroyed to prevent the incursions of the Danes. A new bridge was subsequently erected,  $\frac{1}{4}$  m. N. of the old site; and hence the present name originated. The Earl of Shrewsbury built the walls, in which were six gates, in the reign of Will. II.; the castle was built in that of Henry II., and it has since undergone many sieges. Dr. Percy, bishop of Dromore, was born here in 1738.

BRIDGEPORT, city and p. t., Fairfield co., Ct., 68 m. N.E. New York city, 75 m. S.S.W. Hartford, 17 m. W.S.W. New Haven, 270 W. Separated from Stratford in 1831, incorporated as a city in 1836. It is on the W. side of an arm of Long-island sound, which receives Paquanock river, a considerable mill-stream. The harbour is 80 rods wide at high tide, but not more than 12 at low tide. The tide rises from 7 to 9 feet, and the bar at its mouth has 13 feet of water at high tide. A draw and toll bridge 1236 feet long crosses the harbour, a mile and a half from its mouth. The city is chiefly built on a plain, 12 feet above high water. N.W. of the city the ground gradually rises to the height of 50 feet, called Golden Hill, the summit of which is a plain, with a commanding view of the sound and the surrounding country. The city is neatly built, and contains six churches, two Congregational, one Episcopal, one Methodist, one Baptist, and one Roman Catholic, two banks, over twenty vessels engaged in the coasting trade, and five in the fisheries. It manufactures carriages and saddles extensively for exportation. The Housatonic rail-road commences here, and extends to West Stockbridge, Mass., where it unites with the Boston and Albany rail-road, and another to Hudson, N. Y. It has a daily communication with New York by steam-boats. It contains seventy-three stores, six fulling-mills, one woollen factory, one cotton factory, with 3500 spindles, two tanneries, one rope-walk, two grist-mills, three printing-offices, two weekly newspapers. Total capital in manufactures \$436,300; eight academies, 263 students, thirteen schools, 584 scholars. There is a lighthouse on Fair-weather island. In 1790 there were 110 inhabitants, in 1840, 4570.

BRIDGEPORT, b., Fayette co., Pa. Incorporated in 1814. Situated on the W. side of Dunlap's creek, at its entrance into Monongahela river. A bridge crosses the creek, and connects it with Brownsville. It contains three churches, six stores, one flouring-mill, two saw-mills, one paper-mill, one pottery, one school, 80 scholars, and 135 dwellings. Pop. 788. The National road passes through the place.

BRIDGEPORT, p. v., Pease t., Belmont co., O., 126 m. E. Columbus, 267 W. Situated on the N.W. side of Ohio river. The National road passes through it, along which the village extends for half a mile. It contains one wholesale and seven or eight retail stores, and four warehouses for the storage of flour and tobacco. It has considerable trade. Pop. about 500.

BRIDGEPORT, p. v., Harrison co., Va., 257 m. N.W. Richmond, 215 W. Situated on Simpson's creek, a branch

## BRIDGEWATER.

of the W. Fork of Monongahela river. It contains one church, free to all denominations, one grist-mill, one saw-mill, and twenty dwellings.

BRIDGEPORT, p. v., Seneca Falls t., Seneca co., N. Y., 132 m. W. by N. Albany, 363 W. Situated on Cayuga lake, at the W. end of Cayuga bridge. It contains one store, and twenty or thirty dwellings.

BRIDGETON, p. t., Cumberland co., Me., 63 m. S.W. Augusta, 577 W. Bounded E. by Long pond, from which there is a boatable communication, through Sebago pond and the Oxford and Cumberland canal, to Portland. It contains nine stores, three fulling-mills, five grist-mills, seven saw-mills, four tanneries, one pottery, one academy, 80 students, eighteen schools, 709 scholars. Pop. 1987.

BRIDGETOWN, p. v., port of entry, and capital of Cumberland co., N. J., 68 m. S. by W. Trenton, 179 W. Situated on both sides of Cohamsey creek, 20 m. above its entrance into Delaware bay. It contains a brick court-house, a stone jail, and the county offices, on the W. side of the creek. On the E. side are three churches, one Presbyterian, one Methodist, and one Baptist; an academy, a bank, a woollen factory, a grist-mill, an extensive rolling-mill, iron foundry and nail factory, which employ 195 persons, whose wages are \$30,000 annually. Thirty schooners and sloops sail from the place. The tonnage of the port in 1840 was 14,171. A draw bridge crosses the creek, from which its name was derived. It was formerly called Cohamsey.

BRIDGEVILLE, p. v., Thompson t., Sullivan co., N. Y., 106 m. S.S.W. Albany, 329 W. Situated on the W. side of Neverand river, and contains one store, an extensive tannery, twenty dwellings, and about 195 inhabitants.

BRIDGEWATER, a bor., par., and sea-port of England, co. Somerset, hundred N. Petherton, on the Parret, about 7 m. in a direct line, and 12 m. by water, S. from its embouchure in Bridgewater bay, in the Bristol channel, 28 m. S.S.W. Bristol; lat.  $51^{\circ} 7' N.$ , long.  $3^{\circ} 59' W.$  Pop. (of new bor.), in 1841, 31,778; houses, 6216. The town is situated in a fertile well-wooded plain of considerable extent, having E. the Mendip, and W. the Quantock hills; it is built on both sides the stream, but chiefly on the W., the two parts being connected by a handsome iron bridge of one arch. That on the W. bank has a remarkably neat appearance, the houses (mostly of brick) being well and uniformly built, and the streets spacious, clean, and well paved; the other (Eastover) is inferior in these respects, but has also of late years been much improved; the whole is lighted by gas, and well supplied with water from many fine springs. The church is an ancient Gothic structure, with an embattled tower and lofty spire; there are chapels for Baptists, Friends, Independents, Wesleyans, and Unitarians; a free grammar school (founded by Elizabeth in 1561), and two other endowed schools (founded, one in 1723, the other 1781), each of which educates about thirty children; almshouses, with an endowment of about £18 a year; and an infirmary, established 1813, and supported by subscription. The judge's mansion is a handsome modern edifice, in which the courts of justice are held; the market-house is also a good recent building, with a dome and Ionic portico. There is a spacious quay, accessible to vessels of 300 tons; but the entrance to the harbour is difficult, and should not be attempted without a pilot. The tide in the river frequently rises to a great height, rushing forward with a perpendicular front and with extraordinary velocity. (*Norie's Direct. for the Bristol channel.*) There are three weekly markets: Tuesday, for vegetables; Thursday, corn and cattle; Saturday, general provisions. Fairs are annually held on the first Monday in Lent, July 24, Oct. 3, (the principal one), and Dec. 27; they are for linen and woollen goods, cattle, and general merchandise. The imports from foreign parts consist chiefly of wines, hemp, tallow, and timber: customs duties in 1835, £6734 9s. 6d.; in 1836, £8389 3s. 9d. The imports, coastwise, consist of groceries, general merchandise, and coals; the exports, of agricultural produce. The Taunton and Bridgewater canal connects the two places. Considerable quantities of Welsh coal are conveyed by it inland, and the agricultural produce of the fertile district round Taunton, brought for shipment to Bristol and other ports. On the 1st of Jan. 1838, there belonged to the port 51 vessels, of the burden of 3511 tons. A great quantity of bricks are made in the vicinity, both common and of a peculiar kind, and large size, resembling Bathstone. The town is on the line of the Bristol and Exeter railway; it is divided into two wards (the N. and S.), and governed by a mayor, six aldermen, and eighteen councillors. Courts of pleas and of petty sessions are held every Monday, and of general sessions quarterly, for the bor. The general quarter sessions for the co., in summer, and the co. assizes, once in two years, are also held in the town; at such times its jail is usually crowded, otherwise it has few prisoners. It has sent two mem. to the H. of C. since the 23d Edw. I.: the right of election, previously to the Reform Act, being in the inhabitants paying rent and lot, and having

## BRIDGEWATER.

resided in the town for a certain period; the number was about 400: number of registered electors, in 1836, 567. In 1836, the number of houses rated at £10 and above, was 730; the rated property of the bor. was £5805, at one third of the annual value. The revenues of the corporation are derived from market and fair dues, tithes and rents, and average about £936 a year. The living is a vicarage, united with the rectory of Chilton Trinity, and in the gift of the crown. Bridgewater is a polling place for the E. division of Somerset, and the central town of a union under the Poor-Law Amendment Act. The poor-rates levied in the bor. in 1836 amounted to £3673 8s.

The town derives its name from Walter de Douay, to whom it was granted by William I., and is spelt "Burg" and "Brugge" Walter, in the old records. In the great civil war it sided with the king, and being well fortified and provisioned, was the depository of much valuable property, sent thither for security; all of which, together with 1000 prisoners, fell into the hands of Fairfax, after an obstinate resistance. The ill-fated duke of Monmouth was proclaimed king at Bridgewater, previously to his defeat and capture at the battle of Sedgemoor. The famous admiral Blake, one of the greatest of the naval heroes of England, was a native of this town, having been born here in 1699.

BRIDGEWATER, p. t., Grafton co., N. H., 37 m. N.N.W. Concord, 516 W. Originally a part of New Chester, first settled in 1766, incorporated in 1788. Bounded W. by Newfound lake, and E. by Pemigewasset river. It contains three churches, one Congregational, one Baptist, and one Freewill Baptist; one fulling-mill, one grist-mill, two saw-mills, seven schools, 260 scholars. Pop. 747.

BRIDGEWATER, p. t., Windsor co., Vt., 78 m. S. Montpelier, 458 W. Queechy river and its branches afford water-power. An inexhaustible quarry of steatite, or soapstone, is extensively wrought and exported. Iron ore is also found. Chartered in 1761, first settled in 1780, organized in 1785. It contains two churches, one Congregational, and one common to several denominations, three stores, three fulling-mills, three woolen-factories, one grist-mill, six saw-mills, two tanneries, fifteen schools, 435 scholars. Pop. 1363.

BRIDGEWATER, p. t., Plymouth co., Mass., 25 m. E. by E. Boston, 18 m. N.W. Plymouth, 433 W. Watered by branches of Taunton river. It contains three churches, one Congregational, one Unitarian, and one Baptist, three stores, three furnaces, one paper-mill, two saw-mills, one academy, 45 students, thirteen schools, 577 scholars. Pop. 2131.

BRIDGEWATER, p. t., Oneida co., N. Y., 81 m. W. by N. Albany, 15 m. S. Utica, 370 W. Drained by Unadilla river and its branches. It contains three stores, one grist mill, five saw-mills, ten schools, 437 scholars. Pop. 1418. The village on the W. side of Unadilla river, in the S. part of the town, contains one Presbyterian church, an academy, fifty dwellings, and about 350 inhabitants.

BRIDGEWATER, t., Somerset co., N. J. Bounded S. by Maritan river, by the N. branch of which it is drained. It contains sixteen stores, three fulling-mills, three woolen factories, five grist-mills, two saw-mills, five tanneries, one distillery, two printing-offices, two weekly newspapers. Pop. 3063.

BRIDGEWATER, t., Susquehanna co., Pa. Drained by branches of Wyalusing creek. It contains the village of Montrose, the capital of the co. It has fourteen schools, 660 scholars. Pop. 2069.

BRIDGEWATER, b., Brighton t., Beaver co., Pa. Situated on the W. side of Beaver river, near its entrance into the Ohio. A bridge here crosses Beaver river, 600 feet long, which cost \$22,000. It contains five stores, an iron foundry, saw-mill, brewery, salt works, and various manufacturing establishments, two schools, 120 scholars. Pop. 694.

BRIDGEWATER, t., Williams co., O. Pop. 110.

BRIDGEWATER, t., Washtenaw co., Mich. Drained by the N. branch of Raisin river. It contains one flouring-mill, and two saw-mills.

BRIDLINGTON, a market to. of England, E. riding co. York, 176 m. N. London, 37 m. E.N.E. York, 24 m. N. by E. Hull, and 5 m. W. Flamborough Head. Pop. in 1841, including Bridlington Quay, 13,059. The town, which is about a mile from the sea-coast, consists of one long street, with some smaller streets narrow and irregularly built. A priory, erected in the early part of the reign of Henry I., at the E. end of the town, is, though much decayed, a venerable and magnificent specimen of the old English church architecture. It was endowed with very large estates: its last prior being convicted of high treason, was executed in 1537. A part of it, used as the parish church, accommodates about 1900 persons. The other places of worship are those of the Wesleyan and Primitive Methodists, Baptists, Independents, Presbyterians, and Quakers. The

## BRIDPORT.

schools are, a free grammar school, founded in 1637; two large national schools, an infants' school, and a school of industry, founded in 1781, to instruct poor children in carding, knitting, and wool spinning. A detached building, which formed part of the priory, is used for a town hall and prison. Besides a brick retail trade, an extensive corn trade is carried on. The business is transacted in the Exchange, a neat commodious building. Hats are also manufactured here, and in the neighbourhood are several wind and water mills, and a steam mill for grinding bones. The malt trade, which was formerly very extensive, is much fallen off. Markets are held on Saturdays, and a cattle market every fortnight; fairs on the Monday before Whitsunday, and Oct. 31. Bridlington is a station for receiving votes at elections for the E. riding. The banks are a branch of the York Union, and a private banking-house. Bridlington Quay is a neat village, about a mile from Bridlington. Its principal street, which is very broad, leads directly to the harbour, where there is excellent anchorage; it is defended by two batteries. Here are hot and cold baths, and a chalybeate spring, whose medical properties are highly esteemed. An ebbing and flowing spring, discovered in 1811, supplies the inhabitants with abundance of excellent water. The port is a member of that of Hull, and has a neat custom-house on the quay. It is much frequented in summer by visitors for sea bathing. (*Allen's Hist. of Yorkshire; Thompson's Bridlington, &c.*)

BRIDPORT, a bor. and sea-port of England, co. Dorset, hund. Bridport, 197 m. W.S.W. London, in a fertile vale encircled by hills, between the Brit and Asher, which are crossed by several bridges, and unite a short distance below the town. It consists chiefly of three main streets, well lighted and paved, with many handsome modern houses on either side. The church is a cruciform structure of the later Gothic, with an embattled and planiculated tower in the centre. The Friends, Independents, Wesleyans, and Unitarians have each chapels. The town-hall (where the council meet, and the borough sessions are held) is a handsome modern edifice in the centre of the place; there is also an endowed free school, founded in 1703, and an almshouse, founded in 1606. Pop. in 1821, 3742; in 1831, 4242; houses at the latter period, 678: this, however, refers to the old bor., which was only co-extensive with the parish, an area of about 90 acres. Its present boundaries include portions of six other parishes, and an area of 250 acres. Pop. in 1841, 16,695; inhabited houses, 3262. Its pier harbour (about 1 m. S. of the town, between Lyme and Portland) is safe and commodious, though rather shallow. An act, passed in 1729 (for restoring its piers, and forming a sluice) was carried into effect in 1742, the corporation being trustees. In 1823 another act passed, by which other persons were joined with them in the trust, and the harbour was then materially improved and enlarged, at an expense of nearly £300,000, and is now suitable for vessels of 200 tons; since which the increase of its trade has been progressive. In 1839 it was made independent of Lyme, within whose jurisdiction it had previously been, and established as a bonding port: between twenty and thirty vessels, averaging about 100 tons, belong to it; and several fine coasting smacks are built here. The manufactures are—twine, lines, and fishing-nets, for the home and colonial fisheries, and sailcloth and shoe-thread: these employ several hundred persons. The exports consist chiefly of those manufactures, and of butter and cheese, the produce of the neighbourhood. The imports comprise hemp, flax, and deals, from the Baltic; tallow, skins, coal, culm, slate, wines, spirits, and groceries, coastwise. There are two weekly markets (Wednesday and Saturday), and three fairs (April 6, Holy Thursday, and Oct. 10), chiefly for horses, cattle, and cheese. The bor. is divided into two wards, and governed by a mayor, six aldermen, and eighteen councillors: the revenue of the corporation (derived from market dues and rents) averages about £250 a year. It has sent two mem. to the H. of C. since 93 Edw. I. Previously to the Reform Act the right of election was vested in the householders paying scot and lot, the number of voters being nearly 300. In 1837-38 it had 505 registered electors. Bridport was a borough during the Saxon period: at the Domesday survey it had 100 houses, a mint, and an ecclesiastical establishment. Its staple manufacture is of remote origin; Camden notices a special law of Henry VIII.'s reign, by which the navy was to be exclusively supplied with cordage made at Bridport; and Gibson, in a note on the passage, speaks of the failure of an attempt in his day to form a harbour. (*Gibbs, Brit. 170.*) It confers the title of viscount on the Hood family; the living is a rectory in private patronage.

BRIDPORT, p. t., Addison co., Vt., 79 m. S.W. Montpelier, 8 m. W. by S. Middlebury, 475 W. Bounded W. by Lake Champlain, on which are several landing places. Crown Point, N. Y., lies opposite its N. part, chartered in 1761, first settled in 1768, organized in 1784. It contains

## BRIE-COMTE-ROBERT.

three churches, one Congregational, one Baptist, and one Methodist, six stores, one fulling-mill, one grist-mill, three saw-mills, eleven schools, 300 scholars. Pop. 1480.

**BRIE-COMTE-ROBERT**, a town of France, dép. Seine et Marne, cap. cant., near the Yères, 10 m. N.N.W. Meun. Pop. 3725. It was built by Robert of France, count of Dreux, to whom his brother Louis VII. gave the lordship of Brié. Its old feudal castle has been demolished. The parish church, founded in the 13th century, is remarkable for the height of its tower. The Hôtel Dieu is nearly of the same age as the church. (*Hugo, art. Seine et Marne.*)

**BRIEG**, a fortified town of the Prussian states, prov. Sillesia, cap. circ., on the Oder, about half way between Breslau and Oppeln. Pop. 11,500. It is situated on an elevated bank of the river, over which it has a wooden bridge, and is well built and thriving. Principal public buildings, a gymnasium, formerly a university, to which is attached a good library, a lunatic asylum, with several churches and hospitals. It has extensive manufactures of linens, woollens, cottons, hats, &c., and carries on a considerable trade.

**BRIEL** or **BRIELLE**, a fortified sea-port town of the Netherlands, prov. S. Holland, cap. arrond., on the N. shore of the island of Voorn, near the mouth of the Maase, 13 m. W. Rotterdam; lat. 51° 54' 11" N., long. 4° 9' 51" E. Pop. 4200. It is a handsome well-built town; is strongly fortified; has a good harbour, a tribunal of primary jurisdiction, and sends a deputy to the states of the province.

The Briel is remarkable in Dutch history for being the place where the first foundation of the republic may be said to have been laid. The exiles from the Netherlands, who had taken refuge in England from the persecutions of the Duke of Alva, were ordered by Queen Elizabeth, in consequence of the urgent representations of Alva, to leave this kingdom. Being thus driven to despair, they assembled a small fleet at Dover, under the command of William de Lumey, Count de la Marck, and resolved, if possible, to get possession of some place of strength in their native country. Their original intention was to make an attempt on Enkhuysen; but the wind being unfavourable, they cast anchor before Briel, of which they took possession on the 1st of April, 1572. Thus was struck the first blow in that apparently most unequal and long-continued struggle between Holland and Spain, that ended in the independence of the former; a struggle which, whether we consider the sacrifices and perseverance of the weaker party, or the beneficial consequences of their success, is, perhaps, the most extraordinary and important of which history has preserved any account. (For an account of the capture of Briel, see *Watson's Philip II.*, l. 1, p. 427, 8vo ed.)

Briel was the birth-place of the heroic Admiral Van Tromp, who fell in an engagement with the English, under Blake, off the Texel, on the 8th of Aug., 1653.

**BRIENNE-LE-CHATEAU**, a town of France, dép. Aube, cap. cant., on the great road from Paris to Chaumont, 15 m. N.W. Bar-sur-Aube. Pop. 3003. The town has a fine castle, erected a short while previously to the Revolution, by the minister Lamoignon de Brienne. It stands on an artificial plateau, and commands an extensive view. But the place derives almost its entire celebrity from its connexion with the imperishable name of Napoleon. The great captain received the first rudiments of his warlike education in a military academy that formerly existed in this town, but which was suppressed in 1790; and here, in 1814, in an engagement with the Russians and Prussians, he was in imminent danger. (*Hugo, art. Aube, &c.*)

**BRIER CREEK**, p. t. Columbia co., Pa., 94 m. N. Harrisburg. 205 W. Pop. 1905.

**BRIEUC (ST.)**, a sea-port town of France, dép. Côtes-du-Nord, it is the capital, on the Gouet, near its embouchure in the bay of St. Briec, 32 m. W.S.W. St. Malo; lat. 49° 31' 3" N., long. 9° 43' 53" E. Pop. 11,362. Its port, at the mouth of the river at the village of Lignon, has a handsome quay, and a commodious harbour, accessible to vessels of 850 tons. The town is pretty well built. The cathedral, a Gothic edifice, was begun in 1290, and finished in 1234; there are, also, a hôtel de ville, a hospital on a large scale, a work-house, a theatre, &c. The bridge over the river is a handsome stone structure of three arches. There are some good squares and fine promenades. St. Briec is the seat of a bishopric, and of tribunals of primary jurisdiction and commerce; and it has a departmental college, a diocesan seminary with 160 pupils, a school of arts, and a public library with 94,000 volumes. There are in the town fabrics of linen, serge, flannel, paper, &c., with tanneries and breweries. The inhabitants used to employ a considerable number of ships in the whale and cod fisheries, particularly the latter. In 1693, for example, they had engaged in the cod-fishery 47 ships, of the burden of 2040 tons, manned by 3610 seamen, who brought home 4,669,200 klog. of cod, &c., worth 1,945,405 fr. But it would seem, from the statements of Hays, that in the interval between 1589 and 1833, this important business had

## BRIGHTON.

very rapidly declined, and we have not learned whether it has since recovered. The coast fishery is still carried on to a considerable extent. Horse races were established here in 1807, and are kept up with great spirit. (*Hugo, art. Côtes-du-Nord.*)

**BRIGHTON**, formerly **BRIGHTHELMSTONE**, a market town of England, co. Sussex, rape Lewes, hund. *Wallebourne*, vulg. *Walestone*, 47 m. S. London. This modern *Basis* is situated on the coast of the British channel, between Beachy Head and Selsey Bill. Pop. in 1831, 24,420; in 1841, 46,749; houses, in 1841, 8131. It is of an irregular shape, and is built along the shore, on the sides of a gentle valley, the centre of which, the *Steine*, forms a long slip of land, lying N. and S. The only buildings in this valley, which divides the town into the E. and W. portions, are the palace, and St. Peter's church, recently built. The whole of the town E. of the *Steine*, has been built within the last sixty or seventy years. Along the cliffs, which in this part rise high above the sea, has been formed the finest marine promenade in the world. A wall of immense thickness (at the foundation 30 ft. wide), and from 60 to 70 ft. high, formed of concrete, protects a fine pavement, and a road upwards of 100 feet in width. From the extreme entrance of the town at the E., this splendid marine drive and promenade is occupied to the *Steine* by large mansions, and lodging-houses of the first description. Along this line is situated Kemp Town, and its squares, a splendid range, forming three sides of a quadrangle, and having a row of houses, of similar architectural character, diverging from either extremity: the spacious area in front is laid out in walks, &c., and has an arched passage communicating with the beach, the crescent, and various spacious streets, opening from the line of cliff to the northward. West of the *Steine* is the old town, consisting principally of old and irregular buildings. Many of these have, however, been pulled down, and on the sites of some of them, a new market was constructed in 1829, and a town hall in 1831; but the hall, though large, and making a good appearance externally, is in bad taste and ill contrived within. In every direction around the old town (excepting of course the sea side), new streets and squares have been erected; particularly along the line of cliff, called the King's Road, to Hove, where, facing the sea, but adjoining Brighton, a fine range, called Brunswick Terrace and Square, has been built. The cliffs in this part of the town, rise only a few feet above the highest part of the beach: in their front is a fine promenade, and below this, a level space of green sward reaching down to within a very short distance of the sea. On the Lewes road are, Hanover Crescent, Richmond Terrace, and the Grand Parade on the London road, York and St. George's places, and many structures in the cottage style. The royal palace, called the Pavilion, was begun by George IV. when Prince of Wales, in 1784, and finally completed in 1837; it is in the oriental style, and copied from the Kremlin at Moscow; its stone front extends 900 feet; it has a circular building in the centre, surmounted by a pillared dome. The Chapel Royal is on the W., and behind is a circular range of stables in the Arabian style, lighted by a glass dome: it is excluded from the view of the sea by the buildings of Castle Square; and little can be said in favour of the taste displayed in its erection. The old church is a spacious structure, partly in the ornamented and partly in the later Gothic style, with a square tower; it crowns a hill 150 feet above the sea, and serves as a landmark for vessels. St. Peter's church, serving as a chapel of ease to the last, an elegant Gothic structure, built in 1827, at the public expense, has upwards of 1100 free sittings. Besides these, and the Royal chapel, there are seven others connected with the established worship, three occupied by Independents, two by Particular Baptists; a Catholic chapel, a new and elegant building in Upper St. James' street, containing a fine specimen of sculpture from the chisel of Mr. Carew; and chapels for the Scotch Seceders, Friends, and Wesleyan and Whitfield Methodists: there is also a Jewish synagogue. There are numerous free schools, supported by subscription or endowments, of which the principal are, the Blue-coat schools, one for clothing and educating boys, and one for girls; a government school for the children of fishermen; the Union school, supported by the various dissenting sects; with orphan, national, and infant schools. The County Hospital, a large and well supported establishment, is contiguous to the town. There are baths of all kinds, constructed with the utmost regard to comfort and convenience, as well as numerous bathing machines, and a spa, about half a mile W. of the town, where there is a chalybeate spring, in considerable repute; the building is in the cottage style.

The German Spa is delightfully situated in a valley facing the sea, at the foot of the Row Hill. It was established in 1826, for the preparation of artificial mineral waters, in imitation of the natural springs at Carlsbad, Ems, Marienbad, Pymont, &c.

## BRIGHTON.

Six almshouses for decayed widows were erected in 1795, on the Lewes road, opposite the Royal gardens, by two sisters, of the name of Percy.

Every class of visitors finds suitable accommodations here, in furnished lodgings, inns, and hotels; of all which there is every variety, from those of the most superb and expensive character, to the plainest and most economical. The theatre is small and ill-contrived; but the public assembly rooms, at the Old Ship hotel, are fitted up in the most splendid style. The Royal gardens, N. of the town, are devoted to various amusements, and comprise a good cricket-ground. On the Downs is a well kept course, where annual races are held the first week of August. There are many fine promenades; among them, a very favourite one is the suspension chain pier, constructed in 1831, at an expense of £30,000: the pier head is 60 ft. by 30, and has seats and awnings, as well as tiers of galleries and flights of steps, to facilitate landing and embarkation at different states of the tide; the pier itself is 1900 ft. in length by 14 ft. in width; and an esplanade of the same length, 40 ft. wide connects it with the Steine. The principal market-day is Thursday, but there is a daily supply. Fairs held, one on Holy Thursday, and one on the 4th September. The chief trade of the place is fishing, in which nearly 150 boats are employed. The mackerel season begins in April, the herring season in October; besides which, turbot, soles, skate, &c., are caught in considerable quantities, and supply the London markets, as well as those of the place. A portion of the inhabitants are also employed in making nets and tackle for the fishery, of materials supplied from Bridport. Coasting vessels occasionally discharge coals and light goods on the beach; several steamers ply between this place and Dieppe, which is 21 leagues S. E., and a much nearer and pleasanter route to Paris (*via Rouen*) than that by Calais. A railway to the metropolis and Shoreham is commenced. At present many daily coaches ply between Brighton and London. The Reform Act conferred on Brighton the privilege of returning two members to the H. of C.: par. const., in 1836, 3091. The parochial affairs are managed by directors and guardians, and the affairs of the town, lighting, &c., by commissioners; but the principal conservator of the peace is the high constable. Magistrates of the county holding sittings at the Town Hall every day, and petty sessions every Monday and Thursday.

Brighton is by some considered to be the spot where Cæsar landed; a notion for which there is no good foundation, and which probably originated in the numerous Roman remains, coins, &c., found in the vicinity. For some centuries it was a mere fishing village, and was frequently attacked and plundered by the French; to prevent which, Hen. VIII. erected some fortifications, which were strengthened and extended by Eliz. In 1685, and again in 1696, irruptions of the sea destroyed a large part of the town, and inundated an extensive tract adjoining; again, in the years 1703-5-6, the fortifications were undermined, and the place threatened with total destruction. In the reign of Geo. II. Brighton first came into some repute as a sea-bathing place, through the writings of Dr. Russell, an eminent physician of that day. In 1760 the chalybeate spring was observed, which tended to increase its growing popularity. No doubt, however, it is principally indebted for its rapid rise, and for the high rank it has long continued to hold among watering and fashionable places, to the zealous and continued patronage of Geo. IV. when Prince of Wales, and when regent and sovereign. It has nearly quadrupled its population in the course of the present century; and the advantages it enjoys in its situation, and in its being the nearest port on the S. coast to London, may, perhaps, insure its prosperity, even though it should cease to be an object of royal favour.

BRIGHTON, p. t., Somerset co., Me., 57 m. N. Augusta, 652 W. Organized in 1816. Drained by a branch of Kennebec river. It contains one store, two grist-mills, two saw-mills, seven schools, 390 scholars. Pop. 803.

BRIGHTON, p. t., Middlesex co., Mass., 5 m. W. Boston, 433 W. Charles river bounds it on the N. and E. It is highly cultivated and has many fine country seats. It is the greatest cattle market in the country. Neat cattle, sheep, and swine, have been sold here to the amount of \$3,449,331 in a year. It contains one Congregational and one Unitarian church, twelve stores, one academy 48 students, four schools 300 scholars. Pop. 1425.

BRIGHTON, t., Essex co., Vt. It contains two saw-mills, three schools, 45 scholars. Pop. 157.

BRIGHTON, p. t., Monroe co., N. Y., 217 m. W. by N. Albany, 3 m. E. Rochester, 366 W. Watered by Genesee river. It contains two powder-mills, two saw-mills, fifteen schools, 618 scholars. Pop. 3336. The village on the Erie canal, has one Presbyterian church, one store, thirty dwellings and about two hundred inhabitants.

BRIGHTON, p. v., Beaver co., Pa., 331 m. W. by N. Harris-

## BRINON-L'ARCHEVEQUE.

burg, 357 W. Situated on the W. side of Big Beaver river, over which is a bridge 300 feet long, connecting it with New Brighton, on the E. It possesses a great water-power. It contains one church, two stores, one flour-mill, one cotton factory with 1900 spindles; one paper-mill, one school, 25 scholars. Pop. 331. In the township are three saw-mills, one pottery, seven schools, 390 scholars. Pop. 903.

BRINTON, p. t., Lorain co., O., 195 m. N. by E. Columbus, 374 W. It contains three schools, 52 scholars. Pop. 303.

BRINTON, p. t., Livingston co., Mich., 43 m. N.W. Detroit, 551 W. Drained by branches of Huron river. It contains four stores, one saw-mill, five schools, 157 scholars. Pop. 785.

BRINTON, p. v., Macoupin co., Ill., 12 m. N. Alton, 71 S. by W. Springfield, 814 W. It contains two stores, one castor-oil factory, and twelve or fifteen families.

BRIGNOLLES, a town of France, dep. Var, cap. arrond., on the Caram, 28 m. N.N.E. Toulon. Pop. 3632. It is neat and well built, and is finely situated in a fertile basin, surrounded with high wooded hills. Its principal ornament is its magnificent public fountain, in the square Caram. It has a tribunal of primary jurisdiction, a primary normal school, a secondary ecclesiastical school, a public library, a society of agriculture, &c., with distilleries of silk, fabrics of wine, candles, and tanneries. A considerable trade is carried on in olive-oil, wine, liqueurs, brandy, and excellent prunes, known by the name of *brignoles*. (*Hugs. art. Var; Dict. Géog.*)

BRILLON, a town of the Prussian States, prov. Westphalia, reg. Arnberg, cap. circ., 34 m. S.E. Bost. Pop. 3361. It has two churches, a college, a hospital and fabrics of linen and brass. In the environs are mines of silver, lead, and calamine.

BRIMFIELD, p. t., Hampden co., Mass., 68 m. W. by S. Boston, 19 m. E. by N. Springfield, 378 W. Watered by Chippewee and Quinebaug rivers. It contains three stores, one cotton-factory, with 1233 spindles; eleven schools, 305 scholars. Pop. 1419.

BRIMFIELD, p. t., Portage co., O., 150 m. N.E. Columbus, 10 S.W. Ravenna. It has eight schools, 313 scholars. Pop. 1153.

BRINDISI (an. *Brundisium*), a sea-port and city of Naples, prov. Terra d'Otranto, cap. distr., at the bottom of a bay between capes Cavallo and Gollo; lat. 40° 37' 50" N., long. 17° 38' 33" E. Pop. 8500. (*Raspoldi*.) In antiquity this was one of the most important cities of Italy, and was the port whence the intercourse between Italy and Greece, and the East, was usually carried on. It owed this distinction as much to the excellence of its harbour as to its situation: but in modern times it is sadly changed for the worse. It is still of great extent within the walls; but the inhabited houses do not occupy above half the enclosure. The streets are crooked and rough, and the houses poor and in disrepair. With the exception of the citadel, a large heavy-looking cathedral, and a few remains of antiquity, there is nothing in it that deserves attention. This melancholy change has been produced by the nearly total loss of the inner harbour. This, which encompasses the city on two of its sides and is deep and capacious, was united to the outer harbour, or bay, by a narrow entrance, like that leading to Portsmouth harbour or the Havana. Unfortunately however, this entrance having been nearly shut up, the inner harbour was in consequence rendered inaccessible to all but the smallest vessels, and in summer became feld and unhealthy. Julius Cæsar, who attempted to block up Pompey's fleet that had rendezvoused in the inner harbour, by running mounds into its outlets, may be said to have commenced the ruin of Brindisi, which was completed in the 15th century by a prince of Taranto, who sunk vessels filled with earth and stones in the passage left open by Cæsar! The destruction that was thus brought on the town and its effects roused at length the attention of the Neapolitan gov., by whom a vigorous effort was made in 1776 to obviate the cause of the mischief, by cutting a new channel between the two harbours. But owing, as it would seem, to some defect in the plan, the project has only partially succeeded; the new channel soon filled up, and the entrance to the inner harbour became nearly as much encumbered as before. The canal is now, however, kept open by dredging and otherwise to the depth of 10 or 12 palmi, so that vessels of this draught of water may enter the inner port. The outer harbour, or bay, is deep and capacious, and has good anchoring ground. It is partially protected by an island, on which a fort is built; but it is exposed to the easterly gales, which throw in a heavy sea. (*Swinburn's Two Sicilies*, i. 324, 4to ed.; *Cresset's Naples*, p. 148; *Riviera, Considerazioni sui mezzi da Restituire il Regno delle due Sicilie*, i. 243, &c.)

BRINON-L'ARCHEVEQUE, a town of France, dep. Yonne, cap. cant., near the canal of Burgundy, 10 m. E.

## BRIOUDE.

Juigny. Pop. 2460. It has fabrics of coarse cloth, and sanneries; and carries on a considerable trade in corn and linen, and in the forwarding of timber by the canal for Paris.

**BRIOUDE**, a town of France, *dépt.* Haute Loire, cap. arrond., in a vast plain near the Allier, 30 m. N.W. Puy. Pop. 5247. It is old, ill-built, and dirty. Its most remarkable edifices are the college, situated on a hill, and commanding a fine view, and the church of St. Julian, a venerable Gothic fabric, founded in the 9th century. Besides the college, it is the seat of a court of primary jurisdiction, and has a small public library, and a society of agriculture. Brioude was the birth-place of the Marquis de Lafayette, who acted so conspicuous a part in the American and French revolutions. At Old Brioude, about 3 m. S.E.E. of Brioude, is a bridge over the Allier, built in 1454, consisting of a single arch 188 ft. in span. (*Hugo, art. Haute Loire; Dict. Géographique.*)

**BRISACH (NEW)**, a fortified town of France, *dépt.* Haut Rhin, cap. cant., near the left bank of the Rhine, opposite to old Brisach, 9 m. S.E. Colmar. It was built in 1690 by Louis XIV., and fortified by Vauban. It is a regular octagon, and is regarded as one of the finest works constructed by that celebrated engineer. The streets all terminate in a place in the centre, and the houses are all of the same height. It is of no importance except as a fortification. Hugo says he passed through it in 1893, and that two of its gates were then shut up; that most of its houses were deserted, and that the grass grew in the streets. (*Hugo, art. Haut Rhin.*)

**BRISIGHELLA**, a town of the Papal States, *leg.* Ravenna, on the Lamone, 27 m. S.W. Ravenna. Pop. 3000. It has an extensive trade in silk.

**BRISTOL**, a city, co., and sea-port of England, at the confluence of the Avon and Frome, 8 m. N.W. of the embouchure of the former, in the Bristol Channel, and 108 m. W. London. Lat. 51° 27' 6" N., long. 2° 35' 38" W. Pop. of city and suburbs (inclusive of Clifton and the parish of Bedminster, on the S. side of the Avon, co. Somerset), in 1821, 95,738; in 1831, 117,016; but certain portions of the suburbs are excluded from the limits of the existing parishes, as fixed by the boundary act, the pop. of which, in 1832, was 104,532. This city extends over 6 or 7 distinct hills and their intermediate valleys, amidst a picturesque and fertile district. In the older portion, forming the nucleus of the modern city, the houses were mostly of wood and plaster, with projecting upper stories over narrow streets; but these are now greatly diminished; in other parts the streets and squares are spacious, and the greater number of the houses well-built modern structures. Those of Kingdown, St. Michael's, and Clifton hills, on the N. and W., rise with their terraces and gardens each above the other, like an amphitheatre: Redcliffe, on the E., has narrow streets and densely crowded houses, resembling those of the older part of the city: Bedminster is mostly occupied by small modern tenements for the working classes and tan-yards. The whole city is well paved and sewered, and is lighted with coal gas, supplied by two public companies. There is an adequate supply of water conducted by pipes to several public conduits and public pumps. There are twenty-five churches of the established worship, among which are some fine specimens of the ancient Gothic; others are handsome modern structures. Of the former may be noticed the cathedral in College Green, of the age of Stephen, and anciently part of the abbey of St. Augustine; St. Mary's, Redcliffe, crowning the summit of that hill; and St. Stephen's, with its once richly decorated tower. The dissenters of various denominations have thirty-six places of worship, and form a very numerous and important part of the community. There are twelve endowed charity schools: the free grammar-school, founded in 1532, which has several exhibitions, and two fellowships, each of £30 a year, in St. John's, Oxford: Elizabeth's Hospital, founded in 1586, whose endowments produce above £4000 a year, now managed by the charity trustees appointed by the Lord Chancellor; the Redcliffe free grammar school, founded in the 13th of Eliz.; Colston's, in 1708, for the maintenance, clothing, and education of 100 boys; and 8 others. In the whole, above 900 boys and 40 girls are wholly maintained, educated, and apprenticed; 90 boys and 88 girls clothed and educated; and 148 educated only. Besides these, there are (1839) 35 other schools, supported either wholly or partially by benefactions and public subscriptions, in which upwards of 3000 children are educated, and upwards of 10,000 receive instruction in the Sunday schools of the various sects. Of the endowed charitable institutions, the principal are, the Trinity almshouse, with a chapel annexed; its endowments produce £700 a year; it maintains 10 old men, and 36 women: Foster's ditto, with a chapel, has £530 a year, and maintains 14 old people; and the Temple Hospital, founded in 1813, has £809 18s. a year, and maintains 24 old people:

## BRISTOL.

the Merchants' almshouses, founded in 4th Eliz. for 31 old sailors and their widows: Colston's, in 1696, has £300 a year, and maintains 24 old men and women: Ridley's, in 1716, has £155 a year, and maintains 10 decayed single persons: Blanchard's, in 1722, has £395 a year, and maintains 5 aged people: there are several others of minor importance. Endowed charities, to the amount of about £23,000 a year, are distributed as follows: £8000 lent in various sums for various terms without interest, to tradesmen; £9000 distributed among the poor; £1000 to the endowed hospitals, and £7000 among the endowed schools. The other charitable institutions are the Bristol infirmary, established in 1735; it is capable of accommodating 300 patients, and has, at an annual average, 1600 in and 5000 out patients: it is supported partly by its own funded property, and partly by subscriptions and donations: the General Hospital, a smaller establishment than the former, and partly on a self-supporting principle: the Dispensary, which gives medical relief to about 3000 poor annually at their own dwellings; it has two stations. There are also an asylum for the blind, another for orphan girls, a female penitentiary, and between 40 and 50 other charitable societies, which distribute, in various ways, from £12,000 to £15,000 annually. The principal public buildings are—the guildhall, an old structure of the reign of Richard II., with a modern front: the council-house, built in 1827: the jail, a large, well-arranged structure, built in 1820: the bridewell, rebuilt after the riots in 1831: the exchange, an extensive building of the Corinthian order, erected by the corporation in 1743, but never being adopted by the merchants as a place of meeting, the interior is occupied as a corn-market, and its back forms part of the spacious quadrangle in which the principal market is held. The commercial rooms, built in 1811, and used as an exchange, have a handsome dome, an Ionic portico, a large hall, reading-room, and various apartments for the despatch of business. The Bristol institution, a handsome edifice, opened in 1823, has a reading-room, library, theatre, and museum: in the latter are good collections both in natural history and the fine arts; courses of lectures are given, philosophical papers read, and it has occasional exhibitions of paintings. The Mechanics' Institute, built in 1832, has a lecture and a reading-room. The Bristol library was established in 1772, and has an extensive collection (about 30,000 vols.) in general literature. There are also law and medical libraries; a medical school, established in 1834, in which complete courses of lectures are given: the certificates of its professors are recognised at Apothecaries' hall; a proprietary school, called the Bristol college, established in 1830, for classical and scientific education; and an academy for the education of young men for the Baptist ministry, to which an extensive library and museum are attached. There is a handsome edifice of the Corinthian order in Princes street, now the office of the Bristol General Steam Navigation Co., but concerts, balls, &c., are sometimes given in its large room: the Victoria public rooms are now (1839), also, in progress. At Clifton are baths and pump-rooms; and connected with the hot wells, is a handsome edifice of the Tuscan order.

The great rise of tides in the Bristol channel, and in the river, enables the largest class of ships to come up to the town: but to obviate the risks and damage to which they were formerly exposed by grounding at ebb tide, a floating harbour, equivalent to a dock, was constructed in 1804, by changing the channel of the river. It extends about 3 m. from the dam above Bristol bridge to the entrance lock at Rowham, occupying the old bed of the Avon and of that branch of the Frome that lies between the quays of St. Augustine and St. Stephen. The present extent of quay frontage is 6000 ft., but the limits admit of any further extension that an increased trade might require. The act authorizing the formation of the harbour (43 Geo. 3, c. 140) enacts that there should be 21 ft. water in a sufficient number of berths; but the mud being suffered to accumulate so as considerably to reduce this depth, occasioned much complaint. This defect has now, however, been in a great degree obviated. A new channel was formed for the river, and the harbour finished in 1809, at an expense of about £700,000. There are two basins for the temporary accommodation of vessels entering or leaving: one at Rowham, for large ships, the other below the iron bridge at Bedminster, for coasters. There are also a floating and a dry dock, founded by the Merchant Venturers in 1769: to the former of these timber ships are compelled to resort, if they do not discharge at some private wharf: further down the river are several private docks, where ship-building, to some extent, is carried on. Vessels frequently load and discharge cargoes in Kingroad, at the mouth of the river, by means of lighters: the Great Western steam-ship is obliged to do this, the entrance to the floating harbour not being wide enough to admit her; but the harbour dues are payable, whether ships enter it or not. The tide in the Avon sets

## BRISTOL.

with great rapidity, especially between the high precipitous rocks of Clifton and Leigh, which seem rent asunder to admit its passage; in Kingroad, its rise at springs is between 48 and 49 ft.; at neaps above 53 ft.; at the gates of the floating harbour its rise is from 4 to 5 feet less than at the tide gauge in Kingroad. The bridges which connect the opposite sides of the floating harbour and rivers are—Bristol bridge, of three stone arches, built in 1768; it connects the central part of the city with Redcliffe: two iron bridges each with a single span of 100 ft.; one on the Bath and Wells, the other on the Exeter line of road: a swivel iron bridge (to admit the passage of ships), connecting St. Augustine and Clifton with the rest of the city: a small stone bridge, spanning the Frome at the point where it ceases to be navigable; and a suspension bridge now in progress, which will connect Clifton with the co. of Somerset: this, when finished, will be the most picturesque and striking work of its kind in the kingdom, and probably in the world; the road-way will be 850 ft. in length, 250 ft. above high-water mark, with precipitous rocks on both sides. The Avon, above Bristol bridge, is navigable for barges to Bath, whence the water communication is continued by the Avon and Kennet canal. The Bristol and Gloucester railway, intended to connect the two cities, now extends to Coalpit Heath (9 m. of line); it has three termini at Bristol, and several thousand tons of coal, monthly, are conveyed thither by it. The Great Western railway (118 m. of line), and that of the Bristol and Exeter (76 m.), will shortly effect a rapid means of communication with the metropolis and intermediate towns E. of the city, and with those of Somerset and Devon on the S. W. The Exchange market, and that of St. James, are open daily for general provisions; the chief supply being on Wednesdays and Saturdays: the corn and leather markets are held on Tuesdays and Thursdays; the hay-market, Tuesdays and Fridays; the fellmongers', Wednesdays and Saturdays; the cattle-market, Thursdays, in a walled area of four acres, outside the city, at Temple Meads, at the junction of the Great Western and Exeter railways: this market fluctuates considerably, but the average weekly supply is estimated at 500 head of cattle, 3000 sheep, 400 pigs, 60 horses. A great market is held there on the Thursday preceding Christmas, when the show is usually very fine. Two annual fairs, commencing 1st March, and 1st Sept., and continuing each about eight days, and formerly resorted to by clothiers, hosiery, cutlers, &c., from all parts of England, having greatly fallen off, were abolished in 1837; but fairs for cattle, horses, leather, &c., are still held on the above days.

Bristol was, for a lengthened period, second only to London as a commercial emporium; but though its comparative importance has, in this respect, greatly declined, it continues to be the seat of some important manufactures and of an extensive and increasing trade. The principal manufactures are those of soap, glass bottles, crown and flint glass, chain-cables, anchors, steam-engines and other machinery, refined sugar, tobacco, earthenware, floor-cloths, brass ware, pins, sheet lead, zinc, saltpetre, tin, copper and brass wares, pipes, hats, drugs, colours, dyes, starch, bricks, British spirits, malt liquors: there are also extensive soda works and recently a large cotton-mill. Many of the iron foundries are on a large scale, and are increasing both in their number and the extent of their exports. In 1838 there were made at the various soap manufactories 8,029,076 lbs. hard soap, and 253,467 soft do.; in 1839 there were consumed in 39 public breweries, 297,315 bushels malt; and by 703 licensed victuallers, and 767 keepers of beer shops, together, 338,915 bushels. The establishments for glass, sugar, brass, floor-cloths, and earthenware, are also on an extensive scale. The post-office revenue in 1837 was £35,711. There is a savings' bank, established in 1813, and six other banking establishments. The deposits in the former, on the 30th of Nov. 1838, amounted to £236,381, of which £283,188 were contributed by 7433 depositors, and the rest by friendly and charitable societies. Bristol early possessed, and continues to enjoy, a large share of the trade with the West Indies; and among her foreign imports the most important are those of sugar, molasses, rum, coffee, tea, and cocoa; the next most important are those of tobacco, timber, wine, brandy, tallow, fruits, wool, hemp, dyes, stuffs, oils, saltpetre, hides, &c. The exports consist principally of the produce of the various manufactures of the city, with salt, coal, and culm, in part the produce of the neighbourhood; and cotton, linen, and woollen goods. In 1837 the declared value of exports amounted to £258,687 l. 5s. and 398 ships, of 76,957 tons burden, entered inwards from foreign parts, and 904 ships, of 49,223 tons, cleared outwards: the customs duties during the same year were £1,153,109 l. 13s. 6d. Bristol carries on an extensive and growing trade with Ireland, from which she imports corn, butter, bacon, potatoes, cattle, horses, sheep, pigs, salmon, &c.: she sends in return tea, raw and refined sugar, cheese, wrought iron, tin plates, copper, glass, woollen, and leather. In 1837 there arrived from Ireland

638 vessels, of 56,604 tons, and cleared for 1130 vessels, of 74,578 tons. The imports, coastwise, consist mostly of iron, tin, coal, salt, agricultural produce, and foreign produce, brought from other ports under bond. The exports are chiefly foreign and colonial produce (especially groceries, spirits, and wines), and the various manufactures of the city. There belonged to the port, in 1836, 371 sailing vessels, of 39,650 tons, and 17 steamers, of 1810 tons. A communication by steam for the conveyance of goods and passengers to Ireland was established in 1838, and has led to a great increase of the trade with that part of the empire. Bristol has also had the honour of being the first port in the empire to establish a regular communication by steam with the United States. The first voyage by the Great Western steam-ship was performed in 1838.

The pari. and municip. limits of Bristol coincide, and had, as already stated, a pop. in 1831, of 104,338; and at present, 1838, probably of 115,000. It is divided into twelve wards, and governed by a mayor, sixteen aldermen, and forty-eight councillors. Previously to the Municipal Reform Act, the government was vested in a mayor, twelve aldermen, and thirty common councillors, the recorder being senior alderman: they were a self-elected body, and filled up their vacancies from the freemen, of whom there were 3109 registered. The governing charter was granted in the 8th of Anne; the earliest in the 9th of Henry II. A court of sessions, or jail delivery, (except for capital cases, now tried at Gloucester), is held quarterly by the recorder. The mayor, or sheriff's courts, for all kinds of actions in cases under 40s. A court of conscience, established by act 1 Wm. 3, for debts under 40s., has from 150 to 300 causes weekly. There is also a court of requests for debts not above £15, established by act 45 Geo. 3, consisting of the common council and other commissioners, with an assessor, which has on an average from 90 to 25 cases weekly; and a court of assize for *sci. prius* cases, held the week after the Somerset assizes, by the senior judge on the western circuit. The number of prisoners tried at the criminal courts in 1837 was 215, of whom 88 were acquitted and 1 executed. A police force, upwards of 300 strong, on the plan of the metropolitan police, has been established under the Municipal Reform Act.

The county jurisdiction, by water, extends over the Avon, from 4 m. above the city; and seaward, to the steep and flat Holme, and to the high-water mark on the English side of the Severn, from Aust's Passage to Clevedon. The charters of Hen. VI. and Edw. IV. granted the corporation an admiralty jurisdiction; but this has been lost through desuetude. They are conservators of the port and harbour; and by an act of 47 Geo. III., have the power of licensing pilots, who have the exclusive privilege of piloting all vessels passing up or down to the E. of Lundy Island, except Irish and coasting traders: the ports of Bristol, Newport, Cardiff, Swansea, Hfrscombe, and Bridgewater are comprised within this jurisdiction. There are thirty-four licensed or branch hulls, one of whom cruises from Hfrscombe, the rest from Pill, near the mouth of the Avon. A board of commissioners, elected by the rate-payers, has the exclusive power of paving, lighting, and cleansing the town; they pay an annual assessment on the inhabitants for those purposes, varying from £11,000 to £13,000. The corporation revenues are derived from town and market dues and rents of houses and lands in the city and neighbourhood: the annual average was estimated, in 1835, at £18,773; their debt, at that time, amounted to £36,994; but it has been since paid off by the sale of lands, &c. The Merchant Venturers are another incorporated body, whose governing charter dates in 1st of Chas. I.: they hold, under the former, a beneficial lease of the wharves and other harbor dues, but have long ceased to be a trading company. The Dock company are also incorporated, by an act of 43 Geo. III.: their affairs are managed by twenty-seven directors, nine of whom are appointed by the municipal corporation from their own body; nine by the Merchant Venturers, from theirs; and nine are proprietors of at least ten shares, and chosen by the shareholders. The Chamber of Commerce was instituted in 1823, "for the protection and promotion of the commercial and manufacturing interests of Bristol." It is supported by annual subscriptions, and governed by directors, elected annually, who publish reports of their proceedings: they are not an incorporated body, but have exerted a great and beneficial influence in the commercial arrangements and reforms of the town and port since their establishment. The management of the poor, within the old limits of the city, was vested in a corporate body by an act 7 & 8 W. 3, c. 38, and subsequent acts have been passed regulating their number and powers. The guardians consist of the mayor and twelve members elected annually by the town council out of their own body, the senior churchwardens of the different parishes, the senior overseer of the castle precincts, and forty-eight other inhabitants. The amount of poor-rates levied in the united parishes for the

## BRISTOL

year ending Lady-day, 1836, was £37,095 18s.: the average of 30 years, ending with 1839, was £33,950. Clifton forms the centre of a union, under the Poor Law Amendment Act; in the parishes of that union, which are also within the present limits of Bristol, the average amount of poor-rates for three years, ending 1835, was, in all, £10,788: they are represented by fifteen guardians. *Bodminster* is the centre of another union; its own average rates for the same period were £4724: it is represented by six guardians. The rack-rent of Bristol, according to a survey in 1836, amounts to £253,351; the number of rated properties being 19,990; of these, 10,490, valued at £219,404, are within the ancient limits.

Bristol has sent two members to the H. of C. since 1843: previously to the Reform Act, the right of election was in the freeholders and freemen only. No. of registered electors in 1837-38, 9856. Bristol was made the seat of a bishopric in 1541. It is now, in conformity to the act 6 & 7 W. 4. c. 77, united with Gloucester, in a see comprising the city of Bristol, the deaneries of Cricklade and Malmesbury, in Wilts, and the previous diocese of Gloucester: Bristol being constituted a deanery, which, anomalously with that of Gloucester, is to elect the future bishops.

The Bristol hot well, under the Clifton rocks, is a place of much resort for invalids, its waters being considered efficacious in consumptive cases. The temp. of this saline spring, when fresh from the pump, is 74° Fahr., and it then evolves free carbonic acid: in each pint of the water (according to Dr. Carrick) there are 3.5 gra. carb. of lime, 1.5 sulph. of soda, 1.5 do. of lime, .5 muriate of soda, 1 do. magnesia; total, 6 gra. It issues from the cliff, between the high and low-water mark; the hot-well house is finely situated beside the Avon; a carriage road winds from it, behind the rocks, to Clifton Down; a shorter footpath at the back also leads to that village, which is the fashionable part of Bristol: the scenery, by either line, is singularly interesting. The edifices are occupied by handsome edifices in squares, terraces, crescents, &c., forming fine promenades; the most magnificent of these ranges is York Crescent. Near the water is a good hotel, whence the Irish steam-packets start regularly; and on the cliff a splendid one, where concerts and assemblies are held during the season. Another spring higher up the cliff, but probably from the same source, has within a recent period had baths and a pump-room attached to it. The geological features of the place may be thus briefly described: If the entire area be divided N. and S. into three unequal portions, that on the E. will fall within the limits of a coal formation, which extends N. and S. of the city, but chiefly to the N., about 20 m.: its beds are thin, as compared with those of other coal-fields. The central or largest portion is chiefly occupied by the new red sand, in which auriferous remains occur; the western part is chiefly mountain limestone. Some of the summits in the N. and W. parts of the city are 350 ft. above the bed of the Avon. In the rocks of Clifton, and the opposite ones of St. Vincent, quartz crystals of great purity occur, known as Bristol diamonds. There are remains of three Roman encampments at Clifton, Rowham, and Abbots-Leigh.

The decline in the comparative importance of Bristol, as a trading emporium, has been chiefly manifested by contracting its progress with that of Liverpool. The average customs duties of Bristol for the seven years ending with 1797 amounted to £133,189; those of Liverpool, for the same period, to £51,136. In 1784, the customs of Bristol were £234,998, a great increase; but those of Liverpool had advanced, in the same year, to £248,694. One of the chief causes that have been commonly assigned for this relative showiness of progress, is the excess of local taxation; the town and harbour dues having been much heavier than those of any other of the larger ports. The municipal report of 1835 gives the proportion of local taxation charged on 20 principal articles, imported in 1831, in Bristol and three other ports; as—Bristol, 121; London, 106.44; Liverpool, 11s. 3d.; Hull, 7s. 4d.; Gloucester, 6s. 3d. Since 1831, however, the rates have been considerably reduced, and the mayor's dues wholly abolished.

But notwithstanding this greater weight of local taxation must have operated seriously to the injury of Bristol, too much stress has been laid upon it in accounting for the slower progress of the trade of the port. The real cause of the rapid rise of Liverpool, Glasgow, and other sea-port towns, is to be found, not in the lowness of their port charges, or in any peculiar advantages they individually enjoy, but in their having become the ports of the great manufacturing districts. The extraordinary growth of Liverpool is a consequence of the still more extraordinary growth of the cotton manufacture. Her rise has been dependent upon, and consequent to, the rise of Manchester, Bolton, Blackburn, &c.

According to Camden (*Glossen's ed. of the Brit. L. 74*), Bristol first rose into notice towards the close of the Saxon dynasty. The most common mode of spelling the name, till

the 13th century, was *Bristowe*; but in the oldest, and in all the subsequent charters, it is spelt 'Bristol.' Its castle was built by the Earl of Gloucester, brother to the Empress Matilda. During the wars of the Roses the town was comparatively undisturbed and flourishing; but in the civil war of the 17th century it suffered most severely: at the commencement of hostilities it was garrisoned by the parliamentary forces; subsequently, it was stormed by the king's forces, and surrendered to Prince Rupert: the following year (during which it suffered under the united evils of pestilence and war) it was again stormed, and retaken by Cromwell, who subsequently demolished its castle. The earliest notice, with reference to the trade of Bristol, occurs in the *Anglia Sacra*, (ii. 228); it is there noticed as having a mart for slaves of both sexes, brought from all parts of the kingdom; and also, as having much intercourse with Ireland. In 1647 a great improvement in its port was effected, by cutting a new channel for the river, and forming a double line of quay between Bristol and Redcliffe: a bridge, on the site of the present, was built at the same period. Thence to the 16th century, its manufactures supplied a large portion of the kingdom with woollen goods, soap, and glass: in the reign of Edward III. it was made a staple of wool; and it then traded extensively with Ireland, France, and Russia. In the *Itinerary of Botoner* are details of its trade and shipping in the 15th century, which prove its extended commerce and great enterprises at that period. In 1578 Frobiisher returned from an unsuccessful attempt to find a N.W. passage: at the close of the century Henry VII. granted charters to John Cabot and his two sons, which resulted shortly after in the discovery of Newfoundland, and a large part of the American continent: in 1609 Newfoundland was first colonized by Bristol. In October, 1831, a most disgraceful riot occurred here; which, owing to a want of decision on the part of the civil and military authorities, was allowed to attain a most alarming height. The mansion-house, episcopal palace, and several private houses were burned down; and a large amount of property destroyed.

Among the distinguished individuals that Bristol has produced, are, William of Worcester, the topographer; Wm. Cannyng, the most eminent merchant of his day; Sebastian Cabot, born at Bristol, of Genoese parents, discovered Newfoundland in 1499; Edw. Colston; Sir Wm. Draper; Thomas Chatterton, the poet, whose uncle was sexton of Redcliffe church, where the Rowley MSS. were alleged to have been discovered; Robt. Southey, Esq.; and Bayley, the sculptor. (*Dr. Sayer's Hist. of Bristol, and the Royal Charters of do.; Municip. Commissioners' Report in 1835; Ann. Reports of the Chamber of Commerce; Eighth Report of the Charity Commissioners, &c., and Private Information.*)

Bristol, p. t. Lincoln co. Me., 39 m. S.E.E. Augusta, 607 W. Bounded W. by Damariscotta river, S. by the Atlantic, and E. by Pemaquid river, which last affords water-power. It has a good harbour and considerable shipping, employed chiefly in the coasting trade and the fisheries. It contains seven stores, one fulling-mill, two grist-mills, five saw-mills, four tanneries, nineteen schools, 1014 scholars. Pop. 3945.

Bristol, p. t. Grafton co. N. H., 30 m. N. Concord, 511 W. Newfound pond, 6 miles long, and from 2 to 3 broad, lies partly in its N. part, the outlet of which, affording water-power, passes S. through the town into Pemaquid river, which bounds it on the E. Excellent plumbago, or black lead, is found here. Incorporated in 1819 from Bridgewater and New Chester: first settled in 1770. It contains six stores, six fulling-mills, four grist-mills, seven saw-mills, three tanneries, one academy, 25 students, nine schools, 345 scholars. Pop. 1153.

Bristol, p. t. Addison co. Vt., 50 m. S.W. Montpelier, 490 W. The E. part extends on to the Green Mountains. Watered by New Haven river and Baldwin creek. It contains three churches, one Methodist, one Baptist, and one Congregational, four stores, one fulling-mill, two grist-mills, four saw-mills, eight schools, 400 scholars. Pop. 1233.

Bristol, county, Mass., situated in the S. part of the state, and contains 600 sq. m. Bounded S. by the Atlantic and Buzzard's bay. Taunton river affords good water-power. New Bedford is its tonnage, is the second town in the state, and is distinguished for its manufactures, as well as its navigation. The county contained in 1840, 15,441 neat cattle, 15,000 sheep, 13,032 swine; and produced 3705 bushels of wheat, 94,480 of rye, 193,558 of Indian corn, 17,601 of barley, 63,536 of oats, 345,519 of potatoes. It had two foreign commercial houses, 430 retail stores; capital in the lumber trade \$103,300; capital in the fisheries \$5,980,800; salt was produced to the amount of 35,200 bushels; eleven fulling-mills, seven woollen-factories, fifty-five cotton-factories with 101,369 spindles; ten furnaces, nineteen tanneries, six potteries, sixty-one grist-mills, seventy-three saw-mills, one oil-mill, eight printing-offices, two daily and six weekly papers, ten academies, 619 students, 331 schools, 11,199

## BRITISH EMPIRE.

scholars. Pop. 60,164. Capitals, New Bedford and Taunton.

**Bristol**, county, R. I., situated in the E. part of the state, between Mount Hope bay on the E. and Narragansett bay on the S. and W., and contains 25 sq. m. It enjoys, by its navigable waters, great facilities for navigation. It contained, in 1840, 1462 neat cattle, 2511 sheep, 1691 swine; and produced 127 bushels of wheat, 1819 of rye, 12,169 of Indian corn, 11,490 of oats, 27,901 of potatoes. It had sixteen foreign commercial houses, sixty-four retail stores, one cotton-factory with 6000 spindles; two ropewalks, six grist-mills, three tanneries, one distillery, two printing-offices, two weekly newspapers; capital in the fisheries \$637,500; four academies, 270 students, nineteen schools, 742 scholars. Pop. 6476. Capital, Bristol.

**Bristol**, p. t., port of entry, and capital of Bristol co., R. I., 16 m. S. by E. Providence, 418 W. The village is situated on Bristol bay, a branch of Narragansett bay, and has a fine harbour, capacious, safe, easy of access, with a sufficient depth of water for vessels of the largest class. The tonnage of the district in 1840, was 15,890. It contains a court-house, jail, a market-house, two banks, five churches, one Congregational, one Episcopal, one Methodist, and one Christian, nine foreign commission houses, forty-one retail stores; capital in the fisheries \$390,000; one cotton-factory with 6000 spindles; three grist-mills, one ropewalk, one printing-office, one weekly newspaper; total capital in manufactures \$153,706; nine schools, 457 scholars. Pop. 2490. About 2 miles N.E. of the court-house is Mount Hope, a beautiful eminence, in early times the favourite residence of King Philip, the celebrated Pequot chief, so formidable an enemy of the early colonists. Its summit presents a delightful view of Mount Hope bay, and the surrounding country.

**Bristol**, p. t., Hartford co., Ct., 17 m. S.W. Hartford, 338 W. Watered by branches of Farmington river. Clocks and buttons are extensively manufactured here. It contains four churches, one Congregational, one Episcopal, one Methodist, and one Baptist; fifty-two stores, four fulling-mills, one woollen-factory, two tanneries, one grist-mill, three saw-mills; total capital in manufactures \$160,000; one academy, 25 students, twelve schools, 488 scholars. Pop. 2100.

**Bristol**, p. t., Ontario co., N. Y., 219 m. W. Albany, 9 S.W. Canandaigua, 349 W. Watered by Mud creek. The village at the centre contains an inflammable spring. The town contains three stores, one fulling-mill, two grist-mills, three saw-mills, two distilleries, thirteen schools, 627 scholars. Pop. 1953.

**Bristol**, t., Philadelphia co., Pa., 6 m. N. Philadelphia. Tacony creek affords water-power. It contains six stores, two fulling-mills, two woollen-factories, one cotton-factory with 1400 spindles; one dyeing and printing establishment, one grist-mill, one saw-mill, five schools, 276 scholars. Pop. 1734.

**Bristol**, p. b., Bucks co., Pa., 115 m. E. by S. Harrisburg, 155 W. Pleasantly situated on the W. bank of Delaware river, 90 m. above Philadelphia and 19 below Trenton, opposite Burlington, N. J. Incorporated in 1790. It occupies a commanding situation, is regularly laid out and neatly built, and contains three churches, one Episcopal, one Friends' and one Methodist; ten stores, one flouring-mill, one grist-mill, one saw-mill, two schools, 45 scholars, 250 dwellings, and 1438 inhabitants. The Delaware canal, which communicates with the Lehigh canal at Easton, terminates here, where is an extensive basin for the reception of boats connected with the coal and other trade. Steamboats from Bordentown and Trenton stop here, both ways, daily. In the vicinity are two medicinal springs, from which it probably received its name. The township in which it is situated contains, exclusive of the borough, three stores, four grist-mills, two schools, 391 scholars. Pop. 1450.

**Bristol**, t., Morgan co., O., 5 m. N.E. McConellsville. Drained by a branch of Muskingum river. It contains two grist-mills, five saw-mills, eleven schools, 409 scholars. Pop. 1645.

**Bristol**, p. t., Trumbull co., O., 173 m. N.E. Columbus, 9 N. Warren, 314 W. The post village is called Bristolville. The town contains seven schools, 390 scholars. Pop. 806.

**Bristol**, p. t., Lapeer co., Mich., 43 m. N. Detroit, 568 W. Drained by Belle river and its branches. It contains two stores, two grist-mills, four saw-mills, six schools, 170 scholars. Pop. 884.

**BRITISH EMPIRE (THE)**, one of the most civilized, powerful, and important states that have ever existed, consists of the islands of Great Britain and Ireland, with the smaller islands contiguous to them, and their dependencies in various parts of the world. Great Britain, the largest, and by far the richest and most populous of the British islands, includes what were formerly the independent kingdoms of England and Scotland; the former occupying its

S., most extensive and fertile, and the latter its N. and most barren portion. These two kingdoms, having been united, form with that of Ireland what is called the *United Kingdom of Great Britain and Ireland*, which constitutes not only the nucleus and centre, but the main body and seat of the wealth and power of the empire.

The islands of Great Britain and Ireland are situated in the N. Atlantic ocean, off the W. shores of continental Europe, opposite to the N. parts of France, the Low Countries, Denmark, and the S. parts of Sweden and Norway, between 50° and 50° N. lat., and 9° E. and 11° W. long. Great Britain, which, from its superior magnitude and importance, gives name to the United Kingdom and the empire, is not only the largest of the European islands, but one of the largest in the world. It lies to the E. of Ireland, and approaches at its S.E. extremity at Dover to within 21 m. of the opposite coast of France. But as the coast of Great Britain stretches N.N.W. from Dover to Duncansby Head, the extreme N.E. point of the island, while the opposite shore of the Continent recedes in a N.E. direction, the intervening space, called the North sea or German ocean, is of very considerable dimensions. To the S. of the British islands we have St. George's or the Bristol channel, and W. and N. the broad expanse of the Atlantic.

Great Britain is very irregularly shaped, being deeply indented by numerous gulfs and arms of the sea, but on the whole it approaches to the figure of a wedge, being narrowest at its N. and broadest at its S. extremity. The longest line not intersected by any considerable arm of the sea that can be drawn in Great Britain, extends from Eye in Sussex (lat. 50° 57' 1" N., long. 0° 44' E., to Cape Wrath in Sutherland (lat. 58° 36' N., long. 4° 56' W.), a distance of about 580 m.; and its greatest breadth from the Land's End (lat. 50° 4' 8" N., long. 5° 41' 31" W.) to a point near Lowestoft, on the coast of Norfolk (lat. 52° 58' 30" N., long. 1° 46' E.), is about 367 m. But, owing to the indentations already referred to, its breadth in some places is much less, being between the friths of Forth and Clyde under 40, and between the Mersey Frith and the Mersey under 30 m. from shore to shore. Its area is estimated at 83,888 sq. m., of which England contains 57,513 and Scotland (exclusive of its dependant islands) 26,016 sq. m. The area of the Scottish islands is estimated at 4294 sq. m.; but this is only a rude guess.

Ireland lies to the W. of Great Britain, between the parallels of 51° 36' and 55° 23' N. lat., and of 6° and 11° W. long. Its figure is rhomboidal; and though it has many noble bays and harbours, it is less indented by gulfs and arms of the sea, and is decidedly more compact than Great Britain. It is everywhere surrounded by the Atlantic, except on its E. shores, which are separated from Great Britain by St. George's channel, the Irish sea, and the North channel. From St. David's Head in Wales to Carnarvon point, the distance across is about 47 m.; from Port Patrick in the Rhymes of Galloway to Donaghadee, the distance is 22 m., but from the Mull of Cantire to Tur point in Ireland, the distance is only 134 m. The longest line that can be drawn in Ireland, in about the same meridian, extends from the old Head of Kinsale in Cork to the Bloody Point in Donegal, a distance of about 237 m.: the longest line that can be drawn crosswise in Ireland, in nearly the same parallel of lat., extends from Enniskillen on the coast of Mayo, to Quinfa Point, at the mouth of Lough Strangford, on the coast of Down, being about 128 m.; but in other places the breadth is a good deal less. So conveniently is Ireland situated in respect of water communication, that there is no part more than 50 or 35 m. distant from the sea, or from one of its arms. The area of Ireland is estimated at 31,874 sq. m.

As separate articles will be appropriated to the description of England, Scotland, and Ireland, and their dependencies, it is only intended in this article to take a rapid view of those particulars that have reference to the empire as a whole, and which could not, with propriety, be placed under the description of any one of its separate heads.

*Natural advantages of the United Kingdom.*—Perhaps no country ever existed more favourably situated, or placed under more advantageous physical circumstances, than the United Kingdom. It is sufficiently extensive to be the centre of a mighty empire; and to support, independent of any extrinsic resources, a very large population, and, consequently, possesses that native and inherent power that is necessary to secure the first of political blessings—national independence. Its insular situation is also of immense advantage; it gives us a well-defended frontier, on which there can be no encroachment, and about which there can be no dispute; and while it renders us comparatively secure from hostile attacks, it affords unequalled facilities for commerce; every part of our frontier being, as it were, a terminus to the "great highway of nations." The surface of the country is agreeably diversified with hill and dale, mountains and plains; and while the soil is not so very

## BRITISH EMPIRE.

fertile as to yield crops with little labour, and so to encourage sloth on the part of the cultivator, it is in general sufficiently productive, and yields abundant returns to the laborious and skilful husbandman. It has been well observed of Great Britain, and the same thing is equally true of Ireland, that "it is not fertile enough to make men indolent, nor barren to such a degree as to deny grateful, if not ample, returns to the industrious cultivator. In a word, it enjoys the fortunate medium between fertility and barrenness, or (to speak more properly) between easy and difficult culture; inclining rather to the side of difficulty, and affording opportunity sufficient for industry and improvements; which is just the circumstance a person would wish for who truly understands the good of his country. Rich soils infuse ease and indolence into the inhabitants; but soils that require laborious cultivation stimulate industry and invention, and impress on the population a hardy, enterprising character." (*Hart's Essays*, p. 188.)

All the most valuable species of the *Cerealia*, as wheat, oats, and barley succeed quite as well in the British islands as in any other country. Potatoes, too, and a vast variety of useful vegetables and fruits, are raised in the greatest abundance. Owing to the peculiar aptitude of the soil and climate, no country can compare with the United Kingdom in the luxuriance of its verdure, and the richness of its pastures. And in consequence principally of this circumstance, but partly, also, of the care bestowed on the selection of the most improved stock, our horses, cattle, sheep, and other useful animals, are all equal, if not superior, to the finest breeds to be found in any other part of the world.

The British islands have also been singularly fortunate in respect of climate. If we desiderate the clear skies of Italy and the south of France, we also want the long-continued droughts and exhausting heats to which they are subject. Though exposed to sudden changes, we are exempted from all violent extremes of heat and cold. The general impression seems to be that the climate of Great Britain has been considerably modified since 1750; and that our winters have become milder, and our summers less dry and warm than formerly. In most seasons, indeed, the winter can hardly be said to commence till after Christmas; and in some years there is little if any frost. The great defects in our climate are the prevalence of cold, blighting E. winds in April and May; and not unfrequently, of rainy weather in August and September. It is but rarely that our crops suffer from excess of drought; but they occasionally suffer from backward summers, and autumnal rains. On the whole, however, the climate of the British islands is, notwithstanding its defects, one of the best, if not the very best, in Europe. It requires, indeed, the most anxious and watchful attention on the part of the husbandman; but, instead of being a drawback, that is an advantage. There is also much truth in the remark of Charles II. as quoted by Sir William Temple: "He thought that was the best climate where he could be abroad in the air with pleasure, or at least without trouble and inconvenience, the most days of the year, and the most hours of the day; and this he thought he could be in England more than in any other country of Europe."

Among the other physical circumstances that have promoted, in no ordinary degree, the power and prosperity of the empire, may be specified the number and excellence of our harbours, affording asylums for the ships, and depôts for the goods of the most distant countries; and the number of our rivers, their depth, and the facilities they afford to internal communication. The last-mentioned circumstance is peculiarly worthy of remark: Great Britain and Ireland being islands, with no part very remote from the sea, it might be supposed that their rivers would be of comparatively small magnitude, and of but little use in navigation. But the fact is distinctly and completely the reverse. The Thames, Trent, and Severn, in England, and the Shannon, in Ireland, are all navigable to a very great distance. The first, notwithstanding, its limited length and volume of water, ranks, as a navigable channel, among the first rivers of Europe; its embouchure is unencumbered by any bar, and it is navigated from the sea to London bridge, a distance of 45 m., by the very largest ships, and to a much greater distance by barges. The Severn, Trent, and Shannon have been rendered navigable for barges and steam-boats for the greater part of their course; the latter, which flows through the interior of Ireland, almost to its very source! The means afforded by the rivers for facilitating internal communication, have been vastly extended by the construction of canals; and, with the single exception of Holland, the United Kingdom has a greater extent of artificial navigation than any other country.

The mineral riches of Great Britain are not merely equal to those of any other country, but superior. We cannot, it is true, boast of mines of gold and silver, but we possess what are really more important and valuable. Iron, the most useful of all the metals, is found in the greatest abundance,

and of an exceedingly good quality, in most parts of the empire. Our tin mines are the most productive of any in Europe; and we have also very productive mines of copper, lead, manganese, &c. Our salt springs and beds of fossil salt are alone sufficient for the supply of the whole world. But coal is by far the most important and valuable of our mineral treasures. It is hardly, indeed, possible to overrate the advantages Great Britain derives from her vast, and, to all practical purposes, inexhaustible beds of coal. In this climate, fuel ranks among the principal necessities of life; and it is to our coal mines that we owe abundant and cheap supplies of so indispensable an article. Had they not existed, wood must have been used as fuel; and it is quite impossible that any attention to the growth of timber could have furnished a supply equal to the wants of the present population of Great Britain, even though a large proportion of the cultivated land had been appropriated to the raising of trees. But, however great and signal, this is not the only advantage we derive from our coal mines: they are the principal source and foundation of our manufacturing and commercial prosperity. Since the invention of the steam-engine, coal has become of the highest importance as a moving power; and no nation, however favourably situated in other respects, not plentifully supplied with this mineral, need hope to rival those that are, in most branches of manufacturing industry. To what is the astonishing increase of Glasgow, Manchester, Birmingham, Leeds, Sheffield, &c., and the comparatively stationary or declining state of Canterbury, Winchester, Salisbury, and other towns in the south of England, to be ascribed? It cannot be pretended, with any show of reason, that the inhabitants of the former are naturally more ingenious, enterprising, or industrious than those of the latter. The abundance and cheapness of coal in the north, and its scarcity, and consequent high price, in the south, is the real cause of this striking discrepancy. The citizens of Manchester, Glasgow, &c., are able at a comparatively small expense, to put the most powerful and complicated machinery in motion, and to produce results quite beyond the reach of those who have not the same command over coal, or, as it has been happily defined, hoarded labour. Our coal mines have been sometimes called the Black Indies; and it is certain that they have conferred on us a thousand times more real advantage than we derive from the conquest of the Mogul empire, or than we should have reaped from the dominion of Mexico and Peru. They supply our manufacturers and artisans with a power of unbounded energy and easy of control, and enable them to overcome difficulties insurmountable by those to whom nature has been less liberal of her choicest gifts.

### Estimate of the Mineral Produce of Great Britain, on an Average of Years and Prices.

|                                           | Quantity.              | Value.     |
|-------------------------------------------|------------------------|------------|
| SPices . . .                              | 10,000 lbs. troy . . . | £30,000    |
| Copper . . .                              | 13,000 tons . . .      | 1,300,000  |
| Tin . . .                                 | 5,500 . . .            | 550,000    |
| Lead . . .                                | 46,000 . . .           | 950,000    |
| Iron . . .                                | 1,150,000 . . .        | 7,500,000  |
| Coal . . .                                | 25,000,000 . . .       | 10,000,000 |
| Salt, alum, and other minor produce . . . |                        | 1,000,000  |
| more than . . .                           |                        |            |

Total value probably exceeds . . . £20,500,000

*Races of People.*—At the earliest period to which history ascends, the British islands were occupied by Celts or Gael, who, it is probable, had passed over into Britain from the contiguous coasts of France, and from Britain into Ireland. To the Celtic population of Britain succeeded the Gothic. At a period long preceding the Christian era, the Goths or Scythians, advancing from the east, had occupied a large portion of the N. and N.W. parts of Europe. The Low Countries and the N. provinces of France were, in the age of Cæsar, peopled by Goths, who had acquired the distinctive appellation of *Belge*; and it appears from Cæsar, that long previously to his invasion of Britain, colonies of Belgians had passed over into it, and then occupied its maritime and most fertile portions. (*De Bello Gallico*, lib. v., § 12.) The Romans, though they subdued Great Britain, did not settle in great numbers in it; and the Belge, by whom it had been colonized at the epoch of their invasion, may be regarded as the principal progenitors of the English nation; for, though the various Gothic tribes who passed over into Britain after the departure of the Romans were sufficiently powerful to subdue it, and one of them (the *Angles*) succeeded in giving its name to the greater portion of Britain, they were far too few in number to have occupied it fully, or given it a new language, had their own differed materially from that previously in use. (*Pinkerton's Geog.*, art. *England*, and his *Dissert.* on the *Goths*, *pessim.*) But the ancient and the more recent Saxon and Belgian colonists being essentially the same people, readily

## BRITISH EMPIRE.

smaltingated. The invaders having expelled the original or Celtic inhabitants from the lower and more fruitful parts of the country, the latter were compelled to resort to the fastnesses of Wales, the Highlands of Scotland, and the remote parts of Devon and Cornwall. The facilities which these countries afforded for resisting and eluding an invading force, prevented them being overrun by the Goths. They were never even fully subdued by the Roman legions; and at this moment we find them a distinct race, speaking the language of their remote ancestors.

The temporary conquest of England by the Danes, and its subsequent subjugation by the Normans, however important in other respects, made no sensible change in the stock of the inhabitants. The Normans, though long settled in France, where they had acquired the use of the French language, originally emigrated from Norway, and belonged, as well as the Danes, to the Gothic family. Except, therefore, in so far as we may suppose the Celtic and Belgic inhabitants to have been bleaded together, the Gothic blood would seem to have been preserved pretty pure in all the country S. of the Ty, and E. of the Severn and the Eze.

The Romans did not invade Ireland; and the Goths do not appear to have passed over into it, at least in any considerable numbers. Hence its population, in so far as it is

not alloyed by emigrants from England since the invasion under Henry II., and their descendants, may be regarded as of Celtic origin. In fact, the Irish language, a dialect of the Gaelic, is at this moment spoken to the almost total exclusion of English, in various pretty-extensive districts of Ireland; and we should be disposed to consider nearly two thirds of the people of that island, as being lineally descended from the ancient occupants of the country.

**Population.**—The progress of population in Great Britain and Ireland was long very slow. Latterly, however, it has increased with extraordinary rapidity. This, in the former, has been a consequence of the wonderful increase of manufactures and commerce since 1763, and in the latter, of the splitting of farms, and the endless division and subdivision of the land. The progress of population in the different portions of the U. K., down to the beginning of this century, according to the best attainable information, will be seen in the table first ensuing.

The population of England and Scotland was, for the first time, determined by actual census in 1801; since which a census has been taken every ten years. In Ireland, an incomplete census was taken in 1813; but it was not till 1881 that the population of that part of the empire was exactly ascertained. For the results of the censuses hitherto taken, see the following tables.

**Progress of Population in the different Portions of the United Kingdom.**

| England and Wales. |             | Scotland. |             | Ireland. |             | United Kingdom. |             |

Relation.—Supposing, which there is every reason to believe, that the population of Great Britain has continued to increase since the census of 1831 in the same ratio as during the ten previous years, amount to about 27,500,000. Hence the U. Kingdom of population, the fourth state in Europe, and only in the number of people by Russia, France.

To attempt any exposition of the causes that have led to the progress of Great Britain so pre-eminently distinguished by and progress in the arts, would lead us into foreign to the object of this work, and which, were not the case, our limits would hinder our. It is sufficient to observe that they are of varied kind that we are not indebted for our superior civilization to one or a few, but to a number of causes: to the various favourable physical and political circumstances under which we are placed. We have derived the influence of the first; but that of the second, of circumstances has not been less powerful. of property and freedom of industry we have in a greater degree than any other European power. We have promoted and stimulated industry, every man with the conviction that he would to enjoy, accumulate, and dispose at pleasure, of his industry and skill: our free institutions, they have done, the highest stations to individual ability, how humble soever their origin, and through all classes a desire to excel, and a wish to rise superior to every difficulty. It is characteristic of the Englishman.

"Contendentes nobilitate  
Noces atque dies, nil prestante labora,  
Ad somnos emergere opes, rursusque potiri."

The magnitude of our national burdens, which, to an observer, might appear to be a heavy drawback upon the progress of industry, has really been a means of adding to their. Had they been oppressive, their operation would have been very different; but it was seen that they set by increased exertions, and these have been very have, in fact, operated on the public like an incentive to the necessary expenses of his family on a private and occasional efforts of industry, economy, and that we have more than counterbalanced their influence; and we should have in vain attempted to produce by powerful means.

All accounts will be found in the articles in this work appropriated to England, Scotland, and Ireland, of the progress in manufactures, and commerce of each. Here only endeavour to lay before the reader a few results; and these, we regret to say, are but of comparative little importance. Owing to the extreme difficulty of obtaining accurate returns as to the extent or value of any considerable branch of industry, and the limited amount that has been paid to such subjects, but little information has been collected on which it would be altogether reliable. The following estimates are, therefore, submitted as being free from error, or wholly to be dependent as being believed to be better entitled to credit than others that have been put forward.

Culture.—Extent of cultivated and uncultivated land:

|                              | Cultivated. | Uncultivated. | Total.     |
|------------------------------|-------------|---------------|------------|
| Acres.                       | Acres.      | Acres.        |            |
| England . . . . .            | 26,632,000  | 4,615,600     | 31,247,600 |
| Wales . . . . .              | 2,117,000   | 1,085,000     | 3,202,000  |
| Scotland . . . . .           | 8,045,456   | 18,800,550    | 26,846,006 |
| Ireland (Barony) . . . . .   | 14,000,073  | 4,840,798     | 18,840,871 |
| Ireland (Man, &c.) . . . . . | 308,800     | 786,600       | 1,095,400  |
| Totals . . . . .             | 48,776,313  | 29,267,456    | 78,043,769 |

The totals for Ireland and Scotland are exclusive of lakes.

Average extent of land, under the different species of crops, in England and Wales, their average produce per acre, and price, have been estimated as follows:

| Crops.                         | Acres.    | Produce per Acre.   | Total Produce. | Price per Qr. | Value.     |
|--------------------------------|-----------|---------------------|----------------|---------------|------------|
| Wheat . . . . .                | 3,800,000 | 22 qrs.             | 83,600,000     | 4s.           | 80,768,000 |
| Barley and rye . . . . .       | 2,000,000 | 4 "                 | 8,000,000      | 3s.           | 5,400,000  |
| Oats and beans . . . . .       | 3,000,000 | 4 1/2 "             | 13,500,000     | 2s.           | 16,750,000 |
| Potatoes, turnips, &c. . . . . | 1,000,000 | 1 1/2 Ls. per acre. |                |               | 1,500,000  |
| Clover . . . . .               | 1,000,000 |                     |                |               | 1,500,000  |
| Totals . . . . .               |           |                     | 105,100,000    |               | 95,768,000 |

The price of beans is here reckoned the same as that of oats; but, being usually 10s. a quarter higher, the two may be worth together £17,500,000. Gardens and hop plantations are supposed to occupy about 150,000 acres, producing, at an average, about £15 per acre, or £2,250,000 a year. Hence, the total annual value of crops raised in England and Wales will, on this hypothesis, amount to £72,900,000. (Statistics of the British Empire, I., 532, 9d ed.) The land under fallow may be estimated at 1,650,000 acres. The pasture land of England and Wales, estimated at 17,000,000 acres, and supposed to be worth £3 10s. an acre a year, will consequently yield a total annual value of £59,500,000, which has been distributed as follows:

|                                                                       |             |
|-----------------------------------------------------------------------|-------------|
| Cattle 1,100,000, at £13 each . . . . .                               | 14,300,000  |
| Calves 300,000, at £3 each . . . . .                                  | 900,000     |
| Sheep and lambs 6,800,000, at £1 10s. each . . . . .                  | 10,900,000  |
| Wool (exclusive of slaughtered sheep) . . . . .                       |             |
| 338,000 packs, at £13 each . . . . .                                  | 4,394,000   |
| Hogs and pigs, 555,000, at £1 16s. each . . . . .                     | 1,000,000   |
| Horses, 900,000, full grown, annually produced, at £15 each . . . . . | 3,000,000   |
| Poultry, eggs, rabbits, deer, &c. . . . .                             | 1,344,000   |
| Meadow and grass, for work and pleasure horses . . . . .              | 13,000,000  |
| Dairy produce, or milk, butter, and cheese . . . . .                  | 12,000,000  |
|                                                                       | £59,500,000 |

The total annual value of the agricultural produce of England and Wales, exclusive of wood, &c., may, therefore, be estimated at about £132,500,000; and though there must necessarily be a great deal of looseness in such computations, we do not believe that the result involves any very material error.

In Scotland, the extent of land under different crops, and their produce and value, have been thus estimated:

| Crops.                   | Acres.    | Produce per Acre. | Total Produce. | Price per Qr. | Value.     |
|--------------------------|-----------|-------------------|----------------|---------------|------------|
| Wheat . . . . .          | 880,000   | 8 qrs.            | 7,040,000      | 4s.           | 1,650,000  |
| Barley . . . . .         | 880,000   | 24 "              | 21,120,000     | 3s.           | 1,470,000  |
| Oats . . . . .           | 1,775,000 | 4 1/2 "           | 8,112,500      | 2s.           | 7,771,575  |
| Beans and peas . . . . . | 100,000   |                   |                |               |            |
| Potatoes . . . . .       | 130,000   | 1 1/2 Ls. &c.     |                |               | 2,500,000  |
| Turnips . . . . .        | 350,000   |                   |                |               | 180,000    |
| Flax . . . . .           | 14,000    |                   |                |               | 416,000    |
| Gardens . . . . .        | 22,000    | 1 L. 18s.         |                |               |            |
| Total . . . . .          |           |                   |                |               | 13,866,575 |

Taking the extent of pasture land in Scotland, exclusive of heaths, wastes, &c., at 2,500,000 acres, and estimating its produce to be worth, at an average, £2 per acre,\* its total value will be £5,000,000; but to this has to be added the value of about 14,000,000 of mountain pastures, heaths, woodland, and waste land; the value of this land has been estimated, apparently with great moderation, at 3s. an acre, which, if accurate, would make a total sum of £2,100,000. Hence the total value of the land produce in Scotland will be

|                                         |             |
|-----------------------------------------|-------------|
| Value of crops and gardens . . . . .    | £13,355,375 |
| of pasture land . . . . .               | 5,000,000   |
| of uncultivated land and wood . . . . . | 2,100,000   |
|                                         | £20,455,375 |

\* In the Statistical Account of Great Britain, the value of the pasture is estimated at L. 3 an acre (L. 6d.); but we have since seen statements and details that have convinced us that that was an exaggerated estimate.

## BRITISH EMPIRE.

There are no means of forming any tolerably correct estimate of the extent of land under different crops in Ireland. Of its 8,000,000 of people, it is supposed that 5,000,000 are mainly supported by the potato, and 3,500,000 of the remainder principally depend on oats. The average produce per statute acre in oats is 44 Winchester bushels (see *Statist. of the British Empire*, i. 514); and estimating the consumption of each of the 2,500,000 individuals at 29 quarts, about 1,110,000 acres are employed in raising food for them. Add to this the quantity required for the partial feeding of others, for seed, the feeding of horses, exportation to England, &c., and the whole extent of land under oats may, perhaps, be taken at from 3,000,000 to 3,500,000 acres. The land under wheat and barley does not, probably, exceed 600,000 or 700,000 acres. The whole extent of cultivable land in Ireland, about 14,000,000 acres, being estimated, tillage as well as pasturage, at £3 per acre, will yield an annual value of £43,800,000; or, including the produce of the unimproved mountain and bog land, perhaps £44,500,000 may stand for the sum total of the land produce of that country.

Hence, the aggregate annual value of the agricultural produce of the United Kingdom would be,

|                          |              |
|--------------------------|--------------|
| England . . . . .        | £132,500,000 |
| Scotland . . . . .       | 30,455,375   |
| Ireland . . . . .        | 44,500,000   |
| United Kingdom . . . . . | £197,455,375 |

*Rent.*—The only authentic information as to the rent of land in Great Britain was obtained under the Property Tax Act. It appears from the returns made by the property tax commissioners, that the total rental of England and Wales amounted, in 1810, to £39,503,070, and that of Scotland to £4,951,404. Owing to the extraordinary depreciation of the currency and the rapid rise of prices, in the years immediately subsequent to 1810, the gross rental of England and Wales had increased, in 1815, to £34,330,463, and that of Scotland to £5,075,942. Since then we have no authentic information to guide us. We believe, however, that we shall not be far wrong, if we suppose the rental of Great Britain to be, at this moment (1839), about identical with its amount in 1810, or to amount to about £34,000,000. In many districts rents are lower now than in 1810; but this fall is probably more than compensated by their rise in other places, resulting from the rapid spread of improvement, and from the influence of steam conveyance in opening new markets to the produce of the more remote parts of the country.

The property tax did not extend to Ireland, so that our information with respect to the rental of that important part of the empire is less authentic. But Mr. Griffiths, the engineer, whose means of acquiring accurate information on the subject cannot well be surpassed, submitted to a committee of the House of Lords a carefully compiled estimate of the rental of each county of Ireland (see *PARLIAMENTARY PAPERS*), from which it results that the gross rental of that kingdom then amounted to £13,715,478.

The profits of the farmers have been very variously estimated; but, on the whole, we believe they may be safely taken at about half the rent. But supposing this hypothesis to be a just one, their aggregate amount would not be represented by half the gross rental of Britain or Ireland, inasmuch as that includes the rental of the lands occupied by proprietors, or the rent which it is supposed they would bring, provided they were let.

*Manufactures.*—The manufactures of Great Britain are by far the most extensive and important that ever have belonged to any nation. We may, indeed, be said to be purveyors of most descriptions of manufactured articles for all the world; and there are but few nations, how remote or barbarous soever, that are not indebted for some considerable portion of their comforts, and sometimes even of their necessities, to the skill and industry of British artisans. A very large proportion of the people of our own country are engaged in, and directly depend upon, manufactures for support; and they supply the materials of that commerce for which this empire is so peculiarly distinguished; and which extends to, civilizes, and enriches almost every country of the globe.

We regret our inability to lay before the reader any accurate accounts of the value of the gross annual produce of any of the great departments of manufacturing industry. The following estimates must, therefore, be regarded as mere approximations; though we are disposed to think that in most cases they come pretty near the mark:

|                                 |             |
|---------------------------------|-------------|
| Cotton . . . . .                | £25,000,000 |
| Woolens . . . . .               | 22,000,000  |
| Iron and hardware . . . . .     | 17,000,000  |
| Watches, Jewellery, &c. . . . . | 3,000,000   |
| Leather . . . . .               | 13,500,000  |
| Linen . . . . .                 | 8,000,000   |
| Silk . . . . .                  | 10,000,000  |

|                                 |            |
|---------------------------------|------------|
| Glass and earthenware . . . . . | £4,000,000 |
| Paper . . . . .                 | 1,500,000  |
| Wine . . . . .                  | 2,400,000  |

The value of the above articles amounts to a gross sum of £116,850,000. But exclusive of these, there are other departments of manufacturing industry of great value and importance; such, for example, as the manufacture of spirits and beer, cabinet-makers' goods, &c. In point of fact, however, but a small part of the value of spirits and beer is derived from the labour expended upon their preparation, or extraction from the malt used in their manufacture; and there are no means by which to form any estimate, how rude soever, of the value of cabinet-makers' work. Some information will subsequently be given as to shipbuilding.

But these statements, how imperfect soever, are more than sufficient to evince the vast extent and importance of our manufactures. It would be very desirable, on many accounts, to be able to separate the sums mentioned above as constituting the gross annual value of our principal manufactures into their constituent parts, that is, to show how much of the total value of any branch of manufacture is made up of raw produce, or of the value of some other branch of manufacture embodied in it, and how much consists of the wages of labour and superintendence, and how much of the profits and wear and tear of capital. But to do this is in many cases, next to impossible; and in all cases, the greatest care and circumspection are required to avoid falling into the most serious errors. It is necessary also to observe, that considerable care is always required in drawing conclusions from the gross value of any manufacture as to the addition really made by it to the aggregate wealth of the country. Thus, assuming the gross annual value of the woolen manufacture to be about £92,000,000 a year, we should fall into the greatest imaginable error if we supposed, as is commonly done, that it made an annual addition of that amount to the gross produce of the country. Of this sum of £92,000,000, a third part, perhaps, may consist of the value of the wool; and the value of the British wool, which is by far the largest portion of the whole, being already included in the estimate of the annual produce of agriculture, would be reckoned twice over, were it also included in the estimate of the produce of the woolen manufacture. The same caution must be used in almost every case; and unless it be carefully attended to, none but the most misleading inferences need be looked for.

The progress made by Great Britain in manufactures since the middle of last century has been quite unprecedented. At that period, the quantity of iron produced in England and Wales is not supposed to have exceeded 33,000 tons a year; but the application of pit-coal to the production of iron having soon after become pretty general, the manufacture began gradually to increase, the produce in 1789 being estimated at 68,000 tons, in 1796 at 155,000 tons, and in 1806 at 250,000 tons. Since this last-mentioned period, the progress of the iron trade has been such that at this moment (1839) there are certainly not less than 950,000 to 1,000,000 tons of iron annually produced in England and Wales, and about 120,000 tons in Scotland. The business has now become of the very highest importance. Iron is employed with the greatest advantage in many ways for which it was formerly supposed not to be at all suitable: so much, indeed, is this the case that iron steam-boats have been constructed for crossing the Atlantic! And it is to the cheapness and abundance of our supply of iron as much as to anything else, that the superiority of our machinery, and consequently of most branches of our manufactures, is to be ascribed.

But the progress of the British cotton manufacture since 1769 is undoubtedly the most extraordinary phenomenon in the history of industry. In 1764 the imports of cotton wool did not amount to four million lbs., whereas they now exceed the prodigious amount of 450 million lbs.! It is difficult to give any very satisfactory explanation of this astonishing progress. Much, no doubt, must be ascribed to the influence of the general causes already specified, but much also has been owing to what may be called accidental circumstances. The cotton manufacture may, in fact, be said to be wholly the result of the inventions and discoveries of Hargreaves, Arkwright, Watt, Crompton, and a few others. And the fact of Hargreaves and Arkwright being Englishmen gave us that early priority and superiority in the manufacture which our favourable situation in other respects has since enabled us to maintain. It is seldom an easy matter for new rivals to come into successful competition with those who have already attained to considerable proficiency in any art or manufacture; and they rarely succeed unless they have some very material advantage on their side. But in this instance, besides having the start of foreigners, the natural and moral circumstances under which our manufactures have been placed have given them advantages not enjoyed in anything like the same degree by the manufacturers of any other country. Were any change

## BRITISH EMPIRE.

or revolution effected in machinery that should admit of coal being advantageously dispensed with, it is difficult to say what effect it might have in the long run on our manufactures. We believe, however, that our advantageous situation, the magnitude of our capital, the industry of our workmen, and the determination of all classes to advance themselves in the world, would, under any circumstances, ensure our continued prosperity as a manufacturing people. So long, however, as coal continues to be as indispensable in industrious undertakings as at present, and so long as we preserve our free institutions, without the alloy of popular licentiousness and agitation, there is not so much as the shadow of a ground for supposing that our manufacturing prosperity will be impaired. On the contrary, it is reasonable to expect, seeing the increasing wealth of our foreign customers, the greater competition at home and abroad, and the greater attention paid to scientific investigations, that it will go on increasing, and that the discoveries and progress to be made in the next age will surpass those made in the present, wonderful as they have been.

*Commerce.*—Neither the commerce of Tyre or Carthage in antiquity, nor that of Italy in the middle ages, nor of Holland in the 17th century, could compare for the variety and value of the products which it distributes, and the all but unlimited range which it embraces, to the existing commerce of England. Our products are found in every country, and our flag floats over every sea.

"Quæ regis turæ sociis non placeant laboris?"

And as all commerce is bottomed on a principle of reciprocity, and is sure to stimulate the industry, and to add to the wealth of all who engage in it, we may safely affirm, that while the people of Britain are pursuing only their own interests, they are contributing in the most effectual manner to diffuse the blessings of civilization and a taste for luxury and refinement. It is impossible, indeed, to overrate the beneficial influence of that commerce of which this country is the centre and mainspring. No one aware of its vast extent can have the smallest doubt that it is by far the most important means of civilization and improvement ever brought into active operation. And we may unhesitatingly conclude, that instead of having approached, or, as some suppose, passed, its zenith, it will continue to increase with the increasing wealth, and consequently growing wants, of the various nations it is now rousing to activity and enterprise; and that it will derive new vigour, and have its foundations widened and consolidated, by every circumstance calculated to promote the industry and to add to the riches of those with whom we deal.

When we look a little narrowly into the matter, we find that at bottom society resolves itself into a series of exchanges; that every individual is in some sort a merchant; and that the principal business of life consists in the exchange of one sort of service or article for another. Hence in all countries the mercantile transactions carried on at home, or in the *home trade*, infinitely exceed in number and value those carried on with foreigners, or in the *foreign trade*. The latter, however, is not on that account the less important or valuable. But for the intercourse we carry on with foreigners we should be wholly destitute of many most desirable products—such, for example, as tea, coffee, wine, the precious metals, &c., and of the raw material of many of our most important manufactures, as those of cotton and silk. Generally, too, manufactures are improved and perfected according to the scale on which they are carried on, so that an extensive commerce is at once a consequence and a cause of manufacturing pre-eminence. The cotton-mills of Lancashire and Lanarkshire could not have been constructed had the demand for their produce been confined to the empire only: they have been built not merely to supply the limited consumption of Great Britain and Ireland, but the unlimited consumption of the world!

It is plainly impossible, from the nature of the thing, to form any estimate of the extent of the home trade carried on in any great country, or of the exchanges effected among its citizens. Formerly, accurate accounts were kept of the cross-channel trade between Great Britain and Ireland; but, with the exception of corn, no official account is now kept of the products conveyed from the one to the other. Luckily, however, this is not the case with the trade with foreign countries. Heavy duties being laid on most articles imported from abroad, it is necessary for fiscal purposes that their amount should be ascertained with as much accuracy as possible; and it is believed that the declarations of the real value of the exports made by the exporters do not differ materially from the truth.

The trade carried on with colonies, or the colonial trade, though conducted under different regulations and duties, is substantially the same with the foreign trade; and may be, and indeed generally is, considered as a branch of the latter.

We subjoin a few statements respecting the principal ar-

ticles imported from and exported to the countries with which we have the greatest intercourse.

*Russia.*—Imports from: tallow, corn, flax and hemp, flax and linseed, timber, bristles, ashes, hides, iron, and wax. Exports to: cotton twist, woollen fabrics, salt, coal, hardware, colonial products, &c.

*Sweden and Norway.*—Imports from: timber, iron, and bark. Exports to: cottons and cotton yarn, woollens, earthenware, hardware, coffee, indigo, tobacco, sugar, &c.

*Denmark.*—Imports from: corn and rape-seed, butter, bristles, wool, hides, and bark. Exports to: coal, salt, iron and steel, earthenware, machinery, coffee, indigo, &c.

*Prussia.*—Imports from: corn, oak and fir timber, bark, bristles, wool, spelter, flax, &c. Exports to: refined sugar, salt, cottons, hardware, earthenware, &c. Our trade with Prussia is principally carried on through Hamburg.

*Germany.*—Imports from: wool, corn, wines, butter, linens, hides, clover, rape-seed, smaltz, spelter, saffron, furs, wooden clocks, &c. Exports to: cotton stuffs and yarn, woollens, refined sugar, hardware, earthenware, iron and steel, coal, salt, indigo, coffee, rum, tobacco, cotton wool, spices, &c. A good deal of the imports from and exports to Holland and Belgium are on German account.

*Netherlands.*—Imports from: butter, cheese, corn, madder, Geneva, flax and low, hides, linens, seeds, toys, &c. Exports to: cotton stuffs and yarn, woollens, hardware, earthenware, salt, coal, and colonial products.

*France.*—Imports from: brandy, wine, silk (raw and manufactured), gloves, madder, eggs, skins, and fruit. Exports to: wool, linens and linen yarn, brass and copper manufactures, machinery, coal, horses, &c. Large quantities of Nottingham lace are smuggled into France, and brandy into England.

*Portugal and Spain.*—Imports from: port and sherry wines, barilla, wool, raisins, dried fruits, lemons, oranges, olive oil, quicksilver, &c. Exports to: cotton stuffs, woollens, linens, hardware and cutlery, iron and steel, soap, candles, leather, and cinnamon.

*Italy.*—Imports from: thrown silk, olive oil, straw for plaiting, straw plait and hats, currants, lemons, oranges, wine, barilla, shumac, bark, cheese, lamb skins, hemp, &c. Exports to: cotton stuffs and yarn, refined sugar, woollen manufactures, hardware and cutlery, iron and steel, coffee, indigo, tobacco, pimento, &c.

*Turkey, Greece, &c.*—Imports from: silk, opium, madder, figs, raisins, valones, oil, cotton, currants, senna, &c. Exports to: cotton manufactures and twist, linens, hardware, iron and steel, cordage, woollens, earthenware, indigo, and coffee.

*Egypt and Africa.*—Imports from: cotton wool, flax, linseed, senna and other drugs. Exports to: cotton manufactures, iron and steel, arms and ammunition, and machinery.

*Foreign West Indies.*—Imports from: sugar, coffee, cotton, cigars, &c. Exports to: cotton manufactures, earthenware, linen manufactures, hardware, iron and steel, woollens, glass, machinery, &c.

*United States.*—Imports from: cotton, tobacco, wheat flour, wheat, rice, skins and furs, hides, staves, &c. Exports to: cotton, linen, and woollen manufactures, hardware, cutlery, earthenware, salt, brass and copper, apparel, books, &c.

*South American States.*—Imports from: cotton, wool, sugar, coffee, baillon and precious stones, coconuts, hides, fruits, bark, dye-woods, furs, &c. Exports to: cotton, linen, and woollen manufactures, earthenware, hardware, soap, candles, &c.

*African British Colonies.*—Imports from: Cape and Constantia wines, hides, ivory, skitts, aloes, palm-oil, teak timber, wax, dye-woods, sugar from the Mauritius, &c. Exports to: cotton, woollen, and linen manufactures, apparel, earthenware, hardware, iron and steel, soap, candles, stationery, fire-arms, salt, machinery, &c.

*Asia and Australia.*—Imports from: tea, indigo, cotton, sugar, silk, coffee, wool, pepper, saltpetre, piece-goods, rice, lac-dye, cinnamon, mace, cloves, cocoa-nut oil, whale oil, ivory, tin, and the precious metals. Exports to: cotton stuffs and yarn, woollens, linens, earthenware, copper, hardware, iron and steel, leather, glass, machinery, &c.

*American British Colonies.*—Imports from: furs, fish, ashes, skins, turpentine, &c. Exports to: woollens, cottons, linens, hardware, iron and steel, soap, candles, earthenware, apparel, glass, cordage, coal, butter, cheese, &c.

*British West Indies.*—Imports from: sugar, coffee, rum, cotton, pimento, molasses, mahogany, logwood, fustic, coconuts, cochineal, ginger, hides, &c. Exports to: cotton stuffs, linens, woollens, apparel, soap, candles, hardware, iron and steel, fish, earthenware, cordage, beef and pork, arms and ammunition, &c.

The subjoined Tables give a pretty complete view of the commerce of the United Kingdom. Those who wish for more ample information may refer to the Commercial Dictionary.

# BRITISH EMPIRE.

I. Official and Declared Value of Exports of British and Irish Produce and Manufactures; and Official Value of Exports of Foreign and Colonial Merchandise from Great Britain; and Official Value of Imports into the same, for the following Years.—(Part. Paper, No. 943, Sess. 1840, and Finance Accounts.)

| Years ending Jan. 5. | Exports.                                                       |               | Imports.                                             |                 | Years ending Jan. 5. | Exports.                                                       |               | Imports.                                             |                 |

\* Records destroyed by fire.

The great increase in the official, and the comparatively stationary amount of the real value of the exports, has occasioned a great deal of comment. The rates by which the official values of the exports are estimated in 1839, so that they have long ceased to be any but a nominal value, and are of use only in showing the fluctuations in the quantities exported. To supply this deficiency a plan was set on foot by Mr. H. K. in 1839, an account of the real value of the exports from the declarations of the exporters. Now, it has been contended, that, while the great increase in the official value of the exports since 1815 shows that the quantity of the articles exported has been proportionally augmented, their nearly stationary real value shows that they are selling at the same prices as the same quantity of produce at the same prices, affords no criterion of the advantages of the sale; for, if, in the course of the years, the quantity of the articles exported has been augmented, it is evident that the quantity may be afforded at the same price without injury to the producers. And this has been most strikingly the case with the great real value of cotton, hardware, &c. The fall in the price of the former enables us to export and sell with a profit, (for, unless such was the case, does any one export the cotton without loss?) at the same price, more than double the cotton stuff, and twist that we exported in 1815! Surely, however, so it is, and it is a decisive proof of manufacturing improvement and commercial prosperity.

## BRITISH EMPIRE

III. Account of the Quantities of the principal Articles of Foreign and Colonial Merchandise imported into, exported from, and retained for Consumption in, the United Kingdom, with nett Produce of the Revenue accruing thereon, during the years 1837 and 1838.

| Description.                                               | Quantities imported. |             | Quantities exported. |            | Quantities retained for consumption. |             | Nett Revenue. |           |

*The means of internal communication in Great Britain are probably superior to those enjoyed by any other country. Our high roads, which, during the last half of last century, were really bad, have been signally improved since the times of the American Revolution, and since the general introduction of the practice of *macadamizing*, they may be confidently pronounced to be the very best in Europe. With the exception of Holland and Belgium no country is better supplied with canals; and by these means, and the aid afforded by our numerous navigable rivers, the conveyance of the bulkier articles has been rendered both easy and cheap. Railroads seem now, however, to be likely to su-*

percede most other methods of conveyance, in so far as least as the transit of passengers and of the lighter and most valuable species of goods are concerned; and the wonderful speed with which lengthened trains of loaded wagons are impelled by locomotive engines along these roads, is among the most valuable and astonishing results of modern science and discovery. By facilitating travelling to a degree that could not, a few years ago, have been conceived possible; rendering all the great markets of the empire easily accessible to the products of the remotest districts; obliterating local prejudices and customs; reducing the country to a homogeneous mass; and producing every where

## BRITISH EMPIRE.

a spirit of emulation and competition, our improved means of communication are exercising an influence of the most powerful kind, and which cannot be too highly appreciated.

Still, however, it has been doubted whether these extraordinary improvements in the arts, and the vast extension of commerce, has conferred any real and important advantage on the bulk of our people. That they have added prodigiously to the field of employment is certain; but it has been contended that the increase of population and consequently of the demand for labour, has been equal, or nearly so, to the increase of employment; that the condition of the people has not been materially improved; and that their command over the necessities, conveniences, and enjoyments of life have not been augmented in any thing like the degree in which their numbers have increased. There is really, however, no truth in these representations. The condition of the great bulk of the people of Britain, and especially of the labouring classes, has been signally, and indeed astonishingly improved since the middle of last century. The greatest possible ameliorations have been effected in the interval in the diet, dress, and lodging of all classes. Towards the middle of last century, about half the people of England were consumers of barley, rye, and oat bread; whereas, at present, not a tenth part of the population use any bread unless made of wheat. The consumption of butchers' meat, as compared with the population, has also doubled, or more, in the interval (*Statistics of the British Empire*, II. cap. 5); and the extraordinary increase in the consumption of tea, sugar, coffee, and such like articles, is too well known to require being pointed out. The improvements that have been made in clothing and lodging are, if possible, still more remarkable. Linen shirts, that were formerly luxuries, used only by the richer classes, are now worn by every body; and the old, coarse, comfortless home-made cloths have been wholly superseded by the better and cheaper products of the factories. The cheapness, to specify one instance, and extraordinary abundance of cotton fabrics, have given the poorest females the means of greater comfort, neatness, and display in dress, than were enjoyed by the highest classes in the first half of last century. And any one who compares the old farm-houses and cottages, or the houses in the old narrow streets and lanes in any one of our great towns, with the farm-houses, cottages, and town lodgings for the poor, built within the last fifty, and still more, the last thirty years, will at once be sensible of a vast improvement. Essential as glass windows may now appear, in the 16th century they were luxuries, all but unknown, in the castles of the principal nobility in England; and in Scotland, in the early part of last century, glass was seldom seen in the windows of the first class of country houses, and never in cottages. (*Statistics of British Empire*, I. 714.) The latter were then, also, almost universally destitute even of chimneys! But the liberal use of these, and of glass, is not the only circumstance in which modern houses excel those built previously to the American war. The former are in all respects superior. They are constructed on a larger scale; the apartments are more spacious and lofty; they are better ventilated; and are supplied with water to an extent of which our ancestors had no idea. It is, in fact, to the better construction of houses, the greater width

of streets, and, above all, to the abundant supply of water and the effective system of under-ground drainage that now exists, that the entire freedom of our great towns from epidemic diseases, and the wonderful improvement in the health of the inhabitants are mainly to be ascribed.

Signal as the spread of improvement has been everywhere throughout Great Britain since 1750, it has been greatest in Scotland. This, no doubt, has been principally owing to the fact of Scotland being previously in a comparatively backward state. But its progress since the epoch referred to, or rather since the close of the American war, has been all but unprecedented; and if at all, has only been surpassed by the progress made by Kentucky, and one or two more of the American states.

In Ireland, we regret to say, improvement has been much less rapid than in any part of Great Britain; but even there a considerable advance has been made; and the fair presumption seems to be, now that the civil disabilities under which the Catholics laboured have been removed, that improvement will proceed with an accelerated pace.

If anything more than has been already stated were required to establish the astonishing improvement in the condition of the people of Great Britain during the last fifty years, it would be evinced by the decrease that has taken place in the rate of mortality since 1760 and 1770. The extreme limit of human life assigned by the Psalmist has not, indeed, been extended; but a much larger proportion of those born arrive at or approach to that limit than formerly. The probable life of a male annuitant five years of age (a picked life), at the commencement of last century, has been found to be 39.03 years; whereas it appears that the probable life of a male of five years of age, taken at an average of the mass of the population, from 1813 to 1836, was not less than 49.80, or nearly 11 years greater than the former! This extraordinary improvement must, no doubt, be ascribed to a variety of causes: partly to the drainage of bogs and marshes, by which agues and marsh-fevers have been entirely banished from many districts; partly to improvements in the diet, dress, lodgings, and other accommodations of the mass of the people; partly to the greater prevalence of cleanliness; and partly, and since 1800 chiefly, perhaps, to discoveries in medical science and the extirpation of the smallpox. But, however explained, this, and the facts mentioned above, show conclusively that the beneficial influence of the extraordinary improvements in arts and sciences made during the last 60 or 70 years has not been counterbalanced by the increase of population, and that it has not been confined to the upper and middle classes. On the contrary, these improvements have been especially beneficial to the labourers. The latter are at this moment incomparably better fed, better clothed, and better lodged, than at any former period of our history; and, in point of fact, daily enjoy, and reckon as indispensable, a great number of articles of convenience and luxury that formerly could rarely be obtained even by the richest lords.

*Shipping.*—The mercantile marine of Great Britain first began to attain to considerable importance in the reign of Elizabeth; and it has continued progressively to increase with the increasing colonies and commerce of the country. The subjoined Tables give a view of its present magnitude, and of the navigation of the empire:

### I. Account of the Number and Tonnage of Vessels, with the Number of their Crews, belonging to the British Empire, on the 31st of December, 1836, 1837, and 1838.

|      | Vessels. | Tonnage. | Vessels.  | Tonnage. | Vessels. | Tonnage. | Vessels.        | Tonnage. | Vessels.                            | Tonnage. | Vessels.             | Tonnage. | Vessels. | Tonnage. |
| 1838 | 484      | 43,877   | 105       | 13,113   | 84       | 17,694   | 673             | 74,664   | 5                                   | 709      | 44                   | 7,393    | 732      | 86,716   |

Ship-building is principally carried on at the ports of London, Sunderland, Newcastle, Hull, Liverpool, &c. The business has of late increased very rapidly at Sunderland: so much so, that while only 60 ships, of the burden of 7500 tons, were built in that port in 1830, no fewer than 947 ships, of the burden of 59,441 tons, were built in it in 1838! Of

late years, many steam-boats and other craft have been built in the Clyde. The ships built in the Thames bear, generally, the highest character. At a rough average, the cost, including outfit, of the new ships annually sent to sea may be estimated at from £10 to 12£ a ton.

Account of the Number of vessels with the Amount of their Tonnage, that were built and registered in the Ports of the British Empire, in 1836, 1837, and 1838.

|                                    | 1836.    |          | 1837.    |          | 1838.    |          |

**Money.**—The metallic money of the United Kingdom, consists partly of gold, and partly of silver and copper coins. The standard of our gold coin is 11 parts fine to 1 part alloy: a pound Troy of this standard gold is coined into 46 sovereigns and  $\frac{1}{2}$ ths of a sovereign, or into £46 14s. 6d.; so that the sovereign contains 113.001 grains fine, and 123.374 grains standard gold.

The standard of our silver coin is 11 oz. 2 dwt. fine to 18 dwt. alloy. Since 1816, a pound of this standard silver has been coined into 66 shillings, so that each shilling contains 80.737 grains pure silver, and 87.37 grains standard. Silver coins form a mere subsidiary currency, and are legal tender to the extent only of 40s.

Copper coins are much over-valued in our currency, and are legal tender to the extent only of 1s.

But by far the greater part of the considerable transactions in the United Kingdom having reference to money, are settled by the intervention of paper; that is, by the agency of the notes of the different banking companies, or of bills. In England and Ireland no bank note can be issued for less than £5, but in Scotland they may be issued so low as £1; they are all made payable to bearer on demand, either in coin or in notes of the Bank of England. The latter, with the banks of Scotland and Ireland, are the principal banking establishments. Bills vary in every possible way, as to amount, time, and place of payment.

**Constitution.**—For full details as to this interesting and important head, the reader is referred to the articles ENGLAND, SCOTLAND, and IRELAND. It is here sufficient to observe, that the British constitution appears to have been at its outset substantially the same with the constitution originally established in most of the other European states formed out of the ruins of the Roman empire. But it is the peculiar boast and happiness of England that she alone has had the good sense or good fortune to preserve that distribution of power among the different orders of the community which at one time prevailed among the French,

Spaniards, &c. Our government is of the species called mixed, being partly monarchical, partly aristocratical, and partly democratical. The executive authority is vested in the sovereign, or, rather, in the ministers chosen by him, while the legislative authority is shared by the sovereign and by the houses of Lords and Commons. The former of these houses consists of dignified clergymen, and of nobles whose dignity is hereditary, and who are generally possessed of large fortunes.

At present (1839) it consists of

|                             |     |
|-----------------------------|-----|
| Peers of the blood royal    | 3   |
| Archbishops                 | 3   |
| Dukes                       | 21  |
| Marquises                   | 20  |

| Viscounts                   | 19  |
| Barons                      | 200 |
| Scotch representative peers | 16  |
| Irish ditto                 | 29  |
| English bishops             | 24  |
| Irish representative ditto  | 4   |
| Total                       | 450 |

The House of Commons.—The predominating power in the state—consists of 658 representatives chosen by electors in the different counties and represented towns; and though the sovereign be not, his ministers are, responsible to it and to the H. of Lords for all acts done by them in their public capacity. According to the theory of the constitution, the H. of C. is chosen by, and represents the wishes, feelings, and prejudices of the British people. But if by people be meant the full-grown male pop. of the U. Kingdom, this statement is altogether erroneous. By far the greater portion of the population has not, and never had, anything directly, and but little indirectly, to do with the choice of the members of the H. of C. Down to the passing of the Reform Act in 1832, the members for counties in England were chosen by persons having a freehold or a life interest in freehold property, worth 40s. a year; and in towns the right of election was usually in the corporation, or in the corporation and freemen. That hostility to the old system that paved the way for the Reform Act was not occasioned

\* Returns defective.  
† "Si l'on veut lire," says Montesquieu, "l'admirable ouvrage de Tacite sur les mœurs des Germains, on verra que c'est d'eux que les Anglois ont tiré l'idée de leur gouvernement politique. Ce bon système a été trouvé dans les bois." (*Esprit des Loix*, liv. II, cap. 6.)

## BRITISH EMPIRE.

so much by the faulty mode in which representatives were chosen in towns entitled to send them to the H. of C., as by the decayed condition of many of these towns. The parl. boroughs had all been specified previously to the Revolution; and no provision was made in the constitution for admitting representatives for such new boroughs as might afterward attain to importance, or for the disfranchisement of such of the parl. boroughs as might happen to fall into insignificance. Hence it came to pass that many commercial and manufacturing towns, which had attained to vast wealth and importance after the parliamentary boroughs were selected, were excluded from all share in the representation, while, on the other hand, many boroughs that had become quite unimportant continued to enjoy this valuable privilege. A distinction of this sort could not be long endured, and but for the engrossing excitement occasioned by the late French war, it would, most likely, have been obviated some twenty years sooner. The Reform Act, by disfranchising a good many decayed and trifling boroughs, and enfranchising the greater ones, and giving the right of voting at the election of members to the holders of £10 houses, has rendered the H. of C. a good deal more democratical than formerly, and has, consequently, made it correspond better with the theory of the constitution. This tendency has, perhaps, also been strengthened by the changes that were at the same time made in the county representation, though that is more doubtful.

STATISTICAL VIEW OF THE REPRESENTATION OF THE UNITED KINGDOM.

It remains to be seen whether the changes that have been made in the system of representation will turn out in the end to be beneficial. It is obvious that such a modification in our institutions as should admit the great towns that had grown up since the parl. boroughs were selected to a direct participation in the privileges of the constitution, was alike just and indispensable. It was an insult to common sense to pretend that Gatton and Old Sarum should be represented, and that Manchester and Birmingham should not; and the wonder is, that so revolting an anomaly should have been so long maintained. The only question now is, has the franchise been placed in proper hands? Time only can resolve this; but there are, perhaps, some grounds for apprehension. It appears to us that, in a country like Great Britain, with so great a public debt, and where so much depends on the security of property in opinion, as well as in fact, the power to send representatives to the H. of C. should not have been voluntarily conceded, except to those who, from their position in society, might be presumed to have a substantial interest in the support of the existing order of things. But the occupier of a £10 house or of a £50 farm may be, and in fact not unfrequently is, little better than a beggar. And we are not of the number of those who contend that a person with only 5s., or without anything, will feel himself as much interested in good government, and in the maintenance of that security so essential to all great undertakings, as the owner of an estate or of a cotton-mill. That such a person has a real interest in the well-being and tranquillity of the empire, is most true; but it is absurd to suppose that he will be so likely to be influenced by a wish for its promotion, or that he will be so little likely to lend a willing ear to the seductive harangues of demagogues, or to give his sanction, in periods of distress or excitement, to dangerous innovations, as a person with some considerable amount of property.

That there are difficulties in the way of the establishment of a *bona fide* property qualification is true, but they are far from insuperable; and provided the qualification were of a reasonable amount, it appears to be the most likely means of securing the election of representatives to whom the affairs of the country might be safely entrusted, and of providing for a really responsible, and, at the same time, safe and judicious system of government.

We believe, however, that the objectionable class of electors alluded to above forms in most, if not in all, in-

stances a minority, and that the good sense and obvious interest of the bulk of the people will be sufficient to hinder any rash or dangerous tampering with our institutions. It were well, however, that steps were taken to give the Reform Act fair play, by putting a stop to the manufacture of fictitious votes. In many instances this practice has been carried to a very great height, and threatens, unless put an end to, to subvert every sound principle of representation.

Perhaps the greatest advantage resulting from the free constitution of the H. of C. has been indirect rather than direct. We owe to it what no other European nation has enjoyed—a really free press. According as the people increased in wealth and intelligence, and members for populous places found it necessary to conciliate public opinion, it became of importance to them to have their speeches printed and circulated over the country. Hence, though the reporting of debates be a breach of privilege, it has long been practised, with the consent of all parties. Members, in fact, speak less to the House than to the reporters, and, through them, to the country; and the censures and comments in which they are accustomed to indulge become a warrant and an apology for similar censures on the part of journalists. It would have been subversive of every principle of justice to punish the latter for what had been proclaimed with impunity by the former. Hence it is that we are really indebted for the freedom of the press, that is, for the palladium and only real safeguard of our rights and liberties—not so much to the votes, as to the debates carried on in the H. of C. Freedom of debate produces freedom of printing; and, consequently, gave us the only effectual security for good government, and the only real check upon abuse. It would require a lengthened essay, or rather a large volume, to point out all the advantages we derive from the freedom of the press; but it is not too much to say, that we are mainly indebted to it for the high place we hold among the nations of the earth; and should we ever be deprived of it, our other institutions would, one by one, be subverted, or be rendered of comparatively little importance, and the sun of Britain's glory would set—and forever.

Next to the security afforded by the freedom of the press, trial by jury has been the grand bulwark of the liberties of the people of England. This institution is of very remote origin, and, like representative assemblies, was at one time introduced into several European countries. It is expressly laid down by the great charter, that "*nullus liber homo capietur, vel imprioretur, aut exiliet, aut aliquo alio modo destructur, nisi per legale iudicium parium suorum, vel per legem terra.*" "The founders of the English laws," says Blackstone, have, with excellent foresight, contrived that no man should be called to answer to the king for any capital crime, unless upon the preparatory accusation of twelve or more of his fellow-subjects (the *grand jury*); and that the truth of every accusation, whether preferred in the shape of indictment, information, or appeal, should be afterward confirmed by the unanimous suffrages of twelve of his equals and neighbours (the *petty jury*), indifferently chosen, and superior to suspicion. So that the liberties of England cannot but subsist so long as this palladium remains sacred and inviolate, not only from all open attacks, which none will be so hardy as to make, but also from all secret machinations, which may sap and undermine it by introducing new and arbitrary methods of trial by justices of the peace, commissioners of the revenue, and courts of conscience." (Book IV, cap. 37.)

With the exception of England, trial by jury, in most other countries, was not long in being either suppressed or perverted; that is, juries were either entirely dispensed with, and the power to try prisoners entrusted to judges appointed by the different governments, or the institution was kept up in name only, its object and spirit being totally changed. Instead of jurymen being "indifferently chosen, and free from suspicion," which is of the very essence of jury trial, they were not unfrequently selected by the crown, or its creatures! When so perverted, this institution, from being an efficient protection against unjust and unfounded accusations, becomes a most convenient and dangerous instrument in the hands of an unprincipled government. Hence, it is always impossible to form any fair estimate of the judicial systems of any two or more countries, or of the protection afforded by each to life and property, from merely learning that trial by jury is established in them. Everything depending on its organization. If juries be fairly and impartially chosen from the mass of the people, they are the best bulwarks that can probably be devised for the protection of innocence; but if otherwise—if they may be named, or their election influenced, by judges or government officers, they throw a constitutional veil over the acts of the oppressor, and are, in all respects, most inimical to the public interest.

In England, the selection of jurymen having been always, or at least very generally, made on fair principles,

## BRITISH EMPIRE.

jury trial has been deservedly in the highest degree popular. In most countries, the fact of government bringing a charge against an individual, and his condemnation have been nearly identical; but it has been quite otherwise with us. Here the charge had to be referred to 12 individuals fairly selected from among the freeholders of the neighbourhood; and unless they were *unanimously of opinion* that the charge was well founded, the accusation fell to the ground, and no further legal proceedings bottomed upon it could be instituted against the accused.

The signal benefits derived from jury trial in criminal cases, and in charges of treason and sedition; and the fact that, were it given up in one class of cases, it might gradually fall into disuse in others, seem to be the principal causes of its being continued as a means of trying all descriptions of civil suits. The fair presumption, however, would seem to be, that a large class of civil cases might be as well, or better decided by a judge or judges appointed for that purpose; and one would be disposed to think that trial by jury might now be advantageously confined to that description of civil cases where the facts are disputed, for the investigation of which it is so peculiarly well fitted.

The vital importance of an indifferent selection of jurymen is obvious; but if any doubt should remain in the mind of any one with respect to it, that will be removed by comparing its influence in England with its influence in Scotland: in the former, it has been the best defence of the liberty of the subject; whereas, in the latter, it was the readiest means government could employ to oppress and get rid of any obnoxious individual! This anomalous result was entirely owing to the fact that, in England, juries were fairly selected; while in Scotland, they were nominated by the sheriff and judges! Luckily, however, this gross abuse has been at last obviated; and Scotland, as well as England, is now in the *bona fide* enjoyment of trial by jury.

**Religion.**—The most perfect toleration is given to the professors of different religious creeds in the U. Kingdom. But, from the Revolution down to 1829, Catholics were excluded from parliament, and were incapable of holding most offices of trust and emolument. These unjust and degrading disabilities were, however, removed at the epoch referred to; and Catholics may now be elected members of the legislature, and are eligible to almost all offices. The repeal of the test and corporation acts, in 1828, removed sundry disabilities under which dissenters previously laboured.

The established church of England has retained the episcopal form of church government, with its subordination of ranks; and it is a very richly-endowed institution. Its tenets, which are partly Lutheran and partly Calvinistic, are embodied in the famous 39 Articles. The Kirk, or established church of Scotland, which is Presbyterian in form and Calvinistic in principle, is moderately well endowed. The greatest equality subsists among its members; and, on the whole, it may be said to be an extremely useful and an essentially popular body.

These churches respectively enjoy the confidence and support of the great bulk of the people of England and Scotland. But it is quite otherwise with the established church of Ireland. The latter is identical with the church of England. Inasmuch, however, as the doctrines of the Reformation never made any considerable progress in Ireland, and as the great bulk of its inhabitants have always been Roman Catholics, the established church has been that of a small minority only, and has never possessed the esteem of the people. On the contrary, they have always regarded it as a usurpation, as originally forced upon them by the arms, and upheld by the power, of England, and as being hostile alike to their religion and their secular inter-

ests. Much of the disturbance and disaffection that always prevail in Ireland are to be ascribed to this unhappy constitution of the established church. It is in truth little better than a contradiction and an absurdity to make the church of a small minority the national church, and to assign to it funds that might amply provide for the religious instruction of the whole people. It is not to be supposed that the majority should tamely acquiesce in such a state of things; and common sense would suggest that the Catholic should be made the established religion of Ireland, or, at all events, that the Catholic clergy should participate, in proportion to the number of their adherents, in the endowments now exclusively enjoyed by the established clergymen.

**Revenue and Expenditure.**—That portion of the national revenue that is withdrawn from the public by means of taxes, and appropriated to the use of government, amounts at present (1836) to about £50,000,000 sterling, and far exceeds in magnitude the public revenue of any other country. But it must not thence be inferred that taxation is here comparatively heavy. Its pressure is not to be estimated by the actual amount of the sum taken from the people and lodged in the coffers of the treasury; but by the mode in which taxes are imposed, and the ability of the people to bear them. In some countries taxes are imposed on certain classes only; and even where this gross inequality does not exist, they are often imposed on erroneous principles, and in a way that makes their assessment and collection peculiarly difficult and injurious. But in the U. Kingdom taxation presses equally, or very nearly so, on all classes; and, without pretending to say that our system of taxation is perfect, or that it might not be materially improved, it appears, speaking generally, to be founded on sound principles, and is practically as little injurious as it could well be rendered. And if we compare the magnitude of our taxes with that of the national revenue whence they are derived, it will probably be found that the complaints of the peculiarly heavy pressure of taxes in this country are, in a great measure, without foundation. It is not to the influence of taxation, but to the expensive style of living, which prevails among us, and which luckily (for it is the grand incentive to industry and invention) pervades all classes, that the difficulty many individuals have in preserving their places in society is to be ascribed. Far, indeed, from supposing that the influence of taxation in Great Britain has been hostile to the increase of public opulence and private comfort, we believe it has had a precisely opposite effect. To the desire of rising in the world the increasing pressure of taxation during the late war superadded the fear of being thrown down to a lower station and the two together produced results that we should in vain have looked for from the unassisted agency of either. Oppressive taxes would have had an opposite effect; and instead of producing new displays of industry and economy, would have produced only despair and national impoverishment. But it was seen that the increase of taxation might be met by increased exertion and economy; and this increased exertion has, in fact, led to the production of a far greater amount of wealth than was required to meet the increased demands of the revenue collectors.

About three fourths of the public revenue are derived from duties of customs and excise; and the rest from duties on stamps, the assessed taxes and the post-office. With few exceptions, the duties seem to be judiciously selected; and though it be true that some of them, as those on foreign brandy, tobacco, &c., would be more productive were they materially reduced, the defect is not in the selection of the articles on which to impose duties, but in the too great height to which they have been carried; a defect that admits of being easily obviated.

ACCOUNT of the Public Income of the United Kingdom, in 1836, 1837, and 1838.

The following is an account of the nett amount (including the expenses of collection) contributed by each of the three great divisions of the U. Kingdom to the principal branches of the public revenue in 1836:

|               | England.          | Scotland.        | Ireland.         | U. Kingdom.       |
|---------------|-------------------|------------------|------------------|-------------------|
| Customs       | 18,932,189        | 1,518,881        | 1,944,190        | 22,395,260        |
| Excise        | 10,577,600        | 2,185,855        | 1,974,689        | 14,738,144        |
| Stamps        | 6,814,683         | 626,115          | 461,747          | 7,912,545         |
| Taxes         | 3,808,969         | 326,277          | 2,908,066        | 6,043,312         |
| Post-office   | 1,806,255         | 211,543          | 529,480          | 2,547,278         |
| <b>Totals</b> | <b>41,269,696</b> | <b>4,701,771</b> | <b>4,808,963</b> | <b>50,779,430</b> |

The expense per cent. of collecting the gross public revenue in 1836 was:

|             | Great Britain. | Ireland.  | U. Kingdom. |
|-------------|----------------|-----------|-------------|
|             | Per cent.      | Per cent. | Per cent.   |
| Customs     | 5 0 5          | 11 10 3   | 5 12 1      |
| Excise      | 6 8 4          | 9 16 5    | 6 14 0      |
| Stamps      | 9 1 7          | 4 18 3    | 9 2 8       |
| Taxes       | 5 19 6         | 6 10 0    | 5 15 0      |
| Post-office | 25 18 9        | 30 10 4   | 27 2 11     |

In the following page will be found a detailed account of the expenditure of the United Kingdom in the years 1836, 1837, and 1838.

**Defence.—Army.**—The formation of a standing army was long regarded by our ancestors with extreme jealousy and aversion, so that its establishment in England is of comparatively modern origin, not dating further back than the reign of Charles II. It is annually provided for by a vote of the H. of C.; so that it is always in the power of the latter at any time to reduce, or, if it see cause, totally to disband, the army. But the old jealousies of which it was the object, no longer exist; and there can be no doubt that the establishment of a properly trained regular military force is not only indispensable to guarantee the national independence from hostile attack, but that it is also by far the best force that can be employed to maintain internal tranquillity and order. It would be worse than useless to waste the reader's time by dwelling on the transcendent merits and services of the British army. It has been employed in every quarter of the world, and has everywhere exhibited all those qualities that go to form a perfect milita-

ry force—the most unflinching courage, combined with the greatest patience and fortitude under privations and hardships, and the constant observance of the strictest discipline.

We subjoin an account taken from official documents of the regular troops (exclusive of the ordnance) at home, in the colonies, and in foreign countries, in 1793, 1815, and 1834.

| <i>At Home and in the Colonies.</i> | 1793.  | 1815.   | 1834.   |
|-------------------------------------|--------|---------|---------|
| Household cavalry                   | 778    | 1,604   | 1,511   |
| Foot guards                         | 2,798  | 9,612   | 4,322   |
| Cavalry of the line                 | 5,490  | 16,791  | 7,282   |
| Infantry of the line                | 30,660 | 12,701  | 60,285  |
| Garrison battalions                 |        | 1,283   |         |
| Veteran battalions                  |        | 2,520   |         |
| West India regiments                |        | 2,786   | 1,203   |
| Miscellaneous and colonial corps    |        | 7,147   | 3,727   |
| Fencibles                           |        | 2,809   |         |
| Foreign corps                       |        | 21,314  |         |
| Augmentations in progress           |        | 5,148   |         |
|                                     | 46,562 | 220,714 | 74,819  |
| <i>In India.</i>                    |        |         |         |
| Cavalry of the line                 | 512    | 5,255   | 3,116   |
| Infantry of the line                | 10,198 | 24,045  | 17,280  |
| Totals                              | 97,229 | 250,314 | 100,675 |

The number and description of the land force embodied during the year ending the 31st of March, 1837, were as follows:

|                                                           | Horses.      | Cavalry.     | Infantry and Artillery. | Naval and Flic. | Total.        |
|-----------------------------------------------------------|--------------|--------------|-------------------------|-----------------|---------------|
| Life guards and horse guards                              | 822          | 149          | 1,093                   |                 | 2,064         |
| Cavalry of the line                                       | 7,006        | 718          | 6,075                   |                 | 13,800        |
| Foot guards                                               |              | 218          | 395                     |                 | 613           |
| Infantry of the line                                      |              | 900          | 4,619                   |                 | 5,519         |
| <b>Totals</b>                                             | <b>8,718</b> | <b>1,075</b> | <b>11,097</b>           |                 | <b>20,890</b> |
| But there were wanting to complete the full number of men |              |              |                         |                 | 8,800         |
| Making the total force                                    |              |              |                         |                 | 29,690        |
| Ordnance                                                  |              |              |                         |                 | 7,400         |

# BRITISH EMPIRE.

The British army is recruited by means of voluntary enlistment only, and it is to be hoped that all attempts to introduce the conscription into this country will meet with no better success in future than that which has hitherto attended them. If soldiers could not be procured by other means, we should then admit that necessity formed a valid excuse for the introduction of a conscription. But no such necessity has ever existed. No country that chooses to pay fair wages to its troops, and which treats them as men

employed in the service of their country should be treated, will ever want for a supply of voluntary recruits. If we ever be forced to resort to the oppressive and odious resource of conscription, the necessity will have arisen from the adoption of some spurious system of economy, or from something wrong in the treatment of the troops, or both.

The annual Mutiny Act, and the Articles of War issued by the crown, and subjoined to that act, constitute the code of martial law in force in the British army.

ACCOUNT of the Public Expenditure of the United Kingdom in the Years 1836, 1837, 1838.

| HEADS OF EXPENDITURE.                                                                                                                     |                                 | 1836.      |            | 1837.      |            | 1838.      |            |

## BRITISH EMPIRE.

The charge for the above forces, exclusive of the ordnance, was £4,151,593, of which £291,133 were to be defrayed by the East India Company. The charge for the ordnance during the same year was £1,963,449; making the total expense of the *effective* military forces in 1836-37, £5,415,067. But to this has to be added the charge for *non-effective* services, that is, for half-pay and pensions to officers and men, which amounted, during the same year, to £2,523,578; making the total cost of the army, including the sum to be repaid by the East India Company, £7,938,685.

The forces embodied in 1836-37, exclusive of the ordnance, were distributed as follows:

|                       |                |
|-----------------------|----------------|
| Great Britain         | 95,563         |
| Ireland               | 18,871         |
| Abroad (not in India) | 35,988         |
| India                 | 19,710         |
| <b>Total</b>          | <b>161,132</b> |

The pay and other emoluments of the officers and men depend partly on the length of their service and partly on the department of the service to which they belong. In the household troops, the pay of privates varies from 1s. 9d. to 2s. 6d. a day; in the cavalry of the line it is 1s. 4d.; in the foot guards, 1s. 2d.; and in the infantry of the line, 1s. 1d. Soldiers, however, are not entitled to receive the whole of this sum in money: when at home and in barracks, they are supplied with certain rations, for which 6d. a day, and not more, is to be deducted from their pay. The greater part of their clothes and accoutrements are furnished at the public expense; but certain deductions are made from their pay on that account. Pensions are granted for casualties in action, &c., and to soldiers discharged after certain periods of service. (The regulations relating to pay, half-pay, pensions, &c., may be seen in the *Army List*.)

Exclusive of the regular troops, there is also the militia, yeomanry, and police. The first has not been embodied since 1815. The yeomanry is a species of volunteer cavalry that formerly was much more considerable than at present. It is a description of force of which the utility is very doubtful; and it appears to us that wherever a military force has to be employed, the preferable plan is to employ regular troops. Under the new organisation, the police has become a valuable species of force, and is extensively employed in Ireland, and in London, and several towns in England.

**Navy.**—The naval service has always been exceedingly popular in this country; and the navy has long been reckoned the pride and best bulwark of the empire. The H. of Lords, in an address to Queen Anne, in 1707, laid it down as "a most undoubted maxim, that the honour, security, and wealth of this kingdom does depend upon the protection and encouragement of trade, and the improving and right encouraging its naval strength . . . therefore we do in the most earnest manner beseech your majesty that the sea affairs may be always your first and most peculiar care." And there cannot be a doubt that, in this instance, the lords gave expression to what were then, and have ever since continued to be, the sentiments of the great majority of the British nation.

The Battle off Cape La Hogue, in 1692, gave the British navy an ascendancy over that of France, the only other great naval power, it has ever since preserved. During the last war with France, our navy was prodigiously augmented; and the victories of the 1st of June, 1794, of St. Vincent, Camperdown, the Nile, Copenhagen, and Trafalgar, left us the undisputed masters of the ocean.

The ships in commission and in ordinary in 1793, 1815, and 1835, were:

|                      | 1793 | 1st Rate. | 2d. | 3d. | 4th. | 5th. | 6th. | Small Vessels, &c. |
|----------------------|------|-----------|-----|-----|------|------|------|--------------------|
| Ships in commission. | 1815 | 1         | 9   | 10  | 5    | 10   | 12   | 113                |
|                      | 1835 | 1         | 2   | 22  | 5    | 50   | 21   | 61                 |
|                      | 1793 | 6         | 5   | 6   | 6    | 6    | 6    | 186                |
|                      | 1815 | 7         | 19  | 102 | 16   | 79   | 30   | 179                |
| Ships in ordinary.   | 1815 | 12        | 15  | 178 | 13   | 100  | 80   | 167                |
|                      | 1835 | 14        | 16  | 60  | 14   | 75   | 13   | 80                 |

The number of seamen and marines, and the sums voted at different periods for the service of the navy have been:

| Years. | Seamen. | Marines.   | Total Men. | Sum.        |
|--------|---------|------------|------------|-------------|
| 1793   |         |            | 10,000     | £ 1,895,432 |
| 1815   | 30,000  | For 3 Mon. | 70,000     | 17,032,700  |
| 1825   | 30,000  | 9,000      | 39,000     | 5,963,136   |
| 1830   | 32,000  | 9,000      | 41,000     | 5,595,865   |
| 1831   | 32,000  | 10,000     | 42,000     | 5,876,096   |
| 1832   | 32,000  | 10,000     | 42,000     | 4,874,834   |
| 1833   | 18,000  | 9,000      | 27,000     | 4,256,194   |
| 1834   | 18,000  | 9,000      | 27,000     | 4,478,000   |
| 1835   | 17,500  | 9,000      | 26,500     | 4,345,724   |
| 1836   | 34,700  | 9,000      | 43,700     | 4,899,651   |
| 1837   | 34,700  | 9,000      | 43,700     | 4,708,761   |
| 1838   | 35,165  | 9,700      | 44,865     | 4,811,580   |

\* 1000 first-class boys were first voted this year, and subsequently increased to 2000 in the year 1839.

The navy is governed by the lord high admiral for the time being, or by a body of commissioners called the Board of Admiralty, of which the power is, in fact, vested in the First Lord. This board has the superintendence of all naval matters: all appointments, &c., of commissioned officers, and warrant officers with some exceptions; promotion, honours, pensions; and the general control of every thing relating to the discipline of the fleet.

Those who enter the service with a view to obtain commissions, begin as volunteers, and then serve as midshipmen: after six years in the latter character, and attaining the age of 19, they pass an examination for the rank of lieutenant—the lowest commissioned officer. But the attainment of a commission, and subsequent promotion, are entirely at the disposal of the admiralty. Certain advantages are enjoyed by those who have completed their education as students at the naval college of Portsmouth. The discipline of the navy is maintained by articles embodied in acts of parliament. Sailors enter the navy by voluntary enlistment; but in cases of emergency they may be obtained by impressment. Of the antiquity and legality of this practice, no doubt can be entertained; but very grave doubts have been entertained as to its necessity and expediency.

King's ships are now classified according to a system of rating adopted in 1816. There are six classes of what are termed rated ships; all three-deckers ranking as first rates; and the following five rates comprising ships whose complements of men are above 700, under 700, 600, 400, and 250 men respectively. Ships of war carrying less than 74 guns are usually styled frigates; less than 20, sloops of war, &c.

The navy estimates for the year 1837-38 were as follows:

|                                      |                   |
|--------------------------------------|-------------------|
| Wages for seamen and marines         | 1,051,916         |
| Victuals for ditto                   | 432,686           |
| Wages to artificers, &c.             | 432,570           |
| Naval stores, &c.                    | 359,937           |
| Miscellaneous                        | 325,564           |
|                                      | <b>2,703,073</b>  |
| Half-pay, pensions, &c.              | <b>1,546,165</b>  |
| For the service of other departments | <b>237,941</b>    |
|                                      | <b>£4,531,481</b> |

For an account of the pay, half-pay, pensions, &c., of the different descriptions of officers and men in the sea-service, the reader is referred to the *Navy List*.

**Public Debt.**—Exclusive of the large sums raised by taxes, the British government has borrowed immense sums. Of the total expenditure of the United Kingdom, during the year 1838, amounting to £51,730,747, no less than £29,251,040 were required to defray the interest and expense of managing the national debt! Many conflicting opinions have been entertained as to the policy of the borrowing or funding system, and as to the preference to be given to different methods of borrowing; the stating of which would be inconsistent alike with our objects and limits. It is sufficient for our purpose to remark that the public debt has grown up, almost entirely, since the Revolution, and principally during the American and late French wars, especially the latter. Individuals lending money to the public, or, as it is said, contracting for a loan, receive a certain specified amount of government stock, or *funded property*, bearing a specified rate of interest, or, as it is called, *dividend*, payable quarterly at the bank of England. A lender to the public is not entitled to demand repayment of the principal sum lent; all that he has a right to claim is the regular payment of the interest or dividend on that sum; but he is at liberty to dispose of his right to this dividend, or, in other words, to sell or transfer his stock to any one else. Such transfers or sales are usually effected at the Stock Exchange, in the city of London, and their negotiation affords employment to a considerable number of brokers. The price of stocks is liable to much variation, being necessarily affected by all those circumstances that affect the peace and prosperity of the empire; the abundance or scarcity of money; the rate of profit, &c. Contrary to what is usually believed, a large proportion of the public debt is held by individuals in the lower and middle walks of life. A large proportion is also held by bankers and other individuals, whose business requires that they should be able readily to command their capital.

It is needless to occupy the reader's time by details as to the various schemes that have been proposed for paying off the national debt, by means of sinking funds and such like devices. Notwithstanding the high patronage under which some of these schemes have been brought forward, and the encouragement they have met with, the reader may be assured that they are universally bottomed on delusion or quackery, or both. "The increase of revenue, or the diminution of expense, are the only means by which the sinking revenue can be enlarged and its operations rendered more efficient; and all schemes for discharging the national debt, by sinking funds operating at compound interest, or in any other manner, unless in so far as they are founded on this principle, are completely illusory." (*Hamilton on the National Debt*.)

# BRITISH EMPIRE.

ACCOUNT of the Principal and Annual Charge of the Public Debt at different Periods since the Revolution.

• Dividends payable 10th of October.

† Dividends payable on 5th of January.

*Literature.*—Some remarks as to the language and literature of England, will be found under the head ENGLAND. Here it is sufficient to observe that the basis of the English language is essentially Saxon, intermixed, however, with a great number of words derived from the Latin, and other languages of Latin origin. It is needless to say that the English have attained to the highest distinction in every department of literature. But in modern times, the distinguishing feature of our literature is undoubtedly the periodical, and especially the daily, press. To such perfection has the method of conducting the daily journals been carried, that debates that occur in either house of parliament, are accurately and very fully reported in the morning papers of the ensuing, or it may be, of the same day. These, indeed, are not unfrequently published within two or three hours of the termination of the debate; and being carried to the country by the rail-way coaches, and other speedy conveyances, the report of a debate ending in the H. of Lords or Commons at 4 o'clock in the morning, may be perused at Birmingham or Bristol, above 100 miles off by 1 or 2 o'clock of the same day! The other departments of the daily journals; such as communications from foreign parts; criticisms in various branches of science and literature; and the comments of the editors on the events of the day, are, for the most part, written with great ability; and though strongly tinctured with party prejudices, and but little to be depended on when party interests are concerned, they discover a grasp of mind, and an extent and accuracy of information, that are really astonishing, considering the haste with which they have to be composed, and the little time given for correction. Generally speaking, the periodical press of Great Britain is decidedly superior to that of every other country, and displays much practical good sense, and with some few exceptions, the most praiseworthy respect for the decencies of private life, and for the great principles that form the foundations of society.

*The Colonies and Foreign Dependencies* belonging to the U. Kingdom, and forming part of the British empire, are of great extent and importance. They consist principally of our dominions in N. America and the West Indies, the Cape of Good Hope, Australia, and India. The reader will find in the table on the next page statements of the population, trade, &c. of the greater number of these colonial possessions, and detailed accounts of each will be found under its peculiar head in this work. The common opinion is, that the U. Kingdom is indebted for a large portion of its wealth and power to the possession of these distant territories; but we are disposed to believe that there is but lit-

tle if any real ground for this opinion. It is true that England, in common with all Europe, has derived infinite advantage from the discovery and settlement of America, and from the intercourse with India by the Cape of Good Hope. But the question is, have we derived greater advantages from retaining the countries we settled in a state of dependence, after they were able to govern themselves, than we should have done by making them free? We are well convinced that those who dispositionally inquire into the matter will find that this is a question which must be answered in the negative. Our colonies in America and the West Indies have never furnished one farthing towards defraying any part of the general expenditure of the United Kingdom; they are, indeed, exempted, by express statute, from any such charge; at the same time that the fleets and armies required for their protection in war, and their security in peace, are all supplied by the British nation, and cost them nothing. The only advantage, in a national point of view, derivable from them must, therefore, if it exist at all, be found in the trade or intercourse we carry on with them. But it has been shown, over and over again, that the trade with colonies differs in no important respect from that with foreign countries; that, unless it be naturally advantageous for both parties, it cannot be to the advantage of the mother country to engage in it; and that if it be naturally advantageous, it will be carried on to the same or a greater extent, were the colony an independent state. The great and growing intercourse we have continued to keep up with the U. States since they achieved their independence, is a practical proof of the truth of what has now been stated. Our trade with Canada is, on the other hand, a proof of the mischief occasioned by forcing an intercourse where there is no natural aptitude for one. That colony, of the value of which the most ludicrously absurd notions have been entertained, has not, we believe, a single commodity to export which we might not obtain better and cheaper elsewhere. It is true it supplies us with large quantities of timber, but why? Because, while timber from the N. of Europe is charged, on importation into this country, with a duty of 55s. a load, timber from Canada is charged with a duty of only 10s. This *faâs de se* regulation, besides forcing the use of an inferior article, imposes a burden on the people of Britain of about £1,500,000 a year. Surely, therefore, it were for our advantage that it were repealed; and if so, there would be an end of nine tenths of our trade with Canada. While, however, the forcing a trade with colonies is no advantage, but the reverse, the effort to keep them in a state of unwilling de-

## BRITTANY.

## BROAD TOP.

pendence, after they are desirous to be independent, entails a very heavy expense on the mother countries. Our ascendancy in Canada, at this moment, is wholly dependant on the presence of a large military force, occasioning, one way and another, a direct outlay of little less than £3,000,000 a year; and all this enormous direct and indirect expense is incurred without any equivalent advantage, and with a full conviction in the mind of every man of sense in the empire that, in some ten or twenty years, Canada will be independent, or an integral portion of the United States.

It is said that the West Indian colonies are advantageous, because they supply us with sugar, which yields a large amount of revenue! But in this respect they are merely on a level with China and Virginia, which supply us with tea and tobacco, which also yield a large amount of revenue. Every one, in fact, must see that it is the people of Britain, and not the West Indian Islands, that pay the sugar duties. And as sugar could be imported from Brazil and Cuba quite as cheap as it can be imported from the British West Indies, or rather, we believe, decidedly cheaper, it is clear the emancipation of the latter could not be any very material public loss.

Nothing, therefore, can be a greater error than to suppose that we are indebted for any considerable portion of our national greatness to the extent of our colonial dominion. If rightly examined, we apprehend it will be found to be a source of weakness rather than of strength. We derive our superior wealth and civilization from totally different sources—from the physical and moral advantages enjoyed by the U. Kingdom; and while we possess these, we need not fear that any serious injury will result from the loss of colonial dominions.

Our Indian empire is a foreign dependency, not a colony; it does not enjoy that exemption from taxation, for the benefit of the U. Kingdom, enjoyed by our colonial possessions; and it has occasionally remitted considerable sums as tribute to England. But the magnitude of these sums has been grossly exaggerated; and it has been doubted by various well-informed parties whether, at an average of years, we have received anything from India.

Malta, Gibraltar, and such like strongholds, are valuable, because they afford convenient and secure asylums for our ships of war and merchantmen, serving also as depôts for our produce; and arsenals, whence we may send out cruises and expeditions to annoy our enemies in war. They are, as it were, a species of foreign bulwarks, and are of high importance and value, as means of defence and aggression.

For accounts as to the population, revenue, &c. of India, the reader is referred to the articles HINDOOSTAN and BRITISH (Presidency of), BOMBAY, &c.

**History.**—A sketch will be given in the article ENGLAND of the principal events in the history of that most important part of the empire. The leading epochs in the history of the latter are:

I. The invasion and establishment of the English power in Ireland during the reign of Henry II.

II. The union of the crowns of England and Scotland in 1604, on the accession of James, king of Scotland, to the throne of England, vacant by the death of Elizabeth.

III. The great civil war in the reign of Charles I., followed by the execution of that monarch in 1649; the establishment of the Commonwealth; and the restoration of Charles II. in 1660.

IV. The Revolution, justly styled "glorious" of 1688, which expelled the family of Stuart from the throne; defined and firmly established the principles of the constitution; and introduced a liberal, tolerant, and really responsible system of government, under our great deliverer, William III., prince of Orange.

V. The establishment of the legislative union of England and Scotland, in 1707.

VI. The accession of the House of Hanover, 1714.

VII. The American war, 1776-1784.

VIII. The war with revolutionary France, 1793-1815.

IX. The legislative union of Ireland with England and Scotland, 1799.

X. The passing of the Reform Act, 1832.

**BRITTANY**, or **BRETAGNE**, one of the most considerable of the ancient provinces of France, occupying the peninsula of that name on the Atlantic. It is now distributed among the depts. of Loire Inferieure, Ile-et-Vilaine, Finistere, Morbihan, and Côtes-du-Nord.

**BRIVE**, a town of France, dep. Corrèze, cap. arrond., in a beautiful and fertile plain, on the Corrèze, 15 m. S.W. Tulle. Pop. (ex caat.) 6082. It is well built, the houses being all of hewn stone, and covered with slates. It has a fine hospital, an *église curieuse*, a shady promenade along the river, and is enriched by planted boulevards, which have replaced the ancient ramparts. There is here a tribunal of original jurisdiction, a departmental college, a secondary ecclesiastical school, and a public library. It manufactures various descriptions of woollen goods, with mus-

lin, silk handkerchiefs, &c., and has in its vicinity a *vaste filature* of cotton. It has also a considerable trade in wine, chestnuts, and cattle, and is the centre of the trade in truffes and *oileilles truffées*. The famous Cardinal Dubois was a native of Brive. (*Hugs*, art. *Corrèze*.)

**BRIX**, a vil. of France, dep. La Manche, 6 m. N.W. Vannes. Pop. 3063.

**BRIX (ST.)**, a neat town of France, dep. Yonne, on the road from Paris to Lyons, 7 m. S.E.E. Auxerre. Pop. 1648. Louis, the minister of Louis XIV., whose property it was, and his descendants, have attempted, but without success, to introduce manufactures into this town. It has some trade in white wines, produced in the vicinity, which are held in considerable estimation.

**BRIXEN**, a town of the Austrian empire, prov. Tyrol, at the confluence of the Rienz and the Eisach, 40 m. S.E.E. Innsbruck. Pop. 3600. It has a cathedral, an episcopal palace, and a college.

**BRIXHAM**, a sea-port and par. of England, co. Devon, hund. Haylor, 166 m. W.S.W. London, just within Berry head, which forms the W. point of Torbay. Area of par. 5910 acres. Pop. of par. in 1831, 5015. The town is built in a narrow ravine opening towards the sea, and on the cliffs impending over it on either side, and is divided into the upper and lower towns. In the latter the buildings are much crowded, in narrow irregular streets and alleys; but the upper town contains many good houses, as does also the immediate neighbourhood, which is remarkably picturesque. The church in the upper town is an ancient structure, with some interesting monuments: in the lower town is a chapel of ease, which has 300 free sittings: the living is a vicarage (with the perpetual curacies of Churston and Kingswear annexed), in the gift of the crown. It has also a Baptist and a Wesleyan chapel, and a national school, incorporated with an endowed one founded in 1634, which educates about 400 boys and girls. There is a pier harbour at the end of the lower town, consisting of an inner and outer basin, which communicate with each other, and are safe and commodious: the latter was formed at a recent period by the inhab. at the cost of £2500. The spring tide rises about 34 ft. at the pier-head. The principal trade of the place is connected with the Torbay fishery, in which about 120 vessels, of 30 to 45 tons, and 70 smaller boats, are engaged; the greater part of the fish being forwarded to the London, Bath, and Exeter markets: there are also upwards of 130 vessels, of 60 to 120 tons, belonging to the place, chiefly engaged in the coasting trade of the Channel. There are extensive marble quarries in the neighbourhood; and also an iron mine, whence, of late years, several thousand tons of ore are annually shipped at Brixham for the Welsh furnaces. The market (estab. 1799) is held on Thursdays and Saturdays; a fair on Whit-Tuesday and two following days. By far the most remarkable historical event connected with this place, or with Torbay, is the landing of our great deliverer William III. at this pier, on the 5th of November, 1693.

**BROADALBIN**, t. Fulson co., N.Y., 43 m. N.W. Albany, 423 W. Several creeks afford water-power. It contains four churches, one Methodist, two Presbyterian, and one Christian; nine stores, three fulling-mills, one woollen factory, three grist-mills, twenty-eight saw-mills, four paper-mills, one furnace, six tanneries, one printing-office, thirteen schools, 635 scholars. Pop. 3738.

**BROAD CREEK**, hundred, Sussex co., Del. Bounded N.W. by Nanticoke river, by branches of which it is watered. It contains ten stores, one furnace, ten grist-mills, fourteen saw-mills, two schools, 111 scholars. Pop. 8640.

**BROAD**, river, Ga., one of the western branches of Savannah river, which it enters at Petersburg.

**BROAD**, river, S.C., an arm of the sea, between Port Royal isl. and the main land, on which Beaufort is situated.

**BROAD**, river, S.C., rises in N. Carolina, and unites with Saluda river above Columbus, to form Congaree river.

**BROAD KILL**, hundred, Sussex co., Del. Bounded E. by Delaware bay, and watered by creeks flowing into it. It contains twenty-eight stores, five grist-mills, six saw-mills, three tanneries, two printing-offices, one weekly newspaper, three academies, 108 students, four schools, 116 scholars. Pop. 3741.

**BROADSTAIRS**, a small sea-port and watering-place of England, co. Kent, E. coast, Isle of Thanet, half way between the N. foreland and Ramsgate, 66 m. E. by S. London. There are several good lodging-houses, warm baths, two public libraries, good hotel, assembly-room, &c., and an episcopal chapel, built in 1865. There is a wooden pier (formed in the reign of Henry VIII.), which is accessible for small vessels. Two small fairs are held, April 8 and July 10. There are many vestiges which prove the ancient importance of the place; but it had dwindled to an inconsiderable fishing village, when (within a comparatively recent period) it came into favour as a sea-bathing place.

**BROAD TOP**, t. Bedford co., Pa. It contains one store,

## BROCHHAGEN.

one flouring-mill, one saw-mill, one school, 23 scholars. Pop. 987.

**BROCHHAGEN**, a village of the Prussian States, prov. Westphalia, reg. Minden, 4 m. S. Halle. Pop. 2500. It has a gin distillery and a thread manufactory.

**BROCKPORT**, p. v., Sweden t., Monroe co., N.Y., 30 m. W. by N. Rochester, 225 m. W.N.W. Albany, 394 W. Incorporated in 1839. Situated on the Erie canal. It is handsomely built, chiefly on one street, and contains four churches, mostly of brick or stone, with steeples, one Methodist, one Presbyterian, one Episcopal, and one Baptist; eleven stores, two grist-mills, six saw-mills, one carding machine, one carriage-factory, two tanneries, one distillery, six schools, 485 scholars, 300 dwellings, many of them neat, and 1940 inhabitants.

**BRODY**, a town of the Austrian States, N.E. part of Galicia, circ. Zloczow, near the confines of Russia, 53 m. E. by N. Lemberg; lat. 50° 7' N., long. 25° 18' E. Pop. 25,000, of whom 18,000 are Jews. It is situated in a marshy plain; and the houses being mostly of wood, and the streets unpaved and filthy, it is well entitled to the name it bears, *brody* meaning a dirty place. But, notwithstanding its unpromising appearance, it enjoys a very considerable trade. In 1779 it acquired the privilege of a free commercial town; that is, a town into which commodities may be imported, and from which they may be exported free of duty. This franchise has rendered it an important emporium; and its fairs are attended by dealers from the Ukraine and Odessa, Moldavia, Wallachia, &c., as well as the contiguous Austrian and Russian provinces. The principal articles brought from the S. are cattle, especially horses, with hides, tallow, wax, &c., which are exchanged for colonial produce, manufactured goods, hardware, particularly scythes, furs, jewelry, &c. It is a constant practice in the transit trade between Odessa and Brody, to offer as security for the duty on the articles so conveyed, a certain number of serfs, or Russian slaves, taken at a valuation of 100 silver roubles (£16) a head. This security is preferred to a guaranty on land, from its being more convertible. There is a regular exchange with Odessa. The greater part of this important trade is in the hands of Jewish merchants settled at Brody, of whom 40 are said to be opulent, while about 200 more possess smaller capitals. It is the seat of a mercantile tribunal: has a Catholic and three Greek churches; one large and two or three smaller synagogues; a convent and hospital of the Sisters of Charity; grammar and commercial schools, with peculiar schools for Christians and Jews; a theatre, in which, during the fairs, plays are alternately represented in the German and Polish languages; a Jewish hospital, &c. The town is on the estate of Count Potocki, who has a large castle within its precincts. (*Austrian Encyc.*; *Hagermeister on the Trade of the Black Sea, p. 310*; and *Private Com.*)

**BROEK**, a village of Holland, 6 m. N.E. Amsterdam. Pop. 800. It is celebrated for the wealth of its inhab., but more for the extreme cleanliness of its houses and streets, the attention to which has been carried to an absurd and ridiculous excess. There is a good description of this village in Chambers's *Tour to the Rhine*.

**BROKEN STRAW**, t., Warren co., Pa., 10 m. W. Warren. Watered by Broken Straw creek. It contains three stores, five grist-mills, seventeen saw-mills, two furnaces, tea schools, 530 scholars. Pop. 1149.

**BROMBERG**, a town of the Prussian States, prov. Posen, esp. circ. same name, on the Brza, 6 m. from its confluence with the Vistula. Pop. 8000. The canal joining the Vistula with the Netx, an affluent of the Oder, runs between this town and Nakel on the Netx. It has a court of appeal for the circ., a gymnasium, and other literary establishments, several distilleries and breweries, and a considerable and increasing trade.

**BROMLEY**, a par. and town of England, co. Kent, 10th Sutton-at-Hone, hund. Bromley and Beckenham, 10 m. S.E. London. Pop. (1821) 3147; (1831) 4008: houses at the latter date, 733; area, 4630 acres. The town is on the N. bank of the Ravensbourne, and chiefly consists of one street of neat, respectable houses, extending for some distance along the line of road from the metropolis to Tunbridge; it is lighted, and partially paved. The church is a spacious structure, with an embattled tower; the Independents and Wesleyans have each a chapel; a national school for both sexes is supported by subscription; there is an almshouse for old people, rent free; a charitable establishment, called Bromley College, founded in 1666, and enlarged and endowed by many subsequent benefactors, supports 40 clergymen's widows, who each receives £38 a year, with coals and candles; the edifice encloses two quadrangular areas, and has a chapel, the minister of which receives £150 a year; the charity is under the direction of 14 trustees. There is a weekly market on Thursday, a monthly one for cattle, every third Thursday, and ann. fairs, Feb. 14, Aug. 4, chiefly for live stock. Ann. val. prop. in 1815, £14,795.

## BROOKFIELD.

It is the central town of a poor law union of sixteen par.; its own rates average £1294. The inhab. are chiefly engaged in agriculture. From the 8th century the manor has vested, with little interruption, in the bishops of Rochester. The present palace was rebuilt on an ancient site in 1777; it is a plain brick building, on an eminence 1-4 m. from the town; an ancient spring in its gardens has medicinal properties similar to those of Tunbridge: after being neglected two or three centuries, it was reopened in 1750, and continues to be much resorted to; its weekly market was granted to the town in 1477.

**BROMSGROVE**, a par. and town of England, co. Worcester, hund. Half-shire, 100 m. N.W. London. Pop. (1821) 7519; (1831) 8612: houses at the latter date, 1822. The town is situated on the W. bank of the Salwarp, in a fertile and well-wooded vale, and chiefly consists of one spacious street about a mile in length, paved and lighted. Its church, on a gentle rise, has a tower and spire, together 180 ft. in height, and considered the finest in the co. There are three dissenting chapels; a free grammar school, founded by Edward VI. (in which 19 boys are clothed and educated, with seven scholarships and six fellowships in Worcester College, Oxford); and a town-hall, with a market-place under it. The weekly market is on Tuesday; two annual fairs are held, June 24th and Oct. 1st. Nail making is the chief business of the place; there is also a large button manufactory. In the adjoining parish of Stoke Prior there are large salt and alkali works, in which some of the inhab. of Bromsgrove are employed: the linen manufactory was formerly carried on, but is now extinct. The line of the Birmingham and Gloucester railway passes near the town. The annual value of its real prop. in 1885 was £26,661. It is the central town of a poor law union of nine parishes; its own rates average £1859: it has five guardians. A court of requests for debts under 40s. is held in the town every third Wednesday. Bromsgrove Lich, a lofty range, in which the Salwarp, Res, and some other streams, have their source, lies on the N. of the town.

**BROMYARD**, a par. and town of England, co. Hereford, hund. Broxham, 110 m. N.W. London. Pop. in 1821, 576; 1831, 3051; houses, 599; area, 9310 acres. The town, situated near the Frome, in an orchard district, consists of several irregular streets, which are paved and lighted; many of its houses are of wood. There is a spacious church, in the Norman style; an independent chapel; a free grammar school, founded by Elizabeth; a national school for 190 children; and almshouses for 7 old women. The weekly market is Monday: corn, cheese, and butter are the chief articles. Petty sessions for the hund. are held in the town. The par. comprises three townships and one chapel.

**BRONNITZ**, a town of Russia in Europe, gov. Novgorod, on the road from St. Petersburg to Moscow, 15 m. E. Novgorod. Pop. 1900. The Msta is here crossed by a floating bridge of considerable dimensions. In the environs is a conical mound, which appears to be artificial; and with respect to which several curious traditions are current. It was formerly surmounted by a wooden chapel, which has recently been replaced by one of stone. (*Schaezler, La Russie, &c., p. 175.*)

**BRONSON**, p. t., Haren co., O., 2 m. S. Norwalk, 102 m. N. by E. Columbus, 365 W. Watered by branches of Huron river. It contains eleven schools, 378 scholars. Pop. 1291.

**BRONTE**, or **BRONTI**, a town of Sicily, Val di Catania, cap. cant., near the Giaretta, at the W. base of mount Etna, 23 m. N.N.W. Catania. Pop. 8671, having declined 989 between 1796 and 1831, when the last census was taken. It has several churches and convents; is healthy; has manufactures of woollens and paper; and the adjacent territory produces corn, wine, silk, pecancho nuts, almonds, &c. Lord Nelson was created duke of Bronte in 1798, with an income of 6000 once a year.

**BROOKE**, county, Va. Situated in the extreme N.W. part of the state, and contains 150 sq. m. Bounded N. and W. by Ohio river, into which flow Indian, Horman's, Crow and Buffalo creeks. Some iron ore and bituminous coal are found. It contained, in 1840, 5430 neat cattle, 35,968 sheep, 11,323 swine; and produced 139,953 bushels of wheat, 4629 of rye, 135,246 of Indian corn, 9351 of buckwheat, 63,140 of potatoes, 194,574 of bituminous coal, 594 pounds of sugar. It had fifteen stores, two fulling-mills, two woollen-factories, one cotton-factory with 1500 spindles, twenty-six flouring-mills, one grist-mill, twenty-five saw-mills, one paper-mill, one glass factory with glass cutting, four tanneries, three potteries, one distillery, four printing-offices, one weekly newspaper, one periodical, four academies, 140 students, twenty-two schools, 670 scholars. Pop.: whites, 7089; slaves, 91; free coloured, 77; total, 7948. Capital, Williamsburg.

**BROOKFIELD**, p. t., Carroll co., N.H., 46 m. N.E. Concord, 537 W. Separated from Middleton and incorporated in 1794. Cook's pond, 1 m. long and 3-4 m. wide, is the source of the W. branch of Salmon-fall river. It contains

## BROOKHAVEN.

two stores, two saw-mills, one tannery, four schools, 173 scholars. Pop. 553.

**BROOKFIELD, p. t.** Worcester co., Mass., 60 m. W. Boston, 268 W. Incorporated in 1673. It was attacked and burned by the Indians in 1675, and afterward, until 1710, suffered severely. Watered by Quabog river, issuing from Quabog pond, in the S. part, and flowing into Chicopee river. It contains six churches, one Methodist, three Congregational, one Baptist, and one Universalist; seven stores, one fulling-mill, one furnace, three grist-mills, three saw-mills, one printing-office, one academy, 35 students, fourteen schools, 667 scholars. Pop. 2473.

**BROOKFIELD, p. t.** Orange co., Vt., 17 m. S. Montpelier, 504 W. Incorporated in 1781. Watered by a branch of White river, and by several small mill-streams, issuing from ponds. In the W. part of the town is an inexhaustible bed of marl, around a small pond, from which lime is made. It contains four churches, one Methodist, one Congregational, one Baptist, and one Universalist; two stores, one fulling-mill, one grist-mill, five saw-mills, one academy, 50 students, eighteen schools, 636 scholars. Pop. 1780.

**BROOKFIELD, p. t.** Fairfield co., Ct., 8 m. N.N.E. Danbury, 60 m. S.W. Hartford, 260 W. Housatonic river bounds it on the N.E. Watered by Still river. It contains one Congregational and one Episcopal church, a town-house, four stores, one grist-mill, two saw-mills, eight schools, 317 scholars. Pop. 1255.

**BROOKFIELD, p. t.** Madison co., N.Y., 66 m. W. by N. Albany, 363 W. Watered by Beaver creek and other branches of Unadilla river, which bounds it on the E. It contains seven stores, two fulling-mills, six grist-mills, nineteen saw-mills, one oil-mill, four tanneries, twenty-nine schools, 1519 scholars. Pop. 3605.

**BROOKFIELD, p. t.** Tioga co., Pa., 174 m. N. by W. Harrisburg, 268 W. It has one saw-mill, three schools, 107 scholars. Pop. 431.

**BROOKFIELD, t.** Morgan co., O., 85 m. E. by S. Columbus. Watered by branches of Duck creek. It contains two stores, one fulling-mill, two grist-mills, four saw-mills, one distillery, eight schools, 296 scholars. Pop. 1436.

**BROOKFIELD, t.** Stark co., O. Pop. 315.

**BROOKFIELD, p. t.** Trumbull co., O., 183 m. N.E. Columbus, 295 W. Bounded E. by Pa. Watered by a branch of Chenango river. The village, 2½ m. W. of Pa. line, contains two churches, two stores, and twenty or thirty dwellings. Pop. of the township, 1303.

**BROOKFIELD, t.** Milwaukie co., Wis. Ter. It has one school, 16 scholars. Pop. 148.

**BROOKHAVEN, t.** Suffolk co., N.Y. It extends across Long Island from N. to S., having the sound on the N. and Great south bay, which communicates with the Atlantic on the S. It has good harbours and a light-house on Old Field point on the sound. Ronconcoma pond, 9 m. in circumference, on its W. border, is nearly the middle of the island. South bay, nearly 100 m. long and from 2 to 5 wide, abounds with fish, clams, and oysters. The town contains several villages, thirty-three stores, one fulling-mill, two woolen-factories, two cotton-factories, with 1033 spindles, two paper-mills, eleven grist-mills, five saw-mills, two academies, 85 students, thirty-six schools, 1980 scholars. Pop. 7050.

**BROOKLINE, p. t.** Windham co., Vt., 110 m. S. Montpelier, 439 W. Incorporated from Athens and Putney in 1794. Grassy brook passes through a deep valley from N. to S. and enters West river. It contains two Baptist churches, one close and one open communion; one grist-mill, one saw-mill, four schools, 114 scholars. Pop. 236.

**BROOKLINE, p. t.** Hillsborough co., N.H., 50 m. S. by W. Concord, 455 W. Nisidisset river, passes through it into Potanipond, in its S. part, and thence into Nashua river. Incorporated in 1769. It contains a Congregational church, two stores, five schools, 145 scholars. Pop. 652.

**BROOKLINE, p. t.** Norfolk co., Mass., 4 m. W. by S. Boston, 440 W. Separated from Boston and incorporated in 1705. Bounded N.E. by Charles river. It has a direct communication with Boston by the Western avenue, or Milldam. The soil is highly cultivated, and it contains a number of beautiful country seats of gentlemen in Boston. It contains two churches, one Congregational and one Baptist; two foreign commercial and four commission houses, nineteen retail stores, one grist-mill, one saw-mill, two tanneries, five academies, 63 students, five schools, 171 scholars. Pop. 1365.

**BROOKLYN, p. t.** capital of Windham co., Ct., 44 m. E. by N. Hartford, 371 W. Watered by Quinnaug river and its branch, Blackwell's stream. It contains a court-house, jail, four churches, one Congregational, one Unitarian, one Episcopal, and one Baptist; a bank, a printing-office, seven stores, one cotton-factory with 1500 spindles, two grist-mills, two saw-mills, two tanneries, one academy, 26 students, ten schools, 356 scholars. Pop. 1488. The county seat was removed from Windham to this place in

## BROOKLYN.

1890. Major-Gen. Israel Putnam, of the Revolutionary army, died here at his residence, May 39, 1790, aged 73 years.

**BROOKLYN, city,** cap. of King's co., N.Y., is situated in 40° 41' 50" N. lat., and 73° 59' 30" W. long., at the W. end of Long Island, opposite to the S. part of the city of New-York, 146 m. S. Albany, 298 W. The population in 1810 was 4402; in 1830, 7175; in 1850, 15,596; in 1860, 30,523; of whom 1673 were employed in commerce; 4666 in manufactures and trades; 978 in navigating the ocean; 303 ditto rivers and canals; 307 in the learned professions and engineering. It is the second place in population in the state, and the seventh in the United States. It is separated from the S. part of the city of New-York by the East river, a strait of the ocean, which connects Long Island sound with the bay and harbour of New-York, ½ m. wide. It is connected with the city of New-York by four steam ferries, well provided with numerous and commodious boats, which render the communication as easy as it would be by bridges. The ferry from Fulton-street, Brooklyn, to Fulton-street, New-York, is 731 yards wide; that from Main-street, Brooklyn, to Catharine street, New-York, is 736 yards wide; the Navy-yard ferry, from Jackson-street, Brooklyn, to Walnut-street, New-York, is 707 yards wide; the South ferry, from Atlantic-street, Brooklyn, to Whitehall, in the S. part of New-York, is 1300 yards wide. Three boats constantly ply at the same time on each of the three principal ferries, and the time of crossing is generally from four to five minutes. The fine water, pure air, and delightful prospects of Brooklyn, render it a favourite place of residence to persons doing business in New-York, and it is nearer to the business centres of the latter than residences in the upper part of the city; and these things have contributed to give it a very rapid growth. The increase of population from 1830 to 1840 was 30,837.

The ground on which Brooklyn is built is more elevated than that of the city of New-York. On the "Heights," on the East river, it presents a bold front, elevated 70 ft. above tide-water, affording a delightful view of the city and harbour of New-York, the islands in the bay, and particularly Governor's island, with its fine fortifications, and the shore of New-Jersey, furnishing a prospect unequalled in the vicinity, and scarcely surpassed in the country. In the S. part of the city the land attains a considerable elevation, and presents many fine sites for buildings; and to the E. of the thickly-settled parts, the ground is elevated, and the prospect commanding. The city is regularly laid out, and the streets, with the exception of Fulton-street, the oldest in the city, are generally straight, crossing each other at right angles, and are from 50 to 60 ft. wide, and a number of them have a greater width. A large number of the streets, including all within the thickly-settled parts, are paved and lighted. Many of the streets are bordered with trees, giving the place a peculiarly rural aspect. Fulton-street, originally narrow in its lower parts, has been simply widened, and is bordered with ranges of lofty brick stores, and presents a commanding entrance to the city. No city in the country, of its extent, is better built than Brooklyn, and many of its houses are distinguished for a chaste elegance, and some of them are splendid. Brooklyn, as laid out by the commissioners appointed by the state legislature, is sufficiently large to become another London; and if the spirit of speculation could have been quiet, it is questionable whether it would not have been better to have left many of its original farms, for the present, undisturbed. The city, as chartered, has the same extent as the original township of Brooklyn, which is 6 m. long, and 4 m. wide at its greatest breadth; and all this great extent has been laid out into streets, the corner-posts of which have been permanently fixed. But many of the streets are not opened and regulated, though this has been done to quite as great an extent as the present necessities of the city require. The thickly-settled parts have no public squares or open grounds; and, though some have been laid out within the city bounds, they are not in such a situation as to add, at present, to its beauty or its comfort. Many of its principal avenues, however, have a commanding width, and its whole appearance is open and airy; and its great extent, and the many fine situations presented in its outer parts, will probably long prevent it from being uncomfortably crowded in the portions now most thickly settled. None of the public buildings of Brooklyn have a very commanding appearance, though many of them are neat and commodious, and some of the churches have some claim to architectural elegance. A city-hall was projected a number of years since, on a magnificent plan, to be built of white marble. A substantial and durable foundation was laid, and the basement story erected, at a great expense. But the location was unhappy, and the plan altogether beyond the present wants of the city; and whether the original design will ever be carried out is questionable. It would undoubtedly be a splendid ornament to the city, but could never cease to excite regret that a more favourable location

## BROOKLYN.

had not been chosen for the expenditure of so much money. The estimated cost of the edifice was over half a million of dollars. The common council and the city officers are well accommodated in the City buildings (formerly the Apprentices Library), near the centre of business, which have been purchased, and conveniently fitted up for the purpose. The jail is a substantial and handsome building of free-stone in the E. part of the city, and the county clerk's office is a fire-proof brick edifice, near the City buildings. The Lyceum in Washington street is a fine granite building, with a spacious and commodious lecture-room. The City Library contains 3000 volumes of well-chosen and valuable books, and has a reading-room, well furnished with periodical literature and newspapers, and both are open daily. The Hamilton Literary Association is composed chiefly of young men, and is a highly respectable and flourishing institution; and supports annually an able course of lectures, which are numerously attended. The Brooklyn Collegiate Institute for Young Ladies, which cost over \$30,000, has been converted into an elegant hotel and boarding-house, and is one of the finest buildings in the city. The Brooklyn Orphan Asylum is under the management of ladies, and supports, and trains up for usefulness, a large number of indigent orphan children. They have a spacious and commodious building in the E. part of the city, surrounded by convenient grounds.

The United States Navy Yard is situated on Wallabout bay, and covers 40 acres of ground, enclosed by a high wall, on the land side. It contains two large ship-houses, sufficient to contain vessels of the largest class while in process of construction; seven extensive timber sheds of brick, for the preservation of timber; several workshops, for making sails, rigging, blocks, spars, boats, &c.; offices for the officers, and a number of extensive storehouses. Connected with the Navy Yard is the United States Naval Lyceum, a literary institution, formed in 1833, by officers of the navy connected with the post. They possess a valuable library, and have a museum formed by donations of its members. About 1/4 m. E. of the Navy Yard is the Naval Hospital, with a fine building in an elevated and commanding situation, surrounded by 33 acres of ground, highly cultivated, and surrounded by a high brick wall. It is in contemplation by the government of the United States to construct a dry dock at the Navy Yard, which will cost \$1,900,000.

The Greenwood Cemetery is situated in the E. part of the city, and contains 300 acres of land, in an elevated situation, with a great variety of surface, and in its more elevated parts commanding a fine view of the harbour and city, and extending on the E. to a part of the Atlantic ocean. It has already extensive avenues, and it is designed to embellish the grounds, to make it an attractive spot, an ornament to the city, and a cemetery not only for Brooklyn but for the city of New-York. The Atlantic Dock Company has been chartered for the purpose of constructing an extensive basin for the reception of shipping. It will contain 434 acres, within Red-hook point, and the outside pier will extend 3000 ft. on Buttermilk channel. It will have a sufficient depth to accommodate the largest ships, and be furnished with spacious storehouses. This improvement is already necessary by the crowded state of the docks of New York, and the work is in forwardness. The whole is estimated to cost \$624,527. The Long Island rail-road commences at the South ferry, Atlantic street, and extends 37 m. to Hicksville, and is designed to be extended in the whole 100 m. to Greenport, forming part of a chain of communication to Boston.

Brooklyn contains thirty churches: seven Methodist, seven Presbyterian, seven Episcopal, three Dutch Reformed, two Baptist, one Unitarian, one Friends, and two Roman Catholic. There are three banks, with an aggregate capital of \$1,000,000, and three insurance companies, with a total capital of \$452,000.

The harbour of Brooklyn is extensive, and capable of being made more so, by an increase of its wharves. Vessels of the largest class come to its wharves, which contain extensive storehouses. The commerce and manufactures of Brooklyn are both considerable. There were in 1840 five foreign commercial houses, with a capital of \$100,500; 154 retail stores, with a capital of \$353,000; several lumberyards, with a capital of \$40,000; machinery was produced to the amount of \$162,000; hats and caps were manufactured to the amount of \$102,000; one tannery, and various manufactures of leather produced \$162,600; five distilleries and one brewery employed a capital of \$357,000; paints, drugs, &c., employed a capital of \$392,000; one glass-house employed 160 persons, and a capital of \$15,000; four rope-walks employed a capital of \$65,000; the products of the dairy were \$197,000; three printing-offices issued one daily, two weekly, and one semi-weekly newspapers. Total capital employed in manufactures, \$1,336,500. It had nineteen academies and high schools, male and female, with 1121 students; thirty-eight schools, with 4693 scholars.

## BROOKVILLE.

Brooklyn was incorporated as a village in 1814, and as a city, with greatly extended limits in 1834. It is divided into nine wards, and is governed by a mayor and a board of eighteen aldermen, two from each ward, all elected by the people.

Brooklyn was first settled in 1683, but it did not choose regular magistrates until 1745, though some kind of authority was previously established. The first house for public worship, which was a Dutch church, was erected in 1683. Six years previous to this, the Rev. Heinrich Belwijn had been installed in Brooklyn, with a salary of 600 guilders, or \$240, one half of which was paid by the inhabitants, and the other half by Fatheland, or Holland. An Episcopal church was established in 1766, and St. Ann's church, its successor, was first occupied in 1793. The first Methodist church was incorporated in 1794; the first Presbyterian in 1823; the first Baptist in 1823; and the first Roman Catholic in 1823. The first printing-office was established, and the first newspaper printed, in 1793.

Brooklyn was the theatre of many interesting events during the war of the Revolution. It was occupied by the American army before the battle of Flatbush, which occurred Aug. 27, 1776, and there are now to be seen the remains of the American fortifications, erected at that period, though most of them have been obliterated by the regulation of streets. Until recently, fort Green, in the E. part of the city, remained, in a great measure, entire; but this also is destined soon to pass away. After the final battle of Flatbush, the Americans retreated from Long Island, and it was in possession of the British. At the Wallabout, near the Navy Yard, were moored the British prison-ships, where the American prisoners were confined; and multitudes, after suffering all that human nature could bear, from scanty and unwholesome provisions, impure water, a pestilential atmosphere, and a want of medical attendance, yielded up their lives to British cruelty. Eleven thousand five hundred American prisoners thus miserably perished in these prison-ships. In 1863, the bones of these martyrs to liberty, which had been washed out from the bank, where they had been slightly buried, and were bleaching in the sun, were collected, and deposited in thirteen coffins, inscribed with the names of the thirteen original states, and placed in a vault beneath a suitable building, erected for the purpose, in Jackson-street, opposite to Front-street, near the Navy Yard. On the point of the roof of the building, which is a small square edifice, is an American eagle. On a row of posts and rails, in front of the tomb, are inscribed the names of the thirteen original states, and the tomb is surrounded by a fence. Over the entrance of the enclosure in which the building is situated is the following inscription: "Portal to the tomb of 11,500 patriot prisoners, who died in dungeons and prison-ships, in and about the city of New-York, during the Revolution." An imposing ceremony took place when the bones were deposited; and 15,000 persons were supposed to have been present on the occasion. These remains deserve a removal to the Greenwood cemetery, in a conspicuous place, and a national monument commemorating the important battle of Flatbush, the interesting localities of which are in view from its more elevated portions.

BROOKLYN, p. t. Susquehanna co., Pa., 171 m. N.N.E. Harrisburg, 376 W. Bounded E. by Martin's creek. It contains two stores, one woollen-factory, one grist-mill, five saw-mills, one paper-mill, two tanneries, one academy, 19 students, ten schools, 280 scholars. Pop. 1474.

BROOKLYN, p. t. Cuyahoga co., O., 145 m. N.N.E. Columbus, 360 W. Ohio city, opposite to Cleveland, formerly belonged to this town. Bounded N.E. by Cuyahoga river, across which is a bridge connecting it with Cleveland. It contains one grist-mill, eight saw-mills, one academy, 8 students, eleven schools, 563 scholars. Pop. 1400.

BROOKNEAL, p. v., Campbell co., Va., 122 m. W.W.W. Richmond, 300 W. Pleasantly situated on the N. bank of Staunton river, and contains a Baptist church, two stores, one tannery, several mechanic shops, and fifteen dwellings. Pop.: whites, 61; blacks, 48; total, 109.

BROOKS, p. t., Waldo co., Me., 45 m. N.E. Augusta. Incorporated in 1816. It contains four stores, two grist-mills, four saw-mills, five schools, 373 scholars. Pop. 310.

BROOKVILLE, p. t., Hancock co., Me., 79 m. E. Augusta, 675 W. Bounded W. by Penobscot bay, and consists partly of a peninsula extending into it. It is finely situated for navigation, and contains one fulling-mill, three grist-mills, two saw-mills, eleven schools, 583 scholars. Pop. 1261.

BROOKVILLE, p. b., capital of Jefferson co., Pa., 167 m. N.W. Harrisburg, 956 W. Situated at the head of Rockwell creek, at the union of three branches, by which it is formed. The first building was erected in August, 1830. It contains a brick court-house and county offices, eight stores, one grist-mill, one saw-mill, one tannery, one distillery, one printing-office, one weekly newspaper, one academy, twenty-five students, one school, 60 scholars. Pop. 376.

## BROOME.

**BROOKVILLE, p. v.**, capital of Franklin co., Ia., 60 m. S.E. Indianpolis, 519 W. Situated at the junction of the E. and W. forks of Watowater river. It contains five stores, several mills, one cotton factory, and 600 inhabitants.

**BROOME, county, N.Y.** Situated in the S. part of the state, and contains 687 sq. m. Watered by Susquehanna, Chenango, and Tonawanda rivers and Nanticoke creek. The Chenango canal connects Binghamton with the Erie canal at Utica. It contained, in 1840, 23,540 neat cattle, 80,000 sheep, 13,880 swine; and produced 66,390 bushels of wheat, 26,443 of rye, 84,033 of Indian corn, 31,330 of buckwheat, 303,812 of potatoes, 63,054 pounds of sugar. It had forty-nine stores, nine fulling-mills, twenty-three grist-mills, 144 saw-mills, fourteen tanneries, one distillery, two printing-offices, two weekly newspapers, three academies, 165 students, 167 schools, 6697 scholars. Pop. 23,336. Capital, Binghamton.

**BROOKS, t.** Schoharie co., N.Y., 36 m. W. Albany. Bounded W. by Schoharie creek, by branches of which it is drained. It contains eight stores, two grist-mills, eleven saw-mills, two tanneries, seventeen schools, 780 scholars. Pop. 2404.

**BROSELEY, a market town and parish of England, co. Salop, hund. Wenlock, 137 m. N.W. London, on the Severn, by which it is separated from Madeley. Area of parish 1550 acres. Pop. (1831) 4990. The town consists principally of one long street, with smaller ones branching off to the different collieries and other works. It has a parish church, and chapels for different denominations of dissenters; and there is a chapel of ease at Jackfield, within the parish. It is within the jurisdiction of the bor. of Wenlock. Courts leet for the manor are held in the town-hall in April and October, at the latter of which four constables are appointed; and a court of requests for the recovery of small debts is held, generally every alternate Wednesday. There are here extensive coal and iron mines, with large iron-foundries; and it is celebrated for its extensive manufacture of tobacco-pipes and garden-pots. A burning spring or well was discovered here in 1711, which disappeared on the sinking of a coal-mine in 1758. Owing to the depression of the iron trade, the town declined considerably previously to the last census (1831), there having been a falling off in the pop., since 1811, of nearly an eighth part; the pop. at that period being 4850. Market-day, Wednesday; fairs, Easter-Monday and Oct. 29.**

**BROTHERS' VALLEY, t.** Somerset co., Pa., 8 m. S.E. Somerset. Watered by Castleman's river. It contains two stores, three fulling-mills, one flouring-mill, six grist-mills, ten saw-mills, one oil-mill, four distilleries, five schools, 125 scholars. Pop. 1548.

**BROU, a town of France, dep. Eure-et-Loire, cap. cant., on the Ouzanne, 24 m. S.W. Chartres. Pop. 2369. It manufactures serges, and has a foundry and tanneries.**

**BROUAGE, a fortified town and sea-port of France, dep. Charente inférieure, on the strait dividing the island of Oléron from the mainland, 8 m. S.S.W. Rochfort; lat. 45° 28' 13" N., long. 10° 3' 45" W. Its port admits only of vessels of small burden; but it is strong by nature as well as art, and is of importance from its defending the approaches to Rochfort, and the left of the Charente. Around the town are extensive salt marshes, from which salt is obtained in great quantities, and of an excellent quality. To facilitate its shipment, the marshes are traversed by a canal running from the Charente above Rochfort to a little below Bourgne. (Dist. Géog. &c.)**

**BROWN, county, O.** Situated in the S. part of the state, and contains 470 sq. m. Bounded S. by Ohio river. Watered by Eagle, Whitcomb, and other creeks flowing into Ohio river. Organized in 1818. It contained, in 1840, 16,316 neat cattle, 26,775 sheep, 36,794 swine; and produced 284,019 bushels of wheat, 2304 of rye, 757,284 of Indian corn, 1919 of barley, 212,448 of oats, 62,964 of potatoes, 63,980 pounds of tobacco. It had two foreign commercial houses, sixty-three stores, one fulling-mill, one woolen-factory, forty-two flouring-mills, twenty-eight grist-mills, thirty-eight saw-mills, four oil-mills, fifteen tanneries, two distilleries, one brewery, two printing-offices, three weekly newspapers, one college, 38 students, one academy, 45 students, thirty-three schools, 1382 scholars. Pop. 22,715. Capital, Georgetown.

**BROWN, county, Ill.** Situated in the W. part of the state, and contains 300 sq. m. Bounded E. by Illinois river and N.E. by Crooked creek. It contained, in 1840, 4975 neat cattle, 3723 sheep, 10,978 swine; and produced 15,791 bushels of wheat, 193,105 of Indian corn, 1916 of buckwheat, 17,417 of oats, 14,735 of potatoes, 3030 pounds of tobacco, 14,992 of sugar. It had thirteen stores, six grist-mills, twelve saw-mills, four tanneries, two distilleries, two potteries, eleven schools, 944 scholars. Pop. 4183.

**BROWN, county, Ia.** Situated in the central part of the state, and contains 310 sq. m. Drained by Salt creek and its tributaries. It contained, in 1840, 2361 neat cattle, 2635

## BROWNSVILLE.

sheep, 6867 swine; and produced 3236 bushels of wheat, 66,578 of Indian corn, 9375 of oats, 3539 of potatoes, 3568 pounds of tobacco, 23,215 of sugar, skins and furs to the amount of \$47,611. It had six grist-mills, two saw-mills, one school, 24 scholars. Pop. 2364.

**Brown, county, Wis.** Situated in the N. part of the ter., and contains 1150 sq. m. It is bounded E. by Lake Michigan, and lies on both sides of Green bay. Watered by Fox river. It contained, in 1840, 1053 neat cattle, 85 sheep, 1280 swine; and produced 7614 bushels of wheat, 3690 of Indian corn, 13,674 of oats, 27,508 of potatoes, 30,460 pounds of sugar. It had three foreign commercial houses, forty-two stores, eight lumber-yards, three grist-mills, twenty-five saw-mills, one printing-office, one weekly newspaper, three schools, 46 scholars. Pop. 2107. Capital, Green Bay.

**Brown, t.** Lycoming co., Pa. Drained by Pine creek. It contains two grist-mills, four saw-mills, three schools, 60 scholars. Pop. 308.

**Brown, t.** Milford co., Pa. It contains two stores, three grist-mills, five saw-mills, four schools, 115 scholars. Pop. 603.

**Brown, t.** Montgomery co., Ia. It has four schools, 88 scholars. Pop. 1452.

**Brown, t.** Hancock co., Ia. It contains one grist-mill, one saw-mill. Pop. 749.

**Brown, t.** Washington co., Ia. It has one store, five grist-mills, six saw-mills, three tanneries, two schools, 60 scholars. Pop. 1451.

**Brown, t.** Athens co., O. Watered by Racoon creek. It contains two stores, two grist-mills, four saw mills, two schools, 30 scholars. Pop. 257.

**Brown, t.** Carroll co., O. Watered by Sandy creek. It contains six schools, 188 scholars. Pop. 2165.

**Brown, t.** Darke co., O. Pop. 294.

**Brown, t.** Franklin co., O. Pop. 425.

**Brown, t.** Delaware co., O. Watered by Alum creek. It has seven schools, 130 scholars. Pop. 908.

**Brown, t.** Knox co., O. It has five schools, 290 scholars. Pop. 1230.

**Brown, t.** Miami co., O. Watered by branches of Miami river. It contains one saw-mill, four schools, 194 scholars. Pop. 1239.

**Brown, t.** Paulding co., O. Pop. 180.

**BROWNFIELD, p. t.** Oxford co., Me., 78 m. S.W. Augusta, 503 W. Incorporated in 1808. Bounded N.E. by Race river. It contains two stores, three grist-mills, six saw-mills, two academies, 94 students, thirteen schools, 420 scholars. Pop. 1390.

**BROWNHELM, p. t.** Loraine co., O., 194 m. N.E. Columbus, 348 W. Watered by Vermilion river. It contains two stores, one grist-mill, three saw-mills, one extensive lumber-yard, four schools, 134 scholars. Pop. 834.

**BROWNINGTON, p. t.** Orleans co., Vt., 49 m. N.N.E. Montpelier, 365 W. Chartered in 1790. Drained by a branch of Barton river, which affords water-power. It contains two stores, one grist-mill, two saw-mills, one academy, 46 students, three schools, 65 scholars. Pop. 498.

**BROWNSBURG, p. v.** Rockbridge co., Va., 139 m. W. by N. Richmond, 180 W. Situated on the S. side of a branch of Cowpasture river. It contains one large church, three stores, one flouring-mill, one grist-mill, twenty dwellings, and 150 inhabitants.

**BROWNSTOWN, p. t.** Wayne co., Mich., 26 m. S.S.W. Detroit, 864 W. Situated on Brownstown creek, which flows into Lake Erie. It contains four stores, one flouring-mill, one grist-mill, two saw-mills, four schools, 69 scholars. Pop. 763.

**Brownsrow, p. v.**, capital of Jackson co., Ia., 71 m. E. Indianapolis, 567 W. Situated on a branch of the E. fork of White river.

**BROWNSVILLE, p. t.** Piscataquis co., Me., 109 m. N.N.E. Augusta, 689 W. Watered by a branch of Piscataquis river. Incorporated in 1834. It contains one store, one flouring-mill, one grist-mill, one saw-mill, six schools, 254 scholars. Pop. 563.

**Brownsville, p. t.** Jefferson co., N.Y., 168 m. N.W. Albany, 490 W. Drained by Black and Perch rivers. It contains ten stores, five fulling-mills, one woolen-factory, two furnaces, one flouring-mill, two grist-mills, seven saw-mills, one oil-mill, one distillery, twenty schools, 1267 scholars. Pop. 3063. The village is on the N. side of Black river, 2 m. from its mouth, and 4 below Watertown. Incorporated in 1820. It contains three churches, one Methodist, one Presbyterian, and one Episcopal; eight stores, one cotton-factory with 1500 spindles, two distinet-factories, two machine-shops, two iron-foundries, one whiteland-factory, several mills, 125 dwellings, and about 1000 inhab.

**Brownsville, p. b.** Redstone t., Fayette co., Pa., 191 m. W. by S. Harrisburg, 307 W. Situated on the E. bank of Monongahela river, at the mouth of Redstone creek. Incorporated in 1815. The National road passes through the principal street, and crosses the river by a bridge, 620 ft.

## BRUCE.

long, which cost \$50,000. It contains five churches, seventeen stores, one forge, one glass factory, one grist-mill, one saw-mill, one brewery, one printing-office, one weekly newspaper, three schools, 113 scholars, and 250 dwellings. Pop. 1362.

**BROWNVILLE, p. v.**, Licking co., O., 40 m. E. Columbus, 353 W. Situated on the National road. It contains two churches, five stores, numerous mechanic shops, seventy-five dwellings, and about 400 inhabitants.

**BROWNVILLE, p. v.**, capital of Edmonson co., Ky., 128 m. S.W. Frankfort, 663 W. Situated on the N. side of Green river, at the junction of Nitla creek. It contains a court-house, jail, several stores, and 112 inhabitants.

**BROWNVILLE, p. v.**, capital of Jackson co., Ill., 177 m. S. Springfield, 842 W. Situated on the N.W. side of Big Muddy river, which flows into Mississippi river, and is 25 m. by water from its mouth. It contains thirty dwellings and about 900 inhabitants.

**BRUCE, p. t.**, Macomb co., Mich., 58 m. N. Detroit, 563 W. Watered by the N. branch of Clinton river. It contains two saw-mills, one academy, 15 students, four schools, 150 scholars. Pop. 1192.

**BRUCHSAL**, a town of the G. D. Baden, cap. ballwicks, on the Saale, 19 m. N.E. Carlsruhe, Pop. 7900.

**BRUGES**, a city of Belgium, cap. W. Flanders, and of an arrond. and five cantons, in a vast level plain of sandy soil at the junction of the canals from Ghent, Ostend, and L'Escluse; 7 m. from the N. sea, 19 m. E. Ostend, 94 m. W.N.W. Ghent, and 80 m. N.W. Brussels; lat. 51° 13' N., long. 3° 13' E. It is the seat of an episcopal see under the archbishop of Mechlin; the seat of a court of assize, of a high court of justice, and of a court of commerce. Pop. in 1830, 43,198; in 1838, 44,374. The records of births and deaths from 1700 to 1814 show a natural increase of only 8814 in 114 years; that is, an average annual increase of 3 in 1000. The city has a circumference of nearly 4½ m., and is entered by six gates. It has six large squares, in which are held weekly markets and annual fairs, and above 900 streets and lanes; some are wide and handsome, and all are generally clean. Many large and noble ancient mansions, and spacious public edifices, present their pointed gables to the streets, and afford interesting specimens of the ornamental Gothic architecture of the middle ages; they induce the contemplative spectator to revert to the grandeur and opulence of Bruges in the days of chivalry, when its gorgeous halls and courts were scenes of regal pomp and pageantry, and impress him with a feeling of sadness in contrasting its ancient prosperity with its present comparative desolation. Bruges, in common with all the towns of W. Flanders, is destitute of spring-water, so that the inhab. are obliged, as were their ancestors in the time of Pliny, to have recourse for supplies from the clouds. For this purpose, every house is provided with a cistern for collecting rain from its roof; and that which gathers in the ditches of the ramparts is conveyed, by means of hydraulic machinery, to public fountains and tanks, whence it is distributed in pipes throughout the city. There are fifty-four bridges across the numerous canals by which the streets are intersected, of which twelve are of wood, and rotatory, and forty-two of stone or brick; hence the Flemish name of the place—*Brugges*, that is, *bridges*; in French, *Bruges*. The Ostend canal presents an expanse of surface that resembles a stately river, and is sufficiently wide and deep to admit the passage of ships of 500 tons from the sea. The canal to Ghent is also navigable for large and heavy vessels. Its *treckschuit*, or passage-boat, is a huge floating hotel, affording every accommodation; but delicate passengers are liable to much annoyance from the state of the nearly stagnant water, which often is nearly black with putridity, and covered with dead fish, owing, it is said, to the extensive steeping of flax in the river Lys, which joins the canal at Ghent. The level character of the country is shown by the fact, that between Bruges and Ghent, a distance of nearly 35 m., this great canal has not a single lock. The central basin or dock of Bruges is capable of containing above 100 vessels always afloat; and the convenient stores, and spacious warehouses by which it is surrounded, afford great facilities for the despatch of business. The city is advantageously situated for both maritime and inland commerce; and though its commercial transactions are now infinitely inferior to those of which it justly boasted in the 15th century, they are perseveringly carried on with most of the principal ports of France, Spain, Holland, Italy, England, Sweden, Denmark, Norway, and Russia. "Besides the facilities for internal commerce afforded by excellent roads to the other principal towns of the kingdom, Bruges possesses an important advantage in being traversed by the great national line of railway from Ostend to Ghent, Mechlin, &c."

The leading manufactures of Bruges consist of lace, linens, woollen and cotton goods, and of salt and sugar-refining. Breweries are numerous; and several establishments are

## BRUGES.

in operation for the manufacture of soap, pottery, leather, tobacco, and especially for bleaching, distilling, and dyeing. The blue dyes of the stuffs of Bruges are believed to owe their peculiar excellence from the quality of the canal water in which they are scoured. The lace manufacture is the most important. It employs 7400 persons, or more than one-sixth of the whole population. Children are taught to make lace in at least 900 schools established for this purpose. The exports comprise corn, cattle, and other agricultural produce of the soil, and the products of the various manufactures. The imports consist of wool, cotton, metals, dywoods, drugs, wines, and miscellaneous foreign produce.

Among the most remarkable public edifices are the cathedral of Notre Dame (*Onser Vrouw*), the tower of which is so lofty, that when the atmosphere is particularly clear, it is visible from the mouth of the Thames. The interior contains an exquisitely carved pulpit; a marble statue of the Virgin and Child, attributed to Michael Angelo, and in which Horace Walpole offered 30,000 florins; and six costly old monuments of Charles the Bold, Duke of Burgundy, and his daughter, the wife of the Emperor Maximilian, in richly gilded bronze and silver. The old Gothic hospital of St. John, and the elegant cathedral of St. Savin, have several celebrated pictures by Hans Hemling, Van Dyke, and others. In the great hall of the *Hôtel de Ville* is the public library, containing many curious illuminated MSS., a missal of the 14th century, and the scheme of a lottery drawn at Bruges in 1445. These, and other Gothic buildings in the city, belong generally to the 14th century, and are ornamented with windows of rich coloured glass, sculptured monuments, and paintings by the old Flemish masters. In the great square is a lofty Gothic tower or belfry, the most beautiful in Europe, and its chimes or *carillons* are esteemed the most complete and harmonious in the Netherlands, where only superior qualities are approved in this species of musical instrument, or rather machine. In this tower there are forty-eight bells, some weighing at tons; they are played upon every quarter of an hour, commonly by means of an immense copper cylinder communicating with the clock, and weighing about nine tons. Its surface is pierced by 30,500 square holes, so that an infinite variety of airs may be set upon it, by merely shifting the iron pegs that lift the hammers. On particular days a pious professor of music performs the finest pieces by striking with great effort upon huge keys with well-guarded feet, and upon pedals with his feet. Watchmen are constantly posted at the top of this tower to make alarm signals of fog, by ringing a loud bell, and exhibiting, in the day, a flag, and in the night, a lantern, towards the point whither the engines are required to hasten, which is further indicated by a speaking-trumpet. The city fire establishment consists of nine engines and 140 men. The ancient abbey of the Dunes is a vast and solid building, in which is held the episcopal academy. The Jerusalem church is a relic of the Holy Tomb. There is a Béguinage, or convent of Béguin nuns, and also a convent of English Augustinians, possessing a richly ornamented church. The city is divided into seven Catholic parishes, and contains one Protestant church. Several other public edifices are worthy of notice, as well as ancient private mansions interestingly associated with important historical events and personages. The council chamber of the Palais de Justice contains an immense chimney-piece of wood beautifully carved, in 1524, with figures of Charles V. and his family, as large as life. There is a small theatre, a botanic garden, a museum of natural history, several literary and scientific societies, a well-attended atheneum or collegiate school for the higher degrees of education, receiving annually from government 6350 fr.; a good surgical school, attended commonly by 3 students; and a very flourishing academy of painting and sculpture, in which, besides the student's course, gratuitous instruction is given to others in architecture, design, and drawing. Its gallery of paintings comprises several by the celebrated Van Eyck.

Few cities are better provided with endowed charities and asylums for the destitute and afflicted, and with schools for instructing the children of the poor. The average number of persons in a state of indigence within the city is estimated at 5000. The poor-house is a central establishment for the two Flanders, and will contain 550 paupers: the number of inmates is generally about 500. The prison is kept remarkably clean, and the walls of its cells are rendered dry and secure by a casting of thick boards of oak. There is a *mont-de-piété*, or benevolent institution for lending money upon pledges. In 1832 the number of pledges deposited was 106,371, and the amount lent upon them was 780,801 fr. The city authorities exercise a vigilant superintendence in matters affecting the public health, and gold medals are awarded to those medical gentlemen who have manifested a benevolent zeal in gratuitous vaccination. The number of children who were vaccinated in 1838 was 10,988, and of 183 who took the smallpox, 19 died. The

## BRUGES.

temperature of the atmosphere about Bruges is subject to sudden and extreme transitions; and oppressive heat of the mid-day sun in summer is often succeeded by very chilling evening damps. Health and longevity appear, however, to be kept up to the average points, and those who possess the means of choosing their place of residence often prefer this locality; so that the spacious mansions of the opulent burghers of former times are now tenanted by many of the highest families of Flanders, and by retired independent merchants, for whom this old city would seem to have peculiar attractions. The adjacent rural districts to the W. display the most exuberant specimens of the Flemish farm-houses; and orchards, which abound in every part of W. Flanders, are especially numerous in the vicinity of Bruges, producing excellent cherries, apples, pears, walnuts, plums, and, less commonly, apricots and peaches.

The history of Bruges commences at a very early date. It was a prosperous seat of manufacturing and commercial industry long before Ghent and Antwerp rose to the same distinction. In the 7th it was rapidly acquiring importance, and under Charlemagne, at the end of the 8th century, its waters were highly distinguished. During the government of the rich and powerful counts of Flanders, who resided at Bruges from the 9th to the 15th centuries, its woollen manufactures grew and flourished to an amazing extent, so that Philip II. in 1430, to commemorate its great prosperity, instituted the chivalric order of the Golden Fleece. At the Flemish court of this ostentatious Duke of Burgundy whose hypocrisy, and not his exemption from pride and cruelty, procured him the cognomen of Good, a sumptuous splendour of regality was displayed, which no European monarch could imitate, and an absolute power was exercised, which none dared dispute. The records of luxurious banquets and apparel at this period are almost incredible. Not only the dresses of men and women, but the housings of their horses, were of velvet, satin, and gold, profusely enriched with brilliant jewels, an extravagance which Charles V., in the following century, was obliged to suppress by enacting sumptuous laws. The wealth and splendid attire of the citizens of Bruges had long been subjects of wonder; for when the queen of Philip I. of France, visited this city in 1300, she is said to have exclaimed with astonishment, "I here see hundreds who have more the appearance of queens than myself." The public and private buildings of the city were worthy to display such courtly magnificence; so that Southey, judging from the existing architectural remains of that ancient grandeur, says, in his "Pilgrimage to Waterloo,"

"When I may read of this in days of old,  
Of tournaments graced by chieftains of renown,  
Fair dames, grave citizens, and warriors bold—  
If fancy would portray some stately town  
Which of such pomp & theatre might see,  
Fair Bruges: I shall then remember thee."

This noble city, throughout the 14th and 15th centuries, was the central emporium of the whole commercial world, and had resident consuls and ministers from every kingdom in Europe. In the Hansatic League, or confederacy of the great European ports for the promotion of commerce, Bruges was the leading city, and the grand depot of naval stores. Her quays were crowded with foreign ships and merchants, and her piles of magnificent warehouses were filled with the wool of England, the linen of Flanders, and the silk of Persia. Her weavers were celebrated for making the most beautiful description of tapestry more than a century before the Gobelin manufacture was commenced under the direction of their descendants. The wealth of the citizens of course was enormous: a single merchant gave security for the ransom of Jean sans Peur, the last Count of Flanders, to the amount of 400,000 crowns of gold. The annual exports merely of stuffs manufactured from English and Spanish wool amounted to 8,000,000 florins, and the flora was then quadruple its present value. This amazing prosperity continued undiminished during the dominion of the dukes of Burgundy; but under the Austrian dynasty, at the close of the 15th century, the rebellious conduct of its inhabitants, in forcibly imprisoning the Archduke Maximilian, induced his father, the Emperor of Germany, to visit the city with such destructive vengeance that henceforth its greatness died away, its trade was transferred to Antwerp, and the religious persecution and brutal ferocity of the Spanish under Philip II. and the Duke of Alva completed the process of its ruin, at the end of the 16th century, by compelling its artisans to escape for their lives to England, where they found a hearty welcome from Queen Elizabeth, and became the means of establishing the woollen manufactures for which this country has since become so distinguished. The subsequent history of Bruges, under the dominion of the Spanish, French, and Austrians, is comparatively of little interest.

In glancing over the records of the old cities of Flanders, we find a reckless passion for freedom developing itself in a

## BRUNN.

long succession of obstinate and sanguinary conflicts between the people and their rulers, and often between different towns and parties. By turns we find the victorious citizens, enjoying a short interval of intertemperate and insolent triumph, abusing the blessings procured by the death of thousands of their competitors, and then find them ruinously defeated, and suffering long periods of abject slavery and financial exhaustion under the despotism of their haughty and ambitious conquerors.

Bruges, during its golden age of commercial ascendancy in the middle ages, was the native place of numerous eminent scholars and philosophic authors, classical commentators, mathematicians, jurisconsults, theologians, physicians, and painters. A list of these persons is given in the first of the following works, on the authority of which the statements of the present article principally depend. (*Vander Maelen's Dict. Geog. de la Flandre Occidentale; Guide Books by Coglen, Boyce, &c.; Murray's Hand-Book; Dictionnaire des Pays Bas; Gratton's Hist. of the Netherlands, &c.*) A plan of the city of Bruges, on a large scale, has been published by the Geograph. Esab. of Brussels.

BRUGEN, a town of the Frisian states, prov. Rhine, reg. Drenth, on the Scheldt, 10 m. S.W. Kempen. Pop. 750. It has a fine Catholic, and a Calvinist church, with linen factories, bleach-works, oil-mills, and a tannery.

BRUGUIÈRE, a town of France, dep. Tarn, cap. cant., on the Thoré, 4 m. S. Castres. Pop. 400. It manufactures flannels, coverlets, and other descriptions of woollen goods.

BRUHL, a town of the Frisian states, prov. Rhine, reg. Cologne, 4 m. W. the Rhine, and 9 m. S. Cologne. Pop. 1700. It is surrounded by walls, is well built, and has a seminary for the instruction of schoolmasters; but it derives its principal consequence from the magnificent castle in its vicinity, commenced in 1795 by the elector Clement Augustus, of Bavaria, and finished by Maximilian Frederick. It is splendidly fitted up, and has extensive pleasure-grounds and gardens. (*Schreder.*)

BRUMATH, a town of France, dep. Bas-Rhin, cap. cant., on the Zorn, 12 m. N.W. Strasbourg. Pop. 4131. It is supposed to occupy the site of the ancient *Brannovagus*; and the medals, marbles, urns, &c. which have been found here prove, at least, that it had been inhabited by the Romans. Some hard fighting took place in its vicinity, in 1793, between the French and Austrians. (*Dict. Geog.*)

BRUNN, a town of the Austrian states, cap. Moravia, at the confluence of the Schwarza and Zwittawa, 70 m. N.N.E. Vienna, lat. 48° 11' 28" N., long. 16° 38' 25" E. Pop. 38,000. exc. garrison of 3000 or 4000. It is built on the declivity of a hill, having the cathedral on its summit and the suburbs at its foot; it is encircled by walls, bastions, and trenches, and was formerly defended by the citadel of Spielberg, on the hill of that name to the W. of the town; but the defences of the latter having been destroyed by the French, it is now used as a state prison and house of correction; Silvio Pellico was shut up in it for above eight years. Though narrow and crooked, the streets are well paved, lighted, and provided with foot pavements. Among the public buildings are—the cathedral, remarkable for the height of its nave; St. Jacob's church, built in 1315, with a tower 278 ft. in height, a bell weighing 115 cwt., and some monuments; the episcopal palace; the *Lazarett*, formerly a rich Augustine convent, now the residence of the governor, and the place of meeting of the states of the prov.; the town-house, a Gothic structure, built in 1511; the barracks, an enormous pile, formerly the Jesuits' college, having seven courts, a fine church, and a riding-school; the theatre, with its assembly-rooms; the Maria school for young ladies, &c. Many of the nobility belonging to the prov. have here fine palaces, which give an air of grandeur to the town. The quarter called the Franzensberg is very picturesque; in the gardens a marble monument was erected in 1818, in honour of the late emperor Francis I. The Augarten, a park laid out as a garden, was opened to the public by Joseph II. Brunn is the seat of a bishopric and of the government of Moravia and Austrian Silesia, of a Protestant consistory, a court of appeal, high criminal and military courts, the *Landrecht*, or nobles' court for the prov., and is the place of meeting of the provincial estates, and the residence of their standing committee. It has a philosophical institute, a gymnasium, a principal normal school; schools for young ladies, tradesmen, and mechanics; a theological seminary, and numerous parish and infant schools; an imperial society for the encouragement of agricultural and of the natural history and geography of Moravia, to which is attached a valuable museum, a botanical garden, and a public library. It has general, orphan, and lying-in hospitals; a lunatic asylum; with numerous institutions for the relief of the poor. The manufactures of Brunn are of very considerable value and importance. Those of woollen goods are the most extensive in the empire; and the town has thence been called the Austrian Leeds. Lastly, however, the cloth trade has been represented as not

# BRUNSWICK (DUCHY OF).

is a very prosperous state. The cotton manufacture has been introduced, and has made considerable progress; and silk, glass, soap, tobacco, and machinery, are extensively produced. Its trade is very extensive; and it will be still further promoted by the branch which is to be carried to the from the railway now being made from Vienna to Galicia. (*Oesterreichischer Lloyd*; *Murray's Handbook*, &c.)

**BRUNSWICK** (*Ger. Braunschweig*), **THE DUCHY OF**, in Germany, consists of five detached portions of territory on the rivers *Weeser*, *Seine*, *Ocker*, and *Aller*, between lat. 51° 38' and 52° 39' N., and long. 10° 10' and 10° 28' E. It occupies part of the vast plain which stretches from the foot of the Harz mountains, and their continuation (the *Bölling*) to the German ocean and the Baltic, with a portion of the rise of these chains on the N. side. The largest portion contains the districts of *Wolfenbützel* and *Schöningen*, in which the cities of *Braunschweig* and *Wolfenbützel*, and the towns of *Königsbutter* and *Helmsstadt*, are situated. The district of *Wolfenbützel* is traversed by the *Ocker*, which rises in the Harz mountains and is not navigable. The *Aller* traverses the district of *Schöningen*, but is not navigable in that part of its course; nor is the *Seine* navigable, which traverses the district of that name. The *Weeser*, which forms the boundary of the duchy towards *Prussia* *Westphalia* for a considerable distance, affords an excellent water communication with the sea, and the harbour of *Bremes* on the one side, and with the states of *Hesse* and *Thuringia*, in the heart of Germany, on the other, by means of the *Werra* and the *Fulda*, which unite near *Münster*, and thence take the name of *Weeser*. This river, which forms the main outlet for the waters falling from the N. and W. sides of the Harz, and the *Thuringian* forest ultimately receives all the smaller streams which previously unite with the *Aller*, excepting the *Bode*, which falls into the *Saale*, a tributary of the *Elbe*, and which traverses the third and most southern detached portion of territory, the district of *Blankenburg*. Of the Harz mountains, which, with the *Thuringian* forest, separate the tributaries of the *Elbe* from those of the *Weeser*; a considerable portion, valuable for minerals and forest of vast extent, belongs to *Braunschweig*. The summit of the *Brocken*, and the rude and almost impenetrable *Central Harz*, in which granite, mica slate, and primitive formations predominate, belong to *Hanover*, while the E. and W. falls of the range, in which the transition and secondary formations prevail, form part of the duchy of *Braunschweig*. A portion of this mountain chain belongs jointly to the two governments, and is distinguished by the denomination of *Communion Harz*. The highest summits within the duchy are the *Wormberg*, 2930 feet, and the *Ackermannshöhe*, 2708 feet in height. The most considerable mountain, or, rather, forest range, is the *Bölling*, which lies between the rivers *Seine* and *Weeser*, and is covered with extensive and valuable woods of oak and beech. The summits of this chain are of no great elevation. Iron is found, and sandstone, known under the name of *Söllinger* stones, is quarried in them. The *Elm*, a slight range of heights between the *Ocker* and the *Aller*, is covered with woods of oak and beech, and contains veins of iron and beds of coal, with occasional mineral springs.

Two small detached portions of territory, viz., the circuit of *Thedinghausen* on the *Weeser*, to the N.W. of *Hannover*, and that of *Badenburg*, are enclosed by the *Hanoverian* territory, and form part the former of the *Weeser* district, the latter of the *Seine* district. Finally, the detached circuit of *Kalverde*, inclosed within the *Prussian* province of *Saxony*, belongs to the district of *Schöningen*. According to the latest official returns, the population, in 1833, amounted to 245,783 inhabitants, comprised in 41,600 families. The *Weimar* *Almanack* gives the following survey for 1833:

| Districts       | Area in sq. m. | Pop.    | Towns. | Villages. | Scenes. |
|-----------------|----------------|---------|--------|-----------|---------|
| 1. Wolfenbützel | 460            | 109,000 | 3      | 188       | 12,300  |
| 2. Schöningen   | 250            | 40,000  | 8      | 73        | 4,300   |
| 3. Harz         | 324            | 41,500  | 7      | 70        | 4,650   |
| 4. Weeser       | 290            | 37,500  | 6      | 70        | 4,000   |
| 5. Blankenburg  | 170            | 30,000  | 6      | 64        | 2,500   |
| Total.          | 1,504          | 245,000 | 27     | 497       | 27,750  |

The three cities contained:

|              |                     |
|--------------|---------------------|
| Braunschweig | 33,340 inhabitants. |
| Wolfenbützel | 8,310 do.           |
| Helmsstadt   | 6,773 do.           |

The various religious denominations are thus classified: *Lutheran*, 245,700, in 238 parishes, with 398 churches and chapels, directed by 29 superintendents, and 7 general superintendents; the *Calvinists* have but one parish, and the *Catholics* three parishes. The most perfect toleration and equality of civil and religious rights are shared by all the Christian persuasions. The *Jews*, 1500 in number, have four synagogues. The number of *Hemhatters* (a kind of *Quakers*) is stated at 100.

A census of the pop. in 1814 gave 207,000 as the number

of the inhab., which consequently increased down to 1833 in the proportion of about 1 per cent. per annum; and, supposing the same rate of increase to have continued down to the present time (1839), the pop. will now be nearly 263,000. We have stated that the hilly parts of the duchy are covered with forests of fir, oak, and beech. According to Dr. *Volger*, about 300,000 acres are arable and unimproved land, 264,000. The plain at the N. fall of the Harz is mostly of a limestone soil, alternating with beds of loam, and is fertile; but the predominant feature is sand in these parts. Towards the N. part of the duchy, these fertile plains merge into the arid and unproductive sandy lands of *Dülsen* and *Lüneburg*. The average produce of the soil, in all descriptions, is estimated, by *Volger* at about 55,000 grs.; oil from linseed, rape, and poppies at 1200 tons, flax 1500 tons, besides tobacco, madder, and hops, in each of which articles, the produce considerably exceeds the consumption. Cattle-breeding is carried on successfully in the river districts; and improved breeds of cattle and sheep are found on all the larger estates. Hogs are very extensively reared; but the same quantity of *Braunschweig* pigs is sent to the neighbouring states, the produce of which is sent to all parts of the Continent. Horses are not reared in sufficient numbers to supply the wants of the duchy, and are annually brought from *Moslein* and *Mechlenburg*.

The extensive forests, which had suffered, from many years of neglect and wasteful management, have of late been improved under scientific direction, and are divided into four inspectorships (*Forstmeisterien*), and sixty-one forester's districts. Timber, of valuable quality, is annually floated down the *Ocker*, *Seine*, *Innerste*, and *Weeser*, especially from the Harz and the *Bölling* forests, and forms a considerable object of export trade. The game in these forests is not very abundant, consisting of red deer, roe-bucks, hares, and rabbits, with occasional wild boar. A species of thrush (*Kramm-vogel*) caught by thousands in the winter season, is esteemed a great delicacy. Fish are very abundant, nor are rare sorts. The mineral riches of the Harz mountains, although no longer so prolific as reported in former times, afford employment to a number of industrious individuals, and are managed partly in conjunction with *Hanover*, and partly by *Braunschweig* alone. The *Rammelsberg*, near *Goslar*, of which 3-7ths is the share of *Braunschweig*, and 4-7ths that of *Hanover*, produced, in two recent years, the following quantities:

| Grd.  | Antimony. | Lead.   | Zinc.  | Copper. | Sulphur. | Vitrol. | Alum.   |
|-------|-----------|---------|--------|---------|----------|---------|---------|
| 10 12 | 600,000   | 600,000 | 12,000 | 600,000 | 100,000  | 600,000 | 600,000 |
| 11 6  | 615,000   | 615,000 | 13,000 | 620,000 | 105,000  | 615,000 | 615,000 |

Iron is the chief produce of the mines worked separately by *Braunschweig* in the three districts of the Harz, *Weeser*, and *Blankenburg*. They are all worked on government account, and as well as the salt mines, stone-cutting mills, four glass-houses, and the porcelain manufactory at *Firtenberg*, are under the direction of a mining board at *Braunschweig*. The salt works are very considerable; they are established at *Salzdahlum* and *Salzliebenhall*, in the district of *Wolfenbützel*, and at *Schöningen*. That at *Salzdahlum* has been worked since the 13th century. The salt spring at *Julshall* is worked jointly with *Hanover*. In the *Bruppenholz*, near *Helmsstadt* there is a coal-mine with two shafts, and another near *Waltenried*, where slate and agates are found. Mineral springs occur in several parts; those near *Helmsstadt* and *Seesen* are frequented by invalids. Asphaltum and other bituminous substances are found in many parts of the Harz mountains, especially at the *Rammelsberg* and *Therg*.

Besides the iron-works, linen weaving is the chief article of manufacture. According to *Becker*, it is mostly woven in the towns of *Schöningen*, *Königsbutter*, *Schoppenstedt*, *Langelsheim*, and in several towns of the Harz and *Weeser* districts. Large bleaching-grounds are found at *Hockebrecht*. Camlets are the only descriptions of woollens woven within the duchy; a spinning-mill for woollen yarn has been established at *Bevern*; and spinning is a great source of industry among the inhabitants of *Lutter* and *Barenburg*, and at *Lesse*. Dyeing is carried on at *Schoppenstedt*, *Kalverde*, and *Vornfelde*. Brewing is extensively carried on in all the principal towns, but the beer is bad, and does not prevent the universal use of brandy among the lower classes. The *Mumme*, a heavy drudge extracted from malt is now principally used by persons in delicate health, and is exported for that purpose to all parts of Germany. Oil and sawing mills are found on nearly all the principal streams, and the preparation of the root of chicory as a substitute for coffee, which attained to a great extent during the exclusion of colonial produce under the continental system, is still favoured by high duties on such produce within the

## BRUNSWICK (DUCHY OF).

**Limits of the customs' league.** Becker estimates the quantity annually prepared at 8,750 tons. The price of labour is usually 6 gg. (about 9d.) per diem, in the country, and something more in towns. Trade, especially the transit trade, is a great source of emolument both to the town and duchy of Brunswick, and is principally transacted at its ancient fair, which still keeps up all its importance, and bids fair to succeed to Leipzig as soon as the railway which is now constructing from the Harz shall be continued to some navigable point of the Aller or the Elbe. Brunswick is engaged by treaty in a customs' league with Oldenburg and Hanover (See GERMANY), which opens to her the communication with the German ocean by means of the Elbe and Weser, while the credit and ancient trading connexions of the Brunswick mercantile houses fill up a blank which would otherwise be very sensible in that league. The government wisely directs its attention to the encouragement of the different industrial resources, and has preferred establishing a liberally-endowed and well-conducted system of education to the imposition of protecting duties, by which one class of the people is aided at the cost of the others. The foundation of the "Real Institute," which unites with practical instruction in agriculture and the management of forests the scientific information on which the higher branches of these occupations, as well as mining, and the mechanical and chemical arts, ought to be founded, marks an epoch, even in Germany, where so much care is shown for intellectual improvement. Nor are the higher branches of knowledge by any means neglected. The Lyceum, formerly the Caroline College; two normal schools for teachers; and six gymnasia, afford ample means of cultivating them. The university formerly existing at Helmstedt, the revenues and library of which were transferred during the Westphalian régime to Göttingen, has not been re-established, but Göttingen is regarded as the university of the duchy. There are sixty-three burghers' schools, and 300 elementary schools, giving one to nearly every village. The revenues of nine secularized convents and religious foundations are applied to support a number of unmarried young women and other persons on the presentations of the patrons. The charitable foundations are fifty-two in number.

The inhabitants of the duchy are mostly descendants of the ancient "Brockmanner," a branch of the Saxon or Saxons, and the low German language is universal among the villagers, except on the Harz, whose mining population was drawn from Upper Germany, and speaks high German. The names of some villages, as Wenden, &c., are perhaps the sole remains of the ancient Wendish or Slavonian inhabitants of the north-eastern parts of the duchy. The higher classes of the towns speak high German, which, as all over Germany, is the language of public business and of the schools. Personal courage and open-heartedness are the leading characteristics of the Brunswickers, and, until the feeling was on a recent occasion wantonly trifled with, and abused, they were distinguished by an unshaken attachment to the reigning house. They are allowed to be the best situated, in point of comfort and village economy, of all the Germans, and the aspect of the whole country is indicative of good order and prosperity. The discontent of the oppressed inhabitants who, being long accustomed to the mild rule of wise princes, found the tyrannical innovations of the late Duke Charles insupportable, led, in 1830, to the expulsion of that prince, and the transfer of the sovereignty to his second brother William, who has since been recognised as reigning duke by the great powers of Europe. One of the first acts of this prince's sovereignty was, in conjunction with the "Landstände," or estates, to remodel the constitution which had been given in 1820 under the direction of Count Münster during the minority of the former duke. Instead of two chambers the representation of the people is now confided, agreeably to the old German fashion, to one house of assembly, but which is composed of elected members; ten deputies being taken from among the owners of the seventy-eight knight's estates within the duchy, twelve from the principal towns, ten from the villages and peasantry of the open country, whether holding freehold or copyhold property, and sixteen chosen from all classes indiscriminately by electors named by each class. With the exception of two members of the higher clergy, which must be chosen, no distinction of rank or property influences or limits the choice of this last portion of the assembly. The members chosen for the towns and for the country must, however, belong to that class of each which pays the highest amount of taxes, and which is fixed to include one-tenth of the houses in town, and one-fourth of the landed holdings. The chamber meets every three years, and renews one-half of the members of each class by a new election. The budget is voted for three years, and the chamber has the right of controlling the expenses of the state, under acknowledgment of the obligation to provide for the dignity and power of the government. This new constitution, which was proclaimed 19th Oct., 1833, provides for many

rights of the subject, which are not acknowledged in other German states, among others—that every person who is arrested be brought up for examination within twenty-four hours, and then delivered over to his proper judge; where the course of justice is impeded by government influence, recourse lies to the chambers; the right of emigration and removal to any other country unimpeded is acknowledged. Two of the counsellors (judges) of the court of the duchy, are to be chosen by the chamber; all privileges of various classes of the community are abolished, and perfect equality before the law is established. In the first sittings of the new chamber the manorial dues and services of all emphyteutic fiefs were declared redeemable; the dues in money and kind at twenty-five years' purchase, the service dues at eighteen times their estimated value. The municipal institutions were modified at the same period, and the freedom of the cities rendered easy of acquisition. The magistracy is composed partly of salaried and partly of honorary officers, dependent on the sanction of a council of freemen chosen by the citizens at large, and who vote the sums requisite for the service of the city. The official published statement of the revenue and expenditure for the period 1837 to 1839 gives the following results:

| Revenues.                  |                  | Expenditure.                                     |                  |
|----------------------------|------------------|--------------------------------------------------|------------------|
|                            | Doll.            |                                                  | Doll.            |
| Land tax                   | 337,000          | Department of justice                            | 470,571          |
| Personal tax               | 331,358          | Do. Finance                                      | 211,819          |
| Indirect taxes             | 978,707          | Do. war                                          | 868,773          |
| Stamps                     | 114,000          | Do. police                                       | 134,446          |
| Fees of courts             | 84, 00           | Pensions                                         | 277,488          |
| Post-office and tolls      | 122,339          | Extraordinary building expenses                  | 4,760            |
| Lottery                    | 31,147           | Interest of public debt                          | 484,780          |
| Domains and other branches | 600,318          | Salaries in various departments and sinking fund | 596,156          |
| <b>Total</b>               | <b>3,257,684</b> | <b>Total</b>                                     | <b>3,257,684</b> |

This estimate contains only the surplus revenue of the domains left after defraying the civil list of the duke, which amounts to 337,000 dollars annually. The duke farther derives a revenue of 170,000 florins from the duchy of Oels, in Silesia, and a mediatized principality under the sovereignty of Prussia, which is an appanage of the second branch of the house of Brunswick. Finally, the estates of the convents and religious foundations secularized at the period of the reformation, and then destined to support the clergy and institutions of education, form a separate fund, which does not enter into the budget, yielding the sum of 340,605 dollars annually. A resolution of the chamber fixed the lowest amount of salary of a parish minister at 400 dollars, and that of a village schoolmaster at 80 dollars per annum, the amount required to make up these sums being chargeable on the budget. The public debt is stated not to exceed 3,300,000 florins, and is being rapidly reduced. On the whole, this little state is one of the best managed in Europe in every department of administration. Respecting the principles upon which taxes are imposed, we have collected the following particulars. For the land tax, the ground is rated according to four classes, and a separate assessment is laid on each. The personal tax is a capitation assessment on all persons who are of age, and is divided into ten classes, whose contribution varies from about 3s. 9d. to about £3 16s. per annum. The indirect taxes are levied in conjunction with Hanover and Altenburg, according to a moderate tariff, which affords encouragement to native industry, without aiming at forcing precocious manufactures. A tax is levied upon houses, and some tolls on provisions carried into towns for sale; but these are local assessments for municipal purposes.

The present duke of Brunswick is the lineal descendant of Henry the Lion, the last of the house of Welf, who held the united duchies of Bavaria and Saxony. In their rivalry with the Saxonian house of Hohenstaufen in the 12th century, the party of the powerful Welfs was stronger in Italy than in Germany, and the jealousy entertained of their power in the former country caused all the princes of the empire to unite with the Emperor Frederic Barbarossa in humbling them. Henry the Lion having refused to aid that emperor in his wars with the free Italian cities and the pope, was deprived, by a decree of the diet in 1180, of both duchies, and only left the possession of his allodial domains of Brunswick and Lüneburg, which were subsequently split into numerous branches, but merged finally in the still reigning lines of Lüneburg (or Hanover) and Brunswick, which is the elder branch. As such, the crown of England would have devolved to this line, which claims descent from the daughter of Henry II. on the extinction of the house of Stuart, had not the duke of Lüneburg, afterward George I., by marrying the daughter of Elizabeth, Countess Palatine, the daughter of James I. of England, procured a prior claim to the younger line. Treaties of mutual inheritance exist between the houses of Hanover and Brunswick, and the succession only passes to the female side when legitimate

## BRUNSWICK.

male heirs fall. The intimate family connexion which in the last century subsisted between the house of Brunswick and the reigning families of Great Britain and Prussia, engaged the princes of Brunswick in political alliances with these two powers, in opposition to France, and occasionally to Austria. The Prussian army, at the outset of the disastrous campaign of 1806, was commanded by the Duke Charles William Ferdinand of Brunswick, who fell in the battle of Jena. Although he had declared his duchy neutral, and no Brunswick troops were with the Prussian army, yet his lands were immediately seized by the conqueror, and incorporated with the kingdom of Westphalia. His youngest son, Frederic William, after the death of his eldest, and the abdication of his second brother, the sole remaining heir, served for some time in the Prussian army, and afterward in the Austrian army. In 1809, this adventurous prince raised a small corps, and attempted, in co-operation with the grand Austrian army, to excite a diversion in the north of Germany; but finding his cause ruined by the victory of the French at Wagram, he crossed the whole of Germany, at the head of a small body, not exceeding 3000 men, and marched from the Bohemian frontier to the seacoast near Bremen. Eluding and alternately fighting the various French corps which crossed his passage with equal good fortune and bravery, he succeeded in embarking for England, where his troops joined the British army, with permission to retain the black uniform which their bravery had rendered celebrated, and served until 1814 in the peninsula. Having regained his dominions, under the stipulations of the treaty of Vienna, Frederic William fell at the head of his troops while maintaining the position of Quatra Bras, two days before the battle of Waterloo. In the Germanic Confederation, Brunswick ranks as the thirteenth voice, conjointly with Nassau, and has two voices in the Plenum. The contingent to the confederate army is 3000 men, consisting of 1625 infantry, 399 cavalry, and 173 artillery and pioneers.

BRUNSWICK, a city of Germany, cap. of the above duchy, on the Ocker; lat. 50° 18' N., long. 10° 38' E. Pop. 36,000. Bruno, who appears about the year 849 as duke of Ostfalia, is said to have first built walls round the little town of Brunswick, to protect it from the incursions of the Normans. Henry the Lion, duke of Saxony and Bavaria, and the grand champion of Christianity and Germanic civilization, against the Slavonic nations on the Elbe and the Baltic sea towards the close of the 12th century, made Brunswick his place of residence, and extended and adorned the city. He finished the cathedral church of St. Blasie, an interesting monument of the Byzantine Gothic style, endowed it with lands and relics brought from Constantinople and the Holy Land, and erected a bronze figure of a lion, said to have been cast in the Greek capital, upon a pedestal in front of his palace, on the site of which a barrack now stands. From this period Brunswick became one of the most important cities in N. Germany; and the wealth of its dukes, who were owners of the extensive mines and salt works in the Harz mountains and in the vicinity, was principally expended in the cities of Lüneburg and Brunswick, the seats of the chief lines of the Welf family. In the 13th century Brunswick, which, owing to these resources, had advanced in commercial prosperity, became a member of the Hanseatic league, and flourished as one of the leading cities of lower Germany. On the decline of the league, the increased power of the territorial princes exposed the city to the vicissitudes which their political speculations drew upon the country; and Brunswick suffered in common with other N. cities upon the advance of the Imperial armies under Tilly and Wallenstein, in the thirty years' war. The division of the reigning house into many branches was also, at that period, disadvantageous to Brunswick, which saw the rival cities of Wolfenbüttel, Celle, Hanover, Göttingen, &c., spring up and prosper as so many diminutive capitals, each the seat of a petty court. The city was further almost drained of its small remains of wealth during the French occupation; but through the industry of its inhabitants, and the celebrity of its fair, held in February and August, and frequently visited by 30,000 strangers, it keeps up its importance as a commercial city. An iron railway has been commenced from Brunswick to the foot of the Harz mountains, of which a portion as far as Wolfenbüttel (about 9 miles), was opened in 1839, having cost 300,000 dollars. Should this undertaking be continued through Hanover to the Elbe, or the Weser, Brunswick will bid fair to succeed to Leipzig and Frankfurt, as the staple mart of English manufactures and colonial wares for the N., and perhaps E. parts of Europe. The fortifications of the city have been levelled since the peace, and converted into agreeable plantations, with walks and drives; and the city, although bearing rather an antiquated appearance, has some good streets, and abounds in interesting remains of the middle ages. The cathedral, and church of St. Giles, which has lately been repaired and fitted up as a repository for works of art, the bronze lion be-

fore mentioned, and the town-house with a curious gallery, adorned with the statues of many of the dukes in niches, and the bronze fountain in its vicinity, are justly deserving of notice. The principal streets are the Bohlweg, in which the new palace, a tasteful Greek structure, is built to replace the old residence, burned by the mob in 1830, the Falsterben and Wenden streets. The church of St. Andrews, with its steeples, one of which is 318 feet in height; and that of St. Catherine, with paintings by Diebriech, and stained glass windows from designs by Cranach and Durer, as well as the church of St. Martin, in the pointed Gothic style, are interesting to lovers of the fine arts. Nor is the museum less worthy of attention, in which, among a number of inferior paintings, are some of high value of the Flemish and Dutch schools, by Rembrandt, Jan Steens, Vandyke, and Rubens, together with a portrait of Raffaele, said to be by his own hand; and others by Guido, Giorgione, &c. An Ecce Homo, by Albert Durer, a crucifix, by Benvenuto Cellini, with a collection of antique statues, coins, &c., are worthy of inspection. The celebrated Onyx vase, purchased by one of the dukes of Brunswick, who secured it as his share of booty when Mantua was sacked, in the course of the thirty years' war, together with several other objects of value, were carried off, and are still retained by Duke Charles. The Caroline college, now divided into a lyceum or classical college, with a gymnasium or grammar school, and a "real schule" or mechanics' and commercial institute, with a branch for agriculturists and foresters, a college for teachers, several elementary schools, a general and a lying-in hospital, with schools of surgery, orphan and deaf and dumb asylums, are the public institutions for education. It has also manufactures of linen and woollen stuffs, hardware, &c.; and numerous charitable institutions.

BRUNSWICK, county, Va., situated in the S. part of the state, and contains 676 sq. m. Nottaway river bounds it on the N.E., and Roanoke river crosses its S.W. corner. Drained by Meherrin river and its branches. It contained in 1840, 10,801 neat cattle, 6379 sheep, 18,930 swine; and produced 26,936 bushels of wheat, 385,801 of Indian corn, 115,842 of oats, 15,711 of potatoes, 2,140,812 lbs. of tobacco, 12,669 of cotton. It had nineteen stores, one furnace, four flouring-mills, nineteen grist-mills, two saw-mills, five tanneries, seven academies, 156 students, seven schools, 196 scholars. Pop.: whites, 4978; slaves, 8805; free coloured 563; total, 14,346. Capital, Lawrenceville.

BRUNSWICK, county, N. C., situated in the S. part of the state, and contains 1344 sq. m. Cape Fear river crosses its N. part, and bounds it on the E.; Waccaw river runs on its W. border; bounded S. by the Atlantic. It contained in 1840, 7337 neat cattle, 1899 sheep, 9512 swine; and produced 36,357 bushels of Indian corn, 47,496 of potatoes, 949,753 lbs. of rice, 7668 of cotton, 4867 barrels of tar, pitch, and turpentine. It had four stores, seventeen grist-mills, four saw-mills, seven schools, 106 scholars. Pop.: whites, 2773; slaves, 3119; free coloured, 374; total, 5965. Capital, Smithville.

BRUNSWICK, p. t., Cumberland co., Me., 30 m. S. by W. Augusta, 7 m. W. Bath, 96 m. N.E. Portland, 141 m. N.N.E. Boston, 570 W. Bounded N. by Androscoggin river, which here has falls, affording extensive water-power. The river is navigable for gondolas to Bath. Incorporated in 1739; first settled in 1637. A bridge connects it with Topsham. It contains thirty stores, one fulling-mill, one woolen-factory, one cotton-factory, with 4000 spindles; one flouring-mill, five grist-mills, thirteen saw-mills, two tanneries, one pottery, one printing-office, one periodical, two academies, 86 students, thirty-two schools, 1065 scholars. Pop. 4528.

It is the seat of Bowdoin college, which was founded in 1794, and organized in 1809; has a president and seven professors or other instructors, 749 alumni, 110 of whom have been ministers of the Gospel; 190 students, and \$1,950 vols. in its libraries. The commencement is on the first Wednesday in September. Attached to the institution is Maine Medical School, founded in 1830, which has four professors, 80 students, and 464 graduates. The lectures commence on the 15th of February, annually. The philosophical apparatus and cabinets of mineralogy and natural history, belonging to the college, are very complete. It is the principal literary institution in the state, and among the most respectable in New England. It received a donation of \$10,000 from James Bowdoin, Esq., its principal benefactor, from whom it was named. The state has granted it five townships of land, and \$3000 annually. Its principal edifices, which is spacious and commodious, has been several times burned, but has been rebuilt.

BRUNSWICK, p. t., Essex co., Vt., 86 m. N.E. Montpelier, 583 W. Bounded E. by the Connecticut river; Nulhegan river crosses its N. and Paul's stream its S. part, both flowing into the Connecticut. It has three schools, 47 scholars. Pop. 130.

BRUNSWICK, t., Rensselaer co., N. Y., 4 m. E. Troy, 10 m. N.E. Albany. Drained by the Fossenkil river and its branches. It contains four stores, one fulling-mill, one

## BRUSH CREEK.

woollen factory, one flouring-mill, one grist-mill, six saw-mills, two tanneries, fifteen schools, 500 scholars. Popul. 3651.

BRUNSWICK, p. v., port of entry, and capital of Glynn co., Geo., 233 m. S.E. Milledgeville, 748 W.; situated on the N.E. side of Turtle river, 10 m. W. of the entrance of St. Simon's sound, through which it flows into the Atlantic. It has a spacious and safe harbor, with 13 feet of water on the bar at the lowest tide. It is 8 m. above the light-house on St. Simon's island. It contains a court-house, jail, and about thirty dwellings and stores. The town was in 1494.

BRUNSWICK, p. t., Medina co., O., 35 m. S.W. Cleveland, 190 m. N.E. Columbus, 355 W. It contains four stores, four saw-mills, eight schools, 297 scholars. Pop. 1110.

BRUNSWICK (New). A territory belonging to England in N. America. See NEW BRUNSWICK.

BRUSH CREEK, t., Highland co., O. Drained by Brush creek. It contains eight schools, 400 scholars. Pop. 1502.

BRUSH CREEK, t., Jefferson co., O. Pop. 757.

BRUSH CREEK, t., Muskingum co., O. It contains one church, four flouring-mills, four saw-mills, and several salt-factories. Pop. 1000.

BRUSH CREEK, t., Scioto co., O. Pop. 401.

BRUSH CREEK, t., Washington co., Ark. It has one school, 9 scholars. Pop. 286.

BRUSSELS (Lat. *Brussels*, Flem. *Brussel*, Fr. *Bruxelles*), capital of the k. of Belgium, and of the prov. of Brabant, about 50 m. E. by S. from the sea, lat. 50° 58' N., long. 4° 22' E.; on the Senne, a small river, which, rising near Soignies, in Hainault, and flowing N., falls into the Scheidt, through the Rupel, about 2 m. N. W. of Mechlin. The scenery of the adjacent country is beautifully diversified by sloping heights, and green valleys refreshed by the waters of the Senne. A large portion of the city being built on the acclivity of a hill, it presents, when viewed from the W., a picturesque amphitheatre of houses; and the great inequality of the elevation of its site has often induced a comparison with Naples and Genoa. The figure described by the outline of the surrounding wall resembles that of a pear, the smallest part pointing S.S.W. The greatest extent of the city, from N.N.E. to S.S.W., is about 3 m.; and the extreme width, from N.W. to S.E., about 2½ m. Brussels a century ago, was completely surrounded by strongly fortified ramparts, with salient angles, and ditches or moats, supplied from the river Senne. These fortifications are now almost wholly removed, and their site is formed into spacious boulevards, planted with rows of stately linden-trees, that encircle two thirds of the city, on the N., the E., and the S. The city wall is overlooked by the boulevards, which command extensive views of the country, and afford an agreeable promenade, extending about 5 m. from the Porte au Rivage on the N., to the Porte de Hal on the S. There are nine of these *portes* or mural gates, several of which are fine old architectural arches of great strength. They communicate with, and bear the names of, the high roads that traverse the kingdom and centre in the capital.

The Senne enters the city on the N.W. side by two branches, and forms, within the walls, four islands, of which the principal are named St. Gery and Bon Secours. This rivulet is only about 30 feet in width, and from 4 to 6 feet in depth, and is not navigable in any part of its course. Brussels, however, possesses the advantage of water communication with Charleroy on the S., and with Mechlin, Antwerp, and the ocean, on the N., by means of two capacious and well appointed canals. The width of the Antwerp canal is 45 feet. It was opened in 1551, and cost nearly 2,000,000 of florins (£160,000). Five locks overcome a descent of 50 feet, in a course of 17 miles, between Brussels and the town of Boom, where the canal joins the Rupel, a large affluent of the Scheidt. The head of this canal, in the N.W. quarter of the city, is furnished with several commodious basins and quays, whence passengers and goods are conveyed in large and handsome barges to the junction of the Rupel. The Charleroy canal cost 4,350,305 florins, and was first opened in 1830. It is carried along the W. boundary of the city in the ancient ditches of the fortifications to the Porte au Rivage, where it communicates with the canal to Antwerp. Fifty-five locks obviate a fall of 432 feet, in its course of 45 miles to Brussels. It passes through a tunnel of 1175 yards, and is crossed by fifty-five aqueducts and thirty-six bridges. The soil of the elevated ground, occupied by the E. and E. portions of the city, is sand, interspersed with shells, marine substance, calcareous stones, and layers of ferruginous earth; and that of the lower N. and W. section consists of a sandy marsh, mixed with marine substance, and covered with a deep bed of peat or turf. The highest part, on the S. extremity, between the *portes* of Hal and Namur, is about 320 feet above the level of the sea. The upper town contains the royal court and government offices, the park, the finest squares, streets, and hotels, and the mansions of the higher classes. The central and lower town comprises chiefly the trading and operative por-

## BRUSSELS.

tion of the population, and has generally a more crowded and mean appearance, though it still abounds in fine old ornamented buildings, once occupied by the ancient nobles of Brabant. The *Rivage*, at the N. extremity, is inhabited by rich merchants, and presents a constant scene of commercial activity. The total number of houses is about 15,000, of which 700 are inns or hotels; and there are nearly 300 streets, many of which are wide and regular, besides lanes and blind alleys almost innumerable. All are generally paved with large flint stones, and are lighted by about 1300 lamps, both of gas and oil. The city is abundantly supplied with spring-water, by means of pipes and powerful hydraulic engines, from three subterranean caves at Etterbeek, a beautiful village in the southern vicinity. There are, besides, ten springs within the walls, thirty fountains, and about ninety pumps. Several fountains are ornamented by elegant obelisks and groups of exquisite bronze and marble sculptures. The most remarkable are, *Les Fontaines des Fleuves*, in the court of the Hôtel de Ville, formed of river gods in white marble, and dolphins in bronze; the *Fontaine de Minerve*, in the Place du Grand Sablon, consisting of a beautiful group of figures in white marble, erected in 1741, by the Earl of Aylesbury, in attestation of his respect for the inhabitants, after residing among them forty years; and the *Mannikin Pis*, near the Hôtel de Ville, in the centre of the city. This is an exquisite bronze figure, about 2 feet in height, of an urchin boy, who discharges a stream of water in a natural manner. Great value and historical interest are attached to this antique little figure by the old citizens of Brussels, who regard it with peculiar solicitude as a kind of municipal palladium. The ancient part of Brussels is ornamented by many fine specimens of the florid style of Gothic architecture of the sixteenth century; and the modern part exhibits numerous excellent buildings, erected about fifty years ago; but the newly-built dwelling-houses have commonly the uncouth form and fashion of granaries or manufactories, and are often constructed with very inferior bricks, and with timbers too slender for the lofty tiled roofs. The uniformity of appearance, too, is destroyed by the custom of painting the fronts with strongly contrasted colours—as yellow, green, white, &c.—which often produces a glaring effect, more suitable for isolated inns or fancy cottages than the streets of a metropolitan city. In the Rue de la Madeleine and Rue Montagne de la Cour, are many elegant shops, and these are accounted the liveliest and most frequented streets in Brussels, though in appearance and business they are certainly dull, compared with Paris and London; indeed, dullness in general forms a common subject of querulous remark among the French and English residents in the capital of Belgium. Four uniformly built streets surround the large palace garden called the park, namely, the Rue Royale, which will admit of comparison with some of the finest streets of the European capitals; the Rue Ducale, in which are the palace of the Prince of Orange and the grand concert-room; the Rue Bellevue, containing the king's palace; and the Rue Brabant, in the centre of which is the palace of congress, or houses of parliament. The Grande Place, or great market-place, in the centre of the city, is a noble and very interesting square, containing the gorgeous old Gothic Hôtel de Ville, the Maison du Roi, and many other rich specimens of the ancient ornamental architecture. Here, in 1568, counts Egmont and Horne were beheaded by the Spanish viceroy the Duke of Alva, whose persecutions brought ruin and death into almost every house in Brussels. The Place Royale, near the king's palace, is perhaps the finest square in Brussels. The houses around it are remarkably handsome and regular. The Place du Grand Sablon is the largest square, and is used as a market-place. The Place de la Monnaie is also extensive, and approached by several spacious streets: it contains the theatre, the mint, the exchange, and some of the finest caffès in the city. The Place de St. Michel, better known since the revolution as the Place des Martyrs, is planted with rows of linden-trees, and surrounded by uniform and elegant buildings ornamented with Doric columns. This square was chosen for the sepulture of those who fell in opposing the royal forces during the revolutionary struggle in September, 1830. There are fourteen other squares of less distinction, but which at once serve the purposes of health and ornament. The park is an open oblong space of about fourteen acres, on the high eastern side of the city. Its surface is covered with smooth verdant turf and is formally laid out in broad straight walks and winding paths, which are overshadowed and sheltered by lofty beech and chestnut trees and plantations of acacias. There are several fountains, and many excellent marble statues, busts, vases; and groups of persons and personifications from classical mythology and history are distributed about the grounds. The walks command a great variety of interesting scenery, including the old Gothic edifices of the lower town and the surrounding country, which is very picturesque. In the N. E. corner of the park is "Vauxhall," comprising a small

## BRUSSELS.

pretty theatre for vaudevilles, and a ball-room. Along the banks of the Antwerp canal, issuing from the N. point of the city, is the beautiful promenade called the *Allée Verte*, that is the Green Alley. It is formed of a broad carriage-road, and on each side a footway, divided by four rows of umbrageous elms, extending about a mile and a half. Here the royal family, and multitudes of all classes, are seen every fine evening enjoying the freshness of the country air, and the pleasing views of numerous villas and rural scenery. In fact, the environs of Brussels are in general so interesting, that they form the subject of a large portion of every full description of the city. Besides the excursion, *de courses*, to the battle-field of Waterloo, and its surrounding localities, still intensely exciting to the curious, about thirty-five villages in the more immediate vicinity of Brussels are enumerated in the guide-books as well worth the attention of philosophic and inquisitive strangers. Among their objects of interest are—the splendid royal palaces of Laeeken and Tervuren, and the great workhouse and penitentiary establishments of Vilvorde and La Cambre. The most remarkable public buildings in Brussels require some notice. The royal palace, at the S. extremity of the park, presents a façade of 130 yards in length, with a central portico and arcades. The style of architecture is plain, and the general aspect of the structure not at all remarkable. The interior, too, offers little worthy of inspection beyond the usual suites of royal saloons and apartments, which are very superbly furnished, and covered with rich velvet, satin, and gilt. The paintings are neither numerous nor very valuable, with the exception of Vanduyke's *Chapeau de Pelours*. The Palais du Congrès, at the N. end of the park is a magnificent building, ornamented with fluted Doric columns and appropriate sculptures. Marble stairs on each side of a spacious hall ascend to the two chambers of parliament, which are elegantly fitted up for the reception of the members. The public are admitted into both chambers during the debates, females as well as males; and for this accommodation, the Chamber of Deputies contains a capacious gallery. On the E. side of the park is a palace which, before the revolution of 1830, was occupied by the hereditary Prince of Orange. It was built in 1800. The exterior is nobly simple, presenting a façade of 230 feet in length, with a lofty central dome and cupola. The interior is not surpassed by any European palace in sumptuous furniture and elegant decorations. The paintings are not numerous, but of the highest order, comprising some of the most choice productions of the Flemish and Italian schools. The Hôtel de Ville, in the Grande Place, or great central market-place, is one of the largest and most remarkable of those civic palaces, in the florid Gothic style, that are to be seen in perfection only in the Netherlands. It was erected in 1400. The architecture is Lombardo-Gothic, with a great profusion of quaint sculptures, pinnated turrets, and other fanciful and intricate ornaments. In the front are forty windows, and in the lofty sloping roof eighty more. At a point remarkably distant from the centre of the front, an elaborately ornamented pyramidal tower, open throughout to the summit, rises to the height of 364 feet, and commands a fine view of the surrounding country, including the battle-field of Waterloo. It is surmounted by a colossal copper-gilt statue, 17 feet high, of St. Michael crushing a dragon, which turns about to serve for a weather-cock. The interior of the building is entered by a spacious flight of steps, and the lofty halls and saloons exhibit many curious old paintings, gilded carvings, and specimens of fine tapestry. Opposite the town-hall is a venerable Gothic edifice, built about A.D. 1000, called the Brood Huys (bread house) or Maison de Roi. The Palais de Justice is a large building containing the courts of law: its front displays a noble portico, imitated from that of Agrippa's Temple at Rome. The Palais du Conseil d'Etat, the Hôtel des Monnaies, and several other state offices, are structures more or less elegant: also the theatre, which was opened in 1819, and cost £56,000. Its interior displays very commodious arrangements and tasteful decorations. The stage in front is of greater width than that of the Grand Opera at Paris. The price of admission to the boxes is 4s. 4d., and to the pit 1s. 4d. A smaller theatre in the park has been already noticed, and there is also a private one for amateurs. Near the Place Royale is the large and handsome old Palace or Const, founded in 1300, and rebuilt in 1746. When this was the residence of the Spanish and Austrian governors of the Netherlands, it was one of the richest palaces in Europe. It now contains the public libraries, lecture-rooms, museums, and galleries of paintings and sculptures. The Palace of Industry is a large adjoining building for the exhibition of the manufactures of the kingdom, mechanical models, and new inventions.

Brussels contain several grand and venerable cathedral churches, erected in the middle ages. Four only, of sixteen, are considered primary, and belong each to one of the four *arrondissements* into which the city is divided: the others, although little inferior in appearance, are secondary in rank.

The cathedral of St. Gudule, the largest and finest in Brussels, was founded 1010; and here the first chapter of the chivalric order of the Golden Fleece was held by Philip le Bon, in 1435. There is an aspect of imposing grandeur in its spacious front, surmounted by two large square towers, from the top of which Antwerp is distinctly visible at a distance of 27 miles, and one contains a bell that weighs 14,500 lbs. Against the pillars which divide the lateral aisles from the nave, and support the lofty roof, are placed finely-sculptured statues of the twelve apostles, 10 feet in height, at an elevation of 25 feet from the floor. The pulpit is formed of wonderfully carved groups of figures, the size of life, representing the expulsion of Adam and Eve from paradise. The glass of the principal window displays a magnificent representation of the last judgment, by the celebrated Flemish painter, Francis Floris, and several other antique painted windows of this noble cathedral are exceedingly brilliant and beautiful. Its altars and sumptuous mausoleums of sculptured marble, and numerous fine paintings, are objects worthy of especial notice. The organ, too, is remarkable for the depth and power of its intonations, and perfect union; but that which most attracts the curious spectator is one of the side chapels—a large and splendidly ornamented oratory—called *St. Sacrament des Miracles*, from its being the sanctuary in which are preserved three miraculous consecrated wafers, said to have been stolen by Jews in the 14th century and miraculously recovered. These wafers are still annually paraded with great pomp through the principal streets!

The cathedral of *Notre Dame de la Chapelle* is a beautiful Gothic structure, founded in 1134, and but little inferior in dimensions to that of St. Gudule. Its paintings and sepulchral monuments are even more numerous. At the summit of its lofty spire is stationed a watchman, who sounds a trumpet every quarter of an hour during the night, in proof of his wakeful vigilance; and on seeing a fire, he blows a shrill and incessant blast, to hasten the attendance of the engines. The interior ornaments of this fine cathedral consist of numerous paintings, statues, and monumental sculptures, by eminent artists; and a very curious carved pulpit, representing Elijah fed by an angel under a canopy of palms. The church of *Notre Dame des Victoires* is a profusely ornamented Gothic structure of the 13th century, displaying the most exact symmetry in its plan and proportions. It is ornamented by marble statues and sculptured tombs; its windows are brilliantly painted; and the tones of its organ are exceedingly grand and harmonious. *Notre Dame de bon Secours*, built in the 17th century, is the best attended church in Brussels. Its handsome front façade is surmounted by a lofty dome, and the ornaments of the interior are exhibited to great advantage by the frequent performance of high mass with peculiar sacerdotal pageantry. St. Catherine and St. Nicholas are very irregular and uncouth Gothic edifices of the 12th century, adorned with numerous fine old paintings. The churches of Caudenberg St. Augustine, and Notre Dame de Finisterre, are handsome specimens of the Grecian style, and were erected in the 17th century. A convent of Béguin nuns, called *Le Grand Béguinage*, built in 1657, at an expense of 333,000 florins, has a beautiful church, which contains many fine paintings. There were here formerly a thousand nuns: at present the number is greatly reduced. There are two other nunneries, the convent of Berlaumont, and that of *Les Sœurs Noires*—the Black Sisters. The Church of England service is performed in several Protestant chapels, for the accommodation of the numerous English residents; and the Jews, of whom there are 10,000 in the whole kingdom, have their general consistory in Brussels, and a handsome synagogue; but the great mass of the population are zealously attached to the rites and doctrines of the Church of Rome, while their Lutheran king, Leopold, attends the Protestant service in his private chapel. Previous to the suppression of religious houses in Belgium by the French republican government, at the close of the last century, Brussels contained thirty-one monasteries, two convents of Béguins, two of English nuns, and eighteen oratories; and during the middle ages, the extent and magnificence of the monastic establishments in this locality were truly amazing.

The two principal medical hospitals of St. Peter and St. John are admirably regulated. There is also a well-managed lying-in hospital, and a military hospital attached to the barracks. Nothing can exceed the care and cleanliness observed in every part of the hospital of St. Peter; indeed to this remarkable attention is attributed the fact that, in the calamitous year of cholera, not one case of that dreadful malady occurred in the wards of this establishment, among a miscellaneous assemblage of 600 patients. The hospital of St. John contains between 200 and 300 beds, and includes a community of the Sisters of Charity. The earnest piety and genuine benevolence which induce these and other exemplary females of the Catholic religious orders to go about doing good, by visiting the sick poor, especially in the hos-

## BRUSSELS.

pâtes, often excite the admiration of strangers who justly appreciate virtue and goodness, and convey a tacit reproach to the pious Protestant ladies of England. There is an excellent society for gratuitous vaccination, which is efficiently supported, and is very beneficial to the poor.

The civil and military prison of Brussels is an appropriate modern building, having nine or ten open courts. It is situated very healthily in the high S.W. quarter of the city, and is under excellent management. The part for civil offences will contain 500 prisoners. There are three public cemeteries, outside the boulevards, adjacent to the gates of the Hal, Louvain, and Flanders. The English residents in Brussels have also two burial-grounds on the roads to Uccle and Louvain. Several commodious bathing establishments are formed upon the river Seine, both within and beyond the city walls, and one for medical steam-baths. In the *Place Royale*, near the king's palace, are the public hotels *de Belle Vue, de Flandres, and de l'Europe*, which, in the extent and excellence of their accommodations, are not much surpassed by any on the Continent. There are also several large and elegant cafés which might admit of comparison with some of the finest in Paris. The markets of Brussels amount to more than twenty, and are all well and abundantly supplied. The principal corn-market, in the lower N.W. quarter, forms one of the finest squares in the city. It is surrounded by handsome houses, and planted with double rows of lofty trees. Adjoining the fish-market, which is one of the best in the kingdom, is the market for poultry, in which are exhibited baskets full of the hinder legs, or *grigots*, of large frogs, neatly twisted and skewered up ready for dressing. Their appearance is bright and plump, and by no means so disagreeable as to increase the unfavourable prejudice of an English palate. Brussels is amply supplied with culinary vegetables from market-gardens. Butcher's meat is good, and about 6d. a pound. Game is rather plentiful, and poultry abundant. Fresh-water fish are cheap, sea fish rather dear. Bread is excellent in quality, and two thirds cheaper than in London. Groceries in general are 10 per cent. lower, and tea 50 per cent. lower than in England. Ale and beer of a good description are the common beverage. Wines are moderate in price, spirits particularly cheap. Excellent coal is obtained, by the Charleroy Canal, at one third the cost in London; and wood for fuel is cheaply procured from the forest of Soignes. The following tabular abstract of the records for 1838, which are made in imposing municipal taxes upon the provisions brought into the city, will serve to show the amount of different articles consumed in 1838.

|              |                |            |                   |

The pop. of Brussels, in 1894, was 84,004; in 1830-31, 66,979; and in 1837, 104,365; but these numbers are exclusive of the pop. of the suburbs, amounting to about 30,000.

From the city registers, which are very carefully compiled, we find that the average number of the inhabitants of Brussels, in each of the fourteen years, from 1824 to Jan. 1, 1838, was 93,092; the average annual births, 4037; deaths, 3709; marriages, 918, and divorces, 3.

The climate of Brussels is temperate, moist, and extremely variable. The inhabitants of the upper town enjoy a warmer and dryer atmosphere, and a greater exemption from diseases, than those of the lower town, from which the epidemics that occur most commonly arise. In general the city is healthy, and rarely visited by malignant or pestilential fevers. The air is genial and mild, and the sky often serenely blue. Refreshing breezes blow from the sea, but fogs not unfrequently descend in the morning and evening. The temperature of Brussels, compared with that of Paris, is colder in winter, and less warm in summer; compared with London, it is also colder in winter, but warmer in summer. The dry nature of the soil in the higher part reflects the sun's rays in summer, so as to render the heat extremely oppressive. In general the weather is more damp and variable than in Paris, and less so than in London.

Among numerous benevolent institutions, are several extensive and magnificently supported almshouses, or asylums for the aged, infirm, and destitute, who have never resorted

to public begging. The buildings of these establishments are extremely neat and commodious, and the management is such as to produce the most exemplary order and propriety. Each has from 150 to 300 inmates, and the annual expense of one (near the cathedral of St. Gudule) is defrayed by voluntary contributions, amounting to 25,000 francs, collected from the public houses of the city; to the proprietors of which 5 fr. are awarded for every 300 fr. contributed by their customers. There is a foundling hospital, which had, in 1833, 1920 inmates, supported at an expense of 150,000 fr. a year, of which 27,300 fr. are furnished by the government. The Orphan Asylum contains about 150, who are taught industrial arts, and provided for until the age of twenty. In 1833, there were ten almshouses, or asylums for the indigent, which supported 3870 persons, at an expense of 771,684 fr., and, according to the official reports of the superintendents of the poor, the total number of paupers in Brussels, to whom relief was administered in the same year, was 31,496, belonging to about 500 families. The Board of Beneficence, in relieving 31,496 individuals, expended 158,970 fr., which, with the 771,684 fr. supplied by the asylums, make 930,654 fr., or £38,778, devoted to the poor in one year, besides a great extent of private charity. A great and important institution, called the *Société Philantropique*, has for its object the prevention and extirpation of mendicancy: it is supported by subscriptions. In 1833, the number of pledges received by the *Mont de Piété*, was 240,940, and the sum lent thereon was 1,808,543 fr.; the number of pledges redeemed was 179,933, and the amount refunded was 1,234,698 fr. In March, 1838, the Central Savings' Bank, established in the capital for the whole kingdom, possessed a fund of deposits consisting of 38,971,634 fr., or £1,615,485. Very ample provision is made for the instruction of the children of the poor. There are also evening schools for adult mechanics and labourers, and an excellent establishment for instructing the deaf and dumb. In 1832, the schools for poor children, including a numerous one for infants, contained 3976 scholars, the expense of whose instruction, during that year, was 25,596 fr. A model school receives from the government 1700 fr. per ann. for its head master, and for each of two under masters 494 fr. Subsidies to the amount of about 1900 fr. are also awarded to three other schools, one of which is Jewish, and held at the synagogue. The primary schools connected with the model school were attended in 1833 by 1780 children. At the same period the total number of scholars at the different schools in Brussels was 8470. A large school on the Lancasterian system is established in a spacious building erected for the purpose, and supported by a society of benevolent persons; and Sunday schools are numerous attended. For the instruction of youth of both sexes in all departments of scholastic knowledge, and every elegant accomplishment, there are many excellent academical institutions, public and private. The modern collegiate establishment, called the Free University of Brussels, offers every desirable facility for prosecuting a complete course of study in science, language, and literature. Besides a magnificent library, it possesses a chemical laboratory; museums of natural history, mineralogy, geology, comparative anatomy; an anatomical theatre, and chambers for clinical practice. In 1838, the number of students was 810, of whom 30 were devoted to the physical sciences, 59 to law, 58 to medicine, and 39 to polite literature. The Royal Athenæum is a highly useful and prosperous institution, established on liberal and rational principles, and kept in full operation by fifteen professors and masters. The attention formerly devoted to the ancient languages, so as to engross exclusively the whole period of youth, is properly divided between ancient literature and the more important modern experimental sciences and industrial arts. In the former department there are usually from 150 to 300 pupils, and in the latter from 950 to 300. The hall for lecturing will hold 1900 persons. There is a fine veterinary and agricultural college, with 150 students, a military school, and a school for instructing boys scientifically in the principles of commerce, and the operations of the mechanical arts. Several societies and establishments for the promotion of science and literature have a high and well-merited reputation. The Royal Academy of Brussels was founded in 1769. The Geographical Establishment, in the Faubourg de Flandres, was founded in 1830, by M. Vander Maelen, an affable and patriotic gentleman. On the boulevards, at the E. angle of the city wall, is the Observatory, a neat and appropriate edifice, with two towers commanding an extensive horizon. Its site is 190 ft. above the level of the North sea. This establishment is furnished with an apparatus of very superior philosophical instruments, and serves not only for the prosecution of astronomical and meteorological observations, but for the promotion of all the kindred mathematical and experimental sciences, especially that of horology. Near the Observatory, on the outer side of the city wall, is the Botanic Garden, which is generally allowed to be one of the finest in Europe. An institute of fine arts awards prizes to

## BRUSSELS.

distinguished students of painting, engraving, sculpture, and architecture, and affords them the means of professionally visiting Rome, and the other celebrated schools and repositories of art. Prizes are also distributed by an academy of painting, sculpture, and architecture, which is numerously attended by students, whose productions form an annual exhibition. There is also a society of friends of the fine arts. A royal conservatory of music is attended by 400 pupils, many of whom become eminent performers; and infant and aged musicians are assisted by an institution called the Society of Apollo.

For the promotion of mercantile and mechanical knowledge, there is a commercial society, and one for the encouragement of arts and industry. Two medical societies comprise very numerous bodies of learned physicians, and other distinguished men of science. In the old court, or Palace of the Fine Arts, is a museum of natural history, that surpasses in extent and value every other in the kingdom. The departments of zoology, ornithology, entomology, and mineralogy, are especially replete with rare and admirable specimens, including animals from the Dutch East Indian colonies, Russian minerals, and all the volcanic products of Mount Vesuvius. Another portion of the edifice contains the great public library, of nearly 140,000 vols., and 15,000 historical MSS. and minerals. The latter were collected at a very early period, by the dukes of Burgundy, and are of extreme value; many being richly adorned with miniature paintings of exquisite beauty, by the early Flemish artists, and the greater part are splendidly bound in crimson morocco. Above 9000 vols. of the books were printed in the 15th century. The third division of the palace is occupied by a collection of about 500 paintings, by the great Flemish masters from Van Eyck to Rubens, and his numerous pupils. The library, museums, and gallery, are constantly open to the public. This spacious building serves also for public lectures, which are delivered gratuitously every day, by the most eminent professors, on geology, botany, chemistry, architecture, doctrine of chances, philosophy of history, history of the sciences, history of Belgium, general literature, hygiene, individual and public, and industrial mechanics. Besides the great literary treasures in the old palace, there is a national library possessing 60,000 vols., and 1100 MSS.; and several of the public institutions have large and choice collections of scientific and literary works. Brussels indeed affords peculiar advantages to those who require the use of modern publications for study or amusement; not only from its convenient central position between Germany, France, and England, the three great foci of European literature; but that, owing to a very active, yet, perhaps, not strictly equitable, spirit of enterprise among the publishers of the Belgic capital, all the best new French works, in every department of science and literature, are reprinted in Brussels, with equal accuracy and neatness, nearly as soon as they appear in Paris, and commonly at one third of the original cost. Paris and the Parisians are the models which the people of Brussels are ambitious to imitate. They advert accordingly with much complacency to those points of resemblance which their city exhibits—its circumambient boulevards forming a fashionable promenade beneath umbrageous trees; its palace garden in imitation of those of the Tuilleries; its cafe, that emulates the splendid saloons of the Palais Royal; its grand theatre for the operatic drama, and smaller one for vaudevilles. These, and other copies of the characteristics of the French capital, with a general adoption of the French language, and, among the wealthier classes, an anxious observance of French manners and fashions, have obtained for Brussels the appellation of "Paris in miniature." The common language of the working classes in the lower and commercial parts of the city is Flemish, and a smaller portion speak the Walloon, a language derived from the Gallic tribes antecedent to the Franks. It may, in general, be observed, that the inhabitants of Brussels are possessed of a spirit of enlightened enterprise, and exhibit a zealous disposition to adopt all rational improvements in social institutions, in the physical sciences, and industrial arts; while, in ecclesiastical matters, they retain, with peculiar veneration, many notions and ceremonious customs that belong to remote ages of ignorant superstition. Public charities are supported with great liberality. Modern literature and the fine arts, especially music and painting, are cultivated with ardent emulation. The drama is powerfully patronized, and the performances at the principal theatre are got up in a sumptuous and masterly style. A classification of the inhab., published in 1833, when the whole amounted to 93,574, shows the number of wholesale merchants to be 350; dealers in wine and brandy, 120; brewers of beer, 55; keepers of estaminets, or houses for drinking and smoking, 900; distillers of spirits, 40; bakers, 125; butchers, 25. At the same time there were 113 doctors of medicine, 81 surgeons, and 46 apothecaries.

The manufactures of Brussels consist principally of its celebrated lace and tulle, and of carpets, fine linen, hosiery,

printed cottons, hats, paper, soap, candles, chemical productions, painted porcelain, leather, fabrics of horse-hair, and caoutchouc, articles of iron, brass, gold, silver, bronze, and cut glass; clocks, lamps, mathematical, optical, and surgical instruments. The establishments are numerous and of the highest description for brewing beer, refining sugar and salt, cabinet-making, carriage-building, lithography, type-founding, and printing and binding books. In the year 1833, there were forty-five printing-offices, all in active operation. In addition to the commerce arising from its manufactures, and the consumption by the inhabitants, Brussels possesses an important transit trade, by means of its two canals, consisting of all kinds of grain, coals, timber, iron, stones, lime, bricks, and various other products of the soil, and of foreign countries. The number of canal boats which entered Brussels during the three months, April to June, in 1833, was 1560, of 80,737 tons. Cheap and expeditious conveyance to Antwerp is supplied by the railroad, the carriages of which proceed from Brussels every alternate hour. The establishments connected with commercial operations are—the Commission Supérieure d'Industrie et de Commerce, Tribunal de Commerce, Chambre de Commerce, Société Générale pour favoriser l'Industrie, Société du Commerce de Bruxelles, six insurance companies, the Entrepôt, Royal Exchange, Custom House, and very commodious public rooms, called the Brussels Lloyd, where merchants meet for the transaction of business and perusal of the daily papers. There are two large annual fairs for the sale of all kinds of merchandise; one of twelve days, commencing May 23; the other of fourteen days, beginning the 18th October.

The municipal authority of Brussels is vested in a burgomaster and four sheriffs. They constitute the city regency, whose sanction must be obtained to all measures affecting the rights and interests of the citizens. The supreme court of law and other national tribunals seated in the capital, are noticed in the article on Belgium, where further particulars are given respecting some of the institutions here mentioned.

Brussels is believed to have been founded in 600, and it has been walled in 1044. A code of municipal laws was formed in 1339, involving the principle of trial by jury. About 1300, sixty trades were incorporated in nine classes, to represent the citizens in all questions of taxation. Liberal notions of government continued to prevail, and the population and extent of the city were much increased. In the general persecution of the Jews during 1370-71, hundreds of that race were put to death in Brussels, and the amount of their confiscated property in the province of Brabant was nearly 13,000,000 florins. Under the Dukes of Burgundy, at the commencement of the 15th century, Brussels became a distinguished seat of learning and the arts, and was the residence of a magnificent court, which greatly promoted the progress of science, literature, commerce, and manufactures, especially the weaving of flannels and woollens, and beautiful tapestry. In 1469, during the dominion of the House of Austria, the city was decimated by a dreadful plague, which destroyed 30,000 inhab., and produced a famine, whose effects lasted four years. Brussels was highly prosperous under the Emperor Charles V., who often dwelt in its palace, and made it the scene of his final abdication in 1555. The intolerant and oppressive proceedings of Philip II. kindled that rebellion in the Low Countries which ended in the establishment of the independence of the United Provinces. In 1568, the martyrs of freedom, Counts Egmont and Horns, were beheaded in the Grande Place. Alva's violent exaction of exorbitant taxes at length excited a general revolt of the citizens, and after many changes and party contentions, and the loss, in 1578, of 37,000 inhab. by the plague, the Spanish governors, in 1598, gave up the place to the Austrian dynasty, under which the arts and sciences again revived and prospered.

Brussels, in 1695, was unsuccessfully besieged and bombarded by the French, under Marshal Villeroi, when 14 churches and convents were destroyed, with 4000 houses. In 1708 the keys of the city were delivered to the Duke of Marlborough, and in 1746 it was again attacked by the French, under Marshal Saxe, to whom it capitulated after a siege of three weeks. In 1794, after the storm of the French revolution had burst upon it, and Belgium was annexed to France, it became the chief town of the department of the Dyle. In 1803, Napoleon entered the city with great pomp, at the head of 10,000 troops, with a body-guard of the citizens in splendid uniform. Twelve years afterwards, on his return from Elba, Brussels was the headquarters of the British army, and sent forth the troops who, on the plains of Waterloo, put an end to the ambitious career of that extraordinary individual. From that period Brussels, conjointly with the Hague, was the capital of the kingdom of the Netherlands until the Belgic revolution of Sept. 1730, which made it the capital of Belgium. (Documents obligingly communicated by M. Fender Maclen of Brussels; *Annuaire of Brussels*; *Rumborg's Brussels*

## BRUTON.

and its Environs; Guide to Brussels and Belgium, Paris; Grattan's Hist. of the Netherlands; Diction des Pays Bas; Traveller's Guide through Belgium, Hague; Addison's Handbook for Residents in Belgium, Brussels, &c.)

BRUTON, a town of England, co. Somerset, hund. and par. Bruton, on the Brue, 34 m. S. by E. Bristol. Pop. 2031. It is well built, consisting principally of three streets, having a common centre, with a good market-house, where the sessions for the E. division of the co. are sometimes held. Here is a well-endowed hospital, founded by a native of the town, for the support of poor men and women, and for the support and education of a certain number of children. In 1838 this town had four silk-mills, employing in all 355 hands. Market, Saturday; fairs for cattle 20th of April and 19th of September.

BRUTUS, t. Ingham co., Mich. Pop. 97.

BRUTUS, t. Cayuga co., N. Y., 7 m. N. Auburn, 153 m. W. by N. Albany. Watered by Branch and Cold Spring creeks, which flow into Seneca river. It contains the village of Weedsport on the Erie canal, which passes through it. It has thirteen stores, two fulling-mills, two grist-mills, nine saw-mills, fifteen schools, 751 scholars. Pop. 3044.

BRYAN, county, Ga. Situated in the S. E. part of the state, and contains 480 sq. m. Ogeechee river bounds it on the N. E., and St. Catharine's sound, a branch of the Atlantic, on the S. E. Drained by Cananouches r., and its branches. The soil is marshy. It contains four academies, 65 students. Pop. whites 997, slaves 2878, free coloured 7; total 3182. No other returns were received. Capital, Bryan C. H.

BUCHANAN, county, Mo. Situated in the N. W. part of the state, and contains 800 sq. m. Bounded by Missouri river on the W. Drained by Little Platte river. It contained in 1840, 8476 neat cattle, 6071 sheep, 23,778 swine; and produced 1984 bushels of wheat, 194,961 of Indian corn, 12,060 of potatoes, 3300 pounds of tobacco. It had fourteen stores, three grist-mills, two saw-mills, seventeen schools, 437 scholars. Pop.: whites, 6004; slaves, 327; free coloured, 6; total, 6337. Capital, Sparta.

BUCHANAN, v., Botetourt co., Va. Situated on the S. side of James river, opposite to Pattonsburg, with which it is connected by a fine bridge.

BUCHANAN, t., Berrien co., Mich. Watered, in its W. part, by St. Joseph's river. It contains one grist-mill, one saw-mill, three schools, 57 scholars. Pop. 364.

BUCHOREST or BUKOREST, a city of Wallachia, of which it is the cap., being the residence of the hospodar, and of a Greek archbishop, on the Dambortiza, over which there is here a bridge; 37 m. (direct dist.) from its confluence with the Danube, and 280 m. W. N. W. Constantinople; lat. 44° 38' 45" N.; long. 46° 47' E. Pop. variously estimated at from 60,000 to 80,000. It is situated in a vast swampy plain, is divided into above 60 quarters, and though of comparatively recent origin, it is not built according to any regular plan, and presents a curious display of barbarism and civilization in its mud cabins, brick houses covered with shingles, and specious hotels; and in the vulgar finery of the boyars, or nobles, and the rags and filth of the other classes. It also presents a curious mixture of European and Oriental habits and costume; half the inhab. wearing hats and coats, and half calpacs and pelisses. Some of the streets are paved; but they are mostly boarded over, or rather covered with trunks of trees, or other large logs laid transversely, instead of a pavement; and from the filthiness of the ground, and the slovenliness of the inhabit., all the filth of the streets collects under this rude floor. The streets are thence called *pent*, or bridges, and, according to Dr. Walsh, they "are really bridges floating on rivers of filth. In winter this is continually splashing up through the interstices, and in summer it rises in clouds of black dust; and at all seasons is attended with a foul unwholesome odour, generating pestilential fevers and the plague." The palace of the hospodar, or prince, an immense old pile, and the metropolitan church, are in the largest square in the centre of the town. Near to them is the fire tower, 60 feet in height, whence a full view of the city is obtained. It has a vast number of churches, each with from three to six spires, or towers! It has also about 20 monasteries and convents, and 30 khans, or Oriental inns, with several hospitals, one of which, for the military, managed by German physicians, is said to be very well conducted: another hospital, founded in 1838, by a bequest left by Prince Brankovano, is also stated to be worthy of notice. There is a wooden theatre, where French plays and Italian operas are sometimes performed. The other principal buildings are a large bazar, and the residences of the consuls or ambassadors of the different European powers. Since the final emancipation of the prov., in 1824, from the rapacious and brutal despotism of the Turks, improvements of all kinds have begun to be set on foot, and the most praiseworthy efforts have been made to supply all classes, especially in the capital, with the means of educa-

## BUCKINGHAM.

don. In this view the college of St. Sauvain has been organized, which furnishes instruction to 500 pupils. The French language has been adopted as the basis of instruction, and the institution is under the direction of a gentleman who resided long in Paris. In addition to this four other schools have been opened in the city, where instruction is afforded gratuitously to all who choose to accept it. There is also a lyceum for the Greeks; and a public library, a society of belles lettres, and an agricultural society, have been established.

Formerly the boyars used to ride on horseback; but about 40 years ago they adopted the practice of riding in carriages, and now would hardly cross to the opposite side of the street without using one of them. When Dr. Clarke was here, the number of carriages was estimated at 4000, and, at present, it is probably not materially different. But Bucharest is principally distinguished by profligacy of manners. Gambling-houses are most abundant; and prostitutes are more numerous in it than in any other European city of nearly the same size: a tax upon them has, in fact, been suggested as the most prolific source of revenue, but in this respect, as in most others, some improvements have taken place.

The trade of the town is very considerable. The exports consist of wool, butter, wheat, hides, yellow berries, tallow, honey, wax, &c., sent by the Danube, or by Varna, to Odessa, Constantinople, &c.: they also export immense herds of horned cattle, hogs, &c. to Germany, whence they import almost every thing they have, from the cheapest necessities up to the most expensive luxuries. There are considerable numbers of German artisans, particularly of watchmakers and jewellers, in the town.

The old cap. of Wallachia was Tergovist; but in 1608 the seat of government was transferred to the present city, then only a miserable village, belonging to a boyar, called Buchor, from whom it has taken its name. (See WALLACHIA; and Walsh's *Journey from Constantinople to England*, cap. 11; Macmillan's *Journey from Moscow to Constantinople*, p. 107-190; Clarke's *Travels*, vol. 264, &c.; *Revue des Deux Mondes* for May, 1836, &c.)

BUCK, t., Luzerne co., Pa. It contains eight saw-mills, one school, 45 scholars. Pop. 307.

BUCK CREEK, t., Hancock co., Ia. It has one grist-mill. Pop. 334.

BUCKFASTLEIGH, a par. and town of England, co. Devon, hund. Stanborough, 173 m. S. W. by W. London. Pop. in 1831, 2940; 1831, 3445; houses, 480; area, 6790 acres. It consists of one main street, on the line of the great western road from London to Plymouth; and of another branching from it on the W. side down the incline, and called the Lower Town. Generally speaking, the houses are meanly built: it is paved, but not lighted. The church is on an eminence overlooking the Dart, on the N. of the town, in the meadows beneath which there are some remains of an ancient Cistercian abbey. The inhabitants are chiefly employed in wool-combing and weaving serges, for which there are three or four manufactories in the town. There is also a copper mine in the parish, that is, or was recently, in work; and limestone is quarried and burnt in considerable quantities, for manure to the surrounding district. There are fairs held, for the sale of live stock, the third Thursday in June, and second Thursday in Sept. The weekly market has been long discontinued. The annual value of property in 1815 was £3802. There are the remains of an ancient encampment in the parish.

BUCKFIELD, a t. Oxford co., Me., 32 m. W. by S. Augusta, 50 m. N. by W. Portland, 591 W. Watered by a branch of Androscoggin river. It contains eight stores, one fulling-mill, four grist-mills, four saw-mills, forty-six tanneries, one academy, 35 students, thirteen schools, 656 scholars. Pop. 1689.

BUCKINGHAM, an inland co. of England, having N. Northamptonshire, E. the cos. of Bedford, Hertford, and Middlesex, S. Berks, and W. Oxford. Shape very irregular; area 473,380 acres, of which about 440,000 are supposed to be arable, meadow, and pasture. The vale of Aylesbury, one of the richest tracts in the empire, occupies the middle of the co., and has, on either side, ranges of hills. It is about equally divided between tillage and pasture. The grass lands are partly used for the dairy, and partly for fattening. Agriculture but indifferent; there is a great waste of horse power, and a proper rotation is not always observed. Sheep are an important stock, and the average weight of their fleece is supposed to have been increased, during the present century, from 3 to 5 lbs.; many hogs are also kept; and large quantities of ducks are raised at Aylesbury and other places. There are some large estates. Farms of a medium size average about 180 acres. Leases pretty common; but they are not granted for a sufficiently long term, and are defective in not laying any restrictions on the tenant as to cropping. Average rent of land in 1810, 21s. 14d. an acre. Cottages generally good, and most of

## BUCKLAND.

them have gardens. The manufacture of pillow lace has greatly declined; but a good deal of straw plat is made in the parts of the county next to Bedford. Minerals of no importance. The Thames bounds the county on the S., and the Ouse partly intersects it, and partly bounds it on the N. It contains eight hundreds and 803 parishes, and had, in 1841, 21,071 inhab. houses, and 155,960 inhab., of whom 78,316 were males, and 78,673 females; it returns 11 members to the H. of C., viz., three for the co. and two each for the boroughs of Aylesbury, Marlow, Buckingham, and Wycombe. Sum expended on the relief of the poor in 1837-38, £61,634. Annual value of real property in 1815, £268,573; profits and professions in ditto, £223,982.

BUCKINGHAM, a par., parli. bor., and town of England, co. Buckingham, hund. of same name, on the Ouse, 50 m. N.W. London. Area of par. 5330 acres. Pop. par. 1821, 3465; 1831, 3610; houses at the latter date, 740. Except on the N. side, the town is surrounded by the Ouse, over which there are three stone bridges. It consists chiefly of one long street, which is paved and lighted; houses of brick, and neatly built. The church, with a good tower and spire, was built in 1780, principally at the expense of the Temple family. It has a free grammar and green-coat school for 96 boys, and a national school for 300 boys and girls; two ancient hospitals, supporting six green-coat and ten blue-coat pensioners; and a few minor charitable benefactions. The weekly market is on Saturday, and there are ten annual fairs for cattle and sheep. A branch of the Grand Junction canal extends to the town, by which coals, &c. are supplied. No particular manufacture is carried on in the neighbourhood are paper and corn-mills, and a few lime quarries. Under the Municipal Reform Act there are four aldermen and twelve councillors, and the limits of the bor., which were previously co-extensive with the par., are restricted to that portion of it on which the town stands, and which comprises about three-fourths of the pop. The town was incorporated by a charter in list of Mary, for services rendered by its inhabit. in the Duke of Northumberland's rebellion: the corporation was a self-elected body, consisting of a bailiff and twelve chief burgesses, who, till the passing of the Reform Act, returned two mem. to the H. of C. The last-mentioned act not merely gave the suffrage to the £10 householders of the bor., but included with them the £10 householders of the parish, and those of several of the adjoining parishes. Registered electors in 1838, 341. There is a court of gen. sessions for the bor. held twice a year. It is the seat of the summer assize for the co. The jail was built in 1758, by Lord Cobham, through whose influence the act for holding one of the assizes here was procured; both having previously been held at Aylesbury. The revenue of the corporation does not exceed £63 a year. Under the Poor Law Amendment Act it is the central town of a union of 30 parishes. Buckingham is a polling town for the co. Till within a recent period, the manufacture of lace by hand furnished employment to many of the women and children. The dual title of the Temple family is derived from the town. (*Lycen's Mag. Brit. i.; Camden's Brit.; Par. Pap. and Ret.*)

BUCKINGHAM, L. Wayne co., Pa. Bounded E. by Delaware river. It has three schools, 50 scholars. Pop. 233.

BUCKINGHAM, P. T., Bucks co., Pa., 104 m. E. by N. Harrisburg, 166 W. It contains a well-endowed academy, seven stores, six grist-mills, six saw-mills, two oil-mills, seven schools, 981 scholars. Pop. 2482.

BUCKINGHAM, county, Va. Situated S. by E. of the centre of the state, and contains 816 sq. m. Bounded N.W. and N. by James river, S. by Appomattox river. It contained in 1840, 11,881 neat cattle, 14,566 sheep, 23,345 swine; and produced 168,771 bushels of wheat, 1311 of rye, 438,913 of Indian corn, 227,080 of oats, 30,539 of potatoes, 2,452,590 pounds of tobacco, 10,941 of cotton. It had thirty stores, one furnace, one woollen-factory, one cotton-factory, twenty-two flouring-mills, fifty-two grist-mills, forty-four saw-mills, seventy-eight tanneries, nine distilleries, one college, 97 students, sixteen academies, 300 students, twenty schools, 356 scholars. Pop.: whites, 7333; slaves, 10,014; free coloured, 449; total, 18,786. Capital, Maysville.

BUCKINGHAM C.H., p.o., Mayville v., capital of Buckingham co., Va., 79 m. W. Richmond, 158 W. Situated near the centre of the county.

BUCKLAND, p.t., Franklin co., Mass., 104 m. W. by N. Boston, 412 W. Bounded N. by Deerfield river, by a branch of which it is watered. Incorporated in 1779. It contains three churches, one Congregational, one Methodist, and one Baptist, one store, one fulling-mill, one grist-mill, five saw-mills, two tanneries, eight schools, 270 scholars. Pop. 1064.

BUCKLAND, p.v., Prince William co., Va., 111 m. N. Richmond, 42 W. It has an elevated situation on Broad Run, in the N.W. part of the co., and contains one church free to all denominations, two stores, two flouring-mills, one distillery, various mechanic shops, and about 200 inhab.

## BUDA.

BUCKRAM, p.v., Oyster Bay t., Queen's co., N. Y., 179 m. S. Albany, 226 W. Situated on Beaverdam creek, in the N. part of Long Island, and contains one Friends' church, two stores, two grist-mills, and about 100 inhab.

BUCKS, county, Pa. Situated in the S.E. part of the state, and contains 546 sq. m. Bounded N.E. by Delaware river. Drained by Tobickon and Neeshamony creeks. Plumbago, or black lead, is found in Southampton t. It contained in 1840, 39,208 neat cattle, 97,944 sheep, 33,516 swine; and produced 336,915 bushels of wheat, 254,903 of rye, 680,123 of Indian corn, 107,284 of buckwheat, 694,876 of oats, 237,970 of potatoes, 1890 pounds of silk cocoons. It had 133 stores, ten lumber-yards, two fulling-mills, two woollen-factories, two cotton-factories with 7000 spindles, eleven flouring-mills, ninety-four grist-mills, eighty saw-mills, fifteen oil-mills, twenty-four tanneries, twenty-two potteries, two distilleries, one brewery, four printing-offices, five weekly newspapers, one college, 30 students, eight academies, 233 students, ninety-one schools, 5696 scholars. Pop. 48,107. Capital, Doylestown.

BUCKS, L., Tuncawas co., O. It contains one store, one grist-mill, four saw-mills, one distillery, six schools, 570 scholars. Pop. 1547.

BUCKA, L., St. Joseph co., Mich. Watered by St. Joseph's river, which crosses its S.E. corner, and by Rocky river, its tributary. It has several small lakes in its W. part, and contains two fulling-mills, one flouring-mill, two saw-mills, five schools, 149 scholars. Pop. 787.

BUCKSPORT, P. T., Hancock co., Me., 36 m. N.E. by E. Augusta, 654 W. Pleasantly situated on the E. side of Penobscot river, 15 m. below Bangor, just above the head of Orphan island, on ground gradually ascending from the river. It is handsomely laid out, and neatly built. It has a good harbour, with a sufficient depth of water for vessels of the largest class; and the river seldom freezes here in the winter. The lower ferry on the Penobscot r. crosses at this place. Its shipping is considerable, and it has an extensive trade, particularly in lumber. It contains five foreign commercial houses, eighteen retail stores, one fulling-mill, three grist-mills, eight oil-mills, two tanneries, two academies, 65 students, fifteen schools, 1371 scholars. Pop. 3015.

BUCYRUS, p.t., capital of Crawford co., O., 62 m. N. Columbus, 406 W. The village is situated on the S. side of Sandusky river, here a small stream. It contains a brick court-house, a jail, a U. States land-office, several stores, and over 800 inhab. The township contains nine schools, 502 scholars. Pop. 1634.

BUDA, (*Slav.* BUDIN; *German.* OFEN),\* a royal free city of Hungary, of which, in conjunction with Pesth, it is the cap. and seat of government, on the right bank of the Danube, immediately opposite to Pesth, 716 m. W. Debresin, and 135 m. E.S.E. Vienna; lat. 47° 29' 44" N., long. 19° 5' 30" E. Pop. about 41,000. The pop. of Pesth may be estimated at 65,000; so that, if we regard them as one city, its pop., exclusive of the military, will be about 106,000. Buda is built on and round the last hill of a range which decreases in height as it approaches the Danube, and is divided into six quarters. The upper town, or citadel, occupies the centre and highest part of the city, the Schlossberg; it is enclosed by bastioned walls, but is no longer of any importance as a fortress. Although the smallest division, it contains most of the finest buildings. The royal castle, or palace, begun in 1740, is a quadrangular structure of great extent, containing 903 apartments, some of which, as the throne-room, audience-hall, and drawing-rooms, are extremely magnificent. In this building are kept the regalia of the kingdom, to which the Hungarians attach an extraordinary degree of importance. A large garden surrounds the palace; and Dr. Clarke says that the view from one of its balconies, elevated on a rock above the Danube, is one of the most striking he had ever seen. The church of the Virgin's Ascension, and the Garrison church, both Gothic edifices, the State's palace, high judicial chamber, town hall, residence of the commandant, arsenal, post-office, and many other military and civil public buildings, are situated in this quarter. To the N., and at the base of the rock on which the citadel stands, is the lower, or "Water-town," which in some parts vies with the former division in elegance. It contains the church of St. Anne, and several others. The *Landstrasse*, a well built quarter; the new town, a cheerful suburb toward the E., reaching to the bank of the Danube; the *Raisenzstadt*, or *Taken*, to the S., the most populous quarter of all; and the "Christina town," to the S.W., extending into the rich and beautiful Christina valley, are the other divisions of Buda. The chief remaining buildings deserving notice are the churches of the Capuchins, the Elizabethan nuns of St. Florian, the Greek church, the synagogue, several monasteries and convents, the palace of the prince in the *Landstrasse*, with the

\* Literally, open, from its natural situation, or hot-baths.

## BUDUKHSHAN.

palaces of Counts Sador, Taleki, Erdödy, Zichy, Peckay, Bathany, &c. A well-appointed observatory, attached to the University of Pesth, stands on the Blackberg, an adjacent hill to the S. 300 feet above the level of the river. Copious hot springs, strongly impregnated with sulphur, issue from the sides of the hills on which Buda is partly built, and especially from the Blackberg. The successive occupiers of the place, Romans, Turks, and Christians, have taken advantage of these springs, and have converted them into commodious baths. Of those constructed by the Romans, only broken fragments now remain; but the Turkish baths are in a perfect state of preservation, and the largest, appropriated to the use of the town, is a fine specimen of Saracenic architecture. The finest of the modern baths, that of the "Emperor," in the vicinity of the Landstrasse, is surrounded by gardens and pleasure-grounds. There is here also a good theatre, with other places of public amusement, including numerous fine promenades. Among the many establishments devoted to science and education in Buda, are an archigymnasium (high college), a high school in each of the different quarters of the city, a school of design, Illyrian female schools, a public library, cabinets of mineralogy, conchology, &c. Many of the nobility, the Franciscan friars, and other bodies, possess good libraries, to which liberal access is permitted: in the royal palace there is a gallery of paintings. There are various charitable institutions, including four hospitals. A bridge of boats, about 3-4 m. in length, across the Danube, connects Buda with the modern and finely-built city of Pesth, on the opposite bank of the river; but this is about to be superseded by a magnificent suspension bridge, the construction of which, if it be not already, is to be immediately commenced.

The summit of the Blackberg commands a fine view of the surrounding country, and especially of the river and the opposite city. "The bridge of boats appears alive with the crowds that are continually passing: on this side is Buda, full of architectural anomalies, yet, from that very circumstance, an object of peculiar interest: on the other, Pesth, laid out in all the regularity of street, and square, and mall, and public garden. There is not a greater contrast between the old and new towns of Edinburgh than between Buda, the ancient capital of the Magyars, and Pesth, a city of yesterday's growth. The one wanders from terrace to terrace, in dark and dingy masses, or stretches in a long line wherever, between the river and the basis of the hill, a space of level ground can receive it: the other, a series of streets which cross each other at right angles, shew in all the splendour of a plan rigidly adhered to, and materials the best calculated to preserve an appearance of uniformity, even in separate edifices." (*Gleig*.) Add to this striking contrast the vastness of the river, the passing of barges, ships, and steam-packets, in the very centre, as it were, of Europe, and the scene and the associations connected with it must be admitted to be of no common kind.

Buda is the usual residence of the viceroy, or palatine, and the general commandant of the kingdom, the seat of the vice-regal council, and the highest administrative authorities. It has much less of a bustling and commercial character than Pesth. There are a few manufactures of linens, woollens, silks, velvet, leather, gunpowder, earthenware, &c., and a cannon-foundry; but its principal trade is in its fine wines, of which about 230,000 cimers are produced annually from the vineyards around the heights in its neighbourhood.

Buda is believed by some writers to be either the *Civitas* of Ptolemy, or the *Acronotus* of the Itinerary of Antoninus. It was held by the Romans till nearly the end of the 4th century. Attila made it occasionally his residence. Arpad, the Magyar chief, made it his head quarters in 900; and it then became the cradle of the Hungarian monarchy. It was enlarged and improved by succeeding Hungarian monarchs, and made a free city by Bela IV. in 1045. It was taken by the Turks, under Solymán the Magnificent, in 1596; but was recaptured by Ferdinand I., king of Bohemia, brother of the emperor Charles V., in the following year. It was again taken by Solymán in 1599, and was held by the Turks till 1686, when it was taken by the Imperialists, after a desperate resistance. Joseph II. removed the seat of the Hungarian government thither in 1783. In 1810, the Taban quarter, and a part of the Water-town, were destroyed by fire. (*Oesterr. Nat. Encyclop.*; *Murray's Handbook for S. Europe*; *Gleig's Bohemia*, &c.; *Clark's Travels*, viii., 330, 3vo. ed.)

BUDUKHSHAN, a prov. of central Asia, now a dependency of the khan of Koondoos, between lat. 36° and 38° N., and long. 70° 30', and 73° 30' E.; having N. and N.E. a chain of mountains, inhabited by tribes claiming a Macedonian origin; S.E. and S. the Kolor-Tagh mountains, and the high country of the Caucirs; and W. the other territories of Koondoos. It consists of the valley of the Koocha,

## BUENOS AYRES.

a tributary of the Orux, which rises at its S.E. corner, and soon becomes a considerable river, unfordable even at Budukshah (Fyzabad). The scenery of this country, and its natural productions, have been spoken of in high terms by all who have visited it: it contains ruby mines, and cliffs of lapis lazuli. Near the Orux the former are still worked by the khan of Koondoos, and the latter article, much of which was formerly sent into China, is obtained by lighting a fire under the cliffs, and when hot, dashing cold water upon them, which causes them to fracture. The ruby mines were well known to the emperors of Delhi, and at a much earlier period: they are at a place called Gharan, on the verge of the Orux; are dug in low hills; and the gems imbedded in limestone like round pieces of pebble or flints. The inhabitants of Budukshah are Tadjiks; very social and hospitable; speaking the Persian language, and retaining the manners and customs prevalent N. the Hindoo Kooch before the Tartar invasion. Neither Uzbeks nor Toorkes had settled in the country before the chief of Koondoos overran it about 16 years ago, by whom its own chief was dethroned; since which its peasantry have been driven out, and a rabble of lawless soldiery quartered in their stead. The capital is also called Budukshah, or Fyzabad, and is near the E. bank of the Koocha, in lat. 36° 28' N., long. 71° 23' E. It is said to have been peopled from Belkh, and most of the inhabitants are of the Shiak sect. This country suffered much from a terrific earthquake, in January, 1832, which appeared to exhibit its chief violence in this valley, and destroyed many roads and villages and a great part of the population. (*Burnes's Trav. into Bokhara*, iii., 174-178; *Liebig's Reise nach Kasch.*, ii. 187, 388.)

BUDWEIS, a town of Bohemia, cap. circle of the same name, on the river bank of the Moldau, 75 m. S. Prague. Pop. 7400. Is well and regularly built, and partially fortified. Contains a cathedral, seven churches, a court of jurisdiction for the circle, gymnasium, philosophical academy, and diocesan seminary. Has manufactories of woollen cloth, muslin, damask, sailstap, and musical instruments; and considerable trade in horses and corn. (*Oesterr. Encyclop.*, *Nat. Encyclop.*)

BUENOS AYRES, (*Good Air*), a marit. city of S. America, cap. of the repub. of La Plata, 198 m. W. shore of the estuary of the great river La Plata, 198 m. W. by N. Montevideo, and 90 m. N.W. Point Piedras; lat. 34° 36' 28" S., long. 58° 25' 34" W. Pop., according to Sir W. Parish, perhaps 100,000; from 15,000 to 30,000 of whom are foreigners, chiefly English and French. The city is built upon a bank from fifteen to twenty feet above the level of the river. Including its suburbs, it extends N. and S. for upwards of two m., with a breadth in its centre of about one and a half m. It is built on a uniform plain; the streets, which are all straight, intersect each other at right angles at every 150 yards, dividing it into a number of squares, each having an area about 500 ft. Eng. acres. The principal streets, which are formerly all but impassable in wet weather, while in the dry season they were obscured with clouds of dust, are now tolerably well paved, and provided with footpaths on either side. The houses and other buildings have also been greatly improved within the last few years, and their interior rendered much more comfortable; upper stories are now generally added to them; chimneys, that were formerly all but unknown, are common; they are supplied with English gases, and with coals carried out from Liverpool as ballast. Most sorts of European furniture have found their way into the residences of the upper classes. Almost every house in the principal streets has a garden both before and behind it; and many have latticed balconies in which odiferous shrubs are reared. Though on the edge of one of the greatest rivers in the world, water in Buenos Ayres is both scarce and dear. The wells, though numerous, afford nothing but hard, brackish water, unfit for culinary purposes. There are no public cisterns; rain-water is, indeed, carefully collected in a few private tanks; but the mass of the people have to pay high for their daily supply, which instead of being raised from the river by machinery, and conveyed in conduits to public pumps, is carried about in butts mounted on bullock-carts. The quarter of the city inhabited by mestizos and negroes is wretched and filthy in appearance, and strongly contrasts with the opulence and taste displayed in the other parts. The Plaza, or great square, contains the cathedral, and the town-hall, a handsome stone edifice, built by the Jesuits; and a whole side of it is occupied by the *Recova*, a range of piazzas, 150 yards long, and above 20 in width, enclosing a double range of shops. In the centre of the square is a small obelisk, erected to commemorate the declaration of independence. The town-hall is chiefly used as a prison, but meetings of the municipality are sometimes held in the upper rooms; and from the balcony the citizens are harangued on public occasions. The cathedral, a large handsome edifice, with

## BUENOS AYRES.

a cupola and portico, has its interior profusely decorated with carving and gilding, and its dome painted in compartments, representing the acts of the apostles. The church of the Franciscans, and that of the convent of Mercy, are next in rank, and have steeples and cupolas nearly in the same style as the cathedral. In the former there is a painting of the Last Supper, well executed, by a native Indian artist. There are many other Catholic churches, several convents and nunneries, a Protestant church, Presbyterian chapel, &c., a founding hospital, orphan asylum, and other benevolent institutions. These edifices are all built of fine white stone, found in the plain not far from the city. The fort, which contains the residence of the supreme director and the government offices, is a square brick and stone building, near the river. The university, one of the most celebrated in S. America, occupies a very extensive building, which has been recently fitted up at a great expense: a suite of six rooms in this building contains the state library, a good collection of about 25,000 vols.

The estuary of the Plata is very broad, but is also in most parts shallow, encumbered with sand-banks, and infested with sudden gusts of wind called *pampas*. Its navigation is consequently attended with a good deal of difficulty, and ships bound for Buenos Ayres generally take pilots on board. There is no harbour, and vessels drawing sixteen or seventeen feet water anchor in the outer roads, called the *Answarade*, seven or eight m. from the shore, in a operation by no means free from danger, boats being sometimes swamped in crossing the bar between the outer and inner roads. From the want of a pier, and the shallowness of the water on the beach, even the boats are not able to come close to the shore, but are met at a little distance from it by a rude sort of ox-carts, into which they deposit their goods, at no little risk, and sometimes much loss. These unfavourable circumstances, which might, however, be materially improved by a little exertion and outlay on the part of the government, operate as a heavy drawback on the trade of the city, and tend proportionally to augment that of Montevideo, which is more easily accessible. But notwithstanding the competition of the latter, and the great increase of its trade of late years, Buenos Ayres is still the principal outlet for the produce of the vast countries traversed by the La Plata, and especially for the provinces situated on its right bank.

The quantities and value of the principal articles exported in 1837 were:

| Products.        | Quantity.                | Price.       | Value.    |
|------------------|--------------------------|--------------|-----------|
| Spanish dollars  | 358,748 No.              |              | 253,748   |
| Marka of silver  | 4961                     |              | 36,048    |
| Gold             | 81,259 m.                | at 8         | 373,283   |
| Do. uncoined     | 304                      | .17          | 6154      |
| Ox-hides         | 823,531 No.              |              | 3,284,540 |
| Horse-hides      | 25,367                   | .12          | 3,046     |
| Jerked beef      | 176,577 quintals.        |              | 446,082   |
| Horse            | 484,456 No.              | \$2 per mil. | 9,670     |
| Horse-hair       | 70,378 arrobas of 25 lb. | 3            | 211,116   |
| Sheep's wool     | 161,708                  | 5            | 282,412   |
| Chinchilla skins | 3517 dozens              | 4            | 13,264    |
| Wetria skins     | 51,263                   | 2 1/2        | 129,634   |
| Tallow           | 100,249 arrobas          | 1            | 150,573   |
| Cotton           | 180                      | 3            | 80        |
| Sheep-skins      | 55,188 dozens            | 2 1/2        | 140,470   |
| Flour            | 14,069 fanegas           | 4            | 56,268    |
| Corn             | 4150                     | 3 1/2        | 14,625    |
| Sundries         |                          |              | 2108,618  |
| Total            |                          |              | 5,667,136 |

\*To this amount may be added, as allowance for short manifests, &c., about 80 per cent. additional.

Within the last few years the trade in wool, in consequence of the great improvement effected in the breed of sheep, has become of considerable and rapidly increasing importance. In 1827 the export of this article to Great Britain amounted to only 19,444 lbs.; whereas in 1837 it amounted to 2,307,951 lbs.: Corn, which for a considerable period was not produced in sufficient quantity for home consumption, has within the last two or three years become an article of export: it is sent chiefly to Brazil. Most of the jerked beef, and numbers of mules, are exported to the Havana. The total value of the imports in 1837, amounted to about 7,000,000 dollars, or £1,487,000; of which those furnished by Great Britain amounted to near a half, or to £696,104. The imports hence chiefly consist of cotton (by far the most important article), linen, woolen and silk manufactures, hardware, cutlery, earthenware of all sorts, glass, leather, hats, &c., with about £40,000 or £50,000 worth of foreign and colonial produce. France supplies Buenos Ayres with jewelry, perfumery, and other articles of luxury, to the value, in 1836, of £231,373: the imports from the U. States in the same year amounted to £76,960, and consisted chiefly of coarse unbleached cloths, spirits, soap, sperm candles, dried and salted provisions, tobacco, furniture, and denim. Germany sends woolen

## BUFFALO.

and linen cloths, and Rhinish cottons; the Netherlands, fire-arms, swords, &c.; Holland, butter, cheese, Westphalia hams, &c., chiefly by way of Antwerp, the principal mart for Buenos Ayres hides on the Continent. The Baltic furnishes iron, cordage, canvass, pitch, seals, &c.; the Mediterranean trade is principally in Sicilian and Spanish produce, particularly cheap wines, brandies, olive oil, macerated, dried fruits, and paper. Spanish goods are in little demand, though some serges, velvets, sewing silk, and saff, are imported. The annual importation of Spanish and Sicilian wines is from 10,000 to 15,000 pipes, besides about 1000 pipes of brandy. The *perbe mald*, or Paraguay tea, formerly an export article of some consequence, has now been nearly superseded, even in Buenos Ayres, by tea: the other Chinese imports are alkali, crapes, nankeens, porcelain, and numerous minor articles. The trade with Chili and Peru is insignificant. The markets of this city are well supplied with butchers' meat and fish. Poultry is dear, a couple of fowls selling for as much as an ox. Vegetables and fruit generally are also dear; milk in quality and price is much the same as in London, and all the butter used is imported.

The inhab. of Buenos Ayres are said to be observant, intelligent, and desirous to improve. Education receives a considerable share of attention. Several years since, besides the university, a superior academy, and a military college, there were eight public schools, for whom support the corporation contributed about 7000 dollars annually, and five other schools exclusively for the benefit of the poor, under the charge of different monasteries, and supplied with books and stationary at the public expense. It is rare to meet with a boy ten or twelve years of age in the city who cannot read and write. There are several printing presses; and various weekly journals advocating liberal principles are published.

Buenos Ayres was founded by Don Pedro de Mendoza, in 1534, but in consequence of the opposition of the Indians to the settlement, it was obliged to be abandoned at two subsequent periods, and was not permanently colonized till 1580, after some sharp actions with the natives. In 1680 the city was erected into a bishopric, and in 1700 contained 18,000 inhabitants. In 1776 it became the seat of the viceroyalty of La Plata; and in 1778, when the trade of the river was thrown open by Spain, its trade and consequence began rapidly to augment. In June 1806 it was taken by the British, but retaken by the Spanish in the same year. In 1810 the revolutionary movements began that ended in the emancipation of Buenos Ayres and the states of La Plata from Old Spain. The declaration of independence appeared on the 9th of July, 1816. (*Sir W. Parrish's Buenos Ayres, &c.; Mod. Trav. xix. Part. Reports, &c.*)

**BUENOS AYRES (REPUBLIC OF).** See PLATA (La), (REPUBLIC OF).

**BUFFALO.** city, port of entry, and capital of Erie county, N. Y., is situated at the N.E. extremity of Lake Erie, near the commencement of Niagara river, its outlet, at the mouth of Buffalo creek which forms its harbour, 968 m. W. Albany, 363 m. from do. by the Erie canal; 73 m. W. Rochester; 25 m. S.E. Niagara Falls; 103 m. E.N.E. of Cleveland, O.; 290 m. E. by N. Detroit, Mich.; 637 m. S.E. Mackinaw; 597 m. S.E. Green bay; 427 m. S.W. Montreal, L. Canada, 321 W. Population in 1810, 1508; 1820, 2095; 1830, 2853; 1840, 18,213. Of these 771 were employed in commerce; 1851 in manufactures and trades; 71 in navigating the ocean; 347 do. canals, lakes and rivers; 211 in the learned professions and engineers.

The situation of Buffalo as a place of business is very commanding. It constitutes the great gate between the East and the West, being at the western extremity of the Erie canal, and at the eastern termination of the navigation of the great lakes, Erie, Huron and Michigan. The ground on which it is built rises gradually from the creek, which runs through its S. part, and at the distance of two miles, it becomes an extended and elevated plain, fifty feet above the level of the lake, furnishing a commanding view of the harbour, lake Erie, Niagara river, the Canada shore, and the Erie canal. The city is regularly laid out, with broad and straight streets, generally crossing each other at right angles. Main street is over two miles long, and 190 feet broad; and it is lined on both sides with splendid and lofty stores, shops, dwellings and hotels, presenting an imposing appearance, and scarcely surpassed by any street in any other city of the Union. The houses generally are built with neatness and taste. Many of the streets are paved and lighted. Three public squares, neatly railled in, and planted with trees, are ornaments to the city. Buffalo contains over 150 streets, and more than 3000 dwellings.

The public buildings of the city are a court-house, jail, county clerk's office, two markets, in the upper story of one of which are the common council chamber and city offices, and seventeen churches, three Presbyterian, two

## BUFFALO.

Episcopal, one Methodist, one Baptist, three German Protestants, one Unitarian, two Roman Catholics, one Universalist, one Bethel and two African. It has two banking houses, an insurance company, an orphan asylum, a theatre, and several spacious and elegant hotels, of which the American is one of the finest in the country. The Young Men's Association, is a flourishing literary institution, with a library of over 3000 volumes of well-selected books, and it sustains an able course of literary and scientific lectures in the winter season, which are numerously attended.

The harbour of Buffalo is formed by the mouth of Buffalo creek, which has twelve or fourteen feet of water for the distance of a mile from its entrance into the lake. Originally, a bar at its mouth prevented the access of most vessels from the lake. But a mole and pier, consisting of wood and stone, 1500 feet long, has been constructed at the mouth of the creek, by the joint contributions of the United States government and of the citizens; which, by confining the channel of the creek, has so far removed the bar, that vessels requiring eight feet of water freely enter. At the end of the pier is a light-house, built of dressed limestone, twenty feet in diameter and forty-six feet high, which is not only a necessary, but an ornamental structure. The harbour is protected from all winds, and so spacious that several hundred steam-boats and other lake vessels could be well accommodated in it. A ship canal 700 yards long, 80 feet wide and 12 feet deep, has been constructed, extending from the creek, near its mouth, into the place, where vessels can be secure from the descending ice in the spring floods and have a better access to the city. By a law of the state, the canal commissioners are extending the Erie canal, over a mile E. of its original termination, through the eastern part of the city, parallel to the harbour, to which there will be side cuts, which will enable boats to enter the harbour at different points, with great facility. At the breaking up of the ice in the lake in the spring, by means of the strong westerly winds which at that season prevail, the ice is generally accumulated at Buffalo harbour, and is not dissolved so as to make it accessible, until five or six weeks after the broad lake is navigable. To make the harbour more accessible in severe winds and storms, it has been proposed to construct a ship canal from the lake, across the isthmus, to Buffalo creek, about a mile from its mouth, which would greatly improve the navigation. The harbour is generally open for navigation about the 15th of May.

The commerce from Buffalo to the west employs fifty or sixty steam-boats, many of which are spacious, commodious, and elegant; and about 300 schooners and other lake vessels. The larger vessels are generally schooners, which are more easily managed than square rigged vessels. The tonnage of Buffalo in 1840, was 4916. The arrivals of steamboats and other vessels, were 4061, and the clearances, 4681. The arrivals and clearances in 1845 were only 900 each, during the season of navigation. The amount of property sent E. on the Erie canal from Buffalo during the year 1840 was 177,607 tons. The amount of goods, including domestic manufactures, salt, &c., received by the canal and shipped to the west, was 98,733 tons. The tolls received at Buffalo on the Erie canal, amounted to \$376,417. A chain of rail-roads, now completed, connects Buffalo with Albany, and thence with Boston. It is also connected with Black Rock, Niagara Falls, and Lewiston by rail-roads. There were in 1840, in Buffalo, twenty-three foreign commission houses, with a capital of \$94,000, 931 retail stores, with a capital of \$736,335, one woolen-factory, four flouring-mills, one grist-mill, two saw-mills, one oil-mill, three tanneries, two distilleries, one pottery, ten printing-offices, five daily, four weekly, and one semi-weekly newspapers, had six periodicals. The total amount of capital employed in manufactures was \$630,300. It had one academy with 64 students, twenty-eight schools with 2676 scholars.

By an act of the Legislature, the common schools of Buffalo have been taken from under the school law of the state, and constituted free schools, under the management of the common council of the city. The children of all classes of the citizens are educated in them, without charge for tuition, the expense being defrayed by the city.

Buffalo was incorporated as a city, April 30th, 1832, is divided into five wards, and is governed by a mayor and common council, elected annually by the people. It was originally laid out by the Holland Land Company in 1801, and grew slowly from the time of its foundation until 1819. In that year it became a military post. In December, 1813, the place was burned by a combined force of British and Indians, with the exception of two buildings. It then contained 100 dwellings. This conflagration was ostensibly in retaliation for the burning of Newark, a small village in Canada, at the mouth of Niagara river; and it is remarkable that this burning of Newark was afterwards made the excuse for the Vandal conflagration of the city of Wash-

## BUGIA.

ington, in which the capitol, the finest senate house in the world, was left in smouldering ruins. At the close of the war, the inhabitants of Buffalo received from the United States the sum of \$80,000, in compensation for their losses by the conflagration. In 1817 Buffalo contained over 100 dwellings, many of which were of brick, and some of them large and elegant, most of which were built in 1816. It was incorporated as a village in 1832. In 1839 it contained 400 dwellings, and over 2000 inhabitants. In April 1833 a company was incorporated for the erection of a marine hospital. In May 1834, a company was incorporated for constructing a marine rail-way, with dry or wet docks, for building and repairing vessels. In April 1835 the Sailors' and Boatmen's Friend Society was incorporated, for the purpose of improving the moral condition of the persons navigating inland waters. In 1841 the net proceeds of the post-office at Buffalo, were \$11,739. The commencement of the rapid growth, and great importance of Buffalo, dates from the completion of the Erie canal, which was finished in 1825. It has an uninterrupted lake navigation of 1500 miles, with a coast of 3000 miles. The Ohio canal has already added much to its business; and the Wabash and Erie canal and the Illinois and Michigan canal, will open to it the trade of a greatly enlarged extent of country. No place in the interior of the country possesses so commanding a position, or may be expected to surpass it in its future growth.

BUFFALO, t., Armstrong co., Pa., 6 m. W. Kittanning bor. Bounded S.W. by Allegheny river. At the mouth of Buffalo creek, in the S. part of the t. is the village of Freeport. It contains three stores, one flaking-mill, eight grist-mills, four saw-mills, one distillery, one school twenty-two scholars. Pop. 1830.

BUFFALO, t., Union co., Pa. It contains one store, three flouring-mills, three saw-mills, two tanneries, six schools, 940 scholars. Pop. 1348.

BUFFALO, p. t., Washington co., Pa., 217 m. W. Harrisburg, 243 W. situated on the National road. Watered by Buffalo cr. It contains two stores, one flaking-mill, one woolen-factory, four grist-mills, two saw-mills, three tanneries, eight schools, 280 scholars. Pop. 1116.

BUFFALO, t., Butler co., Pa., 11 m. S.E. Butler. Drained by Thorn, Great and Little Buffalo creeks. It contains six stores, four grist-mills, four saw-mills, nine schools, 495 scholars. Pop. 1830.

BUFFALO, t., Ferry co., Pa., 11 m. E. Bloomfield. Bounded E. by Susquehanna river. A ferry here crosses the Susquehanna. Watered by Juniata river, over which are two ferries. It contains five stores, one flouring-mill, one grist-mill, five saw-mills, one rope-walk, seven schools, 247 scholars. Pop. 948. It contains Buffalo bor., situated on the W. side of Susquehanna river, five m. above the mouth of Juniata river, and has one Presbyterian church, two stores, one school, thirty-five scholars, twenty-five dwellings, and 147 inhabitants. A ferry here also crosses the Susquehanna.

BUFFALO, t., Union co., Pa. It contains one store, three flouring-mills, three saw-mills, six schools, 940 scholars. Pop. 1348.

BUFFALO, p. t., Guernsey co., O., 87 m. E. Columbus, 319 W. Pop. 1037.

BUFFALO, t., Pike co., Mo. Pop. 2174.

BUFFALO, v., capital of Niangua co., Mo., situated on Buffalo Heart prairie, 3 m. W. of Niangua river.

BUFFALO, t., Morgan co., Mo. Pop. 188.

BUFFON, a small vil. of France, dep. Côte d'Or, on the Armançon, 13 m. N. Semur. This village belonged to the illustrious author of the *Histoire Naturelle*, Georges Louis Le-Clerc, created by Louis XV. Count de Buffon, by which name he has since been distinguished.

BUG (an. *Hypenid* or *Bogus*), a river of European Russia. It rises near Biologysko, in the S.W. corner of Volhynia, and pursues a S.E. course past Bratslaff, Oliviopol, Vomecenak, and Nicolaeff, 55 m. below which it falls into the estuary of the Dniester. It is navigable from Vomecenak. The entrance to the Bug is without the bar of the Dniester; happily, too, it has no bar of its own, and has deep water as far as Nicolaeff.

BUGIA or BOUJIAH, a sea-port town of Africa, reg. Algiers, on the declivity of a mountain, at the mouth of the Aduse, 122 m. E. Algiers. The port, which is large, is formed by a projecting neck of land, great part of which was anciently faced with stone. There is good anchorage off the town in eight or ten fathoms, but N.E. winds throw in a heavy sea. Previously to the French occupation, the town was protected by half ruinous walls, and by a castle on the summit of a hill, which also commanded the roadstead. The inhabs. manufacture ploughshares, mattocks, &c. of the iron obtained from the neighbouring mountains, and great quantities of oil and wax are brought down to this place by the Kabyles, for shipment. The town is built of, and stands upon, the ruins of a more con-

## BUGNE (LE.)

able and ancient city. It was bombarded by Sir Edward Spragge, in 1671. (*Sass's Barbary*, p. 43, 4to ed.)

**BUGNE (LE)**, a town of France, dep. Dordogne, cap. cant., a little above the confluence of the Vézère with the Dordogne 16 m. W.N.W. Sarlat. Pop. 2437. It is advantageously situated, well built, and carries on different branches of the woollen manufacture. It is also the entrepôt of the wines and other products of the surrounding cantons, which are shipped thence to Bordeaux, and has a considerable trade in cattle, hogs, &c.

**BULIS (LE)**, a town of France, dep. Drôme, cap. cant. on the Ouvèze, 10 m. S.E. Nions. Pop. 2147. It is ill built, but has some fine promenades and a handsome square, surrounded by a double row of trees. It has some trade in wool, cloth, hats, and jewellery.

**BUJALANA**, a town of Spain, Andalusia, prov. Cordova, being 28 m. E. from the city of that name, and 7 m. from the Guadalquivir. Pop. 14,500. It is well built, with broad streets, has two convents for either sex, two hospitals, a college, and a founding hospital. It has some woollen fabrics, and a large fair which commences on the 26th of August. Though its modern name be of Arabic origin, it is believed that this town occupies the site of the *Calpurnia* of the Romans; and it has various inscriptions, and other antiquities of Roman origin. (*Affiance*.)

**BUKHUR**, an island and fort in the Indus, 165 m. N. Hyderabad. The fort, which is constructed of brick, is about 400 yards from the left, and 350 from the right bank of the Indus. But it has no strength in its works, and is formidable only from its position. (*Burmes*, l. 258, 12mo ed.)

**BUKOWINE**, a ci-devant prov. of the Austrian empire, now included in Galicia, which see.

**BULGARIA** (an. *Mæsia Inferior*), a large prov. of Turkey in Europe, included in the beglerbeglik of Roumelia; lying between lat. 43° 8' and 44° 10' N., and long. 28° 14' and 30° 36' E.; having N. Wallachia and Bessarabia, W. Servia, S. Roumelia, and E. the Black sea. Length, N.E. to S.W., about 350 m.; breadth varying from 40 to 100 m. Area, loosely estimated, from 30,000 to 34,000 sq. m. Pop. 1,800,000. The country is for the most part mountainous, and eminently so in the S., where the principal chain of the Balkan mts. forms its boundary: the Danube constitutes its N. limit; but excepting that river, Bulgaria possesses none of any magnitude, although sufficiently watered by small streams. Its climate is temperate, and its soil fertile and well adapted for the culture of corn, vines, the mulberry, and other fruit trees, and tobacco. There are but few marshes; the pastures are extensive and rich, and feed numerous herds of cattle: the higher lands are often covered with forests of pine, oak, beech, &c. The Bulgarians are descended from a Slavonic horde, formerly inhabiting the banks of the Volga, who crossed the Danube and established themselves in this country in the 7th century, and have since gradually spread themselves over a large part of the region S. of the Balkan. The present race have laid aside the military character of their ancestors; they are a pastoral people, living in small hamlets of about forty or fifty houses each, and occupying themselves chiefly in agriculture and cattle-breeding, with some manufactures, as those of coarse woollen cloth, rifle-barrels, morocco leather, and attar of roses. Large gardens are devoted to the culture of roses; and we are indebted to the Bulgarians for the finest and most elegant of perfumes. Dr. Walsh says that the people are kind, hospitable, and benevolent; forming a striking contrast to the "rude and brutal" Turks found among them. The women, who mix freely with the men, are handsome, industrious, and dress neatly: all wear trinkets; and the girls have their heads uncovered, and their hair braided and ornamented with different coins, as among the Albanians. The male peasantry dress in brown sheep-skin jackets of undyed brown wool, which their wives spin and weave, white cloth trousers, and sandals of raw leather, and carry no weapons of offence. They live in houses of wickerwork plastered, the interior being clean and comfortable. Their language is a dialect of the Servian. Ever since the 9th century their religion has been that of the Greek Church; but they have few places of worship, and in those they have the service is performed in Greek, a tongue which they do not understand. Schools and books are equally rare with churches, and except the shop-keeper and priest of a village, scarcely any one can read or write; yet notwithstanding this gross ignorance, crimes are singularly scarce, and travellers in their country are not secure only, but experience the kindest treatment. *Sperdy, rae, sine lege, fidem rectumque colantur*. Bulgaria is divided into four mandsliks, viz. those of Silistria, Ruschuk, Widin, and Sophia; its chief towns are Sophia, the capital, Shumla, Silistria, Ruschuk, Nikopol, Widin, and Varna. (*Mæsia Brava*; *Walsh's Journey from Constantinople*, &c., p. 164 to 170.)

**BULLITT**, county, Ky. Situated in the N. part of the

## BUNDLECUND.

state, and contains 250 sq. m. Watered by Salt river. Salt is made in the co. It contained in 1840, 6379 neat cattle, 8821 sheep, 30,968 swine; and produced 30,081 bushels of wheat, 3561 of rye, 346,655 of Indian corn, 77,105 of oats, 6433 of potatoes, 2540 pounds of tobacco, 12,171 of sugar. It had six stores, seven flouring-mills, eighteen grist-mills, nine saw-mills, one oil-mill, five tanneries, four distilleries, one brewery. Pop. whites, 4993; slaves, 1329, free coloured, 18; total, 6334. Capital, Shepherdsville.

**BULLOCK**, county, Ga. Situated in the S.E. part of the state, and contains 800 sq. m. Bounded N.E. by Ogeechee river, S.E. by Canapuchee river, by branches of which it is watered. It contained in 1840, 9013 neat cattle, 1622 sheep, 6145 swine; and produced 2974 bushels of wheat, 39,500 of Indian corn, 1877 of oats, 12,416 of potatoes. It had one store, twelve grist-mills, seven saw-mills, one school, 37 scholars. Pop.: whites, 2147; slaves, 955; total, 3102. Capital, Statesboro.

**BUNCOMBE**, county, N.C. Situated in the W. part of the state, and contains 9000 sq. m. Drained by French, Broad and Nolachucky rivers. It contained in 1840, 10,393 neat cattle, 9803 sheep, 39,553 swine; and produced 22,298 bushels of wheat, 9251 of rye, 304,271 of Indian corn, 68,544 of oats, 24,308 of potatoes, 8819 pounds of tobacco. It had nine stores, thirty-six grist-mills, twenty-five saw-mills, one oil-mill, five tanneries, sixty-two distilleries, one printing-office, one weekly newspaper, one academy, 15 students, one school, 10 scholars. Pop.: whites, 8796; slaves, 1189; free coloured, 87; total, 10,084. Capital, Asheville.

**BUNDLECUND**, a large division of Hindostan, prov. Allahabad, between lat. 24° 3' and 26° 30' N., and long. 77° 45' and 81° 33' E.; having N. the Jumna; S. Benares and Malwah; E. Boglucund; and W. Scindia's dom.: area 23,817 sq. m. Pop. (*Hamilton*, 1836) 2,400,000. The country is mountainous, and imperfectly cultivated; the mountains belong to the Vindhya chain, and run in parallel ranges through the district, each successively buttressing a table-land; the country is naturally very strong, every hill being a natural fortress, and often crowned by an artificial one; but the highest summit is no more than 3000 feet above the level of the sea. The Ouno, Desaan, and Betwah, are the chief rivers, but none of them is of much importance; there are several large artificial reservoirs or lakes, formed by masonry, erected across the currents of various streams for the purposes of irrigation. The soil is of every variety, from the rich black loam to the sterile conchar; the valleys and lowlands are generally of the former, and when properly watered, yield abundant crops: the summits of the hills, although mostly rocky, are covered with small coppice-wood: the face of the country often presents detached pieces of jungle, but there are no forests, and a few scattered and stunted oak-trees form the only large timber. Bundlecund is celebrated for its diamond mines in the table-land of Pannah, where they are said to be found wherever the soil is gravelly. This soil is from 2 to 8 cubits deep, mostly very red, but elsewhere of a dark brown; it contains many small pebbles, with which the diamonds are found intermixed, but never adhering to any other stone or pebble. The workmen lift up the gravelly earth; throw it into a shallow pit filled with water; and, after washing out the earth, examine the pebbles on a board. Much time is fruitlessly lost, but a very few diamonds found in the course of the year repay the workman, since he receives  $\frac{1}{4}$  the value of those above the size of a filbert,  $\frac{1}{2}$  the value of those as large as a pea, &c. Very few are now found worth more than £100, and their profits are comparatively insignificant. The mines are the exclusive property of the rajah of Pannah; they are supposed to be identical with the Pannau of Ptolemy.

Bundlecund is now either substantially British territory, or possessed by chiefs tributary to the British, who, since 1803, have retained the internal administration of their dom., on an acknowledgment of allegiance, and the right of interference on our part. The British distr. (1833) contained 9,119,000 kucha, began in cultivation, yielding a revenue of about £300,000 a year. Hindoo ganges have been less affected here by foreign rule than in most other parts of India; the people generally are industrious, and obedient to the constituted authorities, though their chiefs are restless and turbulent. Their language is a dialect of the Sanscrit. They are usually possessed of but little personal property: there is little trade or capital stirring, and these circumstances, together with the bare and open character of the country, are probably the causes of *deceit* or gang-robbery being so unusual. Atrocious crimes are rare; forced robbery and *cozasky*, or robbery on horseback, are the only serious offences, and these are most common on the skirts of Scindia's prov., whence small parties of Pindarries occasionally enter on ravaging excursions: burglary and theft are not common. The zemindars consider it highly reputable to connive at such outrages, and frequently expel from their villages or estates persons of suspected character.

## BULSAUR.

The panchayat, or arbitration system, in the settlement of disputes, has been always very much resorted to here.

At the fall of the Delhi empire, the Maharrats, under All Bahadur, possessed themselves of part of this prov., but were unable to establish their authority in the villages and hill fortresses. Bundicund was occupied by the British troops in 1804, and erected into a magistracy under the Benares court of circuit. In 1817 that portion of it now belonging to the Bengal presid., was finally ceded by the Peishwa, to whom All Bahadur had been nominally subordinate. (*Hamilton's Hindostan*, i., 317-334; *Martin's Statist. of the Colonies*, p. 375-388; *Reports on E. I. Affairs*, and *Appendices*.)

**BULSAUR**, a sea-port town of Hindostan, presid., Bombay, on the gulf of Cambay, 45 m. S.W. Surat; lat. 20° 30' N., long. 73° 5' E. Its trade is considerable, chiefly in grain, jaggery, and timber; its manufactures are mostly coarse gingham and other cloths. Rice and sugar-cane are cultivated in its vicinity.

**BUNGAY**, a town of England, N. border, co. Suffolk, hund. Waveney, on the Wangford, 93 m. N.E. London: it consists of two par., having together an area of 3000 acres, and a pop. of 3734. Having been almost wholly destroyed by fire in 1688, it is comparatively new, well laid out, and well built. The market-place, said to be the best in the co., has two fine crosses; and the town has also a neat theatre, and assembly rooms; a free grammar school, with two exhib. to Emanuel College, Cambridge, and several other schools; the remains of a Benedictine nunnery; some manufactures of hemp; and a considerable trade in malt, corn, coal, flour, lime, &c. Here is also the celebrated printing establishment of the Messrs. Child, which has produced many reprints, in a cheap form, of some of the principal English classics. The trade of the town is promoted by the Waveney, being navigable thence to Yarmouth. Market, Thursday; fairs, 14th May, and 25th September.

**BUNKER HILL**, Charlestown, Mass., has obtained great celebrity, as being the theatre of the first regular battle between the Provincial and British troops, in the war of the Revolution. The place where the battle was fought was originally called Breed's Hill, Bunker Hill being of about an equal height, and north of it, at the entrance of the peninsula on which Charlestown is situated. On this height, a detachment of 1000 men were directed to entrench themselves, on the night of the 16th of June, 1775. By some mistake, they proceeded to Breed's Hill, which is nearer to Boston, and which has since been denominated Bunker Hill, as the name is intimately associated with the battle. The men had worked with such secrecy, that, by the dawn of day, they had, unperceived by the enemy, thrown up a redoubt of 8 rods square. The incessant fire from the shipping and a battery on Copp's Hill, in Boston, did not prevent the Americans from completing, by mid-day, with great labour and fatigue, a slight breastwork from the redoubt to the bottom of the hill, on the E. side. Between 13 and 1 o'clock the British, to the amount of 3000 men, with a portion of artillery, under Major-general Howe, and Brigadier-general Pigot, landed in Charlestown, and having formed their men in two lines, advanced slowly to the attack, frequently halting to allow their artillery time to fire. The Americans coolly waited in their entrenchments their approach. It is said that General Putnam, who was a leader, though Col. Prescott had the chief command, told the men that they had not a charge of powder to loose, and exhorted them not to fire upon the enemy, until they could see the whites of their eyes. They were suffered to approach within 10 or 12 rods, when these practiced American marksmen discharged their pieces incessantly with such deadly aim, as threw the British into confusion, and caused them to retreat precipitately to the bottom of the hill. By the efforts of their officers they were formed a second time, and advanced to the attack. The Americans waited until they were within 5 or 6 rods, when they opened a destructive fire, which brought them to a stand, and threw them into confusion. At this critical moment General Clinton arrived from Boston, and succeeded in rallying his men, and in bringing them to a charge, while some cannon were brought to a station that enabled them to rake the breastwork from end to end. The works were now attacked with fixed bayonets; and as the Americans were not furnished with them, and as their ammunition began to fail, they found it necessary to retreat over Charlestown neck, in doing which they were exposed to the fire of the Glasgow man-of-war and the floating batteries, without suffering great injury from them. The British were victorious; but it was a dear-bought victory. The British loss, by the acknowledgment of General Gage, was 1054 killed and wounded, and the engagement was particularly fatal to the officers, as they were doubtless singled out by the American marksmen. Nineteen commissioned officers were killed and seventy more wounded. Among the former was Major Pitcairn, who led the attack

## BURDWAN.

at Lexington. Of the men, 286 were killed and 888 wounded. The Americans, who had at no time more than 1500 men engaged, had 145 killed and 304 wounded and missing, making in the whole 449. Among the former was Major-general Warren, then president of the colonial congress, and a volunteer. The British did not pursue the victory farther than to entrench themselves on Bunker's Hill, and the Americans did the same on Prospect Hill in front of them, about half way to Cambridge.

Early in the battle, order was sent to Copp's Hill in Boston, to set Charlestown on fire, which was effected by discharging a carcass into the place, and the fire soon spread over it. But the direction of the wind prevented the smoke from seriously annoying the Americans.

On the site of the battle, 63 feet above the level of the harbour, on ground purchased for the purpose, the Bunker Hill Monument, a splendid obelisk, has been erected. The corner stone was first laid, by the celebrated La Fayette, on the 50th anniversary of the battle, in the presence of an immense concourse of citizens, June 17th, 1825, when an address was delivered by the Hon. Daniel Webster. This foundation having been insufficient, the corner stone of the present structure was laid in a more substantial manner, in March, 1827. The monument was completed, July 23d, 1843. The obelisk is 30 feet square at the base, and 16 feet 4½ inches at the top, having a diminution of 14 feet 7½ inches above its base. It is substantially built of hewn Quincy granite. The height from the base to the commencement of the apex is 208 feet; and from the base to the top of the apex, it is 221 feet in height. The whole cost has been \$119,800. The interior is circular, having a diameter of 10 feet 7 inches at bottom, and of 6 feet 4 inches at top, and is ascended by 204 steps. The top is an elliptical chamber, 17 feet high, 11 feet in diameter, with 4 windows, 9 feet 8 inches high, and 9 feet 2 inches in breadth, and presents the most splendid view in the United States, combining in a remarkable degree the beautiful and the sublime. Boston, its harbour and environs, with the more distant country, embracing mountain scenery, are spread out in a most enchanting prospect. The obelisk consists of 90 courses of hewn stone, 84 above the base, and 6 below it. There are a number of windows in the structure, closed with iron shutters, besides numerous apertures. The ladies of Boston, by a fair and other donations, raised a large sum, which ensured the completion of the monument. At the fair, by tickets and the sale of articles, the sum of \$32,000 was raised. The finishing of the monument, July 23d, 1843, was hailed by the firing of cannon, and other testimonials of rejoicing. The anniversary of the battle, and the completion of the monument was celebrated in a splendid manner, June 17th, 1843, in the presence of the President of the United States, and the heads of Department, and an immense concourse of citizens, when an address was delivered on the occasion by Hon. Daniel Webster, late Secretary of State of the United States.

During the erection of the monument, one man was killed by a fall from it; the only serious disaster which occurred. This monument, being the most elevated object in the vicinity, will serve as a landmark to seamen; and will long stand in commemoration of the brave men, who here fought, and many of them fell, in defence of their country's rights, and nobly contributed to the independence of the United States. And it is to be hoped, that it will equally testify to posterity of the horrors of war; for many were the widows and orphans which were made on the 17th of June, 1775.

**BUNPOOR**, a town or village of Beloochistan, cap. prov. Kohistan; 14 m. N. the Bushmark mts.; lat. 27° 47' N., long. 60° 30' E. It is small, and ill built; at one time it had been surrounded by a mud wall, but the whole is now gone to decay. The citadel of the chief, strong enough to resist any attacks from the Persians, is built on the summit of an extraordinary mound of earth, said by tradition to have been artificially raised by an immense army of Ghebers, who, at a remote period, passed this way. Pottinger says, "that if really artificial, it must have been raised with vast labour, as the earth could not have been procured nearer than the mts." The neighbourhood of Bunpoor is desolate and impoverished, destitute of agriculture, and even of date-trees. The Inhab. are the Rakshasnee Belooches, the leading tribe among the Nbaroots; the language spoken at Bunpoor is Persian and Beloochee mixed. The revenues of the chief are usually farmed out, and in lieu of them he received (1810) 25,000 rupees, 140 camels, 140 matchlocks, 140 sheep or goats, 140 measures of 160 lb. each, of wheat, and the same of dates. (*Pottinger's Beloochistan*, &c., p. 176.)

**BURDWAN** (*Parthasene*, productive), a distr. of Hindostan, presid. and prov., Bengal; between lat. 23° and 24° N., and long. 87° 30' and 88° 25'; having N. Beerbhoom, E. Nuddee, S. Hooghly, and W. the Jungle Mohair district; area 3000 sq. m. Pop. (1823) 1,487,300. It is one of the

## BUREAU.

Most productive territories of India, and being environed by jungles N. and S., "appears like a garden surrounded by a wilderness." The uncultivated are but 1-8th part of the extent of the cultivated lands: the chief articles of produce are indigo, sugar, cotton, tobacco, and mulberry-trees. A principal part of the wealth of Burdwan consists in its coal mines: the coal-field appears to be very extensive; the coal is of good quality, and preferred to any other at Calcutta. Several mines, about 120 m. from that city, are worked by an English company, which employed, in 1831, from 3000 to 3000 natives in mining, and 300 or 400 boats in conveying the coal to Calcutta, the mines being on the banks of a river connected with the Hooghly. It is not sold at the pit's mouth, but delivered at about 20s. a chaldron in Calcutta; Singapore, Penang, Madras, and Ceylon, are also supplied hence: the wages of the miners are from 5s. to 8s. per month. Fine iron-ore is found in the neighbourhood of the coal, and a great deal of stone. Commerce has been greatly facilitated by the opening of roads to Hooghly. Culina, and Cutwa; the semidars are opulent, and many of them reside in the capital of the presid.; the land-revenue in 1830-31 was 2,394,750. There are few villages in which there is not a school for the rudiments of education, and there are some private endowments for the purpose; but no regular schools of Hindoo or Mohammedan law exist here: the proportion of Mohammedans to Hindoos is about 1 to 5. Burdwan became subject to the British, with the rest of Bengal, in 1760: the sular rajah enjoys, at present, but little consideration; and his zemindary is now greatly diminished from its original size. (*Hamilten's Hindoos*, i., 153-155; *Evid. of Mr. Bracken, on Coal, &c., Reports*, 1831.)

**BURDWAN**, a town of Hindoostan, prov. Bengal, cap. of above distr. and seat of a sular court; 60 m. N.N.W. Calcutta; lat. 23° 15' N., long. 87° 57' E. Pop. about 54,000, 9-10ths of whom are Mohammedans. The Burdwan rajah has here a large palace, an English summer-house, and spacious gardens, &c.

**BUREAU**, county, Ill. Situated toward the N. part of the state, and contains 648 sq. m. Watered by Bureau creek. It contained in 1840, 4001 neat cattle, 3067 sheep, 12,036 swine; and produced 53,794 bushels of wheat, 190,390 of Indian corn, 51,800 of oats, 35,112 of potatoes. It had several stores, six grist-mills, ten saw-mills, one academy, 45 students, thirteen schools, 281 scholars. Pop. 3067. Capital, Princeton.

**BURFORD**, a par. and town of England, co. Oxford, head. Bampton; 63 m. W.N.W. London. Pop. 1691, 1686; 1681, 1666; houses, 269; area, 3170 acres. It is pleasantly situated by the small river Windrush, but is very indifferently built. The church is partly in the Norman, partly in the later Gothic style, and has a very fine spire, surmounting a tower. The Baptists, Friends, and Wesleyans, have chapels. There are almshouses for sixteen poor widows; a free school, with an endowment producing 254 a year, held in the town-hall, where, till 1656, the co. assizes were held. There is a weekly market on Saturday, and fairs held the last Saturday in April, and July 8th, for live stock and cheese. Saddlery was once a considerable branch of manufacture: there was also a large traffic in wool and corn; both have greatly declined; and the property of the town has been still further depreciated by the alteration in the line of road from Oxford to Cheltenham, which previously passed through and now avoids it. Edgewill, where Fairfax beat the royalists in the neighbourhood. The celebrated Wilmot, earl of Rochester, was educated in its school. It gives the title of earl to the duke of St. Albans.

**BURG**, a town of the Prussian states, prov. Saxony, reg. Magdeburg, on the Elbe, 13 m. N.E. Magdeburg. Pop. 12,500. It is walled, has three gates, four renowned churches, a grammar school, a hospital, a work-house, &c. It is also the seat of a provincial council, a board of revenue, a district court of justice, &c. A very extensive woollen manufacture is carried on, and it has some dyeing establishments and snuff factories.

**BURGOS**, a city of Spain, esp. prov. same name, on the Arlancon, and on the high road from Madrid to Bayonne, at the foot of a mountain, 134 m. N. Madrid, 90 m. S.W. Vittoria; lat. 42° 51' N., long. 39° 38' W. Pop. 19,000. It is of an irregular shape, streets clean and handsome, particularly that leading to the cathedral, but it has a deserted impoverished appearance. It has a modern square, surrounded with a portico, supported by large columns, with houses upon a uniform plan, but small and mean. It is only, in fact, worth mentioning from its bronze statue of Charles III., almost the only one of the sort in Spain; though, according to Bourgoing, it is ill designed and executed. The cathedral, a well-preserved chieft-d'œuvre of Gothic elegance, is about 300 ft. in length, by above 250 in width. Its exterior is inferior to none in Spain; but the interior, though remarkable for the beauty of its workmanship, is inferior to the cathedrals of Toledo and Seville.

## BURLINGTON.

Having been the cradle of the two most renowned captains of Spain, Ferdinand Gonzales, and the old Comendador, Burgos contains a triumphant arch in memory of the former, and a monument to the latter. There are three fine stone bridges over the Arlancon. In the space of half a league. Two of them communicate with the suburbs of the city, on the opposite bank, called Vega, and the third, with the royal hospital, remarkable for its cleanliness and salubrity. There are some fine meadows on the banks of the river, and there also is the famous convent of Las Huelgas, whose abbess possessed almost royal privileges. Close to the city is the monastery of Miraflores, where John II. and his queen have magnificent tombs, and where also there are, or were, some paintings remarkable for their colouring. There are three military roads from Burgos, one to Oviedo and Gijon, another to Agreda, and a third to Sanabria. The approaches to, and promenades of the town are well ornamented with trees; but though it be one of the coldest parts of Spain, fuel is scarce and dear. Milnes mentions a hospital for deserted children, and four other hospitals, exclusive of that already specified. Formerly the greater part of the wool exported from Spain used to pass through Burgos, and it still has some manufactures of leather, woollens, and hats, and two *laserderas*, or washing pools for wool.

La Borda contends, notwithstanding what has been affirmed to the contrary, that Burgos did not exist in the time of the Romans, from its not being mentioned by Ptolemy nor any other ancient geographer; its want of any ancient monuments, and its being insulated and out of the line of the ancient military road. He maintains that its foundation cannot be carried farther back than the reign of Alphonso I., and that it was Alphonso III. who ordered the castle to be built. It was formerly the residence of the counts of Castile, and many of the Castilian kings, and was then celebrated for its wealth and prosperity, and for its woollen manufactures and fairs. But it has since greatly declined: it suffered much during the late contest with France, and still more in the present civil war. (*Adriano; Bourgoing; Tableau de l'Espagne, &c.; De la Borda, &c.; Japhis*, i., 40.)

**BURGUNDY**, one of the old French provinces, now distributed among the depts. of Côte-d'Or, Saône et Loire, Yonne, Nièvre, Aube, Haute Marne, and Ain.

**BURHAMPORE**. See BOORHAMPORE.

**BURKE**, p. l., Calcutta co., Vt., 51 m. N.E. Montpelier, 561 W. Drained by Passumpsic river, and its branches, which afford water-power. First settled in 1739. On-stones, from a small island in lake Memphringham, are here prepared and exported. It contains a Baptist church and several other religious societies, four stores, four grist-mills, seven saw-mills, two fulling-mills, ten schools, 283 scholars. Pop. 997.

**BURKS**, county, N. C. Situated in the W. part of the state, and contains 1685 sq. m. Watered by Catawba river and its branches. It contained in 1840, 26,599 neat cattle, 12,035 sheep, 39,856 swine; and produced 45,098 bushels of wheat, 14,732 of rye, 200,096 of Indian corn, 77,091 of oats, 37,599 of potatoes, 17,718 pounds of tobacco, 43,894 of cotton, gold to the value of \$95,122. It had twenty stores, eight flouring-mills, sixty-six grist-mills, thirty-two saw-mills, three oil-mills, eleven tanneries, 193 distilleries, one academy, 25 students, eight schools, 294 scholars. Exp.: whites, 12,319; slaves, 2346; free coloured, 854; total 15,369. Capital, Morgantown.

**BURKS**, county, Ga. Situated in the E. part of the state, and contains 1800 sq. m. Bounded N.E. by Savannah river, and S. by Ogeechee river. Watered by Satow creek, which flows into the Savannah. It contained in 1840, 14,925 neat cattle, 4756 sheep, 24,793 swine; and produced 7698 bushels of wheat, 508,503 of Indian corn, 10,677 of oats, 35,465 of potatoes, 685 pounds of rice, 6,260,263 of cotton. It had fifteen stores, thirty-six grist-mills, twenty-two saw-mills, one academy, 35 students, five schools, 283 scholars. Pop.: whites, 4690; slaves, 8696; free coloured, 129; total, 13,176. Capital, Waynesboro.

**BURLINGTON**, county, N. J., extends across the state, S. of the middle, and contains 690 sq. m. Bounded N.W. by Delaware river, and S.E. by the Atlantic, and S. by Little Egg Harbour river. Watered by Wading river, a branch of Little Egg Harbour river, and Ramapo creek, which flows into Delaware river. Bog iron ore is found, and marl abounds in its W. part. In Springfield t. is a well which converts wood into stone. It contained in 1840, 16,963 neat cattle, 15,108 sheep, 90,396 swine; and produced 90,326 bushels of wheat, 283,346 of rye, 577,580 of Indian corn, 30,543 of buckwheat, 397,180 of oats, 193,368 of potatoes. It had 129 stores, four fulling-mills, one woollen-factory, one cotton-factory, with 2590 spindles, one dyeing and printing works, three furnaces, seven tanneries, three potteries, nineteen distilleries, thirty-four grist-mills, sixty-six saw-mills, three paper-mills, one printing-office, three

## BURLINGTON.

weekly newspapers, six academies, 135 students, 101 schools, 7195 scholars. Pop. 32,331. Capital, Mount Holly.  
BURLINGTON, p. t., Penobscot co., Me., 180 m. N.E. Augusta, 713 W. It has three schools, 105 scholars. Pop. 350.

BURLINGTON, p. t., port of entry, and capital of Chittenden co., Vt., 40 m. W. N.W. Montpelier, 80 m. S.S.E. Montreal, L. C., 23 m. S.E. Plattsburg, N. Y., 75 m. N. Whitehall, at the S. end of lake Champlain, 513 W. Situated in 44° 27' N. lat., and 73° 10' W. long. Pop. 1830, 3385; 1840, 4271. The beautiful village is the W. part of the town, is the largest in the state, and one of the finest, for its extent, in the United States. It is built on a bay which sets up between two points on the E. side of lake Champlain, and forms a regular curve. The shore in the S. part of the village is low, but toward the N. it rises to an elevated bluff, on the level summit of which were the barracks for the United States soldiers, during the last war, which have since been removed or taken down. On the brow of the elevated bank was a powerful battery, which once maintained an action of half an hour, with a British naval force on the lake. From the S. part of the village the ground rises by a gradual ascent for one mile, where it attains the elevation of 981 feet above the surface of the lake. The streets run from W. to E., and are crossed by others at right angles from N. to S., dividing the whole surface into regular squares. Near the centre is a public square, on which the court-house is situated, which is surrounded by brick stores, and the principal hotels. The village contains many neat, and some splendid dwellings, surrounded with shrubbery, and generally having fine gardens in the rear. Some of the public buildings are spacious and elegant. The Calvinistic Congregational church, completed in 1842, in the place of one which was consumed by fire in 1839, is an elegant model of pure Grecian architecture, is 92 feet long by 61 wide, built of brick, and cost \$30,000. The Unitarian church, erected in 1816, is very spacious, with a lofty spire, is built of brick, and with its bell, clock, and organ, cost \$23,000. The Episcopal church is a handsome Gothic structure, built of stone, and cost \$9000.

The lake is here 10 miles broad, which is its widest part unobstructed by islands, and the view from the cupola of the University, as it respects *natural scenery*, is second to none in the United States. To the west are presented a full view of the beautiful village, the broad expanse of the lake, adorned with several islands, and the moving scenery of vessels and steam-boats; and beyond the lake, rise the lofty Adirondack mountains of New York, to the height of between 5000 and 6000 feet, and elevate the beautiful into the sublime. To the N. are seen the beautiful windings of Winoski or Onion river. To the E. is presented an extended country with the range of the Green mountains, embracing its two most elevated summits, over 4000 feet high.

The harbour of Burlington is the best on the lake, and more vessels navigating the lake are owned here, than at any place. It is easy of access from the N. and S., and to protect it from the west winds, the government of the United States has erected a break-water, 900 feet long, to be continued to the length of 2000 feet, at the distance of 1000 feet from the central wharf, which will cost when completed, \$150,000. A light-house was erected in 1826 on Juniper island, which is distant 4 miles from the wharf, and contains 11 acres of ground. The light-house is in the form of a truncated cone, 30 feet high, 18 feet in diameter at the base, and 19 at the top; and the light is kept continually burning in the night, during the season of navigation, from the middle of April to the first of December. There are three substantial wharves in Burlington, and a great amount of goods is landed here. Burlington has an extensive and fertile back country, and the mercantile business of the place amounts to about \$1,000,000 annually. Steam-boats stop here daily on their way from Whitehall, N. Y., to St. John's, L. Canada.

Burlington contains a court-house, jail, two banking-houses, six churches, one Congregational, one Unitarian, one Methodist, one Episcopal, one Baptist, and one Roman Catholic, an academy, a female seminary, forty-nine stores, one rope-walk, one brewery, one tannery, one glass-factory, one pottery, one grist-mill, three saw-mills, three printing-offices, two weekly newspapers, one academy, 104 students, seventeen schools, 265 scholars. Some of these are out of the village. The village contains 400 dwellings, and 3000 inhabitants. A steam ferry boat crosses from this place to Port Kent on the opposite side of the lake, and thence to Plattsburg. The University of Vermont occupies an elevated situation on the E. border of the village, 281 feet above the level of the lake, and has four spacious edifices. It was founded in 1791, and was endowed by the Legislature with 20,000 acres of land, of which the part leased yields an income of \$6500 annually. It has a president and five professors or other instructors, 241 alumni, 101 students,

and 9900 vols. in its libraries. The commencement is on the first Wednesday in August.

About a mile and a half N.E. of the court-house is the flourishing manufacturing village of Winoski, on Onion or Winoski river, partly in this t., and partly in Colchester, and connected by a fine covered bridge over the river. The river here has a fall of about 90 feet, nearly perpendicular, which affords a great water-power, easily available on the Colchester side. The village contains a church, an extensive woolen-factory, and various mechanical and manufacturing establishments, which are chiefly included in the statistics of Colchester.

The first permanent settlement in Burlington was made after the peace in 1783, it was first organized in 1787. The first store was opened in 1789. The first Congregational church was formed in 1795. Burlington contained a garrison and hospital, during the last war. A great mortality prevailed among the soldiers in the winter of 1813, and out of 4000 men, from 19 to 20 died daily, for several weeks in succession.

BURLINGTON, p. t., Middlesex co., Mass., 13 m. N.W. by N. Boston, 453 W. Watered by Vine brook, a head branch of Shawheen river. Incorporated in 1799. It contains one Congregational church, two stores, one grist-mill, one saw-mill, four schools, 180 scholars. Pop. 510.

BURLINGTON, p. t., Hartford co., Ct., 19 m. W. Hartford, 330 W. Watered by Farmington river, in its N.E. part. It contains two churches, one Congregational, and one Methodist, two stores, two fulling-mills, two woolen-factories, four grist-mills, six saw-mills, three distilleries, nine schools, 335 scholars. Pop. 1901.

BURLINGTON, Otsego co., N. Y., 79 m. W. Albany, 358 W. It contains one church, seven stores, four fulling-mills, two tanneries, four grist-mills, nine saw-mills, two distilleries, thirteen schools, 558 scholars. Pop. 9154.

BURLINGTON, city and port of entry, Burlington co., N. J., 13 m. S. by W. Trenton, 17 m. N.E. Philadelphia, 156 W., in 40° 5' 10" N. lat., and 75° 52' 37" W. long. Pop. in 1830, 9670; 1840, 2434. Pleasantly situated on the S.E. bank of Delaware river, opposite to Bristol, Pa. A great part of the city is isolated by a creek, over which are several bridges. It is regularly laid out, with streets crossing each other at right angles, nine running N. and S., and four E. and W. Upon Main street the houses are compactly built, but less so in other parts, with large gardens, affording much excellent fruit. It is neatly built, and is highly valued as a rural retreat, by the citizens of Philadelphia. The bank of the river is a beautiful grassy plain, bordered with elegant dwellings, among which is the residence of the Bishop of New Jersey, a handsome Gothic edifice, surmounted by a cross. It contains six churches, one Episcopal, one Presbyterian, two Methodist, one Baptist, and one Friends, a city hall, a bank, a lyceum, a public library, three large boarding schools, one of which is for young ladies, and a free school, founded in 1683, and supported chiefly by the rents of Matencunk island in the vicinity, given for that purpose by the proprietaries. The island contains 300 acres, and yields an annual rent of about \$1000.

The river opposite the city is about a mile wide, and it has a pretty good harbour, but little navigation. Four steam-boats pass the city, to and from Philadelphia daily. The tonnage of the port in 1840 was 3651. It contains fifteen stores, four grist-mills, two saw-mills, one tannery, one pottery, one printing-office, one weekly newspaper; total capital in manufactures \$69,650; one academy, 40 students, nine schools, 480 scholars.

Burlington was laid out as a town in 1697, and incorporated by the proprietary government, including the island only, in 1693. It was incorporated as a city by the Legislature of New Jersey, in Dec. 1794, three miles long on the Delaware river, and one mile wide, and has a Mayor, recorder, and three aldermen, elected annually.

BURLINGTON, p. t., Bradford co., Pa., 144 m. N.E. Harrisburg, 254 W. Drained by Sugar creek, and its branches. It contains two stores, one grist-mill, eleven saw-mills, seven schools, 245 scholars. Pop. 1118.

BURLINGTON, p. v., Fayette t., capital of Lawrence co., O., 133 m. S.S.E. Columbus, 410 W. Situated on the N. bank of Ohio river, at the extreme S. point of the state, opposite to the mouth of Big Sandy river. It contains a court-house, jail, two churches, one Methodist, and one Presbyterian, a steam saw-mill, two carding machines, and about 250 inhabitants.

BURLINGTON, p. t., Calhoun co., Mich., 111 m. W. Detroit, 573 W. It contains one saw-mill, four schools, 84 scholars. Pop. 411.

BURLINGTON, p. v., Hampshire co., Va., 198 m. N.N.W. Richmond, 136 W. Situated on Patterson's creek, a branch of Potomac river, and contains one church, free to all denominations, one store, and several mechanic shops.

BURLINGTON, p. v., capital of Boone co., Ky., 83 m. N. by E. Frankfort, 506 W.

## BURNHAM.

**BURNHAMTON CTRY.** p. v. and capital of Des Moines co. Iowa, 573 m. W. It is one of the largest towns in the Ter. and was formerly the capital. It is pleasantly situated on the W. bank of the Mississippi, 248 m. above St. Louis, and 1489 m. above New Orleans. The ground rises by a gradual ascent from the river to the hills, by which it is encompassed. It is regularly laid out, and the streets, rising one above another, present many fine sites for dwellings. It is neatly built, and contains a court-house, jail, several brick churches, a mechanics institute, a United States land office, a fire-insurance company, five forwarding and commission houses, twenty-three wholesale and retail stores, various mechanic shops, two printing-offices, two weekly newspapers, several schools, and 1300 inhabitants. Two steam ferry boats here cross the Mississippi, and it is the seat of much trade. The view from the hills in the rear of the place is beautiful and extensive.

It was first settled by two enterprising white men in 1833, and two stores were opened in the course of the year. It was chartered as a city in 1837-8, and is governed by a Mayor and eight aldermen. It was formerly known as the Flint hills, an old trading post for the Indians, and in the few years which have elapsed since its settlement by the whites, it has become a flourishing city.

**BURNHAMTON, L.** Licking co., O. It has five schools, 264 scholars. Pop. 1932.

**BURNHAM,** a par. and village of England, co. Bucks, hund. Burnham; 30 m. E. London. Pop. 1921, 1918; 1831, 2137; houses, 363; area, 4110 acres. The village is a short distance from the Thames: its church is an ancient structure, and there is a national school. Fairs are held Feb. 23, May 1, and Oct. 2. Its ancient market has been long discontinued. The ann. val. of prop. in 1815 was £10,361. Its poor-rate average £1167. It is a place of great antiquity. The moated site of a palace of the kings of Mercia is still traceable. A nunnery, founded in 1163, existed till the general suppression.

**BURNLEY,** a market town of England, Lancashire, hund. Blackburn, par. Whalley, on the Burn, 180 m. N.W. by N. London, 30 m. S.E. by S. Lancaster, and 21 m. N. Manchester. Pop. in 1801, 3305; 1831, 6378; 1841, 54,192. Its name is derived from the river Burn or Brun, on which it is situated, which unites with the Calder immediately below the town. It stands in the middle of a narrow valley, and has been greatly improved and enlarged within the last twenty years. It is mostly built of freestone, and is well paved, lighted, and abundantly supplied with water. St. Peter's parochial chapel, built shortly after the Conquest, has been replaced by a more recent structure, built at different periods. It has in it the burial-place of the Towneley family, where, among other monuments, one has been erected to the memory of Charles Towneley, Esq., whose fine collection of marbles is now in the British Museum. The Independent, Baptists, Wesleyan and Primitive Methodists, and Roman Catholics have places of worship. A free grammar school was founded in 1578, to which the sons of tradesmen and others in the lower walks of life are admitted on paying a fee of £2 2s. a year, that fee paid by the sons of the higher classes being £3 3s. There are several other schools, and numerous charitable endowments and institutions. There are six county magistrates residing in the neighbourhood: two or more of whom usually attend the petty sessions which are held here every Monday. The town is a station for receiving votes at the election of members for the N. division of the county. The woollen manufacture, which was once carried on extensively, and which still exists here, has been nearly superseded by that of cotton, which is carried on upon a great scale in the town and neighbourhood. There were in the town and on its bounding streams, in 1835, seventeen cotton-mills, mostly wrought by steam, and employing 9040 work-people; and since then the trade and pop. of the town have greatly increased: the latter is now (1836) estimated at above 10,000. The articles produced are principally common printing calicoes. There are also extensive bleaching and printing works, with iron and brass foundries, machine manufactories, breweries, tanneries, rope-works, &c. The town is mainly indebted for its rapid growth and progress in manufactures to the abundance and cheapness of the coal found in its immediate vicinity, or, rather, directly below it; for here, as at Whitehaven and some other places, parts of the town have sunk from the roof of the coal mines not being properly supported. It is also well supplied with freestone, slate, &c. It has an easy communication with the surrounding districts by means of the Liverpool and Leeds canal, by which it is nearly encircled. Markets are held on Monday for corn, and on Saturday for general purposes: fairs on March 6, Easter eve, May 9 and 13, July 10, and Oct. 11; also for cattle on alternate Mondays, for woollens on the second Thursday in July, and for horses on the third Thursday in October. A branch of the Commercial Bank of England,

## BURSA.

and the banking-house of Birkbecks, Alcock, and Co., are established here. (*Baines's Lancashire, &c.*)

**BURNS,** t. Alleghany co. N.Y., 237 m. W. by S. Albany. Drained by Canasawga creek. It contains three stores, two grist-mills, four saw-mills, seven schools, 299 scholars. Pop. 867.

**BURNS,** t. Shiawassee co., Mich. It has one saw-mill, one school, 25 scholars. Pop. 257.

**BURNHAM,** p. t., Waldo co., Me., 34 m. E. Augusta, 630 W. It contains one store, two saw-mills, seven schools, 266 scholars. Pop. 602.

**BURNSIDE,** p. t., Clearfield co., Pa., 156 m. N.W. Harrisburg, 234 W. Pop. 556.

**BURNTISLAND,** a royal burgh and sea-port town of Scotland, co. Fife, on the N. shore of the Frith of Forth, 5½ m. N. Newhaven. Pop. (1841) 1859. It is dull, but a clean and well-built town, having a main street running nearly at right angles with the harbour, and some subordinate streets. It has a town-house, a parish church, a Presbyterian dissenting chapel, and a good school-house. Its harbour, though the best on the N. side of the Forth, nearly dries at low water; but it is said that this serious defect might be obviated at a moderate expense, by the extension of the piers. A considerable number of boats are employed in the herring fishery; but this branch of industry has greatly declined. It used to be exclusively carried on in the Frith of Forth during the winter season. That department is now, however, wholly abandoned; and the boats sent out by the Burntisland curers are employed, in summer only, at Fraserburgh or Wick. Their annual take may amount to 16,000 or 18,000 barrels; but only 748 barrels were cured at Burntisland in 1837. One or two ships are annually sent to the N. Sea whale fishery; and, exclusive of these and the herring-boats, a good coasting and other trading vessels belong to the port. Burntisland has been, of late, a good deal resorted to in summer by sea bathers. It has long formed one of the principal stations for the landing and embarkation of passengers crossing the Frith of Forth, the number so conveyed amounting to 16,635 a year, at an average of the three years ending with 1836. It is at present (1839) proposed to vest this ferry in a joint stock company, and to construct low-water piers. In the vicinity of the town is a large distillery. Burntisland unites with Kinghorn, Dysart, and Kirtaldy, in sending a mem. to the H. of C., and had, in 1838-39, fifty-three registered electors. (*New Statist. Account of Scotland, art. Burntisland, &c.*)

In 1601, the General Assembly met at Burntisland, when James renewed his vows as a Covenanter. It is a curious fact that the existing quays were built by Cromwell.

**BURRILLVILLE,** p. t., Providence co., R.I., 19 m. N.W. Providence, 269 W. Incorporated from Gloucester in 1806. Situated in the N.W. corner of the state. Drained by Branch river, issuing from Alum pond, on the line of Mass., which affords water-power. It contains one free church, a bank, four stores, two woollen-factories, one cotton-factory with 1056 spindles, five grist-mills, fifteen saw-mills, six schools, 448 scholars. Pop. 1933.

**BURR OAK,** p. t., St. Joseph co., Mich., 126 S.W. Detroit, 576 W. It has five schools, 89 scholars. Pop. 268.

**BURSA, BRUSA, or PRUSA** (*anc. Prusa ad Olympum*) a famous city of Turkey, in Asia, (Asia, cap. Bosphorus, 62 m. S. Constantinople, lat. 40° 9' 30" N. long. 29° 2' 45" E. Pop. estimated at 40,000 by Kianer; and at 100,000 by Fontanier; but probably about 60,000. It is beautifully situated at the extremity of a fertile, well-watered, and well-wooded plain, on the lower declivities of mount Olympus. Including the suburbs, which are more extensive than the city properly so called, it extends 2 m. from E. to W. and 1 m. from N. to S. (*Turner*). It is not well built; the houses being principally of wood, on the model of those of Constantinople: it is very subject to fires, and the streets are, for the most part, narrow. Tournefort says, that the latter are *bien plus de largeur, surtout dans le quartier du bazar*; whereas, according to Mr. Turner, who visited the town in 1815, "all the streets are badly paved, and most of them narrow and dirty." No doubt, however, this is one of the cleanest of the cities of Turkey; for a great number of streams that have their source in the upper parts of the mountain flow down several of the streets, and supply almost every house with a fountain. The castle, on a perpendicular rock near the centre of the town, most probably occupies the site of the acropolis of the ancient Prusa. Within its walls is a mosque, formerly a Greek church, in which are the tombs of Sultan Orchan, his wife, and children. The chief ornaments of the city are its mosques, which are exceedingly numerous. The most magnificent are those of the sultans Achmet and Osman, and the Oolah, or great mosque, in the centre of the city. The warm baths of Brusa are famous all over the East: the principal is that of Kaplitcha Hamman, about 1½ m. N.W. from the city. The heat of the water, which is slightly impregnated with sulphur, does not exceed 100° Fah. The water is se-

## BURSLEM.

ceived into a fine building, where there is every accommodation for bathers of both sexes. The *beacetein*, a large building with shops and ware-houses, and the bazars, which are extensive, are well supplied with merchandises, particularly with raw silk and silk stuffs. Great quantities of silk are produced in the adjacent plains; and very excellent silk and silk and cotton stuffs are manufactured in the city, and furnals, with raw silk, carpets, and velvets, the principal articles of export. The khans and colleges, or medresas, of Bursa are numerous, and may vie with those of any other city of the Ottoman dominions. On the whole, considering the fertility of the surrounding country, the beauty of the situation, and its comparative cleanness, it is one of the most agreeable of Turkish cities. "Here, indeed, it is, and at Damascus (if anywhere), that the destroying phrensy of the race of Osman seems to have been arrested in its career, and its menaces successfully defied by the productive powers of indulgent nature." (*Bursa*.)

Bursa was founded by Prusias, the protector of Hannibal, and was long the caput of Bithynia. We know little of it after it came into the possession of the Romans, though it was always famous for its baths, and admired for the beauty of its situation. It was one of the most considerable cities of the Greek empire. It was taken by Orchan, son of Othman, the founder of the Othman dynasty, in 1356, and became the seat of the Turkish power, and the ordinary residence of the sultans till Amurat removed the seat of government to Adrianople. (*Turner's Travels*, letter 21; *Kinney's Asia Minor*, &c., p. 245; *Walpole's Travels in various Countries*, II., 109, &c.; *Turner's Travels*, III., 163, &c.)

BURSLEM, a market town and par. of England, co. Stafford, N. division of Pirehill hund., 2½ m. N.W. Newcastle-under-Lyme, 19 m. N. Stafford. Pop. (1831) town 11,950, par. 12,714. It stands on a gentle eminence, near the Trent and Mersey canal, and is the principal town in that important district called the Potteries, the principal seat of the earthenware manufacture. It contains many well-arranged manufactories, neat and convenient dwelling-houses for the workmen and overlookers or superintendents of works, and some handsome houses for the proprietors. Its principal buildings are, a neat market-house or town-hall, an edifice of modern erection nearly in the centre of the town, one part of which is used as a police-office, and another as a news-room, which is well supplied with metropolitan and provincial papers; the old church, dedicated to St. Peter, built of brick, with a stone tower of much greater antiquity than the body; and a new district church, a handsome edifice, erected in 1838, under the authority of the commissioners for building churches. Burslem was originally a chapelry in the parish of Stoke, but was formed into a separate parish by act of parliament, in 1807. It is lighted with gas, and has a police force under the provisions of a local act. The living is a curacy in the archdeaconry of Stafford. There are places of worship for Baptists, Independents, Primitive Wesleyan, and New Connexion Methodists, and Roman Catholics, all of which, as well as the churches, have Sunday schools attached to them. There is also a national school, and a free grammar school for a limited number of boys. In 1835 there were here, in all, thirty-seven day and eleven Sunday schools. At a very early period Burslem was distinguished for its clay, and for its manufacture of earthenware and pottery, for which, in the 17th century, it was the principal place in the kingdom. The greater part of the inhabitants are engaged in the potteries, and in the earthenware manufacture, which has been brought to a state of beauty and excellence nearly approaching that of China. In *Domesday Book* this town is written *Barcardeslun*. The market days are Monday and Saturday. Fairs for cattle and horses are held in Feb., April, June, October, and December.

BURTON-ON-TRENT, a market town and par. of England, partly in the N. division of Offlow hund., co. Stafford, and partly in the hund. of Repton and Greasey, co. Derby. Pop. (1831) 6088, of which were resident in the town 4400. The town, situated in a fertile vale on the N. bank of the Trent, 13 m. N.E. Litchfield, 23 m. E. Stafford, 125 m. N.N.W. London, consists chiefly of one long street running from the place where the abbey stood to the bridge, and of another intersecting it at right angles. Of late it has been considerably improved, and is now paved and lighted with gas. The town hall, erected at the expense of the Marquis of Anglesea (the lord of the manor), who owns the greater part of the property in the neighbourhood, is a handsome building, and contains, in addition to the usual offices for transacting public business, an elegant suite of assembly-rooms. The old church, dedicated to St. Mary and St. Modwen, formerly connected by a cloister with the abbey founded in 1004, was rebuilt in 1792. The new church, erected in 1823 in the Gothic style, is a handsome edifice. But the most celebrated structure of the town is the ancient bridge over the river, erected prior to the Conquest, and substantially repaired in the reign of Henry II. It has

## BURY.

thirty-seven arches, and is 1545 ft. in length, being considered the longest bridge in England. The government of the town is vested in a high and low steward, and a bailiff, appointed by the lord of the manor. The bailiff is also justice of peace and coroner. A court leet and court baron are held annually, as also two probate courts for proving wills. There is likewise a court called the "Genter's Court," held every third Friday before the steward or his deputy, for the recovery of debts not exceeding 40s., the jurisdiction of which extends over the whole parish. The power to try and to execute criminals, and to hold courts of pleas to any amount, was formerly enjoyed by the town, but has long since ceased. The inhabitants, by virtue of the letters patent granted in the 11th of Henry VIII., are exempted from serving the office of sheriff, and from being summoned as jurors at the assizes and sessions for the county. There are various places of worship for Independents, Wesleyan Methodists, and General and Particular Baptists. There are also Sunday schools attached to the different churches and chapels; a national school, and a free grammar school, founded and endowed in 1590 by the then abbot, William Beane. In 1835 there were, in all, nineteen day and six Sunday schools. There is also a literary institution, entitled "The Burton Permanent Subscription Library," an almshouse for eleven poor women; a dispensary; and a savings' bank. Considerable estates for charitable and other purposes are vested in trustees. In the time of Leland, Burton was famous for its alabaster works, but how long they were continued is not known. The principal manufacture carried on at present is that of its justly famous ale. Contrary to general usage, the brewers prefer in its preparation hard water to soft; and though the Trent runs close by, they use that water only which they obtain from their pumps. It has also fabrics of hats, cotton, tanneries, and light woolen stuffs; with iron furnaces and manufactories of tools; two or three rope-walks, tanneries, a cotton-factory, &c. The Trent and Mersey canal (or Grand Trunk) passes Burton, and unites with the Trent about 1 m. lower down; and the Trent itself, which falls into the Humber, is navigable for vessels of some burden from Gainsborough up to the town; so that, by means of the facilities thus afforded and otherwise, the town can easily communicate with almost all parts of England. The old abbey, a once magnificent pile, of which now scarcely a vestige remains, enjoyed many privileges: the abbots occasionally sat in parliament. Burton suffered greatly during the civil commotions in the reign of Charles I., and was several times taken and retaken by the contending parties. The market-day is Thursday. There are four annual fairs, one of which lasts fifteen days. The six days before Oct. 29 are for horses: the others are for cattle, horses, and pedlary: a cheese fair has also recently been opened.

BURTON, p. t., Cattaraugus co., N.Y., 297 m. W. by E. Albany, 312 W. Watered by Alleghany river and its tributaries. The line of the New-York and Erie rail-road passes through it, along Alleghany river. It contains one store, one fulling-mill, one grist-mill, four saw-mills, two schools, 39 scholars. Pop. 530.\*

BURTON, p. t., Georgia co., O., 165 m. N.E. Columbus, 330 W. Watered by Cuyahoga river. It contains six stores, three grist-mills, seven saw-mills, five schools, 357 scholars. Pop. 1022.

BURTON, L., Luzerne co., Pa. It contains one store, two flouring-mills, one saw-mill. Pop. 733.

BURTSCHIED, or BORCETTE, a town of the Prussian states, prov. Rhine, reg. Aix-la-Chapelle, of which city it is almost a suburb. Pop. 5200. It has broad streets, good houses and promenades. There are here important manufactures of cloth, cassimeres, and needles. The last, which is conducted on a large scale, and with great success (employing, with the needle manufacture in Aix-la-Chapelle, nearly 1000 work-people), is principally carried on by Protestants driven from Aix-la-Chapelle. It has several hot springs; they, however, differ essentially from the springs of the neighbouring city, and resemble those of Wiesbaden. (*Schreiber; Murray's Hand-book*.)

BURY, a par. par. bor., and town of England, co. Lancaster, div. Bolton, hunds. Salford and Blackburn. The town is situated on the left bank of the Irwell, 3 m. above its confluence with the Roch; 8 m. N.N.W. Manchester. The townships of Bury and Elton, included in the par. borough, comprise an area of 4360 acres; and had, in 1831, 13,480, and, in 1841, 77,496 inhabitants. The general appearance of the town has been greatly improved of late years, by widening the streets and approaches, and the erection of handsome modern structures. The church is a large, handsome structure, rebuilt in 1773; besides this, there are five Episcopal chapels in the parish, and about twenty dissenting places of worship; one of the former and seven of the latter being in the town. There is a free school, founded in 1736, the present income of which is £442; it has two exhibitions, either to St. John's Coll.,

## BURY ST. EDMUNDS.

Cambridge, or Brasenose Coll., Oxford: 75 scholars are educated, one third in classics, under the head master; the rest in accounts, &c., under the second master; and 10 girls, under a mistress. Another school, founded in 1748, for 80 boys and 30 girls, has been changed to a national school, and a spacious school-room been built for it. Here is, also, a dispensary, a public library, a mechanics' institute, several public news-rooms, and a horticultural society; all established within a recent period. The weekly market is held on Saturday; and three annual fairs on March 5, May 3, Sept. 18. The manufactures are annually increasing in amount and value. The principal branches consist of cotton and woollen spinning, and weaving, both by hand and power looms; with calico-printing, bleaching, and machine-making. Within a recent period, additional reservoirs have been formed on the banks of the Irwell, and the advantages of the numerous mountain-streams that feed it have been greatly extended. In 1836, there were in the parish eighty-two cotton-mills and fifteen woollen-mills, employing altogether sixty-one steam-engines, with an aggregate power of 1905 horses, and ninety-nine water-wheels, with the power of 977 horses. There were, at the same time, 2067 power-looms, employed in weaving calico; 6954 in weaving fustian; and 980 in weaving woollen goods. There were, in all, 8195 hands then employed in these manufactories, independently of those employed in other factories, coal-mines, &c.; the last employ between 600 and 700 hands. There is a canal and railway communication between Bury, Bolton, and Manchester, for goods and passengers. The ann. val. of prop. in the township only, was estimated, in 1815, at £16,546, and in 1839, at £34,954; that of the entire parish, in 1815, at £60,903, and in 1839, £109,993. Three courts-leet for the manor are held annually, in April, Whituntide, and Oct.: their jurisdiction is co-extensive with the parish. A court-baron is held every third week, for the recovery of debts under 40s.; and petty sessions are held every Friday in the town. The Reform Act conferred on Bury the privilege of returning one mem. to the H. of C. Houses in the parl. borough, in 1832, 3497, of which 353 were rated at £10 and upwards: registered electors, in 1837-38, 678.

The parish of Bury extends over 32,000 acres; and had, in 1831, a pop. of 47,629. Besides that of Bury, it comprises four townships and three chapels. The greater part is a stiff loam, varying in fertility: a small portion only is under the plough. It contains good quarries of building stone, and those of Horncilff produce excellent flags and slates. There are nine coal-mines wrought, so that the factories and inhab. have an abundant supply of fuel within the limits of their own parish. The first distinct notice that occurs of the manufactures of Bury is in Leland's Itinerary, in the reign of Henry VIII.; they were then exclusively of woollen, which is still carried on to some extent. In 1738, John Kay, a native of Bury (though at the time residing in Colchester) invented the fly-shuttle; and in 1760 Robert, a son of the former, the drop-box, by which patterns of various colours are woven nearly with the same facility as plain calico; the setting of cards by machinery also originated in the same family, and in Bury. In 1791, Henry Whitehead, the post-master of Bury, suggested the mode of piecing the ends of broken yarns, in spinning, without stopping the machinery, as had previously been necessary. But the circumstance which chiefly contributed to bring Bury into repute, as the seat of any peculiar branch of the cotton manufacture, was the establishment of large print-works by a firm, of which the late Sir Robert Peel, Bart., was at the head: the perfection to which calico-printing was there brought, not only enriched the parties, but added largely to the wealth and importance of the town. This establishment, with its numerous workshops, ware-houses, and dwellings, is still in full activity; as are also the large manufactories of the same company on other streams, notwithstanding the many changes that have taken place in their ownership. The Right Hon. Sir Robert Peel, the present distinguished parliamentary leader, was born at Chamber Hall, in the immediate vicinity of the town. (*Beine's Hist. Lancashire; Parl. Pap. and Rep.*)

BURY ST. EDMUNDS, a parli. bor. and town of England, co. Suffolk, hund. Thingoe, 60 m. N.E. by N. London. Pop. in 1821, 9999; in 1841, 12,347; houses at latter date, 2517. It is finely situated on a gentle eminence on the W. side the Lark, amid a richly cultivated, alluvial district. Streets broad, well paved, and lighted; houses mostly uniform, and well built, and the whole town has a cheerful, neat appearance. St. Mary's church (finished in 1433) is a fine Gothic structure, with a low Norman tower. St. James's church, finished after the Reformation, is a handsome building. Its belfry, at some little distance, was originally the grand entrance into the burial-ground of the old monastery: it is of a quadrangular shape, eighty feet in height, remarkable for strength and simplicity, and forms one of the finest extant relics of Saxon architecture. There

## BUSHIRE.

are two Independent chapels; and the Catholics, Friends, Baptists, Methodists, and Unitarians have each places of worship. There is an ancient guild hall, in which the bor. courts are held; a shire hall for the assize courts; a county jail on a radiating plan, built in 1805; and a bridewell (an ancient Norman building). The free grammar school (founded by Edward VI.) has six exhib. to either of the universities, a scholarship in Corpus Christi, and another in Jesus College, Cambridge; it educates 100 boys, and holds a highly respectable station among English schools. It has also a charity school for forty boys; two others where fifty girls are clothed and instructed; and two Lancasterian schools for boys and girls established in 1811. There are ninety-eight almshouses, endowed by various benefactors, and under the management of trustees, who have about £2600 a year in their hands for various charitable purposes. Clapton's Hospital (whose annual revenue is £300) supports six widowers and six widows, decayed housekeepers; the General Hospital (established in 1855) accommodates fifty patients. There are also a theatre, built in 1819, with concert, assembly, and billiard rooms; a good subscription library, a mechanics' institute, and botanical gardens, supported by subscription. Weekly markets are held, one on Wednesdays for corn, the other on Saturdays for general provisions. The annual fairs are held on Easter Tuesday, a pleasure fair; Oct. 1, for horses, cattle, butter, and cheese; a great fair, commencing Oct. 10, and lasting about three weeks; and Dec. 1. About a mile from the town the Lark becomes navigable to Lynn for barges, whence coals and other commodities are brought. Spinning yarn was formerly a great source of employment to the poor of the town, but at present it has no manufactures.

The bor. is co-extensive with the two parishes of St. James and St. Mary, the area being 2835 acres; it is divided into two wards, and governed by a mayor, three aldermen, and eighteen councillors. Petty sessions for the bor. are held every Thursday; a mayor court, for small debts, every third week; a court of pleas, monthly; and courts of general sessions thrice a year, in Feb., June, and Nov. The quarter sessions and assizes for the co. are also held in the town. The total number of offenders committed in 1837 was 450; of these seventy-eight were tried at the assizes, 396 at the co. quarter sessions, and seventy-six at the local courts. The property of the corp. consists of lands and houses in the bor., the livings and tithes of both parishes, and the tolls of the markets and fairs; the ann. average revenue is £1000; a fee-farm rent is paid the crown, and a stipend of £100 to each of the church ministers. Ann. value of real prop. in 1834, £48,784. The poor-rates for the year ending Ladyday, 1837, amounted to £2887. The bor. has returned two members to the H. of C. since the 12th of James I.; previously to the Reform Act, the right of election was in an alderman and thirty-six burgesses; the former had a casting vote, and was returning officer; it was, in fact, a nomination bor., in the hands of two peers of opposite political principles. It has about 730 houses of the ann. value of £10 and upwards; and had, in 1837-38, 665 registered electors.

A monastery was founded here in 633, to which, in 983, the body of St. Edmund, the Saxon king, was transferred; hence the name. Canute expelled the secular monks, and transferred thither a convent of Benedictines from Norfolk; his, and other subsequent endowments, made this abbey inferior only to that of Glastonbury; it possessed the franchises of many separate humds., and the right of coining; its abbot sat in parliament, and had power to inflict capital punishment, and determine all civil suits within the liberty. The abbey gateway and bridge, and portions of the walls, still remain; its ann. value, in 36 Hen. VIII., was (according to Dugdale) £1659, (Speed) £2336 18s. There were a few other establishments, of minor importance, in the town previous to the general suppression.

Sir Nicholas Bacon, bishops Gardiner and Pretyman, and Dr. Blomfield (the present bishop of London) were born in the town. It confers the title of viscount on the Keppel family. Ickworth, the magnificent seat of the marquis of Bristol, is within about three miles of the town.

BUSACCO, a convent of Portugal, pop. Belra, on the ridge called the Sierra Busacco, 17 m. N. by E. Coimbra. Here, on the 27th September, 1810, a French army of 63,000 men under Marshal Massena, were repulsed with great loss in an attack on the position occupied by the Anglo-Portuguese army, about 40,000 strong, under the Duke of Wellington. But, though unable to force this position, Massena succeeded in turning it, when the allies retreated upon the lines at Torres Vedras.

BUSH CREEK, t. Washington co., Ark. Pop. 296.

BUSH CREEK, t. Scioto co., O. It has two schools, 45 scholars. Pop. 401.

BUSHIRE (more properly ABOUSHEHR, or ABUSHAHR, Arab., the father of cities), a sea-port town of Persia, pop. Fars, and, excepting Bussora, the principal

## BUSHIRE.

port of the Persian gulf, on the N.E. coast of which it is situated; 130 m. W.S.W. Shiraz, and 255 m. S. by W. Isfahan; lat. 32° N. long. 60° 48' E. Pop. uncertain, and variously estimated at from 8000 to 15,000. It is built at the N. extremity of a low, sandy peninsula, about 11 m. in length, by 4 m. in breadth at its widest part, on its E. side enclosing a deep bay or harbour. The town is thus surrounded on all sides by water, except towards the S., where a mud wall (useless as a fortification), about  $\frac{3}{4}$  m. in length, has been built across the isthmus between the bay and the sea. Viewed from the sea, it has rather a handsome appearance. It is, however, a mean, wretched place, without bustle or movement of any kind. The whole number of dwellings are said not to exceed 1500, of which a third, at least, are reed enclosures, scarcely deserving even the name of huts, as most of them are unroofed. The houses are built chiefly of a friable stone, composed of sand and shells imbedded in clay, and the best of them are constructed of burned bricks brought from Bussorah; but excepting the E. I. Company's factory, the residence of the governor, and a few good dwellings of the merchants, there is scarcely one comfortable, and certainly not one handsome, edifice in the place. Some of the principal houses have *badgers*, that is, wind-catchers, or spires of a square form, open at each side; and which, acting as a funnel, and admitting the air from every quarter, ventilate and cool the houses. The streets are so many narrow, unpaved alleys, without order or regularity, or sufficient height of wall on either side to shelter the passenger from the sun. The mosques are all open buildings, and inferior to those seen in the smallest villages of Arabia; there are but few coffee-houses, and the solitary bath is small, filthy, and badly attended. Water is exceedingly bad; that fit for drinking having to be brought in goat-skins a distance of 16 m. In dry and windy weather, the dust and flies constitute an almost intolerable nuisance. On the S.W. side of the town, facing the outer road, the beach, which is level and sandy, is beat by an almost constant surf, though not so violently as to prevent the landing of boats in moderate weather. The N.E. side, facing the inner harbour, has a wharf or two for landing goods, and is better sheltered. Owing to the numerous sand-banks, the inner harbour is not always easily accessible even for boats; but it is always preferred as the safest and best landing-place. Ships of more than 300 tons burden lie in the outer roads, six miles from the town, where there is good anchorage, subject, however, to all the fury of violent N.W. and S.W. winds, which are very prevalent, often obliging ships to part their cables and bear up for Karak, or elsewhere. Ships of 300 tons burden or less may anchor in the inner roads to the N. of the town, but still six miles distant. By reason of a bar, the inner harbour is only accessible, at high water springs, to ships drawing 18 ft., and at other times to vessels drawing 8 or 9 ft. The water immediately to the E. of Bushire is deep; and it appears from the older descriptions of the place, that the company's cruisers were formerly able to anchor close up to the N.E. side of the town; but the channel leading up to this will now scarcely admit of small draws, except they be lightened. Some islands in the N.E. part of the bay give sufficient shelter to native boats and other small craft.

Bushire is the principal entrepôt for the supply of Persia with Indian goods. It has a considerable trade with Bombay and Calcutta, especially the former; and through them receives most of the goods brought to it from Europe, China, and the E. Archipelago. Few ships touch at Bushire without also touching at Bussorah, and conversely. The imports from Bengal are rice, sugar, indigo, pepper, and spices, with a small assortment of muslin and piece-goods. From Bombay are brought iron, steel, tin, lead, woollen cloths, cutlery, &c., with sugar, sugar-candy, preserved ginger, porcelain, &c., the produce of China; and camels, cloves, nutmegs, and other productions of the E. Archipelago. The demand for English cotton prints is said to be increasing in Persia, while that for the fabrics of Germany and Switzerland is diminishing. Coffee is supplied from Mocha and other Arabian ports, but to no great amount, as it is not in very general use in Persia. The returns to India are mostly in horses for cavalry service; dates, and dried fruits, assafœtida, carpets, Cashmere, and Kerman shawls, Kerman wool, tobacco, old copper, turquoises, atar of roses, rosewater, &c., but chiefly in money. The other exports of Bushire are raw silk and silk goods, Shiraz wine, grain, gall-nuts, pearls, yellow-dye berries, and various drugs. The Russian provinces on the Caspian derive their supplies of indigo from Persia, by way of Bushire. The trade of the port is crippled by the imposts laid on goods passing to the capital, and the unjust and injudicious appropriation of goods on the part of the government. Formerly it was much injured by the pirates; but, thanks to British interference, these are now all but suppressed.

The merchants of Bushire are about equally divided between Persians and Armenians; the latter are the more ac-

## BUSSORAH.

tive, intelligent, and wealthy. There are no Jews of any note, as at Bussorah; nor Banians, as at Muscat. The E. I. Company has a resident here. The population generally is a mixture of the Persian and Arab races. (*Niebuhr*; *Kinnaird's Memoir*; *Buckingham's Travels*; *Dict. of Com. Merc.*)

**BUSHKILL**, t., Northampton co., Pa., watered by Bushkill creek. It contains one store, one forge, four grist-mills, four saw-mills, three schools, 160 scholars. Pop. 1716.

**BUSHWICK**, t., Kings co., N. Y., 3 m. E. Brooklyn, 148 m. S. Albany. Situated on the W. end of Long Island, and drained by Newtown creek. Dairies are kept for the purpose of supplying the city of New-York with milk, which produces \$13,800 annually. It has ten stores, four rope-walks, and various other manufactures, which, together, employ a capital of \$55,000. It has six schools, 155 scholars. Pop. 1595.

**BUSSORAH**, called also **BALSORA**, **BASRA**, and **BUSSRA**, (Arab. *a margina*), a city of Turkey in Asia, pach. Bagdad, the most E. part of note in the Turkish dom., and the principal port of the Persian gulf, on the right or S.W. bank of the Euphrates, or, as it is here called, the *Shat-ul-Arab* (*river of the Arabs*), 70 m. from its mouth, and 45 m. below its junction with the Tigris, 270 m. S.E. Bagdad, and 220 m. W.N.W. Bushire: lat. 30° 28' 30" N., long. 47° 34' 15" E. Pop. probably 60,000.\* The form of this city is an irregular oblong, lying E.N.E. to W.S.W., or at right angles with the course of the river, from which it is a few hundred yards distant. Length about 3 m., breadth opposite the river about 1 m.; circuit estimated at from 7 to 9 m. The space actually occupied by buildings does not, however, comprise above a fourth part of this area, the rest being laid out in corn-fields, rice-ground, date-groves, and gardens, intersected by a number of little canals. Bussorah is surrounded by walls, built of sun-dried bricks, with a parapet at the top, having loopholes for musketry, and occasionally ports for cannon, but of these very few are mounted: it has five gates, and is divided into 70 *mahalls*, or quarters. Two canals, cut from the river, surround the city on either side, within a few yards of the walls, and uniting beyond the W. wall, form a complete ditch to the fortifications. A third canal leaves the river nearly midway between the other two, and is carried through the whole length of the city, serving at once to supply the inhabitants with water for domestic purposes, to irrigate the fields and gardens within the walls, and to admit of the transportation of goods. These canals are filled by the flood, which usually rises 9 feet, and left nearly dry at ebb-tide. They are mere channels dug out of the soil, without being lined by masonry; and the few brick-built bridges thrown over them in different parts of the city are of the meanest kind. Bussorah is wretchedly built; the streets are narrow and unpaved; and, notwithstanding the facilities afforded by the ebb and flow of the tide in the canals for the removal of impurities, it is most disgustingly filthy. No stone of any kind, and scarcely any wood, excepting that of the date-tree, which is very unfit for carpentry, are found within many miles of the city, which is mostly constructed of sun-dried bricks. The English factory, the *serai* of the *Mutesellim* (residence of the governor), one or two of the principal mosques, and perhaps half a dozen mansions of the richest inhabitants, are the only buildings of kiln-dried bricks, and in fact, the only decent edifices in the place. There are about 40 mosques, innumerable *khanas* and coffee-houses, and a wretched bath: the bazars, though stocked with the richest merchandise, are not arched, as in Bagdad and other Persian cities; but are miserable structures, covered only by mats laid on rafters of date-trees. Bussorah is a place of considerable trade, being the grand emporium of the Turkish empire for Indian and other eastern produce. Its situation is, in this respect, so favourable, that notwithstanding the obstacles arising from bad government and unsafe access, both by land and sea, it continues to command a considerable traffic; almost every inhabitant being in some way or other concerned in trade. At the mouth of the *Shat-ul-Arab* there is a bar which has commonly only about 12 feet water; but the channel within is deep, and ships of 500 tons burden, provided they cross the bar at spring tides, may, without difficulty, ascend the river as far as the city. At an average, five or six British ships arrive in the course of the year from India; but the principal part of the trade is carried on in Arabian bottoms, particularly in those belonging to Muscat. The imports are muslins and piece-goods, pepper, and other spices, drugs, rice, sugar, indigo, silk, cotton yarn, Surat manufactures, shawls, Chinaware, and paper, dye-woods, coffee, lac, beads, sugar-candy, and other articles, the produce of India; with lead, iron, steel, tin, quicksilver, cochineal, &c., exported to that country from Europe. The returns to India are mostly made in

\* Niebuhr estimated the population at from 40,000 to, at most, 50,000 (*Voyage*, ii., 176, P. fr. ed.); and Kinnaird and Keppel at 60,000. Buckingham a very inferior authority, estimates it at nearly 100,000.

the precious metals, Arabian horses, pearls, dates (a staple product of Bussorah), copper, gall-nuts, raw silk, gold fringe, coral, gums, rose-water, assafetida, almonds, dried fruits, &c. Of these, gold and silver coin and horses constitute the principal articles. The average cost of the horses sent to Bengal is, on their arrival at Calcutta, including all expenses, about 8000 rupees or £300; that of those sent to Bombay is about 800 rupees, or £30, each. From Persia, Bussorah imports shawls, assafetida, and fruits, and a few horses from Bushire; coffee, dates, and gums, from Arabia; pearls from Bahrain; coral from the Mediterranean, by way of Aleppo, &c. Among the returns to Persia, through Bushire, are a good many English cotton prints, received at Bussorah from the Black sea, Smyrna, and Constantinople. A taste for British cottons and woollens is now forming in all the vast countries watered by the Euphrates and Tigris, which it is of importance to this country to promote and encourage. (For the import and export duties on commodities, see TURKEY.)

The trade with Aleppo and Bagdad is conducted by means of caravans. The naval force of Bussorah was once sufficiently powerful to command the whole of the Persian gulf, and to suppress the marauding expeditions of the pirates who have infested it. It has now, however, dwindled to almost nothing.

The boats used upon the canals are of many different kinds, two of which may be worth notice. The first is a light canoe, long, narrow, and drawing only a few inches water, and impelled forwards by two boatmen, who stand in the head and stern, and often use short paddles alternately from side to side, presenting the appearance which Arrian, in his account of the voyage of Nearchus, describes as belonging to the boats at Kophos, the men in which seemed not so much to row as to dig the water with their oars, and to toss it up as a labourer throws up the earth with his spade. The second is a circular kind of boat of basket-work covered with bitumen, of shallow draught, capable of containing six or eight persons, and which are paddled or spun along, making a circular motion. The ebb tides occupying always twice as long a time as the flood, and the chief canal being much too small for the convenient passage of the vessels employed on it, great activity and corresponding confusion takes place for a short period only, after which most of the craft are grounded till next tide. Great inconvenience sometimes occurs from laden vessels losing the springs and lying flat till the next spring tide in the centre of the channel, and blocking up all passage for smaller vessels, an inconvenience which a little outlay in widening the canal would effectually obviate. But what improvement need be looked for from a Turkish government? About half the inhabitants are Arabs, one fourth Persians, and the remainder a mixture of Turks, Armenians, Jews, Catholic Christians, and Koords. The Turks are few, perhaps not above 500; they, as well as the Arabs, are of the Sunnite sect, excepting a small body of Arab Christians, who call themselves Subbees, or disciples of John the Baptist. The Persians, who are of the sect of the *Shiites*, engross most of the intermediate stations in commerce, as those of clerks, shopkeepers, mechanics, &c., while among the Arabs, a man is either in easy circumstances or a mere labourer. The Armenians do not exceed 50 families; they are chiefly merchants and brokers; they have a small church, with two or three priests. The Jews amount to about 100 families; they are similar to their tribe elsewhere. The Catholic Christians are about 20 families: some are natives of Bussorah, others are recent settlers from Bagdad and Aleppo. The Subbees are a singular sect, scattered over the plain of the Euphrates, very limited in numbers, and constantly intermarrying. They practise no fasts, but baptism is frequently performed on the same individual; their places of worship are all temporary; they are very particular as to the purification of their food; and are said to hold a breach of trust in abhorrence. They are mostly mechanics and handicraftsmen, especially smiths and workers in metals. The Indians in Bussorah are chiefly Banians; and the sepoys of the British factory guard are mostly Hindoos. Some few have their women with them; altogether, they may amount to 200. The few Koords are mostly engaged under the Turks in inferior offices of trust, and in the army. Bussorah formerly constituted a separate pachalik; but its governor has for a long period been sent from Bagdad, to the pachas of which he is subordinate.

The country around Bussorah has no beauties to recommend it. It is, for the most part, a dead flat. Corn, dates, olives, pomegranates, and other fruit, vegetables, and pot-herbs, are cultivated, and there are whole fields of roses grown for the distillation of the attar, and rose-water. Wherever portions of this plain are enclosed near the city walls, and irrigated for a few years from the canals, fine garden-plots are soon produced; and, under a good government, the whole of it would no doubt become of the most exuberant fertility. At present, however, few villages or

people are to be seen without the walls of the city; a melancholy and gloomy silence prevails; and on the W. and S. nothing is seen but a dreary desert extending as far as the eye can reach, with no object to break the line of the horizon but the tops of the houses of Zobair just seen above it, and the range of Geb-el Senam. For six months of the year Bussorah is quite surrounded by water, like an island in the midst of a sea. Summer is extremely hot, and in autumn the city is unhealthy. Winter and spring are delightfully cool, refreshing, and salubrious; and Bussorah is at these seasons resorted to by invalids from India.

In the English factory, established in 1640, there is an English resident; but, with this exception, there are no Europeans in the place. The French factory has merely a nominal existence; the officer under whom it is placed resides at Bagdad.

Bussorah originated from a town now called Zobair, 8 m. to the S.W., founded by the caliph Omar in 635 or 636, on a canal supposed to be the ancient Palaeopos. In a few years it became one of the largest and most flourishing cities of Arabia; but the canal being neglected, and becoming useless, the ancient site of the city was abandoned. The present city was taken by the Turks in 1668, by the Persians in 1777, and by the Mometik Arabs in 1787. A few months after the latter conquest it was retaken by the Turks, to whom it has ever since belonged. (*Kinnaird's Persian Empire*, p. 298-299; *Niabuk, Voyage en Arabie*, ii., 179-186; *Keppel's Journey from India to England*, i., 69-73; *Buckingham*, ii., 196, 207.)

BUSTI, p. L. Chataugue co., N. Y., 332 m. W. by S. Albany, 336 W. Bounded N. by Chataugue lake. It contains one store, one grist-mill, five saw-mills, sixteen schools, 726 scholars. Pop. 1894.

BUTE, a co. of Scotland, consisting of the islands of Bute, Arran, the Cumbraes, and Inchmarnock, all in the Frith of Clyde. Its total area is estimated at about 165,000 acres, of which about 60,000 are cultivated, 40,000 improvable, and 65,000 unimprovable. It contained, in 1841, 5 parishes, 3067 inhab. houses, and 15,095 inhab. being 6485 males, and 7656 females. Valued rent, £15,042, Scotch; annual value of real property in 1815, £32,541. The co. returns one mem. to the H. of C.; registered electors, 1838-9, 374.

BUTTS, the island whence the above co. takes its name, in the Frith of Clyde: it is separated from the district of Cowall in Argyshire by a narrow, winding channel, called the Kyles of Bute, is about 5 m. W. from the nearest point of the Argyshire coast, and is about 19 m. in length (N.N.E. and S.S.W.) by about 4 in breadth. Pop. in 1831, 6630, of which 4817 belonged to the bor. of Rothesay. Its N. extremity, towards Argyre, is bleak and rugged, but its central and S. parts consist for the most part of undulating grounds, with moderately good soil, fit either for tillage or pasturage. The climate is remarkable for mildness and salubrity, but is particularly humid, which renders it not so suitable for agriculture as for the raising of cattle. Agriculture has, however, been materially improved of late years; and a good deal has been done in the way of consolidating farms, building improved houses, opening new roads, &c. The town of Rothesay on the E. coast, famous for its old castle, once the residence of the Scottish monarchs, is now become, in the summer seasons, a favourite resort of the citizens of Glasgow. The principal part of the island belongs to the Marquis of Bute, whose seat, Mount Stuart on the E. side of the island, a little to the S. of Rothesay, is his chief ornament. Most part of the inhab. speak Gaelic; but the use of English is daily becoming more prevalent. Kean, the eminent tragedian, had a seat, in a secluded situation, in the interior of the island.

BUTLER, county, Pa. Situated in the W. part of the state, and contains 800 sq. m. The Allegheny river touches its N.E. and S.E. corners. Drained by Shippen Rock and Conemaugh creeks, which flow W. and unite before entering Beaver river. It contained, in 1840, 26,051 neat cattle, 51,191 sheep, 40,144 swine; and produced 254,914 bushels of wheat, 107,703 of rye, 125,007 of Indian corn, 91,361 of buckwheat, 698,179 of oats, 206,138 of potatoes. It had fifty-nine stores, three furnaces, three fulling-mills, four woolen-factories, two powder-mills, fifty-four grist-mills, sixty-four saw mills, four oil-mills, five potteries, twenty-two tanneries, thirteen distilleries, two printing-offices, two weekly newspapers, two academies, 119 students, 134 schools, 3523 scholars. Pop. 22,373. Capital, Butler.

BUTLER, county, Ala. Situated in the S. part of the state, and contains 1000 sq. m. Drained by branches of Conecuh river. It contained, in 1840, 5550 neat cattle, 1129 sheep, 10,757 swine; and produced 3198 bushels of wheat, 116,766 of Indian corn, 4203 of oats, 8302 of potatoes, 696,303 pounds of cotton. It had fourteen stores, one cotton-factory, with 984 spindles; twenty-three grist-mills, sixteen saw-mills, four tanneries, six academies, 236 students,

## BUTTERMILK CHANNEL.

also schools, 233 scholars. Pop.: whites, 6192; slaves, 2470; free-coloured, 23; total, 8685. Capital, Greenville.

**BUTLER**, county, Ky. Situated W. of the central part of the state, and contains 570 sq. m. Watered by Green river, which is navigable through the co. It contained, in 1840, 5784 neat cattle, 4978 sheep, 21,564 swine; and produced 15,313 bushels of wheat, 183,089 of Indian corn, 35,424 of oats, 4103 of potatoes, 170,776 of tobacco, 16,400 of cotton, 10,584 of sugar. It had six stores, two flouring-mills, seven grist-mills, three distilleries, one academy, 51 students, three schools, 98 scholars. Pop.: whites, 3370; slaves, 515; free-coloured 4; total, 3885. Capital, Morgantown.

**BUTLER**, county, O. Situated in the S.W. part of the state, and contains 480 sq. m. The Miami river and the Miami canal cross it. It contained, in 1840, 31,908 neat cattle, 20,173 sheep, 68,595 swine; and produced 318,730 bushels of wheat, 20,391 of rye, 2,943,661 of Indian corn, 1780 of buckwheat, 12,556 of barley, 550,000 of oats, 46,035 of potatoes, 38,900 pounds of sugar. It had 131 stores, two lumber-yards, one fulling-mill, six woolen-factories, seventeen flouring-mills, twenty-one grist-mills, thirty-eight saw-mills, four oil-mills, two paper-mills, ten tanneries, forty-nine distilleries, two breweries, three potteries, three printing-offices, one daily and two weekly newspapers, two colleges, 254 students, one academy, 69 students, seventy-nine schools, 2837 scholars. Pop. 28,173.

**BUTLER**, p. t. Wayne co., N. Y., 178 m. N.W.N.W. Albany, 238 W. Drained by small streams flowing into lake Ontario. Chartered in 1896. It contains one Methodist and one Baptist church, one store, one grist-mill, two saw-mills, one distillery, one tannery, eleven schools, 735 scholars. Pop. 2871.

**BUTLER**, p. b., capital of Butler co., Pa., 203 m. N.N.W. Harrisburg, 245 W. Situated on the N. side of Connequenessing creek, a branch of Mahoning river. Incorporated in 1817. It contains a court-house, a handsome building on elevated ground on a public square, which has fine and capacious public offices attached; a jail of stone, an academy endowed by the state, which has a stone edifice; five churches, one Presbyterian, one Methodist, one Episcopal, one Unitarian, and one Roman Catholic; thirteen stores, three tanneries, one pottery, two printing-offices, two weekly newspapers, two academies, 119 students, two schools, 125 scholars, and over 100 dwellings. Pop. 861. The township contains two powder-mills, four grist-mills, seven saw-mills, one oil-mill, one brewery, fourteen schools, 350 scholars. Pop. 1384.

**BUTLER**, t., Luzerne co., Pa. It contains one store, one flouring-mill, nine saw-mills, two schools, 80 scholars. Pop. 514.

**BUTLER**, t., Branch co., Mich. It has three schools, 40 scholars. Pop. 234.

**BUTLER**, t., Columbiana co., O. It has seven schools, 241 scholars. Pop. 1711.

**BUTLER**, t., Dark co., O. Pop. 1116.

**BUTLER**, t., Montgomery co., O. It contains one fulling-mill, one woolen-factory, five grist-mills, four saw-mills, two tanneries, five distilleries, six schools, 325 scholars. Pop. 1896.

**BUTLER**, t., Knox co., O. Pop. 647.

**BUTTERMILK CHANNEL**, the passage between Governor's island and Long Island, in the harbour of New-York. It admits the passage of the largest vessels.

**BUTTERNUTS**, p. t., Otsego co., N. Y., 94 m. W. by S. Albany, 341 W. Drained by Butternut creek and Unadilla river. It contains three churches, one Presbyterian, one Methodist, and one Baptist, eight stores, four fulling-mills, three grist-mills, eleven saw-mills, one oil-mill, three tanneries, eighteen schools, 780 scholars. Pop. 4057.

**BUTTS**, county, Ga. Situated in the central part of the state, and contains 490 sq. m. Bounded N. and E. by Ockmulgee river. It contained, in 1840, 466 neat cattle, 5223 sheep, 15,046 swine; and produced 34,637 bushels of wheat, 254,395 of Indian corn, 38,813 of oats, 5385 of potatoes, 236,650 pounds of cotton. It had twenty-four stores, eleven grist-mills, six saw-mills, one academy, 64 students, four schools, 130 scholars. Pop.: whites, 3625; slaves, 3023; free-coloured, 1; total, 5308. Capital, Jackson.

**BUXTON**, a town, and fashionable watering-place of England, co. Derby, hund. High Peak, par. Bakewell, 140 m. N.W. by N. London. Pop., in 1881, 1036; in 1831, 1211: houses at the latter date, 231. It stands in a valley surrounded by hills of considerable elevation, except at one narrow opening, through which the Wye flows. The old town stands on much higher ground than the modern one, and consists of one wide street, in which are a few respectable inns and lodging houses, but the greater number are low, ancient buildings: it has a market-place, with an old cross in the centre. The new part, commencing with the Crescent, extends along the Bakewell road. This is an elegant range, in the Grecian style, comprising two hotels, a library,

## BUZANCOIS.

news and assembly rooms, baths, and some private houses; the whole erected by the late Duke of Devonshire, in 1761, at a cost of £120,000. The adjoining square has an arcade, containing that of the Crescent, and forming, with it, a covered promenade of considerable extent. Connected with the range of stabling at the back, is a spacious covered ride; altogether, there is accommodation for about 1500 visitors; and during its season (from June to Oct.) from 12,000 to 15,000 usually resort to the town. The church is an elegant modern structure, also built by the late Duke of Devonshire. There are four dissenting chapels; an endowed school, on Bell's plan; and a "Bath Charity," supported by subscription, for poor invalids coming from any part, with a proper testimonial from the minister of their parish: they have the gratuitous use of a bath, and maintenance for a month. From 1100 to 1800 are thus annually relieved. At the W. end of the Crescent stands the old hall, built by the Earl of Shrewsbury, in the reign of Elizabeth, in whose custody Mary Queen of Scots was placed; who, being occasionally permitted to visit Buxton, occupied apartments in it. It is now an inn. The public and private baths are numerous, and fitted up with every attention to comfort. St. Anne's Well, where the waters are usually drunk, is a handsome Greek building: it supplies both hot and cold water from springs that rise at a short distance from each other: the temperature of the latter is 60° Fahr.; that of the Buxton hot waters is, in all seasons, invariably 89° Fahr. Besides these (which are properly the *Buxton waters*), there is a chalybeate spring, issuing from a chalk stratum behind the Crescent, which has a building over it, and is occasionally drunk: when mixed with that of the other springs, it forms a purgative. These mineral waters rise on the western edge of the limestone range which occupies that portion of Derbyshire called the Peak Forest, extending from Castleton southwards, and consisting of alternate beds of limestone and amygdaloid (road stone), the former abounding in polypterous and other fossils. A large fault traverses the whole, and in this dyke the thermal springs, both of Matlock and Buxton, rise; the latter being at the S. end of the out-cropping of the lowest limestone bed. Buxton waters have been celebrated for their medicinal virtues from the Roman period. According to Mr. Gardner the following is their analysis:

|                            | Grain. per gall. |
|----------------------------|------------------|
| Carb. acid                 | 1.50             |
| Acids                      | 4.64             |
| Gaseous matter             | 6.14             |
| Hydrochloric magnesia      | 2.50             |
| Sulph. lime                | 10.40            |
| Extractive matter and loss | 1.08             |
| Solid matter               | 15.09            |

The water is hard, in consequence of the calcareous matter, but perfectly clear; nor does it become turbid by any length of exposure. It is used as baths, or topically, by pumping on particular parts of the body; and is also taken internally, in quantities varying from a pint to 1½ pint, in the course of a day: it is considered beneficial in dyspeptic cases; and as a bath in cases of gout and rheumatism. The chalybeate spring has a grain carbonate of iron in 1 gallon: it is very soft water.

There is a weekly market on Saturday, and annual fairs on Feb. 2, April 1, May 2, and Sept. 8; this last is for cattle. The ann. val. of real prop. in 1815 was £2810. The sale of the mineral productions of the district, and the manufacture of ornamental vases, &c., from fluor and alabaster, occupies many of the natives. About half a mile W. of the town, lime is quarried and burned to a considerable extent, and conveyed along the High Peak railway for some distance. There are many public walks laid out with great taste, and the neighbourhood in all directions is most interesting and romantic. Near the lime quarries is Pool's Hole, an immense natural cavern covered with stalactites, which have a very brilliant appearance when lighted by the guides who show the cave; beyond this is the Diamond Hill, so named from the profusion of well-defined hexagonal crystals dispersed through the soil. Five miles in the direction of Castleton is a curious Intermittent spring. Buxton was a Roman station, and two great military roads intersect near it: vestiges of a Roman bath, and many Roman coins, have been discovered.

**BUXTON**, p. t., York co., Me., 65 m. S.W. Augusta, 539 W. Incorporated in 1773. Bounded W. by Saco river, which has here a fall of 80 feet, affording great water-power. It contains twelve stores, two fulling-mills, two grist-mills, twelve saw-mills, six tanneries, one pottery, fifteen schools, 1271 scholars. Pop. 2688.

**BUZANCOIS**, a town of France, dep. Indre, cap. cant., partly on the banks of the Indre, and partly on islands in its channel; the connexion between its different divisions being maintained by means of five bridges, 14 m. N.W. Chateauroux. Pop. 4527. But though the situation be exceedingly good, the town is very ill-built, and presents a confused mass of old houses, interspersed with narrow,

## BUZZARD'S BAY.

crooked, and gloomy streets. There are in its environs some considerable foundries, and it carries on some trade in wool. (*Hage, art. INDUS.*)

**BUZZARD'S BAY**, situated on the S. shore of Mass. and is 30 m. long, with a medial breadth of 7 m. It approaches within 5 m. of Cape Cod bay, to which it has been proposed to cut a canal.

**BYBERRY**, p. t., Philadelphia co., Pa., 113 m. E. by S. Harrisburg, 14 m. N.E. Philadelphia, 155 W. Watered by Poquessing creek, which flows into Delaware river. 60,000 corn brooms are exported annually. First settled in 1693. It contains a Friend's church, five stores, two flouring-mills, three saw-mills, one academy, 36 students, five schools, 183 scholars. Pop. 1053.

**BYFIELD**, p. v., Essex co., Mass. 35 m. N. by E. Boston, 6 m. S.W. Newburyport, 468 W. Situated partly in Rowley town, and partly in Newbury t. Parker river has falls of near 40 feet within a mile of tide-water, and affords extensive water-power. Dummer academy was founded here in 1756 by Lieut. Gov. Dummer, who gave an extensive and valuable farm for its support. On the lower falls was erected the first woolen factory in New-England, and perhaps in America. It contains a Congregational church.

**BYRAM**, r., in the S.W. part of Connecticut, enters Long Island sound, and, in its lower part, separates Connecticut from the state of New-York. It is 18 m. long.

**BYRAM**, t., Sussex co., N. J., 8 m. S.E. Newton. Situated on South mountain. Bounded S. by Musconetcong river. Iron ore is found. It contains four stores, four forges, two grist-mills, five saw-mills, one distillery, eight schools, 334 scholars. Pop. 1153.

**BYRD**, t., Brown co., O. It has five schools, 314 scholars. Pop. 3431.

**BYRD**, t., Cape Girardeau co., Mo. It has five schools, 123 scholars. Pop. 2575.

**BYRON**, p. t., Genesee co., N. Y., 10 m. N.E. Batavia, 234 m. W. by N. Albany. Drained by Black creek, which affords water-power. It contains several sulphur springs. The village has two churches, three stores, several mills, thirty dwellings, and about 300 hundred inhabitants. The t. contains four stores, two fulling-mills, one flouring-mill, three grist-mills, five saw-mills, nine schools, 400 scholars. Pop. 1907.

## C.

**CABARRUS**, county, N. C. Situated in the S. part of the state, and contains 300 sq. m. Drained by the head branches of Rocky river, which flows into Yadkin river. It contained, in 1840, 10,816 neat cattle, 9143 sheep, 21,600 swine; and produced 86,300 bushels of wheat, 2934 of rye, 418,180 of Indian corn, 51,998 of oats, 17,376 of potatoes, 174 pounds of silk cocoons, 4,568,736 of cotton; and produced gold to the amount of \$3,761. It had fifteen stores, eighteen flouring-mills, twenty grist-mills, twelve saw-mills, four academies, 107 students, twenty-two schools, 513 scholars. Pop.: whites, 6971; slaves, 2179; free coloured, 109; total, 9250. Capital, Concord.

**CABELL**, county, Va. Situated in the W. part of the state, and contains 100 sq. m. Bounded W. by Big Sandy river. Drained by Guyandott river. It contained, in 1840, 9261 neat cattle, 9631 sheep, 19,006 swine; and produced 39,327 bushels of wheat, 379,121 of Indian corn, 96,285 of oats, 17,138 of potatoes, 6375 pounds of tobacco. It had twenty-two stores, two flouring-mills, thirteen grist-mills, eight saw-mills, four tanneries, one academy, 15 students, twelve schools, 334 scholars. Pop.: whites, 7574; slaves, 567; free coloured, 22; total, 8163. Capital, Barboursville.

**CABES**, or **GABES**, a sea-port and city of Barbary, reg. Tunis, at the bottom of the gulf of the same name (*Syrts Minor*), near the foot of mount Hancara, on the right bank of a small river; lat. 33° 53' 55" N., long. 7° 44' 1" E. Pop. doubtful, but said by Mr. Blaquiere to amount to 30,000. It is defended by a castle in pretty good repair. Streets regular, but narrow and filthy. Owing to the gradual filling up of the bay, its port is now only accessible to vessels of small burden. The chief article of export is a powder made of the odoriferous leaves of a plant called *kennah*, raised in the surrounding gardens. This powder is used as a pigment by the ladies of the East, and is, consequently, in great demand.

Cabes is said by Dr. Shaw to be the *Epictus* of Scylax, and the *Tacaps* of other ancient geographers. Ruins of the ancient city, among which are several square granite columns, 12 ft. in length, are met with on a rising ground, about ½ m. from the new city. The little river which runs through the city (the *Trites* of the ancients) is diverted into a great number of channels, for the purpose of watering the hennah gardens. (*Shaw's Travels*, p. 113, 4to ed.; *Blaquiere's Letters from the Mediterranean*.)

## CACHAO.

**CABINDA**, a sea-port town of Lower Guinea, cap. Es-Goyo, on the Atlantic, 50 m. N. from the mouth of the Zaire, lat. 3° 33' S., long. 15° 40' E. Pop. unknown. It is distinguished by its beautiful situation, and the fertility of its territory, which have obtained for it the title of the paradise of the coast. Its harbour is safe and commodious. The exports are slaves, ivory, honey, and wax. The natives are uncivilized, and difficult to deal with. The Portuguese have frequently attempted, but without success, to get a footing in this place.

**CABIN POINT**, p. v., Barry co., Va., 43 m. S.E. Richmond, 14 m. W.N.W. Surry C. H., 166 W. Situated S. of Chipcoke creek. It contains a store, and about twenty dwellings.

**CABOT**, p. t., Caledonia co., Vt., 30 m. N.E. Montpelier, 535 W. Drained by Winooki or Onion river, which affords water-power. Joe's pond in its N.E. part flows to Presumpscot river, and thence to Connecticut river. It therefore occupies the height land between the Connecticut and lake Champlain, to both of which its waters flow. Chartered in 1761, first settled in 1785. It contains a Congregational and a Methodist church, four stores, two fulling-mills, one woolen factory, one grist-mill, nine saw-mills, two tanneries, fifteen schools, 450 scholars. Pop. 1449.

**CABOTVILLE**, p. v., Springfield t., Hampden co., Mass., 95 m. W. by S. Boston, 367 W. Situated on the S. side of Chicopee river, near its entrance into Connecticut river. It contains three churches, one Congregational, one Universalist, and one Baptist, seven-cotton factories, with 35,000 spindles, which manufacture to the amount of over \$1,000,000 annually. It contains numerous other manufactories, and has over 3000 inhabitants.

**CABRA** (an. *Agabus*), a town of Spain, prov. Cordova, near the source of the river of the same name, partly on two hills and partly in a plain planted with vines and olives; 96 m. S.S.E. Cordova. Pop. 11,890. Some of the streets are wide and straight, with streams of water running through them, and good houses with magnificent fronts. There is a large, but irregular square; many public and private fountains and promenades; some ancient mosques, and other ruins. Here is, also, a college, with classes for the study of grammar, philosophy, mathematics, and design. The products consist of dyes, bricks, white soap, coarse linen and hempen cloths, with wines, brandy, vinegar, oil, and flour. There are nearly four hundred gardens attached to the town, which supply most parts of the district with fruit and vegetables. The neighbourhood produces marble of various kinds, gypsum, and clay for bricks and pottery. The crater of an extinct volcano is situated in the precincts of the town. It was a place of consideration among the Romans, and also with the Moors. (*Misano*.)

**CABRERA**, a small island of the Mediterranean, belonging to Spain, 9 m. S. Cape Salinas, Majorca.

**CACCAMO**, a town of Sicily, prov. Palermo, cap. cant., 24 m. S.E. Palermo. Pop. 6563.

**CACERES**, a town of Spain, prov. Estremadura, cap. district; 41 m. N. Merida; on a mountain ridge, washed by three rivers, along one of which there are nearly 3 m. of gardens; 24 m. W. Truxillo. Pop. 10,000. It has an episcopal palace, some good public buildings, with many good private houses. It has, also, a Jesuits' college, the most sumptuous in the prov.; a public school; a seminary, or college, with professorships of grammar, and the Latin and Oriental languages, philosophy, divinity, medicine, and jurisprudence; a hospital for infirm persons, widows, and orphans. It was formerly united to Portugal, and was then of much more consideration than at present. It has some flour-mills, fulling-mills, with tanneries, *lavaderos* for washing wool, dyeing works, &c. It appears to have been a Roman station, some magnificent ruins having been discovered in and within a short distance of the town. (*Misano*.)

**CACHAO**, or **KE-CHO**, often called by the natives *Bak-lan*, the largest city of the empire of Anam, cap. of its N. div. or Tonquin, on the right bank of the Tonquin river, about 80 m. W. the gulf of Tonquin, and 325 m. N.N.W. Hue; lat. 21° N., long. 105° 34' E. Pop. probably not far short of 100,000. (*Crawford*.) It is of great extent, but defended only by a bamboo stockade. Chief streets wide, and mostly paved with brick or small stones; the others narrow and unpaved. Some houses, chiefly those belonging to foreigners, are built of brick; but the greater number are of only mud and timber. Public edifices spacious, especially one royal palace, and the ruins of another; the walls surrounding each of which are reported to be of vast extent. It has a considerable trade, and had formerly both English and Dutch factories. The imports are long cloths, chintzes, arms, pepper, &c.; the exports, gold, fine silk fabrics, and lacquered wares, the best of the East. The N. branch of the Tonquin river, which once admitted much larger ships, is said, in consequence of the accumulation of

## CACHAR.

sand at its mouth, to be now impracticable for those above 200 tons burden. The city, being composed of so great an extent of inflammable materials, is very subject to destructive fires; and a rigid police is always on the alert to prevent the use of those for domestic purposes for more than a few hours in the day. It was nearly burned to the ground by some incendiaries in the course of the 17th century. (*Crawford, Emb. to Siam, &c.; Hamilton, &c.*)

CACHAR, or HAIRUMBO, a territ. of India beyond the Ganges, formerly governed by its own rajah, but, since 1838, substantially a British gov., subordinate to the presid. Bengal. It lies between lat. 24° and 27° N., and long. 92° and 94° E.; having N. Assam; E. Cassay, S. Tipperah; and W. Sylhet and Jynteah; length N. to S. about 140 m.; area and pop. as follows (*Pemberton, 1835*):

|                          | Sq. m. | Pop.    |
|--------------------------|--------|---------|
| S. Cachar . . . . .      | 2,366  | 50,000  |
| Central Cachar . . . . . | 2,324  | 14,000  |
| N. Cachar . . . . .      | 1,417  | (6,000) |
|                          | 6,507  | 70,000  |

This prov. is surrounded on three sides by mountain chains: on the N. the Naga mountains cut it off from the Dharmpoor district and the valley of the Brahmaputra; on the W. the boundary is formed by the same chain, which, running S., forms the E. frontier of Chittagong and Aracan, and opposite Sylhet and Munpoor is from 2000 to 4000 feet high; on the S. is an elevated chain, running E. and W., and inhabited by the Kookies. Another range runs parallel to the latter, in about lat. 25° 30' N., dividing Southern from Central and Northern Cachar, and from 4000 to 6000 ft. high; all these ranges are covered from base to summit with vast forests. The plains are mostly in S. Cachar, where their height above the sea is about 300 feet. (*Pemberton*). The chief rivers are the Barak, Captee, Jomona, and Dhunseri. The first rises among the mountains between Cassay and Assam, in lat. 25° 30' N. and long. 91° 30' E., and flows with a very tortuous course for 180 m. it varies considerably in width, but is sometimes 150 or 300 yds. across, and is navigable for boats of some burden to 20 m. above Bankadee; during the rains it has 30 or 40 ft. depth of water, and the country through which it flows is inundated from June to November. The mountain-streams afford ready access to the forests, and are of further service in floating down timber, rattans, bamboos, &c., from which much revenue has been realized by the former rajahs. No lakes have been enumerated. During the S.W. monsoon there are frequent and long-continued falls of rain, beginning in February or March, from which period vegetation proceeds with great rapidity. The excessive moisture renders the climate unhealthy; and ague, dysentery, and diarrhoea, are frequent; but it modifies the heat in summer, reducing it four or five degrees below the temp. of Calcutta. In the cold season fies, morning and evening, are found essential to comfort. The fertility of the soil is very great: rice and other grain, sugar-cane, and cotton, the latter especially, N. of the central hills, grow luxuriantly. Timber is very abundant in the mountain ranges, and has always been an important source of wealth: in other parts a dense and lofty reed and grass jungle rapidly springs up after the rains, affording cover for vast numbers of wild deer, buffaloes, elephants, &c.

S. Cachar is a valuable addition to our Eastern possessions; its fertile plains, which are continuous on the W., with the well-watered ones of Sylhet, extend E. as far as Jorae river, a tributary of the Barak. There are 1850 sq. m. of surface S. the Barak; 1700 of which are a fertile plain, now almost wholly unoccupied, although the traces of numerous villages abound on the banks of the rivers. N. of the Barak there are 1000 sq. m. of surface, 480 of which are estimated to be arable land of a very fine quality. This tract is daily becoming better inhabited, and immediately along the banks of the Barak is a belt of rich cultivation not surpassed in any part of Bengal, and the tracts contiguous to it are in process of being cleared: a considerable emigration appears to have taken place thither from Bengal. The pop. of S. Cachar consists of three or four different classes, viz. 1. Cacharees; 2. Musulman Bengalees, who are the chief of the petty landholders; 3. Hindoo Bengalees, and 4. Mixed tribes, as Nagas, Kookies, and Cassayes: the first two have long inhabited the S. and E. hills, but tendered little homage to the Cachar rajahs; and the Cassayes have been settled there by the British government, and, by their bold and military qualities, form a valuable protection against the other hill tribes to the inhabitants of the plains. From 1831 to 1834 the revenue of S. Cachar increased from 30,600 to 40,400 rupees: the gross charges in the latter year were 31,000 rupees.

From the central ridge, looking N., is seen a vast mass of dark and dense forest, bounded by the Kopli, Jomona, and Dhunseri rivers; extending for about 70 m., broken

## CADIZ.

only by a few specks of cultivation, and the scattered huts of a few Cacharees and Kookies, who earn a livelihood principally by the cultivation of cotton, which they barter for other produce to the inhabitants of Assam and Dhurmpoor. About 6000 of the pop., in Central Cachar, are probably aborigines: the remainder are Kookies and Loloongs, most likely from the S. and S.E. Emigration from Sylhet into Cachar has been greatly encouraged by the assignment of lands at the low rate of 3 annas per barga, to be held rent free for 1000 days, at the end of which time the quantity of land cleared was to be assessed. Capt. Pemberton thinks that for some years neither N. nor Central Cachar will yield much revenue; but the tranquillity insured to their W. neighbourhood by the possession of these districts, renders them important. The revenue derived from the whole prov. by a former rajah is said to have been a lac of rupees a year. The people of the central hills bring cotton, ivory, wax, iron-ore, and bamboos into Central Cachar: about 3000 jarool timbers (half the number formerly exported) are sent down the Barak into Sylhet, for building large *ekam* boats. The other exports are salt, coarse silk, and limestone.

*Routes*.—Three routes through Cachar into Cassay part from Bankadee near the E. extremity of the cleared plains: viz. those of Aquee, Kala Naga, and Khonginee. By the former, or most N., the distance from Bankadee to Jorae-nagar, in the Cassay central valley, is 86 m.; the first 30 m. of which pass through a dense forest abounding in swamps, and intersected with small streams, which rapidly become impassable after rains. The Kala Naga route is in all these respects preferable, and also crosses the Jorae river 8 m. from its confluence with the Barak, up to which point the latter is navigable for boats of 500 maunds. The third route passes over the hilly country of the Kookies, and is useless for military purposes. (*See CASSAY*). Several roads towards the central hills traverse S. Cachar, which all unite in one valley, and thence run through the central and N. divisions towards Assam, into which there are three separate routes through Cachar from Sylhet. The military protection of this prov. is entrusted to two companies of the Sylhet light infantry. Oospoor is the ancient capital, but Silchar, S. the Barak, is the present residence of the chief authority. The Cacharees are strong, robust, fairer than the Bengalees, and like the Chinese in features. The original Hairumbian dialect is said to have been monosyllabic, but is now nearly extinct; the language and written character of Bengal having usurped its place. The Kookies, who have been for years gradually advancing it, are supposed by Capt. Pemberton to be of Malay origin; they are seldom much more than 5 ft. in height; their complexions nearly as dark as those of the Bengalees; voices soft, and language harmonious. Small parties, of from ten to thirty of these formerly made frequent secret incursions within our frontiers, in search of human heads, which would seem to be necessary articles at the performance of certain of their religious ceremonies, if we may so abuse the phrase. Although checked, these incursions are still far from being prevented.

Cachar was unknown to the British until 1763, when Mr. Verelst led a small force into it. In 1774 it was invaded by the Birmeese, and some time after rendered tributary by them. In 1810 they placed the rajah of Munpoor on the throne of Cachar; and, from 1818 to 1823, a civil war for supremacy between that chief and his two brothers devastated the province. By the treaty of Zandaboo, in 1826, Cachar was placed under British protection, and the rightful rajah re-established; but on his death, in 1830, without any heir, it became, in 1832, an integral part of the British territory. (*Pemberton's Rep. on the E. Frontier*, p. 189-210.)

CACHET, Greene co., Ark. It has one school, 25 scholars. Pop. 804.

CADDO, parish, La., situated in the N.W. corner of the state, and contains 2500 sq. m. Bounded E. by Red river. It contains Caddo lake, a large body of water, in its N. part. It contained in 1840, 5310 head cattle, 144 sheep, 14,927 swine; and produced 177,515 bushels of Indian corn, 45,230 of potatoes, 2,891,300 lbs. of cotton. It had sixteen stores, three saw-mills, one tannery, one printing-office, one weekly newspaper, two academies, 45 students, three schools, 49 scholars. Pop.: whites, 2416; slaves, 2837; free colour ed, 39; total, 5292. Capital, Shreveport.

CADDOT, Clark co., Ark. Pop. 661.

CADDOT, Hot Spring co., Ark. It has one school, 27 scholars. Pop. 207.

CADEROUBE, a town of France, dep. Vancluse, on the left bank of the Rhone, which at this point encloses a considerable island, 3 m. S.W. Orange. Pop. 3262. It has silk flatures, and produces corn, silk, and madder.

CADIZ, a famous city and sea-port of Spain, in Andalusia, on the Atlantic, 63 m. S. Seville, and 60 m. N.W. Gibraltar; lat. 36° 31' 7" N., long. 6° 18' 52" W. Pop. (1838) 58,525. The city occupies the rocky and elevated extremity of a long, low, narrow tongue of land, projecting about 5 m.

## CADIZ.

N.N.W. from the Isle of Leon, and enclosing between it and the main-land a spacious bay, which has everywhere good anchorage, and some excellent harbours. The port of Cadiz is formed by a mole projecting from the city into the bay; but it is accessible only to small vessels, ships of large burden anchoring  $\frac{1}{2}$  m. off shore. The bay is divided into the inner and outer bays by the promontory, having at its extremity the fort of Malagorda. The isthmus joining the city to the main-land is in parts not more than from 300 to 350 yards across, and is very strongly fortified: the access to the city from the sea is in some places rendered impracticable by the steepness of the rocks, the occurrence of mud-banks and of sunken ledges; and being everywhere defended by ramparts, bastions, and detached forts, it would, were these kept in proper repair and well garrisoned, be all but impregnable; so that, as respects convenience and security, Cadiz, with its bay and dependencies, is probably unmatched, and certainly not surpassed as a naval dépôt. Streets straight, and though rather narrow, are remarkably well paved, clean, and lighted with lamps. The houses, in general lofty, have a court in the centre; they are mostly built of white freestone, and some of them are ornamented with painted balconies. There are several squares; but, with the exception of that of San Antonio, in the centre of the city, they are all of very limited dimensions. The ramparts afford, perhaps, the finest marine promenade that is anywhere to be met with: the view on the E. side extends across the bay to St. Mary's and the other towns by which it is lined, and to the mountains in the distance: on the W. the eye ranges over the boundless expanse of the Atlantic.

With the exception of the fortifications, Cadiz has no public buildings of any importance. The most conspicuous is the light-house of San Sebastian, on the bastion of that name, having the lantern elevated 173 ft. above the level of the sea. There are two cathedrals—an old and a new; but the latter is unfinished, and, when the city was visited by Mr. Inglis, its interior was converted into a rope-walk, and other parts into a mahogany warehouse. There is a custom-house, several hospitals, churches, convents, &c.; but none of them require any particular notice. The town labours under a great deficiency of water, having none that is potable but what is brought in vessels across the bay from St. Mary's, or what is collected in cisterns. Being almost surrounded by the sea, the climate is comparatively temperate; the summer heats are, in fact, less violent than in Madrid, though it is so much farther south, while the cold of winter is not nearly so severe. It is not unhealthy; but, like most other towns on the S. coast of Spain, is occasionally visited by epidemics. The great drawback upon it as a place of residence is its want of trees and shade, and the impossibility of getting into the fields or the country, except by crossing the bay, or travelling the whole length of the isthmus. There is a tolerable theatre, where Italian operas are sometimes performed; but those who wish to enjoy the national diversion of bull-fights must cross the bay to St. Mary's. Morals here are said to be, if possible, even at a lower ebb than in other Spanish cities. Lord Byron's statements (*Childe Harold*, l. 65) may, perhaps, be suspected of poetical exaggeration; but, according to Mr. Inglis, "female virtue is a thing almost unknown, and scarcely appreciated."

The Carraca, or royal dockyard, is situated at the bottom of the inner bay, about 6 m. from the city, on the channel separating the Isle of Leon from the main-land. This used formerly to be a very complete establishment; and as many as 5000 men were kept constantly at work in it. Now, however, it is all but deserted, and is said not to possess the means of fitting out a single ship. (*Scott's Ronde and Granada*, ii. 74.)

The commerce of Cadiz was formerly very extensive. For a lengthened period, indeed, she possessed a monopoly of the trade with the vast possessions belonging to Spain in the New World; and notwithstanding the abolition of the monopoly in 1778, she continued to engross by far the larger portion of the trade with the countries in question down to their emancipation. This event gave a blow to the commercial importance of Cadiz, from which it has not recovered. Its influence might, no doubt, have been in a great measure obviated, had the Spanish government adopted a more liberal policy in relation to its intercourse with other countries. But oppressive duties and restrictions have gone far entirely to destroy the foreign trade of Spain; and have thrown what little remains almost wholly into the hands of the smugglers; and Cadiz not being very suitable for the operations of the latter, has suffered accordingly. To raise its commerce from the depressed situation into which it had fallen, government made it, in 1829, a free port, that is, a port into which goods might be imported, and from which they might be exported, free of duty. In consequence of this privilege, it immediately became a principal dépôt for the foreign products destined for the Spanish market; and the smuggling carried on from the town was so great, that,

## CAEN.

in 1832, government not choosing to reduce the duties which occasioned it, and being unable otherwise to repress the abuse, withdrew the privilege, so that the trade again relapsed into its state previously to 1829. It has still, however, a larger share than any other Spanish town of the trade with Cuba, Puerto Rico, and Manila, the only remaining colonies of Spain; and it or rather its dependency, St. Mary's, is the centre of the sherry trade, all the wines of Xeres being shipped either from the one or the other.

The principal articles of import are fabrics of linen, wool, silk, and cotton, of which, however, a large proportion is destined for re-exportation; sugar, cocoa (of which there is a very great consumption in Spain), coffee, and other colonial produce; timber, tobacco, hides, salted fish, &c. Wine forms by far the principal article of export; the quantity shipped from Cadiz and the different ports round the bay may be estimated at about 30,000 butts a year, of the value of near £1,000,000 sterling; of which about a half in quantity, and far more than a half in value, comes to England: the other articles of export are—quicksilver, provisions, brandy, salt, wool, oil, &c. In 1834, the value of the articles imported is said to have amounted to £1,154,000, and that of the exports to £1,700,000. In 1837, the import of sugar was 150,534,774 lbs.; of coffee, 26,654,515 lbs.; of leaf tobacco, 1,196,185 lbs.; and of cigars, 143,704,500 in number. Subjoined is a statement of the navigation of the port with foreign countries and the transatlantic possessions of Spain, in 1834:

| Ships of        | Entered. |        | Sailed. |        |
|-----------------|----------|--------|---------|--------|
|                 | Ships.   | Tons.  | Ships.  | Tons.  |
| England         | 290      | 32,562 | 294     | 27,625 |
| United States   | 43       | 8,300  | 55      | 13,471 |
| Russia          | 21       | 6,093  | 25      | 6,718  |

| Other countries | 36       | 1,523  | 37      | 3,562  |
| Colonies        | 99       | 13,566 | 62      | 9,639  |
| Totals          | 665      | 86,938 | 570     | 80,692 |

The pop. and wealth of the city have declined with its trade. The number of inhab. has fallen off from about 70,000 to under 60,000; and many of the houses are unoccupied, and even rapidly falling to decay. The sea-wall erected on the S. side of the city, to defend it against the encroachments of the sea, and which is justly regarded as one of the greatest works of the kind ever undertaken and completed, has been allowed, for want of timely repair, to fall into a state of dilapidation. The fortifications are also getting into a bad state; and the appearance of the city is characteristic of the paralyzed and abased state of the monarchy.

Cadiz is very ancient, having been founded by the Phœnicians. In 1596 it was taken and sacked by the English, by whom it was again ineffectually attacked in 1623 and 1702. In 1809 it became the asylum of the Cortes, and was blockaded by the French till 1812. In 1823 it surrendered to the French under the Duc D'Angoulême. (*Scott's Ronde and Granada*, ii. 64-75; *Fuglio's Spain* in 1830, l. cap. 13; *Penny Magazine*, May, 1839; *Dictionnaire de Commerce*, art. Cadiz; *Milano*; *Traveller*, &c.)

CADIZ, p. t., capital of Harrison co., O., 114 m. E.N.E. Columbus, 284 W. The village contains a large brick courthouse, three churches, two Presbyterian, both of brick, and one Methodist; a steam grist-mill, one academy with 39 students, three schools, 253 scholars. Pop. 1038. The t. contains one academy, 25 students, five schools, 337 scholars. Pop. 1366.

CADIZ, p. v., capital of Trigg co., Ky., 296 m. W.S.W. Frankfort, 753 W., situated on the S. side of Little river, 9 m. from its entrance into Cumberland river. It contains a court-house, jail, one church, and a male and female seminary. It has considerable trade, particularly in tobacco, and contains about 450 inhabitants.

CADRON, t., Conway co., Ark. Pop. 312.

CAEN, a town of France, dep. Calvados, of which it is the capital, in an extensive valley between two large meadows, at the confluence of the Odon with the Orne, about 8 m. from the embouchure of the latter, 30 m. S.W. Havre; lat. 49° 11' 12" N., long. 0° 31' 38" W. Pop., ex com., 30,638. This is a well-built, improving town. The streets are generally broad, straight, and clean; and the houses of freestone have a good appearance. It was formerly a place of considerable strength, being defended by a castle, and surrounded by massive walls, flanked with towers. The latter

## CAERLEON.

and the walls have almost disappeared: the castle, which was of great size and strength, was partly demolished at the Revolution; the portion of it that still remains is now used as a prison. There are four squares, of which the Place Royale, ornamented with a statue of Louis XIV., is the finest. A *cours*, or public walk, shaded by magnificent elm-trees, extends for nearly a mile along the banks of the river. There are some fine old churches, of which the most interesting is the *abbaye aux Hommes*, built by William the Conqueror; it is a large, plain building, with two very high spires; and contains, among other interesting monuments, the tomb of the Conqueror; but the latter was violated by the Huguenots, in 1562, and the bones dispersed. The *abbaye aux Femmes*, also very ancient, is now the Trinity Hospital, one of the best managed establishments of the kind anywhere to be met with. The church of St. Peter has the finest spire in Normandy; and several of the other churches deserve notice. Among the other public buildings are the hotel of the prefecture, the Hôtel de Ville, the Palace of Justice, the Hôtel Dieu, &c. Caen has been long celebrated for its university, founded in 1431, by Henry VI., king of England. It was remodelled after the Revolution, and now exists under the title of an *académie universitaire*. There are here, also, a royal college, or high-school, with from 450 to 500 pupils; a secondary school of medicine; a primary normal school; a school of hydrography; a public library, containing 47,000 volumes; a botanical garden, with a good collection of plants; a school of architecture and design; a deaf and dumb school; museums of pictures and natural history; with numerous societies for the promotion of literature and the fine and useful arts; a theatre, &c. It is the seat of a royal court for the depts. of Calvados, Manche, and Orne; and for tribunals of original jurisdiction and commerce. In its vicinity is a *maison centrale de détention*, which, in December 1833, had 481 male, and 288 female inmates: when finished, it will contain 1600. Manufactures important and valuable. They consist principally of laces, and of thread and silk, the making of which employs a vast number of people; stockings and caps, table linen, a variety of cotton fabrics, coarse and fine earthenware, cutlery, hats, with brewery, oil-works, &c. At high water, vessels of 150 or 160 tons come up the river as far as the town, where they lie alongside fine quays. In 1837, the value of the imports amounted to 1,092,960 fr., and that of the exports to 151,585 fr.

Several large fairs are held for the sale of the products of the town, and of the horses, cattle, butter, fowls, &c., of the surrounding country. In consequence of its excellent establishments for education, and other advantages, Caen is a favourite resort of English families. It has produced several distinguished men; among whom are Malherbe, the father of French poetry; the learned Huet, bishop of Avranches, Tannequil, Lefèvre, &c.

Caen is not very ancient. It became of importance under the dukes of Normandy, by whom it was fortified. It has undergone several sieges, and fell finally into the possession of the French in 1448, when it was taken from the English by Dunois. It was taken by the Protestants in 1562, when it suffered severely. (*Hugs, art. Calvados.*)

CAERLEON, a decayed town of England, co. Monmouth, hund. Usk, par. Llangattock, on the Usk, 18 m. S.W. Monmouth. Pop. in 1831 only 1071. This was the *Isca Silurum* of the Anglo-Romans, and was then of great importance, being the cap. of the prov. of Britannia Secunda. At a later period, it was celebrated as a seat of learning, and, in the 12th century, Giraldus Cambrensis gave a lively, though perhaps exaggerated, picture of its wealth, and magnificence. Several Roman antiquities have been dug up in the town and its vicinity, and in several parts the Roman walls are still visible. An elliptical concavity, the longest diameter measuring 74 yards, and the shortest 64, and 6 yards in depth, is situated in a field close by the Usk, near the S.W. side of the town. The country people call it Arthur's Round Table; but no doubt it is the remains of an amphitheatre. Within the course of last century stone seats were discovered on opening the sides of the concavity; and, in 1706, an alabaster statue of Diana was found in it. It has a well-endowed charity school for maintaining and educating 30 boys and 30 girls, till they attain the age of 14, when they are apprenticed, the former having £7 and the latter £4 each. (*Bestiary of England and Wales. Coxe's Monmouthshire, &c.*)

CAERMARTHEN, a marit. co. of S. Wales, having E. Caermarthen bay, which unites with the Bristol channel, E. the co. of Glamorgan and Brecon, N. Cardigan, and W. Pembroke. Area, 623,390 acres, being the largest county in the principality. Surface very various, in part mountainous, and in part consisting of low, fine vales: the largest and most celebrated of the latter is the vale of Towy, stretching for about 30 m. along the river of that name, by which the co. is intersected, with an average breadth of about 2 m. Exclusive of the Towy, Caermarthen is sepa-

## CAERMARTHEN.

rated from Cardigan by the Taaf, and in part from Glamorgan and Pembroke by the Loughor and the Taaf. The portion of this co., S. and E. of the Towy, adjoining Glamorgan, is included in the great coal-field of S. Wales: at Llanelly there is also an abundant supply of iron-stone, and considerable iron-works. Soil of the arable land mostly a sandy loam, easily wrought, admirably adapted to the turnip husbandry, and in general very productive. But agriculture here, and indeed in the greater part of Wales, is in an extremely backward state. The occupiers are, for the most part, uneducated, and strongly attached to ancient practices. Drainage, though the first and most essential of improvements, is almost wholly neglected; tenants are not usually under any restrictions as to management, and the common practice is to take corn crops in uninterrupted succession from the land till it be completely exhausted. The farm implements and stock are also bad; and the whole system evinces the want of intelligence, capital, and industry. (*Kennedy and Grainger on Trencry, p. 169.*) Average rent of land in 1810, 7s. 2½d. an acre. Manufactures unimportant. Principal towns, Caermarthen, Llanelly, and Kidwelly. It contains 8 hundreds, and 78 parishes, and had, in 1841, 23,407 inhab. houses, and 106,428 inhab., of whom 50,795 were males and 55,795 females. It returns two mem. to the H. of C. for the co., and one for the bor. of Caermarthen. Registered electors for the co., in 1837-38, 5125. Sum paid for the relief of the poor only, in 1837-38, £37,564. Annual value of real property in 1815, £289,030.

CAERMARTHEN, the cap. of the above co., and a co. by itself, finely situated on an irregular acclivity on the N.W. bank of the navigable river Towy, 7 m. N. from its embouchure in Caermarthen Bay, Bristol channel; lat. 51° 51' 10" N., long. 4° 19' W.; 180 m. W. by N. London. Pop. (1821) 8906; (1841) 37,512. A few of the streets are tolerably wide, well paved, lighted with gas, and contain many respectable houses; but the rest are narrow and crooked, and those leading to the river steep, and the pop. much crowded: the best houses are on the Milford line of road. The supply of water is bad and inadequate. There is a large plain church, several dissenting chapels, and a grammar school, from which scholars were admitted to take orders previously to the estab. of Lampeter college; a Presbyterian college for young men intended for that ministry (of which the corporation nominate the master and 8 scholars), a Lancasterian and a national school. The guildhall, a handsome edifice raised on pillars, has under it the market-place for corn. It has also a theatre, and bor. and co. jails; the latter is on part of the site of the old castle (of which some remains are still left), on the brow of the hill rising abruptly from the river; along which the quay extends. The river is crossed by a fine bridge of seven arches. Markets, Wednesday and Saturday; and cattle fairs, April 15, June 3 and 4, July 10, Aug. 12, Sept. 9, Oct. 9, Nov. 14 and 15. There are no manufactures of any importance in the town; but, as it furnishes the populous district in the vicinity with articles of general consumption, its trade is considerable. Principal exports (all coastwise), bark, marble, slate, lead ore, leather, corn, butter and eggs; imports, general cargoes of British and colonial produce, and manufactures, and timber and deals. At an average, 10 cargoes a year are imported from abroad, the vessels sailing outwards in ballast. Custom duties between £2900 and £3000 a year. About forty vessels belong to the port, and vessels of 50 to 150 tons are built here. It is a creek, comprised in the port of Llanelly. Vessels of 200 tons may ascend to the bridge at spring tides; but many obstructions are suffered to accumulate in the river, so that they are frequently obliged to discharge 3 m. below. The salmon fishery, which was once very extensive, has much decreased. Races are annually held in Sept. 4 m. up the vale of the Towy. It is the central town of a poor law union of sixteen parishes; its own average rates amount to £4,036.

Caermarthen has returned one mem. to the H. of C. since the reign of Henry VIII. The limits of the present par. bor. coincide with those of the ancient bor., but Llanelly is now joined with it, as a contributory bor. Previously to the Reform Act, the elective franchise in Caermarthen was exercised by persons admitted *de jure* burgesses, under qualifications of a freehold estate within the bor., *ex gratia*, and servitude of apprenticeship for seven years. Registered electors in both bors., in 1837-38, 868. The election of a mem. for the co. takes place here. The limits of the municipal bor. are now restricted to the town and a small space round it. It is divided into two wards, and governed by a mayor, six aldermen, and eighteen councillors; a sheriff and recorder. Courts of petty sessions are held weekly; fortnight courts, for the recovery of debts, and courts of general sessions twice a year, for the bor.: the assizes and three of the general quarter sessions of the co. are also held in the town.

Its ancient castle, in the last civil war, was at first abandoned for Charles I., taken subsequently by the parlia-

## CAERNARVON.

mentary forces, and dismantled by order of Cromwell, in 1648. Caernarthen must, on the whole, be considered a flourishing and increasing town. A column has been erected at its W. end by public subscription in memory of the public services of Sir T. Picton, who fell at Waterloo, and had previously represented this bor.

CAERNARVON, a marit. co. of N. Wales, separated from Anglesea by the Menai strait, extending from Conway, on the N., in a S.W. direction along the shore to the extremity of the peninsula of Lleyn opposite Bardsey island, having E. part of Cardigan bay, and the cos. of Merioneth and Denbigh. Area 348,160 acres. This is the most mountainous co. in the principality, being traversed in its whole extent by the Snowdon range (see SNOWDON): it has, however, some limited tracts of comparatively low fertile land. The Conway, which has its sources in the co., and forms for a considerable distance the line of demarcation between it and Denbigh, is the principal river; but there are several streams of inferior dimensions, and some small lakes. Lead and copper ores have been found within the co., and have been wrought to some extent, but not with much success. The slate quarries belonging to Lord Penryhn, near Bangor, employ about 1800 men and boys, and are the most extensive and valuable in the empire; and other slate quarries in this co. employ about 1700 men and boys. Soil of the greater part of the arable land basally loam. Agriculture, though a good deal improved, is still in a comparatively backward state: leases are either not granted, or they contain no proper regulations as to management; a proper rotation of crops is not generally observed; the land is not generally clean and in good harvest; and the implements are still, in many instances, defective. Oats is the principal corn crop. Breed of cattle small and hardy. Average rent of land in 1810, 5s. 2½d. an acre. The older class of farm buildings and cottages, especially the latter, are as bad as possible; but luckily they have been in many parts replaced by others of a new and improved character. Manufactures unimportant. Principal towns, Bangor (a city), Caernarvon, and Conway. Caernarvon is divided into ten hundreds, and sixty-nine par., and had in 1841, 16,899 inhab. houses, 14,553 families, and 81,008 inhab., of whom 39,000 were males and 41,408 females. It sends one mem. to the H. of C. for the co., and one for the town of Caernarvon and its contributory bors. Registered electors for the co., 1837-38, 3050. Sum expended for the relief of the poor only, in 1838, £18,803. Annual value of real property in 1815, £131,313.

CAERNARVON, a sea-port and par. bor. of N. Wales, cap. of the above co., on the S.E. side of the Menai strait, at the mouth of the Selont, 7 m. S.W. from the Menai bridge, and 305 m. N.W. London. Pop. in 1881, 3310; in 1831, 6377. This town, with its magnificent castle, was built by Edward I., between 1283 and 1294, as a place of strength to secure his newly achieved conquest of Wales. The walls, constructed by the conqueror round the town, are still pretty entire. They are flanked with round towers, and had originally two principal gates, but others have been since added. Within the walls the streets, though narrow, are regular; but of late years, new streets and buildings have been erected without the walls, and the whole town has been much improved; it is well supplied with water, and lighted with gas. Pennant says of it, that it "is justly the boast of N. Wales, for the beauty of its situation, the goodness of its buildings, the regularity of the plan, and, above all, the grandeur of the castle, the most magnificent badge of our subjection." (*Trav. in Wales*, ii., 404, 8vo ed.) The par. church is ½ m. from the town; but the latter has a handsome chapel of ease, and four dissenting chapels, and a British and a national school. The town-hall is over one of the ancient gateways and one of the old towers is fitted up as a prison: there is also a co. hall, a small theatre, and a modern market-house for provisions, the old one being now used for corn. Many opulent families reside in the neighbourhood, and the town is much resorted to in the proper season by sea-bathers. To accommodate them and other visitors, an excellent hotel has been built by the marquess of Anglesea, and there are also hot and cold baths, assembly and billiard-rooms, &c. Outside the walls is a fine terrace walk along the Menai, resorted to in the summer evenings by all descriptions of people.

There are no manufactures of any importance. The harbour, which has of late been a good deal improved, admits vessels of 400 tons, but the trade of the port, which is mostly with Liverpool, Bristol, and Dublin, is principally by small coasting vessels and steamers. The principal export is slate, brought from the quarries by a railway. The removal of the coast duties on slate has occasioned a great increase of demand here and in other ports whence it is exported. (*Boundary Report*.)

Previously to the Reform Act Caernarvon returned one mem. to the H. of C., conjointly with the contributory bors. of Conway, Cricethel, Nwinn, and Pwllheli, the right of voting being in the resident and non-resident burgesses. To these

## CAGLIARI.

contributory bors. the Reform Act added Bangor. The limits of the ancient bor., with which the par. bor. coincides, are about 8 m. in circ. Registered electors in all the bors. 1837-38, 1080. The limits of the municipal bor. extend about 1½ m. round the town. Corporation revenue about £700 a year. The menses and general quarter sessions for the co. are held here. Market-day, Saturday; thin, March 13, May 16, Aug. 12, Sept. 30.

Caernarvon Castle is one of the noblest and most magnificent ruins of its kind in the empire. The walls, which enclose an area of about 3 acres, are 7 ft. 9 in. thick, have within them a gallery with slits for the discharge of missiles, and are flanked by thirteen strong pentagonal, hexagonal, &c., towers. A narrow chamber in the Eagle Tower was the birthplace of Edward II., the first Sum prince of Wales. Near the steep bank of the river Selont, at a small distance from the castle, is an ancient Roman fort, the walls of which are still pretty entire. At a small distance from this, and 1½ m. from the Menai, is the site of the ancient Roman station of *Seguntium*, whence, it is most probable, Edward I. derived part of the materials for building the castle and town of Caernarvon. (*Pennant's Wales; Bangor's ditto*, &c.)

CAERNARVON, L., Berks co., Pa. It contains two stores, one flouring-mill, three grist-mills, three saw-mills. Pop. 68.

CAERNARVON, L., Lancaster co., Pa. It contains seven stores, two forges, one fulling-mill, one woollen-factory, four flouring-mills, six grist-mills, four saw-mills, three tanneries, three distilleries, seven schools, 210 scholars. Pop. 139.

CAERPHILLY, a town and chapelry of S. Wales, co. of Glamorgan, hund. Caerphilly, par. Eglwys-lais, between the Taf and the Rumney, 7 m. N. Cardiff. Pop. of the par. in 1831, 2618. The town is an irregular collection of ancient and modern houses; but it has a good appearance, and being surrounded by mountain ranges that open on the E. and W., the scenery is grand and picturesque. It has a neat Episcopal chapel, and three dissenting places of worship. Market, Thursday, and fairs for cattle, corn, and cheese, April 3, Trinity Thursday, July 19, Aug. 25, Oct. 3, and Nov. 16. Manufactures of checks and lime-wool; shirting for miners, employ about 100 persons; the rest are engaged in the mines and quarries of the neighbourhood in agriculture. It was anciently a bor., but lost its privileges in the reign of Henry VIII. Its castle, whose magnificent ruins show that it must have been one of the best in the kingdom, was of Norman origin, and enlarged at successive periods, but chiefly by the favourite of Edward II., Hugh le Despencer, for whom it was wrested from its Mortimers, its ancient possessors.

CÆSAREA, a ruined and deserted coast-town of Palestine; lat. 32° 25' 37" N., long. 34° 44' 35" E. Under the Romans it was the cap. of the district in which it sank, and the residence of a proconsul. An artificial harbor, the castle, the walls of the city, and two aqueducts, are among the most perfect remains, but a great extent of ground is covered with the ruins of public and private buildings. It owed its existence, or importance, to Herod the Great, who named it *Cæsarea*, in compliment to Augustus, B.C. 22. It figures in the early history of Christianity as the place where Peter converted Cornelius and his house (Acts 2, 1), and as the scene of Paul's memorable speeches to Felix and Agrippa (Acts xxiv., xxv., and xxvi.). Vestigian made Cæsarea a Roman colony, under the name of Flavia Cæsarea, and it continued to flourish till A.D. 635, when it fell into the hands of the Saracens. In 1101 it was taken by the Crusaders, and in the wars of this period it sank never to rise again. (*Robinson*, i., 189-192; *Hogg*, ii., 185; *Palestine*, i., 18; *Josephus*, *Ant. J.*, xii., 5.)

CÆSAR'S CREEK, L., Green co., O. Watered by Caesar's creek, which flows into little Miami river. Pop. 73.

CAFFA. See KAFFA.  
CAGLI (an. CALLIS), a town of the Papal States, *del. Urbino* and Pesaro, at the foot of mount Petraro, at the entrance of the Cantiano and Basso, 14 m. S. Urbino. Pop. 4000. It has a cathedral, and four convents for monks, and four for nuns.

CAGLIARI (an. *Calerio*), a marit. city of Sardinia, of which it is the cap., on a bay of the same name on the S. shore of the island, lat. 39° 12' 13" N., long. 9° 0' 44" E. Pop. about 35,000. (*Smyth*.) In the middle ages, it appears to have been restricted to a triangular space, on the summit of a hill about 400 ft. above the beach, now called the "Castle," which is walled round, and has a citadel on it. To this were successively added the Marina, a portion extending down the W. face of the hill from the castle to the sea, which is surrounded by a slight wall flanked by some bastions, and farther defended by a wall but shallow ditch; the quarter of Stampace, to the W. of the castle; and that of Villanova to the E. The ancient city consists of these four portions; there is, besides, a suburb nearly a mile in length, called S. Avandrea. Cagliari has an imposing appearance from the sea. The Marina is sit-

## CAHABA.

brably well built, but Villanova quite otherwise; and the streets generally are narrow, irregular, dirty, steep, and paved with round pointed stones. There are, however, some excellent and even splendid public buildings, and many spacious private houses. The castle is the part in which the nobility and state officers reside. It contains the vice-royal palace, a fine edifice; the cathedral, built by the Pisans, with a front in great part of marble; a handsome manseum of Martin, king of Sicily; a celebrated cryptic sanctuary; the citadel, and three large square towers, good specimens of Pisan art; the university, with its four faculties of theology, law, medicine, and philosophy, and between 300 and 300 students; and other public seminaries. The Marina is inhabited chiefly by merchants, and by the foreign consuls; it contains a good bonded warehouse, an arsenal, lazaretto, and more. In Stampæe are the corn-market and storehouses. Cagliari contains besides about thirty churches, twenty-one convents, to one of which, belonging to the Jesuits, there is a very handsome and richly ornamented church attached; two hospitals, a female orphan asylum, a public library, with 15,000 volumes, museums of antiquities and natural history, a college of nobles, a seminary, a small theatre, mint, three prisons for galley-slaves, &c. At the S. angle of the Marina wall there is a very commodious *darsena*, or pier-harbour, capable of containing fourteen or sixteen vessels of a tolerable size, besides small craft. The port is one of the best and safest in the Mediterranean. Ships usually lie about a mile S.W. by S. from the mole, in 6 or 8 fathoms water, on an excellent bottom of mud. The gulf of Cagliari, which extends from Pala on the W. to cape Carbonara on the E., 24 m. across by 13 m. deep, has good anchorage everywhere, after getting into soundings. The city being placed on a hill, is healthy, notwithstanding the immediate proximity on its W. side of the stagnant lagoon of Cagliari, 6 or 7 m. long by 3 or 4 m. broad. This lake abounds with fish and aquatic birds. To the E. of the city, there are some good salt-works. Cagliari possesses a royal manufactory of tobacco, and has manufactories of cotton fabrics, cake saffron, soap, chairs, and other furniture, tanneries, &c. Its trade is chiefly in corn, legumes, salt, oil, and wine. From the portion of commerce it enjoys, Cagliari has, on the whole, a busy appearance. Provisions of all kinds are cheap and plentiful, except water. The castle is supplied from cisterns and extremely deep wells. Extensive remains exist of a fine ancient aqueduct, which might be restored at a comparatively small expense. There are several other Roman antiquities, including a tomb in tolerably good preservation, and an amphitheatre excavated in the rock near the city walls. Vestiges of the ancient Greek city may be still traced beyond Stampæe. A good carriage-road of recent construction connects Cagliari with Sassari.

Cagliari is the seat of a royal *audiencia*, or head tribunal, and of the *cortes*, or states-general of the island; of a tribunal of commerce, an intendant-general, a general-commandant, and an archbishop with the title of primate of Sardinia.

The city is very ancient, its foundation being carried back to the fabulous ages. It was the residence of the king of Sardinia from 1798 to 1814, during the occupation of his continental dominion by the French. The latter bombarded it unsuccessfully in 1793. (*Smyth's State of Sardinia*, p. 395-399, &c.; *Marmora, Voyage on Sardinia*.)

CAHABA, river, Ala. It is 130 m. long, and flows into Alabama river, at Cahaba v. on its W. side, 195 miles above its junction with Tombigbee river.

CAHABA, p. v., capital of Dallas co., Ala., 92 m. S.S.E. Tuscaloosa, 353 W. Situated on the W. side of Alabama river, immediately below the junction of Cahaba river. It contains a court-house, jail, a U. States' land-office, and a number of stores and dwellings.

CAHER, an isl. town of Ireland, co. Tipperary, prov. Munster, on the Suir, 96 m. S.W. by S. Dublin. Pop. in 1831, 3299; in 1831, 3408. Pop. of par. in 1834, 6096; of whom 113 are of the established church, and 5913 Roman Catholics. The town is well built; the parish church and Roman Catholic chapel are large fine buildings; the Society of Friends have also a meeting-house. There is a market-house, bridewell, fever hospital, dispensary, schools on the foundation of Erasmus Smith, and large cavalry barracks. The staff of the Tipperary militia, and a party of the constabulary, are stationed here. The earl of Glengall's mansion is in the town. Races take place annually in the neighbourhood. A manorial court is held every six weeks; petty sessions weekly. The linen and straw-plait manufactures are carried on upon a small scale; much is done in the corn trade. Markets are held on Fridays: fairs on 8th February, 13th April, 26th and 27th May, 30th July, 18th and 19th September, 20th October, and 7th December. The post-office revenue in 1836 was £363, and in 1836, £511. The contemplated railroad from Tipperary to Kilkenny will pass through the town, as does one of the mail-coach roads

## CAIRA.

from Dublin to Cork, and that from Waterford to Limerick. The mail car from Clonmel to Limerick also passes through Caher. (*Railr. Rep.*)

CAHOKIA, p. v., St. Clair co., Ill., 98 m. S. by W. Springfield, 811 W. Situated on the E. bank of Mississippi river, 5 m. S.E. St. Louis. It was founded by the French in 1683, had fifty families at the commencement of the Revolutionary war, and was early engaged in the fur-trade. The Mississippi once washed its border, but in three years it receded a mile and a half from it.

CAHOKIA, creek, Ill., enters the Mississippi river, 3 m. above the ferry at St. Louis. It passes through the American bottom, and a dam near its mouth sets the water back for 15 m. Along its border are 60 or 70 mounds of various shapes and dimensions.

CAHOES or CAHOES FALLS, Albany co., N. Y., are on the Mohawk river, 3 m. above its entrance into Hudson river. They have a perpendicular descent of 70 feet, and in time of high water, they present a grand and imposing spectacle. The banks below consist of perpendicular rocks about 100 feet high. About a mile below the falls the river is crossed by a bridge, from which a fine view of the cataract is presented. A little above the falls the Erie canal crosses the river in a fine aqueduct. By a dam near its mouth, the Champlain canal crosses in the bed of the river, the dam serving as a tow path. Half a mile above the falls, where is a dam, the water of the river is taken out in a canal 2 m. long, with an entire descent of 190 feet, affording a vast water-power.

CAHORS, a town of France, dep. Lot, of which it is the cap., on the Lot, 60 m. N. Toulouse; lat. 44° 25' 50" N., long. 1° 27' 17" E. Pop., ex com., 10,944. It stands principally on an eminence, almost surrounded by the Lot, and is for the most part ill built, with narrow, crooked streets. It was formerly defended on the land side by towers and ramparts, that stretched across the isthmus; but of these only the ruins now remain. It is traversed by the great road from Paris to Toulouse, and has three bridges over the river, one of which, built in the 13th century, is surmounted by three enormous towers. The cathedral has been supposed to be partly of Roman construction; but it is pretty certain that the most ancient part of the building is not older than the 6th century. With the exception of the hotel of the prefecture, the ancient episcopal palace, few of the other public buildings deserve notice. It is the seat of a bishopric, and has tribunals of primary jurisdiction and of commerce. Cahors had a university, founded in 1339; the famous jurist Cujas was, for a while, one of its professors, and Fenechon was of the number of its pupils. The university was united to that of Toulouse in 1751. At present it has an *académie universitaire*; a royal college or high school, with about 250 pupils; a diocesan seminary, with 150 pupils; a primary normal school; a public library with 12,000 volumes; a theatre; a society of agriculture, &c. The manufactures, which are not very considerable, consist principally of some descriptions of woollen goods and paper. There is contiguous to the town a departmental nursery. The excellent red wine, called the *vin de grave*, is raised in its territory; and it has a good deal of trade in that and other wines, and in oil, hemp, flax, &c.

Cahors is supposed to be the ancient *Dionos*, the capital of the *Cadurci*. The Romans embellished it with several fine edifices, of some of which there still remain a few vestiges. The principal of these are a portico, supposed to have made a part of the public baths; with the ruins of a large theatre or circus, and of an aqueduct for conveying water into the town. There have also been dug up fragments of columns, mosaics, and numerous medals of Theodosius and Claudius. In more modern times, it has undergone many vicissitudes. In 1590, it was besieged by Henry IV., and being taken, after an obstinate resistance, it was, despite Henry's efforts to the contrary, given up to military execution. (*Martinière*, art. *Cahors*; *Hugo*, art. *Lot*, &c.)

CAIPA, or KAIPA, a small marit. town of Palestine, at the foot of Mount Carmel, on the W. side of the bay of Acre. The harbour is one of the best along the coast (*see Acre*), and the ancient river Kishon flows past the town. It has a fortress with a garrison; but the most important and interesting building in the place is a hospice maintained by the monks of Mount Carmel, where strangers of all nations and religions are lodged and entertained. The Kishon is referred to in the song of Deborah and Barak (*Judges*, v. 21). It is famous also as the place where Elijah slew the prophets of Baal (1 Kings, xviii., 40). (*Robinson*, i., 193; *Hogg*, ii., 178.)

CAIRA, p. v., Cumberland co., Va., 57 m. W. by S. Richmond, 147 W. Situated on the W. side of Willis river, a branch of James river, which is navigable 12 miles above this place, and 60 miles from its mouth. It contains a church free to all denominations, three stores, one tobacco warehouse, one flouring mill, forty dwellings, and about 240 inhabitants.

## CAIRO.

CAIRO, or KAHIRA (*El Kha'irah*, Arab. "the Victorious," called by the inhabitants *Marr*), the modern cap. of Egypt, and the second city of the Mohammedan world; chief residence of the Pacha, and seat of his government, near the right or E. bank of the Nile, about 13 m. above the apex of its delta, 112 m. S.E. Alexandria, 97 m. S.S.W. Damietta, and 75 m. W. Suez; lat.  $30^{\circ} 3' 21''$  N., long.  $31^{\circ} 18' 45''$  E. Pop., including its port of Boulac, Old Cairo, &c., about 240,000 of whom about 190,000 are Egyptian Moslems, 10,000 Copts, from 3000 to 4000 Jews, and the rest strangers from various countries. (*Lane's Mod. Egypt*, &c.) Shape oblong, being nearly 3 m. in length, by  $1\frac{1}{2}$  to 3 m. in breadth, on sloping ground, midway between the Nile and the E. mountain range of Mokattam, and occupying an area of about 3 sq. m. The distance of its N. extremity from the Nile at Boulac is upward of a mile; but from its S. extremity to the bank of the river where Old Cairo stands, is somewhat less than  $\frac{1}{2}$  m. The intervening tract is laid out in gardens or otherwise cultivated, and watered by a canal. Viewed from a distance, Cairo has a magnificent and interesting appearance; but, like most other E. cities, its interior has a very different aspect from its exterior. It has, however, though still susceptible of much improvement, been, within these few years, quite changed from the wretched place so often depicted by travellers. Filth of every description, putrid ditches, drains never cleaned, unburied carrion, fragments of vegetable matter, all in various states of decomposition; want of free circulation of air, clouds of dust, and multitudes of deformed beings, are among the nuisances formerly complained of; but, according to more recent observers, the rigid police established by Mehemet Ali has already effected so desirable a change, that, for cleanliness, as well as order, quiet, and the absence of crime, Cairo "may now rank with the best governed capitals of Europe." (*MS. Account of Cairo*). The clouds of dust, apparently the most difficult to deal with, have, as well as the want of a free circulation of air, been in a great measure obviated by the removal of a number of high mounds of sand, scoria, ashes, earth, broken pottery, and other rubbish, which formerly encircled the city, some of them elevated 150 ft. above its level; and by the continual watering of the public thoroughfares.

On entering Cairo, the European visitor is gratified and interested with the entire contrast this city presents to all he has left behind him in Europe. In the words of a British resident, "here everything is oriental; the style of the buildings, the shaded streets, the aspect and costumes of the people, the quiet and repose universally prevailing; no rattling of carriages and carts; no rushing, busy crowds, little on their different pursuits; but in their stead, the solemn camel and his patient little attendant, the donkey, making their noiseless way under their burdens; the people gathered in groups around the doors of the *cafes*, chatting or smoking; the shopkeeper listlessly reclining in his stall; the sentinal, half asleep at his post, while the guard within lies stretched in profound repose; all yielding to the influence of a climate as delightful as it is salubrious, and which fortunately acts as an opiate, to some extent, against the many physical ills the people are exposed to from a bad and rapacious government." Cairo at present contains 240 principal streets, forty-six public places (squares), eleven bazars, 140 schools for the instruction of children, 300 public cisterns, 1166 coffee-houses, sixty-five public baths, 400 mosques, and several considerable hospitals. The whole city is enclosed by a stone wall, terminated on the S.E. by a detached and scarped rock rising more than 900 ft. above the level of the Nile, on which stands the citadel. This fortress, with the city walls, was built or restored by Saladin, about 1176. The walls have battlements, and lofty towers at about 100 yards apart. They are, however, of little strength, and have been suffered, in many parts, to fall to decay. There are four gates, praised for their grandeur and magnificence. The streets still continue to be unpaved, and are mostly so very crooked, narrow, and irregular, that they might more properly be called lanes. There is but one as wide as Cranbourne Alley. Though deprived of a great deal of light, they are rendered cool, by the upper stories of the houses projecting over them, so as not unfrequently to meet each other. "By a stranger who merely passed through the streets, Cairo would be regarded as a very close and crowded city; but that this is not the case, is evident to a person who overlooks the town from the top of a lofty house, or from the minaret of a mosque. The great thoroughfare streets have generally a row of shops along each side. Above the shops are apartments, which do not communicate with them, and which are seldom occupied by the persons who rent the shops. To the right and left of the great thoroughfares are by-streets and quarters. Most of the by-streets are thoroughfares, and have a large wooden gate at each end, closed at night, and kept by a porter within, who opens to any persons requiring to be admitted. The quarters mostly consist of several narrow lanes, having but one general entrance, with a gate, which is also closed at night;

but several have a by-street passing through them." (*Lane's Mod. Egyptians*, i. 7, 8.) The Jewish quarter is, as in all other cities, the filthiest; the Copts, Franks, and other nations, generally speaking, inhabit distinct quarters, though there is no restriction in this respect, the whole city being free to all. In the Frank quarter, where also many of the Armenian and Syrian Christians reside, the streets are rather wider than elsewhere. The houses are solidly constructed and lofty, being mostly two stories high, and frequently more; their lower parts are built or cased with the soft calcareous stone of the Mokattam mountains, the layers of which in front are often painted alternately red and white; their upper parts are commonly of brick; their roofs, which are flat, serve for many domestic purposes, and are the resort of the family in the cool of the evening. Most considerable houses enclose an open unpaved court, into which the doors and windows of the principal apartments open. The windows of the upper apartments generally project  $\frac{1}{2}$  ft. or more, and are commonly formed of wooden lattice-work, close enough to shut out much of the light and sun, and to screen the inmates from observation, while they admit the air; occasionally, glass windows, which sometimes are finely stained, are made use of. The front doors of the larger houses are handsomely carved, painted, decorated with Arabic inscriptions, and furnished with iron knockers and wooden locks. The court-yard and ground floors commonly contain wells, fountains, pools, stables, and other domestic offices, and a hall sometimes very handsomely fitted up, in which the master of the house receives his visitors; the upper apartments are those of the women and children. Lodging-houses, or caravanseras, called by Mr. Lane *wehaleks*, and designed for the reception of merchants and their goods, are somewhat differently laid out; and such persons as have neither a wife nor a female slave are usually obliged to take up their abode in one of these buildings. (*Lane*, i. 30.) There are several open spaces or squares: *Ezbekia*, the principal, is surrounded by many of the finest palaces and other structures in Cairo; its centre is laid out as a garden, and is, like some of the other squares, annually overflowed by the inundation of the Nile. The waters of that river are conducted into the city by a canal, believed by Pococke, Shaw, and others, to be the *Canal Trejanes* (ΤΡΑΙΑΝΩΝ ΠΟΤΑΜΟΣ) of Ptolemy's Geog. (lib. iv., c. 5), and which, commencing at Old Cairo, runs through the whole length of the modern town, filling a number of public and private basins, and irrigating numerous gardens planted along its banks. The citadel is, in many respects, one of the most interesting monuments in Cairo. Clarke (*Trav.*, v., 137-139) adduces several authorities to prove that it stands upon the spot once occupied by the Acropolis of the Egyptian Babylon, erected by Cambyse upon the site of the still more ancient Latopolis, a city almost as old as Memphis. This much, however, seems certain, that a similar structure existed here previously to the time of Saladin, to whom, according to Shaw (*Trav.*, 205), the restoration, rather than the construction, of the citadel should be ascribed. The rocky hill on which it is built is separated by a chasm about 400 yards wide from the Mokattam hills. Its walls are massive, rest on a foundation of scarped rock, and have recently been put into a respectable state of repair: but, being commanded by the Mokattam hill, on which a fort has been placed, and being open both on the E. and W. to the fire of artillery, it could not hold out for any length of time against a European force. Within its precinct are the palace and harem of the pacha, the mint, the council chamber or *divan*, a mosque built by Mehemet Ali, a military arsenal, and various other public offices and works of the Mameluke monarchs. The pacha's palace and harem are plain white-washed buildings, presenting nothing remarkable, and the new mosque has some bas-reliefs in marble, imported from Genoa, conceived and executed in the worst taste. The Egyptian coin is all struck in the mint, but the process hitherto pursued has been of the rudest kind. The arsenal contains foundries for brass and iron cannon, manufactories of smallarms, and workshops for the supply of all sorts of military equipments. Taken altogether, it is the finest establishment in Egypt. But the greatest curiosity in the citadel is Joseph's Well, supposed to have been dug by Saladin. It is 45 ft. in circ. at its mouth, being cut through soft calcareous strata to the depth of 276 ft., or to the level of the Nile, from which its water is most probably derived. A winding staircase conducts to its bottom, and Clarke observes, that for the general perfection of the work, "it may be compared rather to the labours of the ancient Egyptians than to any modern undertaking."

\* Previously to the annual inundation, the mouth of this canal is closed by a mound or pillar of mud, which, Dr. Clarke says, is called *Shan*, or "the Bridge." The rushing in of the water carries away this mound; and this circumstance is believed by several authors to have given rise to the fabulous story of the annual sacrifice of a virgin to the Nile. (See Clarke, v., 101, 102; Niebuhr's *Trav.*, i., 66, &c.) The opening of the canal is celebrated with great rejoicings.

## CAIRO.

From the ramparts of the citadel is displayed a noble panorama. To the E. are seen the obelisk of Heliopolis and the tombs of the Mamelukes, backed by an arid desert; to the S., the lofty quarries of mount Mokattam, with ruined castles, mouldering domes, and the remains of other edifices, above, below, and stretching beneath the heights far into the plain: S.W. and W. are the grand aqueduct, mosques, and minarets, the Nile, the ruins of Old Cairo, and the island and groves of Rhoda: beyond the river, on the S.W., the town of Ghizeh, amid groves of sycamore, fig, and palm trees; still more remote, the pyramids of Ghizeh and Seccara; and beyond these the great Libyan desert. N.W. and N., may be discovered the green plains of the delta, sprinkled with white edifices: and N. to N.E., at the feet of the spectator, is the city of Cairo, surrounded in the latter direction by heaps of sand. In 1811, this fortress was the scene of the massacre of the Mamelukes, by order of Mehemet Ali. In 1824, 4000 individuals, and a great portion of the citadel, were destroyed by the explosion of a powder magazine.

Much yet remains in Cairo to evince the success with which the dynasties of Mussulman princes, who governed Egypt previously to the Ottomans, strove to beautify this city; and we might look in vain throughout the modern Saracenic world for any works at all approaching in excellence the metropolitan mosque of El-Azhar, with those of Sultan Hassan, the Muristan, Hassan Ain, El Ghorez, and Zitenebah, the gate called Bab-el-Nasr (*Gate of Victory*), and one or two of the other gates; the aqueduct on the road to Old Cairo, and the tombs of the Mamelukes. The principal mosque—that of El-Azhar, or Lazarus—is in the middle of the most populous quarter. That of Sultan Hassan, said to be a work of the 13th century, is the largest mosque; its dome is considered the finest in Cairo, and beneath it, in its interior, is the handsome tomb of the sultan whose name it bears. The body of the mosque is closed by a bronze door, beautifully inlaid with silver, and is surrounded by a large open square court, with shrines under fine bold arches. This mosque is also remarkable for the height of its two minarets, the variety of marbles used in its construction, its arabesque ornaments, mosaics, and inscriptions. The mosque of Tagloulou is the most ancient of all, having been erected about 887, by the sultan Achmed Ebn. Tagloulou, the founder of a new dynasty in Egypt, nearly a century before the city of Cairo was built. It consists of a vast open court surrounded by a colonnade of marble and granite pillars, supporting a double row of arches of the latest Saracenic style, and bearing a great resemblance to the Patio de los Naranjos adjoining the mosque at Cordova. It contains rich and delicate carving, but is now much neglected. The mosque of Hassan Ain, on the contrary, is greatly thronged, being considered by far the most holy in Egypt, and surpassed in sanctity by few in the Mohammedan states. Outside the walls of the city, and between them and the Mokattam hill, are the celebrated tombs of the Mameluke sovereigns, some of which are fine bold specimens of the Arabic style of architecture of the 13th and 14th centuries: they are chiefly of white marble, and abound with fine arabesque ornaments and carving. There are several other cemeteries in different parts of the environs.

Old Cairo, which is believed by Pococke to have succeeded to the town and fortress of the Egyptian Babylon (*Deser. of the East*, 1, 95), is chiefly occupied by Copts: it contains twelve Christian churches, some of them large and sumptuous buildings; the ancient granaries, bearing the name of Joseph; a grotto, castle, &c., and a machine for raising the water of the Nile into the ancient aqueduct. This, which is exclusively appropriated to the supply of the citadel with water, is raised on arches, and proceeds from Old Cairo by a winding course, and a length of about 3 m. Boulac, the port of Cairo, contains the principal manufactures, and is the seat of most of the trade. It is dirty, nearly as large as Blackwall, and presents the same busy scene, attended with much more noise. "On the banks of the river," says Captain Scott, "are heaped up pyramids of millet, peas, and corn, the property of the government, and placed there, exposed to the sun, dew, and rain, ready for shipment. The shore is lined with boats of all descriptions, discharging their cargoes or advertised for hire." Along the banks of the Nile, between Boulac and Old Cairo, embosomed in groves of orange, sycamore, and acacia, are a number of handsome palaces, the most conspicuous of which is that belonging to Ibrahim Pacha. This palace is built in the Turkish style, and contains some handsome apartments, gaudy furniture, and a large collection of Egyptian antiquities. Its extensive gardens and plantations occupy the plain between it and Cairo; towards the Nile the grounds are laid out in terraces ornamented with statuary, which give them quite a European appearance. In the Nile, immediately opposite Cairo, are the two considerable islands of Boulac and Rhoda: the latter, which is nearly 3 m. in length, is almost entirely the property of Ibrahim Pacha, and is laid out

as pleasure-grounds, open to the public. Its S. extremity, however, between Old Cairo on one bank, and Ghizeh on the other, is occupied by powder magazines and mills. Here also is the celebrated Nilometer, a graduated pillar in a large square well, having a subterraneous communication with the river. From a court leading to this structure a flight of steps descends to the water, called the Steps of Moses, from a tradition of that being the spot where the deliverer of the Jews was found among the bulrushes.

Most of the higher class of Turks, and individuals holding chief public employments, have their residences in Cairo, where they live in much splendour. These are principally in the square of *El Esbekiah*; and it was in the garden of one of these that the French general, Kleber, was assassinated. Some of the public baths are very spacious, and greatly ornamented; and several public fountains are worthy of notice. There are about twenty stone bridges over the canals of the city and plain, but none worthy of special notice. The coffee-houses are generally very plain, and the shops are merely small recesses capable of holding two or three persons. Each separate bazar is usually devoted to one kind of commodity.

The commerce of Cairo appears at present to be in a very depressed state, owing, as is said, to the injuries inflicted on it by the pacha's monopoly system, the rapacity of his government, the insecurity of property, the alleged corruption of the courts of law, the depreciation of the currency, and various other causes. The plan now acted on, of transporting all the produce to Alexandria to be disposed of, has also occasioned the removal of many of the principal merchants to that city. Numerous houses are becoming untenanted, and falling to ruin; and the new ones that are raised are comparatively mean and poor. There is now no display of Cashemeres, rich silks, jewellery, &c., as we are told the bazars exhibited in the times of the Mamelukes; no crowding of strangers to the capital of Egypt. Matters are every year getting worse; and we are assured that, "unless a change of system takes place soon, Cairo may be blotted out of the map as a place of commerce." The most flourishing trade is that of slaves, for which there is a regular market. Georgians, Nubians, Abyssinians, &c., are met with; but the principal supply comes from Darfur, and other countries in the interior. Black slaves are met with in every family in Cairo. Two English hotels have been opened for travellers since the steam communication with India has been established; but neither steam conveyances nor railroads, though much talked of, have yet come into operation to aid the commerce of Cairo. The only Egyptian steam-boat on the Nile is the private property of the pacha, and is reserved for his own use.

Within the city Mehemet Ali has established an extensive cotton factory; a gun factory, furnishing annually 10,000 muskets; a manufactory of saddles, bridles, knapsacks, belts, and every other leather equipment required for the army; a copper-mill, and machinery for boring gun-barrels, both driven by steam; a paper-mill, &c. At Boulac he has a foundry, a cotton-mill, a woollen cloth factory, with dye-works attached; a cotton-printing establishment, chemical works, &c.; and at Marietta, not far distant, there is a large cotton factory worked by steam, and furnished with the newest machinery in use in Europe. Besides these, the pacha has large gunpowder and saltpetre factories in the neighbourhood, and a large tannery on the road to Old Cairo. These establishments supply the clothing and accoutrements required for the army and navy, as well as most articles in common use throughout the country.

Cairo has always been, and still is, the seat of the best schools for Arabic literature and Mohammedan theology. The mosque of El Azhar has attached to it a library and college, where lectures on the Koran, law, ethics, mathematics, medicine, &c., were formerly delivered to students, who flocked to it from every part of the Mohammedan world. But Mehemet Ali having appropriated the greater part of the property belonging to this mosque to the service of the state, the college attached to it has considerably declined. This, however, is but a trifling deduction from the advantage that has already resulted, and which, no doubt, will continue to result, from the teaching, introduced by the pacha, of the rudiments of European arts and sciences into the public schools. Nothing short of government interference could have effected this signal improvement. There are three primary schools in Cairo, which afford education to 600 boys, who are also clothed and fed. At Boulac there is a school of engineers, with 180 pupils. At Abosabul, within a mile of the city, is a preparatory school, with 1500 pupils; a school of medicine, with 300 students; a veterinary school at Schoobra; a school for accountants, &c.; and schools for the artillery and cavalry service at Ghizeh, and elsewhere in the vicinity. The prejudice against these schools was at first so strong that the pacha was obliged to resort to compulsion to obtain scholars, and to give them regular pay. The latter is still continued; but compulsion

## CAITHNESS.

is no longer necessary to obtain pupils. Regimental schools are also established, and primary schools are attached to the greater number of the mosques. The pacha has established a printing-press at Boulae, from which a weekly paper in Arabic issues; and at which many popular works in history and science have been printed for the use of students. The principal charitable institutions in and near Cairo are—a military hospital, in the square of El-Ebeikh, capable of accommodating 1000 patients; another large military hospital about a quarter of a league from the city, composed of four ranges of buildings, enclosing a square, and containing 64 spacious apartments, with 40 beds each; museums of physic and natural history; a chemical laboratory, and all necessary offices. In the city is a hospital for the Egyptian navy, with two general hospitals; and a lying-in hospital, under the direction of a French female practitioner, with a number of pupils. There is also a lunatic asylum; but the unhappy inmates are caged and chained, and present a melancholy and revolting sight. All the medical establishments are under the superintendence of the well known Clot Bey, the originator of most of them. The courts of law are held in a large new building, erected by the pacha.

Most European nations have vice-consuls resident at Cairo; it is the seat of the patriarch of the Coptic church; there are both Roman Catholic and Greek convents, presided over by dignitaries called patriarchs; and two English missionaries are established in the city. There are, however, comparatively few European inhabitants in Cairo, and they are for the most part poor and without influence. The city is usually garrisoned by two regiments of 4000 men each, one stationed within the citadel, and the other encamped outside the walls.

The neighbourhood of Cairo abounds with places and objects possessing great interest. The pyramids, and the remains of the city of Heliopolis, the *On* of the Scriptures, are treated of under the articles *GHIZEH*, *Egypt*, &c. About two m. N. from the city, the country palace of Shooobra, belonging to the pacha, is pleasantly situated on the bank of the river, and connected with Cairo, for the whole distance, by a fine avenue of acacias and sycamores. Mehemet Ali resides here without any pomp for a great portion of the year, and the grounds, which have been agreeably laid out, are generally open to the public. A few m. to the N.E. of Shooobra, is the scene of the victory obtained by Kieher over Yousef Pacha, in 1800.

Cairo is supposed to have been founded by Janbar, an Arab general under the first Fatimite caliph, in 970. The caliph Moez afterwards made it the capital of his dominions, which distinction it retained till the overthrow of the Mameluke sovereignty by the Turks, in 1517. It was the residence of the pacha of the Turkish province of Egypt till 1798, when it was taken by the French, who retained it until its capture by the English and Turks, in 1801. Not long after the re-instatement of the Turkish rule in Egypt, Mehemet Ali became viceroy; and under him Cairo has once more become the capital of a virtually independent and extensive empire. (*MS. Account of Cairo; Lane's Modern Egyptians*, vol. i.; *Clarke's Travels*, vol. v.; *Scott's Egypt and Candia*, p. 125, 317, &c.)

CAIRO, p. L. Greene co., N. Y., 10 m. W. Catskill, 44 m. S.S.W. Albany, 346 W. Watered by Catskill cr. and its branches. It contains ten stores, two woolen-factories, four grist-mills, two saw-mills, eight schools, 352 scholars. Pop. 3093. The village contains four churches, one Presbyterian, one Methodist, one Episcopal, and one Baptist, six stores, one woolen-factory, one grist-mill, one saw-mill, sixty dwellings, and about 600 inhabitants. The country poor-house with 100 acres of land attached is located here.

CAITHNESS, a marit. co. of Scotland, occupying its N.E. extremity, having W. Sutherland, and N.E. and S. the ocean. Dunnet Head, on the N. shore of this co., lat. 59° 40' N., long. 3° 25' W., is the most northerly point in G. Britain: area, 446,080 acres, of which above 90,000 are cultivated, 6400 waste, and the remainder mountains, moors, and mosses. The mountains lie principally along the confines of Sutherland, terminating to the S. in the stupendous precipice called the Ord of Caithness. But with this exception, the rest of the country is mostly undulating or flat, consisting principally of vast tracts of mossy moors, covered with low stunted heath, and destitute of wood. Principal rivers, Thurso, Wick, and Dunbeath. Owing to its being nearly surrounded by the sea, the winters are less severe than might have been expected, but the summers are in general cold and wet. Property in a few hands, and mostly entailed. Farms often small; and the practice of underletting, and of stipulating for payment of a portion of the rent in services of various kinds, used to be very prevalent. These practices are now, however, on the decline; and notwithstanding its remote situation, this co. has astonishingly improved within the present century, by the opening of new roads, consolidating small farms, taking in

## CALABRIA.

waste land, improving the breeds of cattle and sheep, &c. A great number of superior farm-houses and offices have been constructed of late years; but, generally speaking, the huts of the peasantry are still poor and miserable. Oats, bear or bigg, and potatoes, are the principal crops. Average rent of land in 1810, 1s. 5d. an acre. Wick and Thurso, its only towns, are, at present, the principal seats of the British herring fishery. Limestone is abundant, and is burned with turf. The inhab. of Caithness are of Scandinavian or Gothic origin; and, except along the border of Sutherland, Gaelic or Erse is neither spoken nor understood. All ranks and orders speak English. Caithness contains ten par., and had in 1841, 6062 inhab. houses, and 36,197 inhab., of whom 16,993 were males, and 19,204 females. It sends one mem. to the H. of C. for the co., and Wick unites with other boroughs in returning a representative. Co. constituency in 1838-39, 432. Valued nat. £37,954 Scotch; annual value of real property in 1815, £35,469.

CAJAZZO, a town of Naples, prov. Terra-di-Lavara, cap. cant., on a hill near the Voltorno, 11 m. N.E. by E. Capua. Pop. 4080. It is very ancient, and is defended by a castle built by the Lombards. Besides a fine cathedral, it has several other churches, with convents, a college, a hospital, and a seminary. Its territory produces good wine.

CALABOZO, an inh. town of Venezuela, prov. Caracas, in the *Ucayes*, near the Guarico river, 11 m. N.E. by E. Capua; lat. 8° 55' N., long. 67° 48' W. Pop. 5600. It has a good church, and several villages surrounding it: many of its inhab. are prosperous cattle-farmers. The pools in its neighbourhood swarm with electrical eels. (*Humboldt's Pers. Narr.* iv.)

CALABRIA, an extensive prov. of the Neapolitan dominions, the most S. portion of Italy, between 37° 46' and 40° 7' N. lat., and 15° 39' and 17° 13' E. long.; having N. the prov. Basilicata, N.E. the gulf of Taranto, S.W. the Strait of Messina, and in the rest of its extent the Mediterranean: it comprises the chief of the two peninsulas at the extremity of Italy, and forms what is called the foot of the Italian boot. Shape very irregular; it is 165 m. in length, N. to S., but varying in breadth from 15 to 70 m. Area 6789 sq. m. Pop. (1833) 930,180.

In most points, Calabria affords a striking contrast to the peninsula of Otranto, on the other side of the Tarantine gulf; its shores are extremely irregular, and present many capes or headlands: the principal are those of Cosenza and Rizzuto, on the E.; Spartivento, on the S.; and Vastano, on the W. coast: the principal gulfs are those of Taranto (which it assists in forming) and Squillace, on the E.; Gioja and S. Eufemia, on the W. shores. By far the greater part of Calabria is mountainous; the principal Apennine chain enters it at Mount Pollino, and runs at first S. near the shore, as in N. Italy, then E., and lastly in a S.W. direction to its extremity. It gives off a lofty and remarkable branch to the E., the Silene mountains, which occupy most of the central and wider region of Calabria. The Apennines here attain a greater height than in the central prov. of the king of Naples, and the summits of many of them are covered with snow from Dec. till March. Monte Sila is 4633 feet, Monte Alto (Aspromonte), 4110 feet, and the pass of Nicastro, 3946 feet above the level of the sea.

The plains are few, and of no great extent; the largest are in the N.E., on the banks of the Crati and Coscile, and on the E. coast; in the W. the lowlands consist of only a succession of narrow valleys. The mountain streams are numerous, discharging themselves into both seas; the larger rivers, which, however, require no particular notice, are mostly in the central parts of Calabria. There are many small lakes around the E. shore, but none worthy of special notice. Calabria produces corn, rice, oil, wine, apricot, and fruits of every kind; silk, sugar, manna, wild honey, tobacco, saffron, resins, liquorice, many medicinal plants, and dyes; forests of oak, elm, chestnut, &c.; it has also veins of gold and silver, iron, marble and alabaster; and yields besides crystal, rock salt of the purest kind, and sulphur. Great numbers of fish surround the coast, and game abounds in its forests. It is divided as follows:

|                    | Area.  | Pop.    | Chief Towns.                         | Pop.   |
|--------------------|--------|---------|--------------------------------------|--------|
|                    | Sq. m. |         |                                      |        |
| Calabria Citra     | 3619   | 285,200 | Cosenza<br>Rossano<br>Cassano        | 18,000 |
| Calabria Ultra I.  | 1464   | 20,000  | Ridigliano<br>Boglio                 | 17,000 |
| Calabria Ultra II. | 1786   | 223,000 | Catanzaro<br>Monteleone<br>Squillace | 11,000 |

No part of Europe presents more magnificent scenery than Calabria. On entering it from the N., at Monte Gerardo, the undulating hills are lost; the Apennines assume a bold and steep character, and are broken by deep hollows and ravines, and clothed with forests of massive timber.

## CALABRIA.

The Bruttian forest of Sila, which occupies to a great extent all the S. part of C. Citra, and the N. of C. Ultra II., consists of oak, elm, sweet-chestnut, beech; and pine and fir toward the summits of the mountains: in other parts the Apennines are covered almost to their tops with woods of fine cypress, laurel, hazel, olive, orange, and cedar trees; near Cariati the mauna ash prevails. There are many pastures, however, in the region of La Sila; but habitations are very thinly scattered through it, and towns or hamlets are very few. Around the coast of Calabria Citra there are some cultivated tracts; that near Rosselo yields olives, capers, mignon, corn, and cotton, on the high lands near the sea; the latter is cultivated also at Cassano. Trees are wanting on the banks of the Neto, and the country about Cotrone is one of the most uninteresting in Calabria. From Cantanzaro to Squillace the ground is level; the soil full of broken shelly deposit, and fertile in corn, maize, and mulberry-trees. At Chiaravalle the fields are cultivated with flax; the vines are few, cherry orchards numerous, and hedges of holly, woodbine, and sweet-brier, and banks of heart-ease and wild strawberry. S. Calabria has many towns and villages, various culture, and fine woods; its scenery is decidedly superior to that of Sicily. The environs of Reggio are celebrated for their beauty, and its neighbourhood is well stocked with cattle; from Tropaea to Monteleone the country is like a park, but quite unenclosed, adorned with large clumps of olive-trees. Thence to the Apennines is a wooded vale, through which the Angitola winds; beyond this is a marshy country; and on the banks of the Amato is the field of Maida, celebrated for the action fought there in 1806. N. of Nicastro the main road passes through a fine plain embraced by the mountains, and on the high grounds hence to Cosenza the breaks in the woods display on either side views of wooded vales, sprinkled with towns and villages, and the sea beyond. Some flat grounds prevail N. of Cosenza, as on the banks of the Crati, which are fertile in corn, vines, and mulberry-trees, but subject to malaria; towards the gulf of Policastro there is a tract of pasture land, feeding many flocks of sheep.

Calabria is subject to earthquakes: a most terrific visitation of this sort occurred in 1783, which swallowed up a great many towns and villages. Near S. Basile there are traces of former volcanoes, and the soil is one mass of lava. Several spots are renowned for the events of ancient history; numerous are the sites of ancient Greek cities, as Sybaris, Crotona, &c.; near cape Vaticano, Sextus Pompeius defeated at sea the navy of Augustus. Alaric the Goth, the conqueror of Italy, was buried under one of the tributary streams of the Crati. No Italian prov. of equal extent possesses so many Gothic remains.

The arts and manufactures of Calabria are in a very depressed and backward state. Silkworms are cultivated largely in some places, and silk is produced in tolerable quantity, and of good quality. It has a darker colour than in other Neapolitan provinces, in consequence of feeding the worms on the leaf of the red mulberry, which prevails in every part of this territory. The condition of the peasantry is generally bad; a consequence, principally, of the feudal privileges and exactions of the barons. Smuggling is very prevalent, and outlaws and mendicant friars are both very abundant. The country and its inhabitants, though susceptible of the greatest improvement, are alike uncultivated and savage. No attention is paid to the education of the peasantry, so that the grossest ignorance and superstition are widely prevalent.

The peasants are neither so tall nor so good-looking as those of the rest of Italy. The outline of their faces is African; their complexion a pale olive, or copper colour; their hair coarse, black and frizzled; but they have beautiful teeth, and their countenances are expressive, and mixed with a look of melancholy and wildness. They are vigorous, agile, active, and nervous; quick, gay, courageous, faithful, and hospitable; but irritable, and prone to passion. In the N. a solidity, like that of the Germans, is manifest in their disposition; while, in the S., their manners approach more to those of the Greeks. Many Greeks reside in S. Calabria, who are much handsomer in their persons and dress than the Calabrese. The dress of the latter varies; in the S. it is like that of the Sicilians, and bonnets are worn; in the N. they wear hats; the men dress in a short close jacket, and close hose, both of black cloth; leathern gaiters, and shoes of undressed skin, laced with thongs of the same; or else in a coarse long jacket, coming down far below the waist; wide hose, full of plaits; and ill-cut gaiters of coarse cloth, fastened across with cords: the females wear a large full-plaited petticoat of dingy scarlet. The Calabrese speak a peculiar Italian dialect, pronouncing the *c* and *t*, the *p* and *b*, alike, &c. They are generally poor; the marriage portion of a girl is frequently only a small piece of vineyard, or even a single fruit-tree. Gipsies are numerous, occupying themselves in making small iron articles, bodkins, &c.

## CALAIS.

**History.**—Before the dominion of the Romans, Calabria was subdivided into many republics, forming part of Magna Græcia, a region that comprised all Italy S. of Naples. After the fall of the Western empire, it fell successively under the rule of Odoacer, Theodoric, and subsequently of the Greek emperors, who possessed it till the year 998, when the Arabs, from Sicily, established themselves in a few forts, whence they extended their rule over the rest of the province. A century and a half afterwards, it was conquered by the Normans, when it formed a part of the dominions of Robert Guiscard, Duke of Apulia, with the history of which province its own is subsequently connected. (*Rampoldi, Corografia dell' Italia*, l. 350—352; il. 350; *Hoffmann, Europa und Seine Besohner*, l. 41; *Swinsburne's Two Sicilies*, l. 281—333; il. 426—472; *Craesen's Tour in the S. Prov. of Naples*, 301—340.)

CALAHORRA (an. *Calagurnis Narica*), a city of Spain, prov. Boria, on the Cidacos, near its confluence with the Ebro; 24 m. S.E. Logroño, 43 m. S.S.W. Pampeluna. Pop. 6067. It has a cathedral and an episcopal palace. The neighbourhood produces grain, pulse, hemp, flax, fruit, wine, and oil. This was a Roman town of some note, the reputed birthplace of Quintilian.

CALAIS, a sea-port town of France, dép. Pas-de-Calais, cap. cant., on the straits of Dover, 89 m. N.N.E. Boulogne, lat. 50° 57' 31" N., long. 1° 11' 16" E. Pop. 10,985. The town is of a square form, and is well fortified; being surrounded by walls and bastions, and protected on the W. side by a strong citadel, commanding the town and harbour, and towards the sea by several forts; the country round may, also, in case of necessity, be laid under water, by means of sluices. It is generally pretty well built, the houses being of brick, and the streets broad and straight; but it is said to be *peu axiale*, and *triste-monotone*. It labours under a great deficiency of spring water, the want of which is but indifferently supplied by the rain water, collected in cisterns. In the middle of the town is the *place d'armes*, having round it several good houses, and a handsome Hôtel de Ville. The gate on the road to Paris, constructed in 1695, is a fine piece of architecture. The parish church, erected by the English, is a large, fine building, with a lofty spire. A tower, near the Hôtel de Ville, serves as a light-house; the light, which is revolving, being elevated 118 feet above the level of the sea. A pillar has been erected on the spot where Louis XVIII. landed on his return to France in 1814. The Hôtel Desmin, comprising, besides an excellent inn, a theatre, public baths, and a posting establishment, is the finest building in the town. The ramparts, which are planted with trees, form an agreeable promenade. Calais derives its principal importance from its being the nearest French port to England: it is only 30½ m. from the South Foreland, and 22½ m. from Dover, with which, and Ramsgate, London, and other English ports, it has daily or very frequent communication. The entrance to the harbour is between two wooden piers, nearly ½ m. in length. Unfortunately it dries at ebb tide, and within the piers has only from 15 feet to 18 feet at high water, according to the winds. There is, however, excellent anchorage-ground in the outer road, from two to three m. N.W. from the harbour. There is here a tribunal of commerce, schools of hydrography and design, a public library, with 12,000 vols., &c. Manufactures of trifling, consisting of soap and oil-works, salt refineries, &c. Vessels are fitted out for the cod, herring, and mackerel fisheries, and a considerable trade is carried on in salt and spirits; at present, however, its principal dependence is on the resort of travellers to and from England. It communicates with the A. and consequently, with St. Omer, by means of a canal about 91 m. in length.

Edward III. took Calais, after a lengthened and memorable siege, in 1347. The obstinate resistance made by the besieged is said to have so much incensed the conqueror that he determined to put to death six principal burgoesses of the town, who, to save their fellow-citizens, had unanimously placed themselves at his disposal. But, if he ever really formed any such resolution, he was driven from it by the tears and entreaties of Queen Philippa. The English retained possession of Calais for more than two centuries, or till 1558, when it was taken by surprise by the Duc de Guise. In 1596 it was taken by the Archduke Albert; but in 1598 was restored to France by the treaty of Nervins. It deserves to be mentioned, to the honour of Calais, that it is one of the very few towns of France in which no individual lost his life on account of politics during the Revolution. (*Hugo, art. Pas-de-Calais*; *Purdy's English Channel*; *Hume's England*, cap. 15.)

CALAIS (Str.), a town of France, dép. Sarthe, cap. arrond., on the Anille, 26 m. E.S.E. Mans. Pop. 3783. It has a fine Gothic church, a large square or place, and two promenades; and is the seat of a tribunal of primary jurisdiction, and of a communal college. There are manufactures of serges, linen and cotton stuffs, with tanneries and glass-

## CALASCIBETTA.

works. The country round is barren, being principally occupied with heaths and forests.

CALAIS, p. t. Washington co., Me., 300 m. E.N.E. Augusta, 786 W. Situated on the S. side of the St. Croix river, nearly opposite to St. Andrew's, New-Brunswick. The falls in the river afford extensive water-power. Vessels of the largest class come to the lower village, where is a tide of 30 ft. It contains three foreign commercial houses, thirty retail stores, six lumber-yards, one grist-mill, twenty saw-mills, ten schools, 1317 scholars. Pop. 3934.

CALAIS, p. t. Washington co., Vt., 10 m. N.E. Montpelier, 306 W. Watered by branches of Winooki or Onion river. It contains a church common to several denominations, one store, two saw-mills, four oil-mills, seventeen schools, 487 scholars. Pop. 1709.

CALASCIBETTA, a town of Sicily, val Calatanissetta, cap. cant., 15 m. N.E. Calatanissetta. Pop. 5073. There are in the environs numerous caverns.

CALABELLOTA, or CALTABELLOTA, a town of Sicily, val di Girgenti, on the summit of a lofty mountain near to, and overlooking, the course of the river of the same name, 10 m. N.E. Sciacca. Pop. 4693. It is very difficult of access, and is said by Swinburne to be the worst situated place, as respects the comforts of life, he had ever seen.

Tricala, a strong city of ancient Sicily, was situated within a short distance of the modern town. This city is famous in history, from its having been the stronghold of the revolted slaves during the dangerous servile insurrection that broke out in Sicily, 104 or 105 years B.C. Owing to the strength of the city, and the talents of their leader Athenio, the insurgents were able to defend themselves for four years; and were not subdued till a considerable army, headed by Aquilius, the colleague of Marius, was sent against them. (*Ancient Universal Hist.*, xii., 30, 8vo ed.) In more modern times, Roger I. defeated the Saracens, with great slaughter, in the vicinity of this town. (*Swinburn's Two Sicilies*, ii., 258, 4to ed.)

CALATAFIMI, a town of Sicily, val di Trapani, cap. cant., 7 m. S.W. Alcamo. Pop. 8933. It is ugly and ill built. Its castle, now in ruins, stands on the summit of a hill, in a commanding situation. The environs are well cultivated. (*Swinburn's*, ii., 331.)

CALATAGIRONE, or CALTAGIRONE, a town of Sicily, val di Catania, cap. distr., on the declivity of a mountain, 35 m. S.W. Catani. Pop. 31,616. It stands in a salubrious situation, and is said to be the richest and best governed city of Sicily. Streets clean, spacious, well paved, and tolerably lighted; many of the palaces and other public buildings are handsome, and the market is well supplied with provisions at moderate rates. It is the seat of a bishopric; has several churches and convents, a royal college, a hospital, and an orphan hospital. The inhabitants are industrious, and are said to have made the greatest proficiency of any in the island in the useful arts. A kind of soft argillaceous earth is found here, and manufactured into tolerable imitations of the Saxon porcelain; groups of figures, in the various costumes of Sicily, are also formed from it with infinite taste. The neighbourhood affords saffron and yellow ochre, bistre, soda, and other colouring materials. A grand festival and fair is held for fifteen days in October, during which great sales are made of cattle, cloth, honey, wax, poultry, and agricultural produce. It is supposed, from the existence of sepulchres and other remains of antiquity, to occupy the site of the *Hybla Hersea* of the ancients. (*Swinburn's*, ii., 307; *Smyth's Sicily*, p. 197.)

CALATANISSETTA, a town of Sicily, cap. prov. of the same name, in a large and fertile plain, near the right bank of the Salso, 62 m. S.E. Palermo. Pop. 16,563. It is well built; has broad and straight streets, a fine square; is defended by a castle, and has a civil and criminal court. In its environs, at a place named Terra Pilata, are two salines that emit hydrogen gas.

CALATAYUD (*Bibilia*), a city of Spain, Aragon, cap. district, on the Jalón, at its confluence with the Jiloca, at the foot of a hill, 45 m. S.W. Saragossa, 115 N.E. Madrid; lat. 41° 55' N., long. 1° 33' W. Pop. 5998. It has a large square, full of shops; pleasant and shady promenades; a fountain with eleven jets d'eau, and a magnificent tower; an episcopal palace; a hall for the meetings of the Junta; a house of industry; two hospitals, and barracks for 4000 troops. Streets and houses regularly built, and there are three bridges over the river. It has several elementary schools, and two grammar schools, with manufactures of common cloths, brown paper, leather, &c. The soil abounds in cathartic salts, and there are several chalybeate springs, and extensive caverns, from whose roofs hang concretions, said to be sulphate of lead. The town has three suburbs. It is rather a desirable place to live in, though dull, provisions being good and abundant. This was a Roman town, and is celebrated as being the birthplace of Martial, who has eulogised its manufactory of arms. (*Milano*.)

CALATRAVA LA VIEJA, in Spain, the remains of the

## CALCUTTA.

ancient city of Calatrava, the *Oratum* or *Oris* of the Romans, on the Guadiana, prov. La Mancha, 12 m. N.E. Ciudad Real, 15 m. N. Almagro. The order of the Knights of Calatrava had its origin here. The city being menaced by the Moors, in 1158, was abandoned by the Templars, who had held it for ten years, and Sancho III. promised it to any one who would undertake its defence. Raymond, abbot of Fitero, and Diego Velasquez, offered themselves for the task, and were furnished with money, arms, munitions, &c. A crusade was proclaimed, and plenary indulgences were granted to all who should be found at the defence of Calatrava. The Moors, alarmed at the report of these preparations, abandoned their enterprise, and Velasquez, in his turn, made several incursions into their territories. On this, the king confirmed the grant, with new donations. The order was then regularly organised in two classes, one for the service of the choir, and the other for the field; but the knights, on the death of Raymond, separated themselves from the monks, and chose a grand master distinct from the abbot, who returned with his monks to Fitero. The knights subsequently acquired great fame and riches in their contests with the Moors; but, having sustained serious reverses, and quarrelling among themselves, the pope adjudged the grand-mastership in perpetuity to the crown of Spain. The order has at present about eighty commanderies. (*Perrot, Collect. Historique des Ordres de Chevalerie*, p. 79, Paris, 1890; *Milano*, ii., 265.)

CALCASIEU, parish, La. Situated in the W. part of the state, and contains 5000 sq. m. Bounded W. by Sabine river, which separates it from Texas, and E. by the Gulf of Mexico. Watered by Calcasieu river and its branches. It contained, in 1840, 13,557 neat cattle, 553 sheep, 4564 swine; and produced 16,670 bushels of Indian corn, 6387 of potatoes, 45,600 pounds of cotton, 6000 of sugar. It had four stores, one tannery, two schools, 98 scholars. Pop.: whites, 1349; slaves, 422; free coloured, 236; total, 2057. Capital, Lisbon.

CALCASIEU, river, La., runs chiefly in the parish whose name it bears, and passes through a lake 30 m. long from 1 to 10 broad, a little before its entrance into the Gulf of Mexico.

CALCUTTA, a celebrated city of Hindoestan, prov. Bengal, cap. of the British dom. in the East, and seat of the supreme government, in a level tract on the E. side of the Hooghly river, an arm of the Ganges, about 100 m. N. of the bay of Bengal; lat. 23° 33' N., long. 88° 25' E. Pop. (1837) about 230,000, exclusive of perhaps 150,000 more, who come daily from the suburbs into the city. On approaching Calcutta from the sea, the stranger is much struck with the magnificence of its appearance; the elegant villas on each side of the river; the government botanical gardens; the spires of the churches and temples, and the strong and regular citadel of fort William. Including fort William, the esplanade, &c., Calcutta extends along the bank of the river, from Kidderpore to Cosmopore, a distance of 6 m., with a variable breadth, but averaging about 14 m. A handsome quay, similar in many respects to that of Petersburg, called the Strand, is continued for 2 or 3 m. along the bank, from the point at which the esplanade meets the city: it is raised 40 ft. above the low water mark, and furnished with about thirty principal quays, or flights of steps, for landing, &c. The Hooghly is here about a mile in width at high water, or at least twice as broad as the Thames below London bridge, and is, like that river, crowded with shipping; vessels of all descriptions, up to 600 tons burden, being able to lie almost close to the quay. The residences of Europeans are mostly detached from each other, built in the Grecian style of architecture, and situated in Chowringhee (the S. portion of the city, lying at the edge of a portion of the esplanade), or in the suburbs at that quarter, as Garden Reach, where the villas exhibit much beauty, and are surrounded by plantations of mango, jack, and other fruit trees. The citadel, or fort William, which stands near Kidderpore, about 4 m. S.W. the city, is not only the strongest and most complete fortress in India, but in the British dominions; it is, however, large, and would require for its proper defence 10,000 men. It is an octagon; the five faces on the land side are regular, the three others, towards the river, vary according to circumstances. The bastions have very salient orillons, and every curtain is covered with a large half moon, mounting twenty-six pieces of cannon: the outworks are very extensive, but not much raised above the level of the surrounding country, and fort William does not, therefore, make an imposing appearance from without. It contains an excellent arsenal, and a cannon-foundry, &c.: its interior is beautifully laid out in walks and grass-plots, shaded with rows of trees, intermixed with piles of shells and cannon balls. It is usually garrisoned by one strong European regiment, two native regiments, and a strong detachment of artillery: was built by Lord Clive soon after the battle of Plassey; and has cost the E. I. Comp., from first to last, £2,000,000. Cal-

## CALCUTTA.

catta has no defence other than this fortress; the ditch and mound, constructed by the early settlers as a barrier against the Maharattas, were destroyed by Marquis Wellesley, and their place is now occupied by the "circular road," which marks the boundary of the liberties of Calcutta, and of the administration of English law. Between the fort and the city there is an extensive open plain, called the Esplanade, being a continuation of the glacis, the fashionable resort for driving and riding, as Hyde Park is in London. On it is the government house, in a line with which there is a range of very handsome dwelling houses. Chowringhee, formerly a collection of huts, is now a village of palaces, and extends for a considerable distance into the country. Calcutta, when viewed from the Chandpal ghaut, or from any other spot to the S., certainly gives the impression of a very noble city; this impression, however, as is common in all Eastern cities, is soon dissipated on penetrating into its interior. Behind Chowringhee, the native or "Black Town" stretches along the river to the N., and exhibits a remarkable contrast to the part inhabited by Europeans. Its streets are dingy, narrow, and crooked, and consist of "huts of earth baked in the sun, or of twisted bamboos, interspersed here and there with ruinous brick bazars, pools of dirty water, coco-trees, and little gardens, and a few very large, very fine, and generally very dirty houses, of Grecian architecture, the residences of wealthy natives. There are some small mosques of pretty architecture, and very neatly kept, and some pagodas, but mostly ruinous and decayed; the religion of the people of Bengal being chiefly conspicuous in their worship of the Ganges, and in some ugly painted wooden or plaster idols, with all manner of heads and arms, which are set up in different parts of the city. Fill up this outline with a crowd of people in the streets, beyond anything to be seen even in London; some dressed in tawdry silks and brocades; more in white cotton garments; and most of all black and naked, except a scanty covering round the waist; besides figures of religious mendicants with no clothing but their long hair, and beards in elf locks; their faces painted white, yellow, or dirty red; their beads in one ghastly lean hand, and the other stretched out like a bird's claw to receive donations; marriage processions, with the bride in a covered chair and the bridegroom on horseback, so swathed round with garlands as hardly to be seen; tradesmen sitting on the ground in the midst of their different commodities; and old men, looking on, perched, naked as monkeys, on the flat roofs of the houses; carts drawn by oxen, and driven by wild-looking men with thick sticks, so unmercifully used as to undecieve perfectly all our notions of Brahminical humanity; attendants with silver maces pressing through the crowd before the carriage of some great man or other; no women seen, except of the lowest class, and even these with heavy silver ornaments on their dusky arms and ankles; while coaches, covered up with red cloth, are seen conveying the inmates of the neighbouring seraglios to take what is called "the air;" a constant creaking of cart-wheels, which are never greased in India; a constant clamour of voices, and an almost constant thumping and jingling of drums, cymbals, &c., in honour of some of their deities; and add to all this a villanous smell of garlic, rancid coco-nut oil, sour butter, and stagnant ditches, and you will understand the sounds, sights, and smells of what is called the "Black Town" of Calcutta." Under the administration of the Marquis of Hastings, large sums were spent in the improvement and ventilation of Calcutta; a street 60 ft. wide was carried through its centre in its longest diameter, and several squares were laid open, each having a tank or reservoir in the middle, surrounded by planted walks. The largest square, which is near the S. extremity, is 500 yards on each side, and contains a tank 60 ft. deep. There are no covered ways, as in the cities of Persia, Turkey, &c., though, from the violent heats and rains, such would be very desirable. The bazars in the native town are very inferior, and the shops and warehouses have all a mean appearance: the public buildings there are few and small, and there is not a single minaret in the whole place. The most remarkable public edifice is the government house, which is, "to say the least of it, a more showy palace than London has to produce;" it was built by the Marquis Wellesley, and consists of a centre and four wings, connected together by chenevi passages, so constructed as to obtain the benefit of the air from whichever quarter the wind blows. The wings contain the private apartments, and that on the N.E. the council room; the centre has two very fine rooms, the upper one of which is the hall-room, and both are lighted by a profusion of lustres, while, at the same time, they exhibit much good taste: the architecture of most of the buildings is of the Ionic order. The other chief edifices are the town and custom houses, the mint, St. John's cathedral, and another English church, all of which are contiguous to the government house; the Scotch Presbyterian church, a very handsome structure; the Portuguese, Greek, and Armenian

churches; the courts of justice, barracks, jail, hospitals, &c. There are many public colleges and benevolent institutions; as the Hindoo, Mohammedan, and Anglo-Indian colleges, and the college at Fort William; the Calcutta grammar, free, and other charity schools; the military and female orphan asylums; poor funds, &c.; besides many bible, missionary, and other religious associations. On the N.W. side of the river are the extensive suburb of Howrah, opposite the "Black Town," and the botanic garden, opposite the citadel. Near the latter is the bishop's college, a handsome building in the Elizabethan Gothic style, occupying three sides of a quadrangle, 150 ft. square, erected in 1890, for the education of a clerical body, by the Society for the Propagation of the Gospel, at the suggestion of Bishop Middleton. The botanic garden is beautifully laid out, and covers 300 acres of ground: between it and the bishop's college there is an extensive plantation of teak, which, although not in its native soil, thrives exceedingly well. There are several dry and other docks on both sides the river, in which vessels of any size may be built and repaired; but the ships constructed here are of inferior durability to those built at Bombay, in consequence of the framework being of inferior wood, and the visible portions and upper works alone of teak; all the timber in Calcutta also, without the fact being outwardly obvious, suffers greatly from the devastations of the white ant. In every part, the city is covered by an amazing multitude of little pools, or reservoirs, yet the soil on which it stands is remarkably deficient in springs, none having been met with even after boring down 140 ft., till 1828, and subsequently, when Dr. Strong found some in isolated spots, at a depth of 70 ft. The drainings of the place, with such portions of the refuse as are not devoured by crows, kites, vultures, adjutants, and pariah-dogs, which abound in the streets, and at night by foxes and jackals from the surrounding country, are conveyed away, by a canal, to a large shallow salt lagoon about 4½ m. distant, towards the E. Between the city and this salt lagoon the country is filled with gardens, orchards, and villages, but is little inhabited by Europeans. The tract to the N. is drier, healthier, and more open; and the two great roads to Dumdum, the artillery cantonment, and Barrackpore, the country seat of the governor-general, lie over a vast extent of fertile country, divided into rice-fields, orchards, and gardens, and swarming with population. The vicinity of Calcutta is very pleasing; "as soon as its boundary is passed, the roads wind through beautiful villages, overhung with the finest and most picturesque foliage the world can show, of the banyan, the palm, the tamarind, and the bamboo. Sometimes the glade opens to plains covered with the rice harvest, or to a sight of the broad, bright river, with its slips and wooded shores; sometimes it contracts into little winding tracks, through fruit-trees, gardens, and cottages; the gardens fenced in with hedges of aloe and pine-apple; the cottages neater than those of Calcutta, and mostly of mats and white wicker-work, with thatched roofs and cane verandahs, with gourd trailing over them, and the broad, tall plantains clustering round them." The rainy season at Calcutta generally begins about June 12, and terminates October 14. The average fall of rain for three recent years was 59.83 inches; the annual mean of the barometer is 30.704; of the thermometer, 79° 13". The most pleasant and temperate period of the year is from October to March; by the middle of April, the weather becomes oppressively hot, often rising to 100° Fahr. The lowest temperature in December 31, 1855, was found to be 69° 2° Fahr.

Calcutta enjoys a very extensive internal navigation, by means of the Ganges and its numerous arms and tributaries; and it monopolizes the whole of the external trade of Bengal. It is now, in fact, Canton perhaps excepted, the greatest emporium of the East: the gross amount of its imports and exports amounting to £10,000,000 to £12,000,000 a year. The principal foreign trade is in the hands of English merchants, but there are others among the Persian, Hindoo, Portuguese, Greek, Armenian, &c., inhabitants, who are in an extensive way of business. The native Portuguese and Armenian merchants have latterly been declining, both in wealth and importance; while, on the other hand, the Parsees have increased in numbers and opulence, and there are several possessing a capital of £250,000. Innumerable small craft daily arrive from the interior, laden with the produce and manufactures of the different provinces, and the Calcutta market is well supplied with an abundance of excellent provisions: game, snipes, wild ducks, teal, and ortolans, are comparatively cheap; stilled venison is as fat as in England, but without flavour; an immense variety of fruits of fine quality appear on European tables; and an exquisite luxury is met with in the *tapaewi* or mango-fruit (so called because it is in season with the mango-fruit), and which has been hitherto found only in the rivers of Bengal, the Birman empire, and Cambaja rivers.

# CALCUTTA.

The population of the city is unequally distributed : its N. and central portions, especially the former, are very densely inhabited ; the S. part much less so, owing to the dwellings of Europeans being so much more widely dispersed. The following is the latest census (1837), giving the relative proportions of the different races of resident inhabitants :

|                              |         |                          |         |
|------------------------------|---------|--------------------------|---------|
| Hindooes . . . . .           | 137,651 | Brought up . . . . .     | 900,406 |
| Mohammedans . . . . .        | 58,744  | Chinese . . . . .        | 363     |
| Half Castes . . . . .        | 4,746   | Jews . . . . .           | 307     |
| English . . . . .            | 3,133   | Arabs . . . . .          | 351     |
| Portuguese . . . . .         | 3,181   | Madrasas, . . . . .      |         |
| French . . . . .             | 165     | Parsoes, and { . . . . . | 144     |
| Armenians . . . . .          | 636     | Native Chris- . . . . .  |         |
| Mugh (Araconees) . . . . .   | 683     | tians . . . . .          |         |
| Persians, called { . . . . . | 537     | Low Castes . . . . .     | 19,084  |
| Moguls . . . . .             |         | Total . . . . .          | 990,714 |
| Carry forward . . . . .      | 900,406 |                          |         |
| Males . . . . .              | 144,911 |                          | 990,714 |
| Females . . . . .            | 84,803  |                          |         |

The number of houses, huts, &c., in 1837, was 65,495, exclusive of the suburbs. Calcutta is the seat of the chief Protestant bishop of India of the Established Church of England ; of the supreme courts of justice ; of one of the courts of circuit and appeal for the presidency of Bengal ; of a vicar-apostolic of the Romish Church, with authority over fourteen priests and ten churches, one of which is in that city.

European society in Calcutta is gay and convivial ; and fêtes and dinner-parties, both numerous and splendid, are given by the government officers and wealthy private individuals. A certain degree of formality and stiffness is, however, very prevalent ; and the Brahminical institution of *castes* would appear to have communicated itself to all ranks and classes of Europeans.

Bishop Heber observes, that the large dinner-parties, in addition to the geographical situation, and other local peculiarities ; the aspect and architecture of the place ; the multitude of servants, want of furniture in the houses, &c., tend, except in respect of climate, to give Calcutta a striking resemblance to Petersburg. Besides private parties, there are public subscription assemblies, with *conversations*, concerts, and a theatre, though the latter is but little frequented. It is usual with Europeans to rise early, the pleasantest part of the day being the first of the morning ; after *tiffin* (lunch), which is taken between two and three o'clock, many persons, during the summer heats, retire to sleep for two or three hours ; at sunset the fashionable drives of the Esplanade are crowded with European vehicles of all sorts, and the dinner-hour soon after succeeds. The equipages of Calcutta embrace barouches, chariots, tilburies, gigs, &c., as in England, drawn by a breed of horses which have been greatly improved through the government stud and importations from Europe and Arabia ; but a grotesque and peculiar appearance strikes the eye of the European in the intermixture of Asiatic costumes, black coachmen, &c. in the scene. Most visits at a short distance are paid in palanquins, the bearers of which are from Balasore, Behar, or the northern Circars, and run silently, bare-headed, and almost naked. The Anglo-Indian, or half-caste population, the product of an intercourse between Europeans and natives, are more numerous in Calcutta than anywhere else in India ; they are intelligent, industrious, and generally well educated, and possess a degree of consideration in the eyes of the native population, though they are without any political influence. All of them speak English, as well as the native dialect. Many of the half-caste females, daughters of mothers of high caste, are educated in the seminaries in and near Calcutta, and often marry Europeans, when they are said to make most unexceptionable wives and mothers : their children, in this case, lose in one or two generations all distinctive mark of their Indian origin. A considerable number of the new zemindars, and the retired traders who have become wealthy, reside in Calcutta, where they have houses handsomely furnished in the European style ; drive the best horses and equipages ; have adopted some English habits and tastes ; speak the English language ; enter into the politics of the British empire, and are not ignorant of English literature. With all this, the education of their sons is often miserably neglected, and they turn out more spendthrifts ; but the fact is sufficiently and generally manifest, that the native inhabitants of all ranks show a willingness to learn and speak English, an increasing anxiety to send their children to our schools, and a growing neglect of caste and other national prejudices ; tendencies which, if properly taken advantage of, may, ere long, be turned much to our mutual benefit.

The great bulk of the natives have a very bad character, being proficients in intrigue, falsehood, and chicanery ; prone to perjury, theft, gambling, and all kinds of dishon-

esty ; and of a cowardly disposition : but it is generally admitted that the morality of the native inhabitants of Calcutta is at a lower ebb than that of those in the provincial districts. A perceptible amendment in the morals and pursuits of the people is, however, said to be taking place. The Bengalee dialect, which had long been looked on with much prejudice by the natives of India, is now reviving, and various works are published in it every year. Numerous periodical works, newspapers, &c., issue from the press in Calcutta ; among which are the *Bengal Hurkaru* and *Chronicle*, the *Calcutta Courier*, and the *Englishman*, daily ; one paper twice, and another three times a week ; six weekly ones, of which one is in the native tongue ; and another, the *Reformer*, an English paper, conducted by native gentlemen ; various other native publications ; and five monthly, and two yearly (English) journals. There are several distinguished scientific, literary, and other associations, in Calcutta ; as the Asiatic Society, which owes its origin to Sir W. Jones ; the Medical and Physical, Agricultural and Horticultural, Societies ; the Chamber of Commerce, Trade Association, &c. To the very able monthly journal of the Asiatic Society we have been much indebted in this and various articles of the present work.

In 1698 the British factory was removed thither from Hooghly ; but in the early part of the last century Calcutta was but a paltry village, belonging to the Nuddes district, and inhabited chiefly by husbandmen. Chowringhee was also but a straggling village ; and a forest jungle, interspersed here and there with patches of cultivated land, covered what is now the Esplanade, so late as 1756. In that year Suraj-ul-Dowlah, the scoundhal of Bengal, dispossessed the English of their settlement ; on which occasion 146 Englishmen, who had been left to defend the factory, were shut up at night in the black hole (a part of the old fort, taken down in 1818), of which number only 23 were found alive next morning. Col. Clive, with some Madras troops, retook Calcutta Jan. 1, 1757 ; since which it has been quietly retained by the British, and risen to its present degree of importance. (*Heber's India, &c. i. 315-325; Heber's Hindoostan, i. 48-61; Heber's Journal, &c.; Journals of the Asiatic Soc. of Great Britain and Bengal, &c.; Mod. Trav. ix., 36-115.*)

In the Year 1837-38 the Value of Imports at, and Exports from, the Port of Calcutta was as follows:

|                                    | Imports.  | Exports.  |
|------------------------------------|-----------|-----------|
| Great Britain . . . . .            | 2,800,438 | 2,719,222 |
| France . . . . .                   | 148,606   | 227,888   |
| Sweden . . . . .                   | 5,000     | 16,678    |
| South America . . . . .            | 64,025    | 5,073     |
| North America . . . . .            | 72,945    | 120,371   |
| Madras Coast . . . . .             | 128,900   | 114,600   |
| Ceylon . . . . .                   | 6,507     | 6,408     |
| Maldives and Laccadives . . . . .  | 15,970    | 4,328     |
| Bombay and Malabar . . . . .       | 171,000   | 277,108   |
| Arabian and Persian Gulf . . . . . | 188,776   | 157,287   |
| Singapore . . . . .                | 320,680   | 517,681   |
| Penang and Malacca . . . . .       | 88,779    | 65,581    |
| China . . . . .                    | 675,494   | 5,054,375 |
| New Holland . . . . .              | 6,144     | 36,718    |
| Java and Sumatra . . . . .         | 6,150     | 14,715    |
| Pege . . . . .                     | 142,877   | 517,681   |
| Mauritius . . . . .                | 45,785    | 154,885   |
| Reunion . . . . .                  | 13,405    | 28,870    |
| Cape and St. Helena . . . . .      | 6,408     | 23,897    |
| Total . . . . .                    | 4,900,902 | 6,804,904 |

The principal Articles of Import and Export were as follows:

|                                  | Quantity.          | Value.    |
|----------------------------------|--------------------|-----------|
| <b>IMPORTS.</b>                  |                    |           |
| Beet root . . . . .              | 121,884 bush. mds. | 56,544    |
| Bees and pamphlets . . . . .     |                    | 20,500    |

CALDER, a river of England, in Yorkshire, rises on the S.E. side of Bolesworth hill, in the grand central range of English mountains, and flowing in an E. direction, at a little distance from Halifax and Dewsbury, and past Wakefield, unites with the Aire at Castleford. This river is of great importance in the canal system of Yorkshire and Lancashire, and has been rendered navigable for a great part of its course. Another river of the same name rises on the W. side of the same hill, and flowing W., falls into the Ribbles. It is of very inferior importance. (*See HUMBER.*)

CALDWELL, county, N. C. Situated in the N.W. part of the state. Drained by Yadkin river. The Blue ridge lies on its N. border. Organized since 1840. Capital, Lenoir.

CALDWELL, parish, La. Situated towards the N. part of the state, and contains 560 sq. m. Drained by Washita river, and branches of Little river. Pop.: whites, 1354; slaves, 649; free coloured, 14; total, 2017. Capital, Columbia.

CALDWELL, county, Ky. Situated in the W. part of the state, and contains 600 sq. m. Bounded S.W. by Tennessee river. Watered by Cumberland river. It contained, in 1840, 11,191 neat cattle, 10,445 sheep, 35,189 swine; and produced 53,109 bushels of wheat, 2113 of rye, 601,265 of Indian corn, 15,995 of potatoes, 2,567,625 pounds of tobacco, 17,154 of cotton, 8205 of sugar. It had twenty-nine stores, one furnace, one forge, four flouring-mills, thirty-eight grist-mills, nine saw-mills, six tanneries, two potteries, thirteen distilleries, one printing-office, one weekly newspaper, one college, 76 students, three academies, 69 students, sixteen schools, 377 scholars. Pop.: whites, 8091; slaves, 2171; free coloured, 103; total, 10,365. Capital, Princeton.

CALDWELL, county, Mo. Situated in the N.W. part of the state, and contains 438 sq. m. Drained by Crooked creek and branches of Grand river. It contained, in 1840, 14,986 neat cattle, 693 sheep, 5056 swine; and produced 62,393 bushels of Indian corn, 15,190 of oats, 3510 of potatoes, 2950 pounds of tobacco. It had six stores. Pop.: whites, 1367; slaves, 61; total, 1458. Capital, Far West.

CALDWELL, p. t., capital of Warren co., N. Y., 63 m. N. Albany, 436 W. The village is pleasantly situated on the S.W. end of lake George, and contains a court-house, jail, county clerk's office, one church, two stores, one grist-mill, one saw-mill, one plaster-mill, thirty-five dwellings, and about 200 inhabitants. The remains of old fort William Henry and of fort George are near this place. A steamboat plies on lake George, 36 miles, to its outlet, and presents to the traveller much beautiful and romantic scenery. The town contains one grist-mill, four saw-mills, six schools, 239 scholars. Pop. 693.

CALDONIA, county, Vt. Situated towards the N.E. part of the state, and contains 700 sq. m. Bounded S.E. by Connecticut river. Watered by Passumpsic river, which flows into Connecticut river, and by head waters of Winooksi and Lamollic rivers, flowing to lake Champlain. It contained, in 1840, 32,668 neat cattle, 100,886 sheep, 18,991 swine; and produced 52,109 bushels of wheat, 1799 of rye, 32,350 of Indian corn, 12,991 of barley, 342,433 of oats, 1,066,848 of potatoes, 3011 pounds of hogs, 663,397 of sugar. It had fifty-three stores, one furnace, eighteen fulling mills, nine woollen-factories, thirty grist-mills, 107 saw-mills, three oil-mills, twenty-seven tanneries, three potteries, two printing-offices, two weekly newspapers, four academies, 323 students, 205 schools, 7398 scholars. Pop. 21,991. Capital, Danville.

CALDONIA, p. t., Livingston co., N. Y., 239 m. W. Albany, 363 W. Bounded S.E. by Genesee river. On the W. an efficient mill-stream issues from a spring, which is supposed to discharge the lost waters of Allen's creek, 7 miles W. It contains five stores, one furnace, one grist-mill, two saw-mills, one brewery, twelve schools, 521 scholars. Pop. 1987. The village contains two churches, four stores, one flouring-mill, one saw-mill, one brewery, seventy dwellings, and about 450 inhabitants.

CALDONIA, L. Shiawassee co., Mich. It contains one store, one saw-mill. Pop. 114.

CALHOUN, county, Ill. Situated in the W. part of the state, and contains 240 sq. m. Bounded E. by Illinois river, and S.W. by Mississippi river, containing a table land, 374 miles long, and from 3 to 10 wide, extending from river to

## CALICUT.

river. It contained, in 1840, 9705 neat cattle, 860 sheep, 6497 swine; and produced 9791 bushels of wheat, 79,039 of Indian corn, 3610 of oats, 5673 of potatoes, 1460 pounds of sugar, 530 of tobacco. It had eight stores, one lumber-yard, two grist-mills, five schools, 119 scholars. Pop. 1741. Capital, Gilead.

CALHOUN, county, Mich. Situated S. of the centre of the state, and contains 730 sq. m. Drained by Kalamazoo and St. Joseph's rivers, and their branches. Organized in 1833. It contained, in 1840, 9457 neat cattle, 3057 sheep, 18,308 swine; and produced 176,630 bushels of wheat, 140,971 of Indian corn, 3336 of buckwheat, 90,553 of barley, 179,177 of oats, 132,319 of potatoes, 18,755 pounds of sugar. It had thirty-three stores, ten flouring-mills, five grist-mills, twenty-nine saw-mills, four distilleries, two printing offices, two weekly newspapers, two academies, 88 students, ninety-six schools, 3157 scholars. Pop. 10,599. Capital, Marshall.

CALHOUN, county, Florida. Situated in the W. part of the ter., and contains 1100 sq. m. Bounded E. by Apalachicola river, S. by Apalachicola and St. Joseph's bays, and the gulf of Mexico. It contained, in 1840, 1464 neat cattle, 99 sheep, 966 swine; and produced 4556 bushels of Indian corn, 4495 of potatoes, 5000 pounds of rice. It had seven commission houses, ten retail stores, nine lumber-yards, two grist-mills, two saw-mills, one printing-office, one weekly newspaper, three academies, 53 students, five schools, 108 scholars. Pop.: whites, 705; slaves, 430; free coloured, 17; total, 1143. Capital, St. Joseph.

CALICUT, a marit. distr. of Hindostan, prov. Malabar, which see.

CALICUT, a marit. town of Hindostan, cap. of the above district, and of the prov. Malabar, 85 m. S.W. Seringapatam, and 380 m. W.S.W. Madras; lat. 11° 18' N., long. 75° 50' E. Pop. 25,000! The principal exports are pepper, teak, sandal-wood, cardamoms, coir, cordage, and wax; but Calicut is destitute of any good harbour. This was the first place in India made by the Portuguese under Vasco da Gama, who arrived here 18th May, 1498. In 1509 the Portuguese were repulsed, with great slaughter, in an attack on the place, and their commander killed. In 1766 it was taken by Hyder Ali, and Tippeco afterward destroyed the fort and town, obliging the inhabitants to migrate to Nelluru; but on the conquest of the prov. by the British in 1790, most of them returned to it, and in 1800 Calicut again numbered 5000 houses. (*Hamilton's East India Gazetteer*, i., 326; *Journal of the Asiatic Society*, ii., 246.)

CALIFORNIA, a country of N. America, extending along its W. coast from 33° 48' to 43° N. lat., and between long. 107° and 124° W., having N. the W. territories belonging to the U. States, E. Mexico and the gulf of California, and S. and W. the N. Pacific ocean. It is naturally divided into Old or Lower, and New or Upper California; which, as they differ widely, both as to formation and products, we shall notice separately.

CALIFORNIA (LOWER), a long, narrow peninsula on the W. coast of N. America, between 29° 48' and 39° N. lat., and 109° 18' to 116° 30' W. long., having N. Upper California, E. the gulf of California, which separates it from almost its entire length from the Mexican prov. of Sonora, and S. and W. the N. Pacific ocean; length about 700 m.; breadth varying from 30 to 100 m., with an average of 50 or 60 m.; area 38,000 sq. m. Pop. perhaps not more than 14,000 or 15,000. (*Forbes*.)

A chain of rocky mountains, not more than 5000 feet in height, runs through the centre of the peninsula from S.E. to N.W. The surface of the country consists of groups of bare rocks broken by ravines and hills, interspersed with tracts of a sandy soil nearly as unproductive. It is, in fact, one of the most barren and unattractive regions within the temperate zone. In some sheltered spots, where the soil has not been carried away by the torrents from the mountains, or in others which chance to be fertilized by small streams (which are very scarce), there is mould of great fertility; but such spots are rare and of small extent. There are some tolerable harbours; but the same barrenness reigns around them that prevails elsewhere, and renders them ineligible as situations for towns. Lower California is said to be rather rich in minerals. At its S. extremity there are argentiferous lead ores; in other parts there are mines of gold and silver; but of these none are now wrought, with the exception of those of San Antonio, in or about the 34th parallel, which afford a trifling produce. The climate is excessively dry and hot: unlike Mexico, the rains, except in the most southerly parts of the peninsula, occur during the winter months; summer rains scarcely occur N. of Loreto, near lat. 26° N. Violent hurricanes are frequent, but not earthquakes. Timber is very scarce, and by far the greater portion of the country is incapable of producing a single blade of corn. The sheltered valleys only, near the different missions, are cultivated with maize, and yield a variety of fruits. Dates, figs, &c., are dried,

## CALIFORNIA.

preserved, and exported; wine is also made and exported, and a kind of spirit is distilled from the muscat. Cattle are rather numerous as compared with the population, and feed in part on the leaves of the moncho tree, a species of acacia. Wolves, foxes, deer, goats, several snakes, lizards, and scorpions are among the wild animals; and the fertility of the sea, if properly taken advantage of, would make amends for the indomitable barrenness of the land. The pearl-fishery in the gulf of California has been famed from its first discovery, and in the 17th and 18th centuries large quantities of pearls were obtained by the Spanish adventurers. Violent means, attended with frequent loss of life to the Indians, were often resorted to, to carry on the fishery: it was customary with the Spaniards to kidnap and employ by force as divers all the inhabitants of the coasts and islands of the gulf they could lay their hands on. When the Jesuits had settled in California, they obtained the prohibition of such practices towards the Indians under their protection; and divers were then brought from the opposite or Mexican side of the gulf, in which none were allowed to fish for pearls but such as had the viceroy's licence. When prosecuted to its greatest extent, from 600 to 800 divers were employed; the fishery was carried on by vessels of 15 to 30 tons' burden. The oysters were divided as follows: two for the "armador," or owner of the vessel; two for the "bueno," or diver; and one for the king, whose fifth, at the commencement of the 17th century, often produced a value of no less than 12,000 dollars per annum for every bark employed. The oysters were then immediately opened. The pearls found in those belonging to the divers were equally divided among them, and either sold on the instant to the armador, to whom they were always indebted for their outfit and previous advances, or to dealers on shore, who supplied them with spirits, chocolate, sugar, cigars, &c., and who often reaped more profit than the armadors. In 1683, Captain Hall says the oysters were differently distributed: the largest were first laid aside for the Virgin, and of the rest, 8 were the share of the owners, 8 of the divers, and 2 only of the government. Sixteen or eighteen small vessels are now annually employed in the gulf, each of which obtains, in favourable seasons, from 500 to 1000 dollars' worth of pearls. In 1831, four tolerably large vessels from the opposite coast of Mexico, with 180 divers, together obtained pearls to the value of £3,600 (*Forbes*). Pearls, tortoise-shell, a few bullock's hides, dried beef, dried fruits, cheese, soap, &c., constitute all the exports of Lower California, which are mostly sent to San Blas and Mazatlan, in small coasting vessels. The imports are—provisions, clothing, agricultural and domestic utensils, supplies for the ceremonies of the church, and a small amount of the ordinary luxuries of life.

This country was discovered by Hernando de Grijalva in 1534; but no settlement was made by the Spaniards till towards the conclusion of the succeeding century, when some Jesuits established themselves here, with the view of converting the natives. They found the latter feeble, timid, and indolent, little advanced above the rudest state of barbarism; living by hunting and fishing and the spontaneous produce of the soil, destitute of agriculture; the men without any covering whatever, and any fixed forms of government or religion apparently unknown. Loreto, considered the capital, and various other small settlements, were established in different parts of the country by the Jesuits, who instructed the natives in agriculture, and persuaded many of them to adopt settled habitations; but this civilization has taken no real root, and the Indians appear to be rapidly diminishing. Perhaps half the natives of Lower California have been nominally converted to Christianity. (*Forbes, Alex., California*, 1839, 1-75; *Coulter, Dr., in Geog. Journ.*, vol. v., &c.)

CALIFORNIA (UPPER OR NEW), in its widest sense, comprises all that extensive portion of N. America between lat. 33° and 43° N., and long. 107° and 124° W. Within these limits it includes the territory discovered by Sir F. Drake, and named by him New Albion; and has N. the W. territories claimed by the United States; E. the river Colorado, which separates it from Mexico; S. Lower California; and W. the N. Pacific ocean. The E. and central parts of this region are occupied by the Rocky mountains, an immense chain running N. and S.; and on the W. side of these, by a dry and sandy plain or desert, about 700 m. in length, with a breadth of about 100 m. at its E., and 300 m. at its N. extremity. This plain forms the E. boundary of the inhabited, and indeed only habitable portion of Upper California.

The part inhabited by European and other foreign settlers is merely a tract extending along the shore of the Pacific for about 500 m., and bounded inland by the first range of hills, with an average breadth of 40 m.; area about 20,000 sq. m. Pop. (1831) 23,000. This territory has been thus divided:

# CALIFORNIA.

| Provision or Jurisdiction. | Pop. 1831. | Ch. towns.              | Pop. |
|----------------------------|------------|-------------------------|------|
| San Francisco . . . . .    | 6933       | San Francisco . . . . . | 371  |
| Monterey . . . . .         | 4143       | Monterey . . . . .      | 708  |
| San Barbara . . . . .      | 4028       | San Barbara . . . . .   | 618  |
| San Diego . . . . .        | 7261       | San Diego . . . . .     | 1576 |

The first ridge of mountains met with on passing inland is a continuation of the central chain of Lower California, which, after entering this portion of the country, divides into several ranges, which diverge from each other as they advance N. Some of the more inland ranges are constantly capped with snow, and it is supposed in about 45° N. lat. they join the table-land, which divides the waters flowing into the Columbia river from those which fall into the bay of San Francisco. Surface of the country near the ocean very diversified; in some places elevated into ranges of hill from 1000 to 3000 feet high, in others spread out into extensive plains. Some of the hills seem chiefly composed of sandstone; the soil elsewhere is often light and sandy, though fertile, or of the richest loam: in some spots it is marshy, but generally it is characterized by dryness. Upper California possesses several good harbours: San Francisco, in lat. 38°, is one of the largest and best on the W. coast of America. The country immediately behind the first range of mountains is said to be superior even to that near the shore, and to consist of plains, lakes, and hills, beautifully diversified, very fertile, and abounding with timber. The plain between the first and second mountain-ranges contains the two Tule lakes. These, which are of very considerable dimensions, are connected by a river, which, following a N.W. course, falls after escaping from the N. extremity of the upper lake, into the bay of St. Francisco. After the Rio Colorado, the largest rivers are those which fall into the bay of St. Francisco: the principal is the Sacramento; the only river in the country which has a S. direction, it is navigable for several hundred miles inland, and, like the Colorado, runs through a country capable of sustaining a large population. The San Joachin and Jesus Maria are both large and navigable streams, discharging themselves into the same bay; the Rio de San Buenaventura has a N.W. course of nearly 300 m., and falls into the bay of Monterey. The other streams are mere rivulets, and the general infrequency of rivers and springs is the chief defect of the country; though water may be obtained in most places by digging. The climate of California, and indeed of all the country on the W. side of the Rocky mountains, is considerably warmer than that of the country in the E. parts of America, in the same latitudes. Near the Colorado, the heat of summer is sometimes intense, reaching 140° Fahr. (Coulter); during the month of December, 1833, Capt. Beechey found the mean temperature at San Francisco 53° & Fahr. So far as known, minerals are of very little importance; E. of Santa Ynez (about lat. 34° 30'), a small silver mine was wrought for some time, and small quantities of gold have been found in one of the streams falling into the S. Tule lake; but excepting these, limestone and clay, none else have been discovered of any value; and in this respect, as well as in its abundance of vegetable and animal life, and the fertility of some of its districts, it strikingly contrasts with Lower California. There is a profusion of forest trees, including oak, elm, ash, beech, birch, planes, and many varieties of pine, which grow to a large size, and are often spread out into extensive forests. Its abundance of timber, and the goodness of its shores, afford great facilities for ship-building and the acquisition of maritime importance. Although many fine fruits are easily cultivated, few are indigenous. Among those which are, is a species of vine, producing grapes of considerable size, and so plentiful, that considerable quantities of brandy are made from them. Among the wild animals, Forbes reckons the American lion (*Felis concolor*), the American tiger (*Felis tigris*), badgers, weasels, minks, otters, the wild mountain cat, bears, wolves, jackals, numerous herds of wild cattle, foxes, pole-cats, otters, beavers, hares, rabbits, and a profusion of other kinds of game. The elk, and argali (*Ovis pygargus*, Cuv.) are domesticated; the bison is hunted for its skin, which is used in many parts of Spanish America as a bed or carpet. Birds are exceedingly abundant. Otters and beavers are found in all the rivers, lakes, and bays; but their numbers have greatly decreased, since the country began to be more settled. Captain Beechey estimated the annual export of skins in 1834 at 9000; and the quantity is now probably less than this, though it might no doubt be increased by a better system of hunting. The sea contains exhaustless stores of fish.

The Indians of Upper California are seldom much more than five feet in height, and of a dark copper colour; they have projecting lips, broad and flat noses, low foreheads, over which their hair, which is long and straight, grows down near the eyebrows; beard generally scanty. They have a timid carriage, are indolent, pusillanimous, and without any of the boldness, industry, and activity evinced

# CALLAN.

by the Indians nearer the pole. Excepting those that have been converted in the different missions, the women go nearly, and the men entirely, naked. They are filthy in their habits, have few articles of furniture, and live in wigwams built in great part of a kind of bulrush, of which also they construct their rafts, and what clothing they use. In their primitive state they have no agriculture, but subsist on wild herbs, seeds, which the women collect and grind into a meal, fish, the *Testacea* on the shores, the products of the chase, and whale's flesh and blubber, whenever that animal is cast upon the shore; an event which occasions great rejoicing.

In 1831, 18,700 Indians, nominally converted to Christianity, resided in the 21 missions. The men are employed in agricultural labours, or in the warehouses and laboratories of the mission; the women are occupied in spinning, grinding corn, and other domestic duties. All are fed and clothed by the friars, to whom they are, in fact, slaves: their modes and condition of life have been somewhat improved; but their numbers are evidently diminishing. The whole of the free settlers, including those of mixed blood, do not exceed 3000. The greatest part of the lands, and especially those to the S. of Monterey, are in the hands of the missionaries; those parts, however, which, both as to fertility and climate, are best suited for emigrants, lie N. and E. of the bay of Francisco: these are as yet uncultivated, and peculiarly favourable for the culture of grain, and of the rearing of cattle. In 1831, the harvest produced 14,438 quarters, of which 7857 were wheat, and the rest maize, barley, &c.

The potato thrives in California, and, as well as all green pot-herbs, was introduced by the Europeans: the soil and climate are found very suitable for flax; hemp of good quality was formerly cultivated to a considerable extent. The vine (*Vitis vinifera*) thrives in an extraordinary degree, and wines and brandies of a superior quality are made in large quantities. California has analogous latitudes with the finest wine countries in the world, and will probably, at a future period, become celebrated for its wines. The olive is produced in very great perfection. Cattle, however, have hitherto been the staple produce of the country. Their increase since their introduction, in 1790-70, has been quite extraordinary, the stock in 1831 being of—

|                          |         |                  |      |
|--------------------------|---------|------------------|------|
| Branded Cattle . . . . . | 216,777 | Mules . . . . .  | 2944 |
| Sheep . . . . .          | 156,466 | Cattle . . . . . | 1973 |
| Horses . . . . .         | 32,391  | Hogs . . . . .   | 394  |

besides numerous herds running wild. Its chief exports are hides, tallow, and cattle, with small quantities of wheat, wine, raisins, and olives; the whole amounting in value, perhaps, to £200,000 a year. The chief imports are various kinds of useful manufactures, with deals, salt, silks, candies, &c. The presidios are military governments, administered formerly, under the Mexicans, by a commandant, with a body of about 250 inferior troops. The head places of the presidios are commonly a square of about 100 yards, surrounded by a wall of unburned bricks, and containing a few houses, barracks, church, &c.; at a short distance from each is a small fort; but all are very ill kept and insignificant. In their neighbourhood are some ranches, or national farms, set apart for the use of the soldiers. The various missions are clusters of houses usually built in a square, with a territory of about fifteen ac. m. each, free from government taxes, and each subordinate to a Franciscan friar, termed a *prefect*. There are small free towns, inhabited by retired soldiers, &c., which have their own mayor, town-council, and internal jurisdiction. This country was in part discovered by Cobillo, a Spanish navigator, in 1542, and its N. part, called New Albion, by Sir F. Drake, in 1578. In 1768 it was first colonized by the Spaniards, and until after the revolution in Mexico, formed a province of that country. In Nov. 1833, the people of Monterey and its vicinity rose, attacked and subdued the garrison, expelled all the Mexican functionaries and troops, declared California independent, and established a congress of deputies for its future government. (*Forbes's California*, 1839, p. 78-325; *Coulter, Dr., in Geog. Journal*, vol. v.)

CALLAN (EL), a town of Barbary, reg. Algiers, on a mountain, and surrounded by ramifications of the Atlas, fifteen m. N.E. Mascara. It is a dirty and ill-contrived town, having neither drains, pavement, nor causeways. It has a citadel, and a large manufactory of carpets and *barbecues*, or woollen cloaks. Several villages in the neighbourhood are engaged in the same employment. Dr. Shaw thinks that it may have been the *Gittis* or *Apfao* of Ptolemy. (*Shaw's Travels*, 2d ed., p. 25.)

CALLAN, an Isl. town of Ireland, co. Kilkenny, prov. Leinster, on the King's river, an affluent of the Nore, 73 m. S.W. by S. Dublin. Pop. of the town, liberties, and parish, in 1831, 5678; in 1831, 6111; and in 1834, 6933; of which 197 were of the established church, and 6065 R.

## CALLANDER.

Catholics. The town was anciently walled, and a place of considerable strength; but was stormed and dismantled by Cromwell in 1650. The streets form a cross, with lanes branching from them, and the houses are, in general, very indifferent. The parish church was anciently a monastic building; the Roman Catholic chapel is modern. There is also an Augustinian friary, with a large chapel, a national school, a dispensary, and a loan fund. A party of the constabulary is stationed here. The corporation, which consists of a sovereign, burgesses, and freemen, returned two men to the Irish H. of C. till the Union, when it was disfranchised. The liberties extend to a considerable distance round the town. The only trade is in grain. Markets, held in a small market-house, on Tuesdays and Saturdays; and for pigs, on every Monday from January to May. Fairs held on 4th May, 13th June, 10th July, 21st August, 10th October, 4th November, and 14th December. Post-office revenue, 1830, £323; in 1836, £318. The mail coach from Dublin to Cork passes through Callander, and a car plies to it from Clonmel three times a week, conveying an average of four passengers each trip. (*Stat. Surv.*; *Railway Rep.*)

CALLANDER, a bor. of Scotland, co. Perth, valley of Menethil, beautifully situated on the left bank of the Teith, sixteen m. N.W. Stirling. It may be regarded as the threshold of the Highlands in this quarter, and is surrounded on all sides except the S. by stupendous mountains, forming part of the Grampians; Benledi, the highest and most striking, being 3009 ft. above the level of the sea. Pop. 1900. Gaelic and English are both spoken, and the Highland dress is partially worn. A classical interest has of late years been imparted to this town, and to the district with which it is connected, by Sir Walter Scott's poem of "The Lady of the Lake." Loch Katherine and the Trosachs ("bristled country"), so celebrated in that poem, lie 10 m. W. from Callander; and the activity and prosperity which mark this neat little town are chiefly ascribable to the advantages it derives from lying in the line of the great thoroughfare leading to these romantic scenes. Not fewer, at an average, than fifty strangers are said to sleep in Callander every night during five months of summer and autumn, on their way to and from the Trosachs. The place abounds with inns, and most families let beds for the accommodation of travellers. The head inn, lately built, would do no discredit to any town of the kingdom. Manufacturers have not yet found their way to this place. The town is built on *fens*, or building leases, holding of the noble family of Perth, now represented by Lord Willoughby d'Eresby; to each of which is attached an acre or more of ground, varying in yearly rent from £1 10s. to £3, so that each family has a source of employment within itself almost peculiar to Callander. The only public building in the town is the parish church, a modern edifice, with a spire. It has also an efficient parish school.

CALLAO, a sea-port town of Peru, about six m. W. from Lima, of which it is the port, on the N. side of a projecting tongue of land, opposite to the barren island of San Lorenzo, which protects the W. side of its bay; lat. 19° 3' 45" S., long. 77° 4' 10" W. The houses in the town are mean and poor, with mud walls and flat roofs. It is well fortified. The roadstead is by far the best on the Peruvian coast, with good anchorage in from seven to ten fathoms. There is a rudely constructed pier, within which vessels of large burden may load and unload. There is a very good carriage road from Callao to Lima. The present town is of comparatively modern origin; the former town having been wholly destroyed and submerged in a dreadful earthquake that occurred in 1746, which also destroyed great part of Lima. In calm weather the ruins of the old town are still visible under the water at a short distance from the present town. In November, 1890, Lord Cochran cut out the Esmeralda, a large Spanish ship of war, from under the guns of the castles of Callao. These surrendered to the independents in the course of the following year. (*Steevens's S. America*, l. 134, &c.; *Hall's S. America*, &c.)

CALLAWAY, county, Ky. Situated in the W. part of the state, and contains 600 sq. m. Bounded N. and E. by Tennessee river; by branches of which it is watered, the principal of which is Clark's river. It contained in 1840, 9287 neat cattle, 7738 sheep, 39,580 swine; and produced 54,911 bushels of wheat, 157,818 of Indian corn, 65,903 of oats, 11,498 of potatoes, 143,192 pounds of tobacco, 93,471 of cotton, 9421 of sugar. It had sixteen stores, three flouring-mills, ten grist-mills, seven tanneries, twenty-six distilleries, eighteen schools, 206 scholars. Pop. whites, 8670; slaves, 911; free colored, 13; total, 9794. Capital Wadesboro'.

CALLAWAY, county, Mo. Situated N.E. of the centre of the state, and contains 760 sq. m. Bounded S. by Missouri river. Drained by Big and Little Au Vase creeks, which flow into Missouri river. It contained in 1840, 11,693 neat cattle, 12,066 sheep, 39,493 swine; and produced 23,909

## CALNE.

bushels of wheat, 1915 of rye, 234,539 of Indian corn, 137,057 of oats, 3695 of potatoes, 391,743 pounds of tobacco, 12,353 of sugar. It had twenty-four stores, six woolen-factories, five flouring-mills, thirty-four grist-mills, seven saw-mills, two oil-mills, one rope-walk, nine tanneries, nine distilleries; total capital in manufactures \$33,510; two academies, 81 students, forty schools, 664 scholars. Pop. whites, 2601; slaves, 3143; free coloured 42; total, 11,763. Capital, Falmouth.

CALLIS (LA), a factory founded by the French African Company, on the N. coast of Africa, reg. Algiers, near the Tunisian frontier. It stands on a peninsular rock nearly surrounded by the sea, and was well fortified. This was formerly the principal seat of the coral fishery carried on along the Barbary coast. It was nearly destroyed by the Algerines in 1827.

CALLIANE, an ind. town of Hindostan, prov. Aungher, presid. Bombay, 24 m. N.E. that city; lat. 19° 15' N., long. 73° 15' E. It is the cap. of a dist. of the same name, and stands on the S. bank of the Calian river, surrounded by ruins: it is, however, populous, and carries on some trade in cocoa nuts, oil, coarse cloths, brass, and earthenware. It contained many slaves during the wars between the Moguls and Mahatras. The district of Callianee is a strong hilly country extending along the sea-coast, opposite the islands of Bombay, Salsette, &c., bounded E. by the W. Ghats, and containing the towns of Bassein, Patalwell, Chowli, Rajapoor, &c.: its towns are large and tolerably well peopled; but its villages small, meanly built, and thinly scattered. (*Hamilton's E. I. Gaz.*, l. 357.)

CALINGTON, a town and par. of England, co. Cornwall, middle div. E. hund. Area of par. 2090 acres. Pop. of do. 1368. The town, in a low and unpleasant situation, is 7 m. S.E.W. Tavistock. It was made a bor. in the 37th of Elizabeth, and returned two men to the H. of C. from that period down to the passing of the Reform Act, when it was disfranchised. The right of election was in the owners of burgage tenures paying scot and lot.

CALLOSA DE ENBARRIA, a town of Spain, Valencia, 18 m. S.S.W. Denia, near the confluence of the Genil and Algor, in a mountainous country that produces fine raisins, and excellent wine, almonds, and fruit. Pop. 6100.

CALLOSA DE SEGURA, a town of Spain, Valencia, 4 m. E. Orihuela, on the river Segura. Pop. 4443. Charcoal, known by the name of *grana*, is here manufactured from the stalks of hemp; it is said to be superior to any other for the manufacture of gunpowder, and is or was used in the preparation of that made for the Spanish artillery. (*Milans*, Sup. p. 159.)

CALMAR, or KALMAR, a sea-port town of Sweden, cap. prefecture of same name, on the W. side of the narrow strait of the Baltic separating the island of Öland from the continent, 90 m. N.N.E. Carlscrona; lat. 59° 40' 30" N., long. 16° 26' 15" E. Pop. 5346. It stands on the small island of Quarholm, which communicates with the mainland, where there is a suburb, by a bridge of boats. It is built of wood, and is strongly fortified. The castle, in the suburb, formerly looked upon as one of the keys of the kingdom, is now occupied as a house of correction. Calmar is the seat of a bishopric, and has an academy and a dockyard. The cathedral is a fine stone building; and the hotel of the prefect, the hôtel de ville, and some other public edifices, are of the same enduring material. Its port is small, but safe and commodious. There are manufactures of woollen stuffs, tobacco, and potash; with breweries, &c. Previously to the annexation of the province of Schonen and Blekingen to Sweden, this town was of much greater consequence than at present. Its importance as a fortress has declined; and its commerce, which was formerly very considerable, has been mostly transferred to Stockholm; but timber, alum, tar, hemp, &c., are still exported.

This is a very old town. Having been burned down in 1647, it was rebuilt on the island of Quarholm, being previously situated on the mainland where its suburb now stands. It has been the scene of some very important events in Swedish history. Here, in 1397, was concluded the famous treaty which united the kingdoms of Sweden, Denmark, and Norway, under the vigorous sceptre of queen Margaret, surnamed the Northern Semiramis. But in its consequences this treaty was very ruinous to Sweden. Here also, in 1590, Gustavus Vasa disembarked to deliver his country from the domination of foreigners and of a sanguinary tyrant. Louis XVIII. resided at Calmar in 1804, and erected at Stenens a bust in honour of Gustavus. In 1800 a fire destroyed a great number of the houses, with the buildings of the academy. (*Dict. Geographique*, &c.)

CALNE, a pari. bor. market town, and par. of England, co. Wilts, hund. Calne, the bor. being situated on the great coach road from London to Bristol, 28 m. W. from the former, and 25 m. E. from the latter. The bor. formerly

**CALVADOS**

**CALVERT**, county, Md. Situated in the S. part of the

**CAMRAY.**

**CAMBAY'S** marble town of Hindostan, prov. Gujrat, in the Gulwarkhy district, formerly a celebrated and flourishing sea-port, but now much decayed, through the filling up of the bay, at the head of which it stands, by the debris brought down by the rivers. It is 73 m. N.W. by S. 200 m. N. Bombay. Pop. about 10,000, almost equally divided between Hindoos and Mohammedans. Various Hindu and Mohammedan edifices are still to be seen, among which is a very beautiful mosque, close to the nabwah's residence: its main court contains 300 pillars of a handsome red sandstone, the material for which was brought, it is said, from Cutch. There are also the remains of a subterranean temple, said by some to be of Jain, but believed by others to be of Buddhist origin: it consists of two chambers, one over the other, and about 30 ft. sq. In the lower chamber three sides are occupied by empty niches; in the fourth there is a double row of seven or eight marble idols, having in their centre a gigantic idol of white or light feet high: they are all alike, with a mild aspect, the legs crossed, and a lotus flower on the sole of the foot. In the upper room the figures are similar, and in one corner there is a black marble idol of the same size and appearance as the one beneath; none of the other figures here are more than two feet high. Many emigrants from Persia formerly settled here, after the civil wars in that country and conquests of Nadir Shah; and it has still 30 or 40 Parsee families. The silversmiths here emboss very neatly, by filling the articles to be operated on with gum lac, and then punching the figures with a small chisel; but the chief industry consists in the manufacture of cornelian, bloodstone, agate, &c. ornaments. These stones, when intended for beads, are chipped into a roundish figure, and afterwards rolled together in bags for several weeks, till they become perfectly spherical: when a flat surface is required, the stones are sawn by means of a mixture of gum lac and quartzose substances, which readily fuse together, and harden as they cool, when they are formed into cutting instruments. Cambay formerly exported silks, chintzes, gold, stuffs, &c.; but these manufactures have dwindled away: the town was given up as a trading station by the E. I. Company, who kept only a

## CAMBERWELL.

Parsee agent there. Heavy goods have almost ceased being shipped at Cambay, and most of the Gujrat cotton is now sent to Gogo. The surrounding country is pleasant and rich, but not generally well cultivated; it yields ample returns of wheat and Hindostanee grains, indigo, cotton, oil-seeds, and excellent tobacco: some grain and indigo are exported to Bombay, and tobacco, from which many imitations of Manila cheroots are made. This city and territory prospered under the Moguls; in 1780 it was tributary to the Mahratta peishwa, since whose fall his rights have devolved on the British govt. to whom the nabob now yields allegiance. (*E. I. Gaz.*, i, 398; *Lord*, in *Journ. of Arist. Soc.*, vol. II.)

CAMBERWELL, a par. of England, co. Surrey, E. div. Brixton hund., a suburb of the metropolis, on its S. side. Area, 4570 acres. Pop. (including the hamlets of Dulwich, Peckham, and part of Norwood) in 1821, 17,896; 1841, 39,867. The more ancient part of what is usually designated the village of Chamberwell, including the green, is mostly occupied by shops, &c., and is paved, and supplied with water from the works of the South London Company. The more modern mansions are mostly detached handsome houses, occupying the rising ground to the S. and E.E. of the former, known as the Grove, Champion, Denmark, and Hearn's hills. These villas are mostly occupied by the families of merchants who either are or have been connected with the active business of the metropolis. The church, supposed to have been built in 1520, and enlarged and improved in 1786, is in the later Gothic style, having a low embattled tower, with many interesting monuments. There are three chapels of ease—Camden church, another on Denmark hill, and one beside the Surrey canal, built by the church commissioners in the Grecian style, and forming the district church of St. George. There are also three dissenting chapels; a free grammar school, founded in 1618, for 12 boys, is endowed with an estate valued at £300 a year, but is at present let on a beneficial lease, producing £60. There is also a green-coat school, on the national plan, on Chamberwell green, and a similar one, attached to Camden church, founded in 1810; three or four other schools have small endowments; and there are some minor charities. The grounds of the St. Metropolitan Cemetery, in this parish, form an extensive enclosure, tastefully laid out, with a chapel and other offices, catacombs, &c. The agricultural portion of the parish is fertile, and market-gardens and nurseries employ part of the population. The majority, however, are more or less engaged in the general business of the metropolis. The Surrey canal terminates in it. On Luddend hill, S. of the village, is a quadrilateral Roman camp, with a double entrenchment. In digging the canal, in 1809, a Roman way was discovered, formed of square blocks of chalk, secured with oak piles, which has made some suppose that this was the place where the Roman legions first crossed the Thames: three ancient wells, on Well hill, in the parish, are supposed to have originated the name.

CAMBOJA, or CAMBODIA, a country of India beyond the Ganges, formerly one of the most flourishing in that peninsula; but at present divided between the empire of Anam and the kingdom of Siam. It lies between lat. 8° 30' and 15° 30' N., and long. 103° and 107° E.; having N. Laos, E. Cochín China, W. Siam, and S. the ocean. It is enclosed E. and W. by two of the great mountain chains, which, passing S. from Yunnan, traverse the Ultra-Gangetic peninsula: on the sea shore, it presents a vast alluvial flat, stretching for a considerable distance inland. It has several rivers, one of which, the Mekon, ranks among the largest in Asia; and another, the river of Saigon, is, perhaps, in all respects, the finest river in that continent for navigation. (*Crawford*.) The interior of Cambodia is scarcely at all known by Europeans: it contains large forests, producing some teak, and many *sao* trees, a hard black timber called *gao*, eagle, and rosewood, and various other woods fit for cabinet work, dye-woods, areca, stick lac, sugar-cane, pepper, &c. The celebrated gamboge gum is said to be obtained from a species of *Garcinia*, by making incisions in the bark, from which the gum exudes, and is collected in vessels, in which it soon becomes concrete, and fit for the market without farther preparation. Besides the articles already named, Cambodia exports cardamoms, ivory, hides, horns, bones, dried fish, &c. in considerable quantities, and imports silks, China and lacquered ware, tea, sweetmeats, tin, and *tutuagau*. (*See SAIGON*.) In person, manners, laws, and state of civilization, the inhabitants more closely resemble the Siamese than any other people: most of them are Buddhists; but there are a few Christians. The latter faith was first introduced by the Portuguese Jesuits in 1624.

In 1809, in consequence of dissensions in the country, it was invaded by both the Siamese and Anamese, when the latter made themselves masters of Penomping, the modern capital, together with the person of the king, and took possession of a large tract of country on the sea coast, from

## CAMBRIA.

communication with which, the Emperor of Anam, in 1819, interdicted all foreigners, declaring Saigon the emporium of his S. provinces. In 1830, the final partition of this country took place. (*Crawford's Mission to Siam*; *Hamilton's E. I. Gaz.*)

CAMBODJA, an inland town of India beyond the Ganges, the ancient cap. of the above territory, on both sides the Mekon, nearly 900 m. from the sea; lat. 13° N., long. 104° 35' E. The Chinese writers of the 13th century give a very vivid description of its magnificence at that period (*see Ritter, Asia Erdkunde*): it is now in a state of decay.

CAMBOURNE, a town and par. of England, co. Cornwall, hund. Penwith. Area of par. 6900 acres. Pop. of do. 1891, 9219; 1831, 7090. This is a neatly-built, and, for the most part, modern town, on an elevated site, 12 m. W.N.W. Falmouth, near the S.W. limits of the chief mining district of the co., many of the oldest and most productive mines of tin and copper being in its immediate neighbourhood, and furnishing employment, not only to the inhab. of the town, but to the three or four considerable hamlets, and the cottages every where dispersed over the parish. The church is a handsome structure, in the later Gothic style; there is also a chapel of ease, and several large dissenting chapels, chiefly for the various sections of the Wesleyan Methodists; a free school, founded in 1763, for 12 boys and 8 girls, has a revenue of £21; there are also several large Sunday schools. Market, Saturday; fairs, chiefly for cattle, March 7, Whit-Tuesday, June 28, and Nov. 11. Petty sessions for the hund. are held weekly in the town.

CAMBRAY, a well-fortified town of France, dep. du Nord, cap. arrond., on the right bank of the Scheldt, 32 m S. Lille; lat. 50° 10' 37" N.; long. 3° 13' 47" E. Pop. 17,844. Its fortifications were improved by Vauban, and it is farther defended by a strong citadel. It is pretty well built, and has a magnificent *place d'armes*. Its principal public buildings are the cathedral, the hôtel de ville, and the theatre. It has a tribunal of original jurisdiction, a communal college, a diocesan seminary, with 330 scholars, a secondary school, a society of emulation; with schools of design, sculpture, painting, and anatomy; a public library containing 50,000 volumes, &c.

Cambray was formerly an archbishopric; and has to boast of having had Fenelon, who died here in 1715, among its prelates. It is painful to have to state that, in 1793, during the revolutionary phrensy, the body of Fenelon was torn from the grave, and the lead of his coffin cast into bullets! The old cathedral was, at the same time, totally destroyed. To atone as far as possible for these enormities, a handsome monument, the work of David, the sculptor, was erected to the memory of Fenelon, in the present cathedral, in 1825, under which his remains have been deposited. In 1802, the archbishopric of Cambray was changed into a bishopric.

This town has been long famous for its manufacture of fine linens and lawns, whence all similar fabrics are called in England *cambrics*. It also produces thread; carries on several branches of the cotton manufacture; and has soap-works, tanneries, salt refineries, &c. A great number of hands are occupied in the adjoining communes in the linen manufacture. It has a considerable trade in wool, flax, butter, hops, &c. The navigation of the Scheldt begins here, and it communicates with St. Quentin by a canal.

This is a very ancient city, having been a place of considerable importance under the Romans. It is celebrated in diplomatic history for the famous league, known by its name, concluded here in 1507, against the republic of Venice; and for a treaty of peace negotiated in 1529 between Francis I. and Charles V. It was taken from the Spaniards by Louis XIV. in 1667, and was confirmed to France by the treaty of Nimwegen. The British took it by escalade in 1815, after the battle of Waterloo. (*Dict. Geog.*; *Hugo, art. Nord.*; *Murray's Handbook*, &c. p. 108.)

CAMBRIA, county, Pa. Situated centrally in the W. part of the state, and contains 790 sq. m. The Allegheny mountain lies on its E. part, and the rail-road over it, connecting the parts of the Pennsylvania canal from Hollidaysburg, terminates at Johnstown, in the S. part of the co. The descent from the summit to Johnstown is 11714 feet, a distance of about 364 miles. The rise to the summit from Hollidaysburg, a little over 10 miles, is 13063 feet. The whole length is a little over 364 miles, and the total rise and fall 25704 feet. Drained by Conemaugh river and its branches. It contained in 1840, 8518 neat cattle, 11,461 sheep, 10,769 swine; and produced 34,421 bushels of wheat, 22,704 of rye, 31,943 of Indian corn, 15,837 of buckwheat, 1473 of barley, 114,470 of oats, 87,896 of potatoes, 27,539 pounds of sugar. It had ten commission-houses, thirty-two retail stores, two lumber-yards, twenty grist-mills, fifty saw-mills, one rope-walk, six tanneries, one brewery, one pottery, one printing-office, one weekly newspaper; seventy-one schools, 260 scholars. Pop. 11,453.

## CAMBRIDGE.

CAMBRIDGE, p. t., Niagara co., N. Y.; 923 m. W. by N. Albany, 406 W. It contains one grist-mill, two saw-mills, one oil-mill, seventeen schools, 759 scholars. Pop. 3099.

CAMBRIDGE, t., Cambria co., Pa. Drained by Black Lick creek, and a branch of Little Conemaugh river. It contains seven stores, three grist-mills, three saw-mills, one printing-office, one weekly newspaper, eight schools, 320 scholars. Pop. 1156. It contains Ebensburg bor., the capital of the co., occupying a commanding situation, which has a court-house, an academy, three churches, one Baptist, one Congregational, one Roman Catholic, about forty dwellings, and 353 inhab.

CAMBRIDGE, an inland co. of England, having N. co. Lincoln, E. Norfolk and Suffolk, S. Essex and Hertford, and W. Bedford, Buckingham, and Northampton. Area 548,480 acres, of which about 500,000 are supposed to be arable, meadow, and pasture. Surface, except in the S. parts, where it is diversified, for the most part flat and naked. Soil clayey and stony. It is divided into two portions by the river Ouse, and is watered besides by the Cam and the Nene, or Nen. The most northerly portion of the co. consists principally of the district called the Isle of Ely, which has separate jurisdiction within itself. This district, which is naturally a marsh, is included within the great level of the fens; and is rendered habitable only by a most expensive system of drainage, by which the water is raised and conveyed away in channels, kept at a higher level than the surrounding country. Agriculture is in rather a backward state, the land under tillage being frequently foul and out of order. Wheat, oats, beans, and potatoes, are the principal crops in the fens; and barley in the elevated grounds. Flax and hemp are also raised in the fens; and cole is extensively cultivated as food for sheep. The rich meadows in the valley, watered by the Cam, are principally appropriated to the dairy husbandry, and Cambridge butter has long enjoyed a high reputation. The large, thin, cream cheese, made at Cottenham, is admitted to be the first of its class. Heavy cart horses are extensively bred. The rich grass lands are mostly depastured by short-horned cattle, and long-wooled sheep. Cambridge, as well as Huntingdon, is overrun with pigeon-houses. Estates of all sizes: some large, but many small, some being worth only from £30 to £50, and £100 a year. Size of farms equally various, and held mostly at will. Farm-houses inferior, and cottages decidedly "bad." Average rent of land in 1810, 16s. 6d. an acre. Manufactures and minerals of no importance. The co. contains 14 hundreds, exclusive of the Isle of Ely, and 167 parishes. Principal towns, Cambridge, Ely, Wisbech. In 1841 it had 33,112 inhab. houses, and 164,509 individuals, of whom 81,513 were males, and 82,996 females. It sends seven members to the H. of C., viz., three for the county, two for the University, and two for the borough of Cambridge. Registered electors for the co. in 1837-38, 4040. Sum expended for the relief of the poor in 1837-38, £58,587. Annual value of real property in 1815, £795,373; ditto of trades and professions in do., £238,687.

CAMBRIDGE, a pari. bor. and town of England, co. Cambridge, hund. Hendish, the seat of one of the great English universities, on the Cam; 48 m. N. by E. London. Pop. (1821), 14,142; (1841), 94,453: houses at the latter date, 4795. It is situated in an extensive level tract, that scarcely presents any inequality, with the exception of the Gog Magog hills, 4 m. S.W. of the town; and the greater part of its public structures, with their walks and gardens, are embosomed in wood. Owing to these circumstances, the approach to Cambridge is unimpressive; but the noble chapel of King's College, the tower of St. Mary's, and the spire of Trinity church, rise above the trees, and break the general uniformity of the outline. The greater portion of the town stands on the S.E. bank of the river. The streets are mostly narrow and irregular. There are two principal lines, which unite on the N.E. side, near the iron bridge over the Cam; from these smaller streets diverge on either side, all of which are paved, sewered, and lighted by gas. The chief supply of water is derived from a spring 3 m. distant, and conveyed by an aqueduct, under some of the principal streets, to a public conduit in the market-place. For this the town is indebted to Hobson, the horse hirer, whose determination to let his horses in strict rotation gave rise to the well-known proverb of "Hobson's choice." There are fourteen distinct parishes, and a corresponding number of churches. St. Mary's, a stately Gothic structure, forms one side of a quadrangle, in which the public library and senate house are also placed; it is occupied both by the parish and the university; St. Sepulchre's, built in the reign of Henry I., in imitation of that of the Holy Sepulchre at Jerusalem; and Trinity Church, an ancient cruciform structure, are the only churches worth notice. The Baptists, Independents, Friends, Primitive Methodists, and Wesleyans, have each a chapel. There is a free grammar school, founded by Dr. Perse, in 1615, originally for 100 scholars, but now educating 16; they have preference of the Perse fellowships and scholarships in Caius Coll.: a

national school, founded in 1806, and extended in 1816, educates 600 boys and girls: in this the old, or Whiston charity schools, have merged. In nine distinct sets of almshouses fifty-six poor persons are wholly or partially supported: there are also benefactions for various other charitable purposes, held in trust by the corporation; and a general infirmary, called, from its founder, Addenbrooke's Hospital, in which about 1000 patients are annually relieved. The market-place occupies two oblong squares in the centre of the town, at the head of which stands the shire-hall (built in 1747), and behind it the town-hall (rebuilt in 1789). The jail, built on Howard's plan in 1810, is in the yard of the ancient castle (of which little more than the gateway remains) at the N.W. end of the town—the only comparatively elevated portion: near it is an artificial mound, whence an extensive view is commanded. The various structures connected with the university form, essentially, a part of the town, mostly on its W. side, but these will be more appropriately noticed in the subsequent article. No dramatic performances are allowed in the town; but there is a theatre in the adjoining village of Barnwell, which is opened in fair time. There is a musical society on a large scale, and great musical festivals are held, at intervals, in St. Mary's Church. The Cam, formed by the junction of several small streams about 4 m. from the town, is made navigable for barges up to the town: it joins the Ouse not far from Ely, by which a water communication is continued to Lynn Regis. There is a daily market for general provisions; but the chief supply is on Saturday. Two annual fairs are held—the first, commencing June 23, lasts three days; it is held on a common near Jesus Coll., and called Pot Fair, from the quantity of earthenware brought to it: there is a large horse-fair on the first day. The other is Stourbridge fair, anciently the largest in the kingdom, and still of considerable resort, though much curtailed both in duration and importance: it is held in a field near Barnwell, and now lasts fourteen days; on two of these, horses are sold, and on the others the chief traffic is in wool, hops, leather, cheese, and iron. There are no manufactures carried on; but its situation, at the head of the inland navigation from Lynn, occasions a considerable trade in corn, coal, timber, oil, iron, &c. Since the more perfect drainage of the fens, and the formation of good roads towards and along the E., and S.E. coasts, over tracts previously impassable, it has become a considerable thoroughfare, and derives some business from that source; its chief traffic, however, is directly or indirectly, connected with the university, and the supply of its various wants. The ann. val. of real prop. is £91,501. Under the Poor Law Amendment Act its fourteen par. are formed into a union, the average annual rates of which are £9907: there are thirty guardians. The paving and lighting are managed by commissioners under two local acts. The annual assessments levied for the purpose average £3000. The limits of the ancient bor. have been adopted both in the Parl. and Municipal Reform acts, and comprise an area of 3196 acres. It is divided into four wards, and governed by a mayor, ten aldermen, and thirty councillors. Courts of petty and quarter sessions, and a court of pleas, are held for the borough, from the jurisdiction of which the members of the university may claim personal exemption. The heads of it are united with those of the corporation in the commissions of peace that are issued for the borough. The police is also under their joint control. The improvements in the navigation (which of late years have been very considerable) are under the direction of conservators, three of whom are appointed by the university, three by the corporation, and three by the county magistrates. The ann. rev. of the town corporation averaged, in 1835, about £1700 a year, and is derived from rents of lands and tenements, and tolls of the fairs and markets, which they receive, though the entire control of these, as well as the licensing of public houses, be vested in the university: there are also 310 acres of common land under the management of the corporation, but on which the inhabitants generally have a right of pasturage. Cambridge has returned two mem. to the H. of C. from the earliest records of parliament. Previously to the Reform Act the right of election was limited to the freemen of the bor. not receiving alms. Registered electors, 1837-38, 1698. The quarter sessions and assizes for the county are held in this town. The first historic mention that occurs of Cambridge is in 871, when it was ravaged by the Danes. The castle was built by William the Conqueror. In 1549 the first notice of discussions between townsmen and students occurs. In 1831 (the period of Wat Tyler's riots) the university charters were seized and destroyed by the townsmen, for which Richard II. deprived them of their own, and vested the university with their privileges. Henry VIII. restored their charter, but with modifications which made them, in many respects, still subordinate to the university. In 1643 the town was garrisoned by Cromwell, who had, previously twice represented it in the H. of C. No subsequent event

# CAMBRIDGE (UNIVERSITY OF).

of public importance is connected with its history. Bp. Jeremy Taylor and Ed. Cumberland (the dramatic writer) were natives of Cambridge.

CAMBRIDGE (UNIVERSITY OF). This celebrated seat of learning and education derives its origin from certain public schools, established in the town at a very remote but uncertain period, perhaps in the 7th century. The students who resorted to those seminaries lived in lodgings in the town; nor did they, till the 13th century, assume the regular form of a university, as that term was understood in the middle ages. In general, four branches of education, or faculties, were recognised: that of arts, preparatory to the others, and embracing the three superior, and four subordinate sciences, or as they were called in the language of the time, the *trivium* and *quadrivium*—the first comprising the study of grammar, rhetoric, and logic; and the second, that of arithmetic, music, geometry, and astronomy; and the faculties of theology, law, and medicine. In each of these, there were usually two degrees, that of bachelor and master; and the functions of a university, as at present, was to impart the necessary instruction in each, and to confer degrees, or certificates of proficiency. Except the public schools, there were, at first, no other buildings appropriated to academical purposes; but subsequently, public halls or hosteries came to be established for the convenience of the students, and the introduction of some better system of discipline. The students resorting to each of these chose a principal, or rector, from among themselves, whose appointment was sanctioned by the governing body of the university; residence in those halls was, however, never insisted on as an essential requisite. The colleges are of still later origin, and derive their existence from private munificence; the object being to provide lodging and subsistence to a limited number of the poorer class of students. Originally, the masters of arts were the public instructors, and were bound to teach others some of the subjects pertaining to their respective faculties: convenience ultimately came to limit this function to a certain number of masters, who also came to form chiefly, or wholly, the governing body; and hence the distinction of *regent*, and *non-regent* masters. The appointment of professors in the different faculties, paid by salaries, instead of fees (as was the case with the *regent* masters) completed the university system on the recognised plan of the period. The general right of lecturing was, however, retained down to a recent date. Such, probably, was the system pursued through the 14th and 15th centuries. The greatest number of students frequenting the university during the period when the public halls formed the residences of the great majority, was in the 13th century. From the earlier part of the 14th, downward, the numbers diminished considerably; partly from civil war, partly from the declining reputation of scholastic philosophy, and subsequently, from religious differences; so that, at the Reformation, the halls had been mostly deserted, and the greater part of the students were those on the foundation of the different colleges, which had become numerous, and were nearly the only institutions that survived the religious confusion of the age. These came in the 16th century to admit independent members in residence, who were not on the foundation; others came to be established, and the remaining halls were converted into colleges. The ascendancy of the college system, however, was effected gradually, through a considerable period, till completed in the reign of Elizabeth. The following are the existing collegiate establishments of Cambridge, in the order of their foundation:

| Names.                                 | Date of Foundation. | Founders.                                                                                           | Visitors.                                                                           | On the Foundation.                                                                                                                                                                                                                                                                                       | Members in 1859.<br>Of the Society. | Teach on the Boards. |

Each of these colleges is governed by laws and usages of its own (for the most part established by the respective founders), and is subject to the inspection of its own visitor or visitors, appointed by the foundation charter. Except at King's and Trinity, the heads (masters) of these colleges are elected by the fellows, for life, from among themselves; in general, they must be in orders, and are allowed to marry; their incomes (which vary considerably) arise from the proceeds of a double fellowship, livings attached to the office,

&c. They exercise supreme authority in the discipline of their college in respect to education, and the conduct of those in *status pupillari*, and are associated with the general government of the university, as will subsequently be noticed; but, as respects the government of their college, they form part of the general legislative council, and are nominated by the foundation fellows, who form the governing body in each college. In regard to these last, the ordinary practice is to elect to vacancies, each from the respective students

## CAMBRIDGE (UNIVERSITY OF).

of its own establishment, and, for the most part, from among those studying with a view to taking holy orders; time, however, is allowed by the statutes for graduates to make choice of a profession, and, consequently, those who decline after the limited period taking orders have to vacate any fellowships they have been appointed to; vacations also occur by acceptance of college livings (which, as they fall in, are offered by seniority to the respective fellows,) or by other livings or situations, statutorily incompatible, or by marriage, which is against the statutes in all the colleges; so that from these and other circumstances, the succession of fellows, in most of the colleges, is tolerably rapid: when in residence, a considerable part of their board is provided. The incomes are very various, and in each college vary from year to year, being contingent on the college revenues, much of which is derived from rents, varying with the prices of corn, from the falling in of leases, &c. The college expenses also vary, and are paid from a fund set apart for general purposes, and derived partly from taxation of the fellowships, partly from room-rent, &c.

The *foundation scholarships* are subject to different regulations and conditions, peculiar to each college; but they are always elected from among the under graduates, and in the larger colleges, where these are numerous, they form a sort of minor prizes, to be contended for like those of the fellows. The emoluments attached to these scholarships are very various in amount; in regard to discipline and education, they are precisely on the same footing as the independent students.

The *exhibitions* are annual pensions, given in some instances by the colleges, but mostly by free endowed schools elsewhere, to assist such youths as, having been educated at them, are sent to the university: *exhibitors* are not usually accounted on the foundation. Besides these, there are students of an inferior class, termed *sizar*s, who are provided for wholly or in part by the foundation. The officers of the establishment, such as dean, bursar, &c., are selected by the fellows of each respective college from among their own body; as also the college tutors, &c., to whose charge all the students, whether on the foundation or not, are entrusted. The whole of these must necessarily be in residence; but in respect to the other fellows, this is not in general required, though a number usually do reside, some as private tutors, others for the purpose of study. In some colleges, probationers have to pass an examination previously to being admitted as fellows on the foundation. The instruction given at each of those colleges is preliminary to taking the first university degree of B. A.; and is exclusively adapted and directed to that object. This is chiefly attained, not through the public lectures of the university professors, but through the private labours of the respective college tutors. The character and extent of this instruction is determined by the university, by which the degree is granted; but no one is admissible unless he have been entered at, and resided within the jurisdiction of one of the colleges or licensed halls, and has been under the collegiate instruction of his house. Thus the university is formed by the union of seventeen colleges, devoted to academic pursuits and the study of all the liberal arts and sciences: it is incorporated (13 Eliz., c. 39) by the name of "The Chancellor, Masters, and Scholars, of the University of Cambridge;" and though, as we have seen, each college is a body corporate, bound by its own statutes, it is likewise controlled by the paramount laws of the university. The statutes of the 12th of Eliz., which were sanctioned by parliament, and confirmed some former privileges, are the foundation of the existing government, and form the basis of all the subsequent legislation; in fact, no grace of the senate is considered valid which is inconsistent with the statutes of Eliz., and certain nearly cotemporary interpretations of them; or with king's letters, that have been accepted and acted on by the university.

Each college furnishes members both to the executive and legislative branches, collectively termed the senate; the present number of which is 2705. It is divided into two houses, called the regents' and non-regents' house. The former, or upper house, is composed of masters of arts of less than five years' standing, and doctors of less than two years; its members wear hoods lined with white silk; all the rest, who retain their names on their respective college boards (for which a small annual fee is charged), constitute the lower house, and wear hoods of black silk; hence the distinction of white and black-hood houses. Doctors of more than two years' standing, and the public orator of the university (who may be considered as the secretary), may vote in either house, at pleasure. Besides these, there is a council called the *caput*, chosen annually on the 12th Oct. It consists of the vice-chancellor; a doctor in each of the three faculties of divinity, civil law, and physic; and two masters of arts, as the representatives of the regent and non-regent houses. In practice, these are mere nominees of the vice-chancellor; and as the approval of the *caput* is essen-

tial previously to any "grace," or legislative proposition, being voted on in either house, the substantive government of the university vests in him. He also fixes the days when congregations, or meetings of the senate, are to be held for transacting university business; these, in term time, are usually once a fortnight; but there are also certain fixed times by statute for congregations to be held, for conferring degrees, electing officers, &c. Graces which pass both houses, under the sanction of the *caput*, become acts of the senate, and, if of a public nature, become statutes of the university. An assembly of the senate held out of term time is called a convocation; but, by a grace passed *pro forma*, it is converted to a congregation, and the business proceeds in the usual way. The chief officers of the university are, a chancellor, in whom the executive vests, except in matters of mayhem and felony, within the limits of the jurisdiction, which is a mile round, reckoned in any direction from any part of the suburbs; the office is biennial, or for such longer period as the tacit consent of the university may choose to allow. A high steward, who has special power to try scholars impeached of felony within the limits, and to hold courts leet, which is done by deputy. His election is by a grace of the senate. A vice-chancellor, elected annually by the senate (on the 4th of Nov.) from the heads of colleges. In the absence of the chancellor, the powers of that officer vest in him by the statutes, and he is also, *ex officio*, a magistrate for the university, town, and county. A commissary, appointed by the chancellor, to hold a court of record for all causes to be tried and determined by the civil and statute law and university custom, in respect to all privileged persons under the degree of M. A. A public orator, who may be said to be the speaker of the senate. The assessor, an officer to assist the vice-chancellor in his court. Two proctors, or peace officers, elected annually, to enforce proper discipline and behaviour in all who are in *status pupillari*, as well as various other duties. They must be M. A. of two years' standing at least, and are nominated in turn by the different colleges, in a prescribed and peculiar cycle of 51 years. There are many other offices of minor importance; but the two moderators must be noticed, who are nominated by the proctors, and appointed by a grace of the senate, to act as the proctors' substitutes in the philosophical schools, and alternately superintend the exercises and disputations in philosophy, and the examinations for the degree of B. A.; and also the eight classical examiners, nominated by the several colleges in turn (according to the same cycle as the proctors), and elected by a grace of the senate; four of these are examiners of inceptor bachelors, and four of the junior sophes, in Lent term.

The University is represented in the H. of C. by two members, chosen by the collective body of the senate, the vice-chancellor being returning officer. The privilege was granted by charter, in 1 James I.

The public professorships in this university are, Lady Margaret's, of divinity, founded 1503; the regius professorships of divinity, civil law, physic, Hebrew and Greek, founded by Henry VIII. in 1540; those of Arabic, one founded by Sir F. Adams, in 1632, the other, the Lord Almoner's; the Lucasian professorship of mathematics, in 1663; that of music, in 1664; that of casuistry, founded in 1663; of chemistry, 1702; the Plumian professorship of astronomy and experimental philosophy, in 1704; that of anatomy, in 1707 (there is a good anatomical museum connected with this); those of modern history and of botany, 1794; that of geology, in 1787, by Dr. Woodward, who left his collection of minerals in connexion with it; that of astronomy and geometry, founded in 1749; the Norrisian professorship of divinity, in 1780; of natural and experimental philosophy, in 1783; the Downing professorships of English law, and of medicine, founded in 1800; that of mineralogy, in 1808; and, lastly, of political economy, in 1828. These professors are paid from various sources; some of the foundations have estates appropriated to the purpose; others are paid by ancient stipends, in part; and some from the privy purse, or by government. One has £400, another, £300, the rest £100 annually. The appointment of some of them rests in the senate, of others, in the crown, and of others, again, in special bodies of electors. None of them can be said to be directly concerned in the education of the students, as the attendance on the courses of lectures given by them is not made essential to any of the students (with the exception of those proceeding to the bachelor's degree in civil law and medicine, who are required to bring testimonials of attendance on the courses connected with those subjects). The public income of the university arises chiefly from the proceeds of the rectory of Burwell, from matriculation, and other fees (about £3000 a year from all these sources), and from the trading profits of the Fitz or university press. The funds are managed by the vice-chancellor and specific trustees, and three annual auditors are appointed by the senate to pass the accounts. Its library claims (under the copyright act) a copy of every

## CAMBRIDGE (UNIVERSITY OF).

volume, map, and print published in the United Kingdom; it is also endowed with a portion of the proceeds of two estates; besides this and occasional donations, a quarterly subscription of 1s. 6d. is paid by all the members, except *seniors*, towards its support. A new and splendid building, from designs by Mr. Cockerell, is now in course of erection, intended for the reception of the library, and for public lecture-rooms. As this was much wanted, and the university had no disposable funds for the purpose, a subscription was set on foot, and £30,000 have been collected to effect it. The printing establishment has also, within a recent period, been enlarged and improved, from funds appropriated to that purpose by the committee for managing the sums collected for a public memorial of the late Right Hon. Wm. Pitt. The Fitzwilliam museum, consisting of a splendid collection of books, paintings, drawings, &c., was left by Viscount Fitzwilliam to the university, in 1816, together with funds for the erection of a building to receive it, which was commenced in 1837. The university also possesses a collection of pictures, left by Mr. Mezzani; an observatory, built in 1834, at an expense of £18,000; and a botanical garden of 3 or 4 acres. The Cambridge Philosophical Society may also be briefly adverted to here; it was established in 1819, for the promotion of scientific inquiry, and the advancement of philosophy and natural history; in 1833, it was incorporated by charter, and all, except honorary members, are required to be graduates of the university.

The degrees conferred by the university are those of Doctors in the three faculties of divinity, civil law, and medicine, and also in the science of music; that of Master of Arts; and the degree of Bachelor, in each of the foregoing. Except in the initiatory degree, last named, all examination in regard to proficiency is in reality discontinued, and the higher degrees are conferred as of right on those who have obtained a particular standing, without reference to qualification, or (with trifling exceptions) to residence. The academical year consists of three terms, viz., Michaelmas, Lent, and Easter; and the following are the chief regulations necessary for proceeding to degrees—premiating first, that the mode of admission on the boards of a college is either by personal examination of its tutors and officers, or (the more usual plan) through a recommendatory certificate, specifying the age, qualifications, &c., of the candidate, signed by an M.A., who has graduated at the university, and accompanied by a deposit called caution-money. This is usually done before the end of Easter term; and, if deemed satisfactory, the name is at once entered on the boards of the college, and the student usually comes into residence the 1<sup>st</sup> October following, when the academical year begins.

**Bachelor of Arts.**—12 terms on the boards of some coll., 10 of which in residence.

**Master of Arts.**—B.A. of 3 yrs. standing.

**Bachelor of Divinity.**—M.A. of 7 yrs. standing: under the 9th statute of Eliz., those who have been admitted on the boards of a coll. after 24 yrs. old, and have remained so 10 yrs. (the 3 last of which must be in res.), are admissible without having taken any other—these are called 10 yrs. men.

**Doctor of Divinity.**—B.D. of 5, and M.A. of 13 yrs. standing.

**Bachelor of Civil Law.**—Of 6 yrs. standing complete, 9 terms of which in res., or B.A. of 4 yrs. standing.

**Doctor of Civil Law.**—B.C.L. of 5 yrs., or M.A. of 7 yrs. standing.

**Bachelor in Medicine.**—Of 5 yrs. standing, 9 terms of which in res.

**Doctor in Medicine.**—Similar to that degree in civil law.

**Licentiates in Medicine.**—M.A. or B.A. of two yrs. standing.

**Bachelor of Music.**—The name must be entered on the boards of some coll., and an exercise performed.

**Doctor of Music.**—Usually B.M.

Persons having the rank of privy counsellors, bishops, noblemen, and eldest sons of noblemen, are entitled to have any of those degrees conferred on them without complying with the regulations; and knights and barons from that of M.A. downward. By a grace passed in 1835, these are to be examined and approved in the same way as others, but they are admissible after keeping 9 terms; but though none can claim a degree in right of nobility, &c., yet honorary ones are often conferred, without examination or residence, on eminent individuals.

The respective orders in the different colleges rank as follows:

1. *The Heads of Coll.*, who are generally of the degree of D.D.
2. *The Fellows*, who are doctors, masters, or bachelors of the different faculties.
3. *Noblemen*, who are graduates, doctors, and M.A.s, not on the foundation (the name must be kept on the college boards, the cost of which varies from £3 to £4 a year).
4. *Bs.D.*, who are 10 yrs. men.

5. *Bachelors of Civil Law, and of Physic*; these wear the habits, and enjoy all the various privileges of M.A., except that of voting in the senate.

6. *Bachelors of Arts*, who are considered in *status pupillari*.

7. *Fellow Commoners*, usually younger sons of the nobility or sons of men of fortune, &c., who have the privilege of dining at the same table as the fellows.

8. *The Scholars*, who are on the foundation.

9. *Pensioners*, who pay for their chambers, commons, &c., and comprise the chief part of the students.

10. *The Sizar*, students of limited means, who usually have free commons, and other emoluments.

Since, as we have seen above, all substantial examination for degrees is limited to the initiatory ones of *bachelor* (of which that of B.A. is the first, and only really important step), the necessary education of the different colls. is, of course, directed to that object, and contingent, in its nature and scope, on the qualifications which the university deems fit to exact at their public examinations, and the class-books they order to be adopted for the purpose. The ordinary course of study for B.A. may be comprised under three heads—natural philosophy, theology, and moral philosophy and the *bellæ literæ*; and for the attainment of these, the students attend the lectures of the college tutors, which are not formal harangues, but rather of a catechetical nature, intermixed with reading and discussion; at each of which a limited number of the students go through a certain portion of some mathematical or classical work with the tutor. Half-yearly or yearly college examinations usually take place, in addition to these lectures, when the names of the students are arranged in the order of their respective merits. The first public examination of a student takes place in the Lent and October terms of the second year from the commencement of his academical residence. After the examination, the candidates are arranged in two classes—those who have passed with credit, and those to whom the examiners have only not refused their certificate of *approval*. A second examination takes place, in Michaelmas term, of those who have been absent from the former by permission, or were not then approved of: this is termed, in university phrase, the "little go." Those anxious to take honours usually engage a private tutor (who is not necessarily of their own coll.) after this, in order to secure more exclusive attention and assistance. The usual fee of a private tutor is £50 a year. After this preparatory step, those who are candidates for honours perform the college exercises under the superintendence of the moderators: these are usually Latin theses, propounded and opposed in a syllogistic form. The senate-house examination for the degree of B.A., commences on the Monday preceding the first Monday in Lent term, and continues six days. The previous division of the candidates for honours into four classes has recently been discontinued, and the same questions are now proposed throughout the examination, to all whom the moderators judge, from the previous public exercises in the schools, to be qualified for examination as candidates for mathematical honours; and of the six examiners, two confine themselves to mathematical subjects, two to Homer and Virgil, &c., and two to Paley's Evidences and Moral Philosophy, and to Locke's Essay on the Human Understanding. The whole is conducted by writing, and the various subjects and problems may be seen in the annual registers of the university. Those who are not candidates for honours, *solæ*, are classed and examined separately, the subjects being—the Acts of the Apostles in Greek, one Greek and one Latin classic, Paley's Moral Philosophy, and certain questions in mathematical and mechanical science, specified in a printed schedule. The degrees are conferred on such of the questionists as pass, to the satisfaction of the examiners, by a subsequent grace of the senate, when the oaths of allegiance and supremacy are taken, and a declaration of adherence to the doctrine of the Church of England is required to be signed; but previously to this, on the last examination day, the mathematical *tripes* or list of those who succeed in obtaining an honour, is exhibited, formed into three divisions—that of *senior*, and of *senior* and *junior* opinions, arranged according to merit, or "bracketed," where two individuals are considered on an equality. The senior *triple* is the highest academical honour obtainable in the kingdom. On the fourth Monday after the general admission ad *respondendum questiones*, an examination commences of all such as have obtained an honour at the mathematical examination of the previous January, and who voluntarily offer themselves for the purpose in classical learning at this examination (which continues five days), translations are required of passages from the best Greek and Latin authors, and written answers to questions arising immediately out of such passages. The names of those who obtain honours are arranged in three divisions (like those in the mathematical *tripes*), in a list which forms the classical *tripes* of the year. There are two *tripes* days, one for *wranglers* and

## CAMBRIDGE (UNIVERSITY OF).

senior optimes, the other for junior optimes, when these are publicly announced.

The annual prizes of the university form another subject of competition: the classical ones are—the chancellor's gold medals, given to two commencing B.A.'s, who, having attained senior optimes at least, show themselves most proficient in classical learning: these prizes were first instituted in 1751. A third, first given by the Duke of Gloucester, and continued by the present chancellor, is for the best English ode, or English poem in heroic verse. Many of these have been published, under the title of "Cambridge Prize Poems:" the competition is limited to resident under graduates. The members representing the university also give four prizes, of 15 guineas each, which are bestowed on two B.A.'s and two under graduates, who compose the best dissertations in Latin prose. Brown's three gold medals, of 5 guineas each, to under graduates, are given for the best Greek ode, the best Latin ode, and the best Greek or Latin epigram. Porson's prize consists of one or more Greek books, given for the best translation of some passage in Shakespeare, B. Jonson, Massinger, or Beaumont and Fletcher, into Greek verse. The mathematical consists of two annual prizes, of £25 each, left by the Rev. R. Smith, and given to two commencing B.A.'s who prove the best proficient in mathematics and natural philosophy. The examination takes place soon after the admission of questionnaires: the competition is open, and the adjudicators are the vice-chancellor, the master of Trinity, and the Lucasian, Plumian, and Lowndean professors. The second or even lower wranglers occasionally become first prize men; hence it forms, in some sort, a court of appeal from the decisions of the examiners. *Cæsar's peribola*, preference is given to candidates of Trin. Coll. In theology, there are the Norrissan and Hale's prizes. The *Seatonian* is a poetical one; the subject is proposed in January, and the poem is to be sent in by Michaelmas; that which obtains the premium is printed from the produce of the estate left for the purpose, the remainder of which is given to the author. (A selection of these poems has been published in 3 vols. 8vo.) The university scholarships are also publicly contested for, and are given to the most successful candidates in classical reading and composition: in this respect they rank first in the classical competitions of the university, and are usually extended beyond the ordinary range of text books. The examination is the same for all, but most importance is usually attached to the Pitt scholarship, it being less frequent as well as of greater pecuniary value.

Very different opinions have been, and may be, entertained as to the merit and demerit of the system of instruction pursued at this and the sister university. Mathematics, and the sciences closely connected with and dependent on mathematics, form the distinguishing characteristic of the studies pursued at Cambridge; and the chief examinations, as well as the public lectures, honours, and emoluments, are principally rendered subservient to their advancement. A critical knowledge of the structure of the Greek and Latin tongues is that to which attention is mainly enforced at this university, in respect to classical attainments. Original composition forms no part at either tripos examination, but it is made a leading feature in the competition for scholarships and other prizes.

Of the importance of mathematical studies no doubt can be entertained: but very great, and apparently well-founded doubts may be entertained whether the exclusive attention given to them at Cambridge be the best means of educating accomplished statesmen, lawyers, divines, country gentlemen, or even manufacturers. The truth is, that this and the other university are institutions that belong to a different age; and though they have been materially modified, a great deal yet remains to be done before they become suitable places for educating the noble and aspiring youth of a great commercial and manufacturing country like Great Britain.

Lodging within the walls of a college is not enforced on under graduates, provided there be no vacant rooms; which may probably account for the greater increase of students matriculated in this than in the sister university, where residence within the walls is enforced. In 1748 there were 1500 members on the boards; in 1838, 5535; in the present year, 5822; of whom 2705 are members of the senate. The collegiate buildings of many of the establishments have been greatly improved and augmented of late years. Those of Trinity are the largest of any single college in either university; those of St. John have also been increased by a large quadrangle on the left bank of the Cam, forming one of the finest collegiate edifices in the kingdom. (*The Statutes of the University*, printed in 1785; *The University Calendar*, published annually; *Classical Exercises in University of Cambr.* 1st and 2d series; *Wheatell's Principles of University Education*; *Coloured Plates of the Costumes*, by R. Harraden; and *Cambridge Illustrata*; are works that may be advantageously referred to as embodying the

best information on most of the various matters connected with this university.)

CAMBRIDGE, p. t., semi-capital with Concord of Middlesex co., Mass., 3 m. N.W. Boston, 437 W. Sit. in 43° 23' 21" N. lat., and 71° 7' 38" W. long. It contains three parts: Old Cambridge, the seat of the university; Cambridge-Port, about half way between the university and the bridge leading to Boston; and East-Cambridge, formerly Lechmere's point, opposite to the N. part of Boston, the seat of the court house, and of a large crown glass factory. Cambridge is one of the oldest towns in New-England, having been incorporated by the name of Newtown in 1630, but took the name of Cambridge in 1636. It contains a court house, jail, state arsenal, three banks, with an aggregate capital of \$350,000; five churches, two Unitarian, one Episcopal, one Baptist, and one Universalist; one foreign commercial and one commission house, with a capital of \$40,000; twenty-seven retail stores, with a capital of \$65,930; eight lumber-yards, with a capital of \$65,000; three rope-walks, two printing-offices, one bindery, five periodicals, two academies, 45 students, sixteen schools, 2455 scholars. Pop. 8408.

It is the seat of Cambridge University, the oldest and best endowed institution in the United States. It originated in 1636, by the grant of £400 sterling by the general court. It was founded in 1636, when this sum was increased by the donation of £800 by the Rev. John Harvard, of Charlestown, from which circumstance it was called Harvard College, in honour of the donor; and the name of the town was changed from Newtown to that of Cambridge, from the name of the seat of a principal university in England. The college was sedulously cherished by the early founders of New-England, and afterwards furnished most of the early pastors of the churches. Its funds have been increased from time to time, and now amount to over half a million of dollars. It has a president, twenty-nine professors or other instructors, has had 3750 alumni, of whom 1561 have been ministers of the gospel; has 945 students, and 53,000 volumes in its libraries, which is the largest in the United States. The buildings consist of the fourth Wednesday in August. The buildings consist of University Hall, an elegant granite edifice, 140 by 50 ft., and 42 ft. high, containing a chapel, six lecture-rooms, dining hall, &c.; Harvard Hall, a brick edifice, 108 by 40 ft., containing the library, philosophical apparatus, and mineralogical cabinet; and four other edifices, four stories high, denominated Massachusetts, Hollis, Stoughton, and Holworthy Halls, containing rooms for the accommodation of the students; Holden Chapel, containing the anatomical museum, chemical laboratory, and lecture-rooms; and three college edifices of wood, occupied by the students; Divinity Hall, for the accommodation of theological students; and the Medical College, with a spacious brick edifice, located in Boston, connected with the institution, a president's house, &c. The buildings occupy an enclosed plain of 14 acres. It has a botanical garden, of 8 acres, containing an extensive collection of trees, plants, and shrubs, both native and foreign. The Medical Institution was founded in 1782; has six professors, 58 students, and has had 547 graduates. The lectures commence in Boston on the first Wednesday in November, annually. It has a library of over 5000 volumes. A course is also delivered at the university, from the 1st of April to the last of July. The course of instruction is completed in three years. The theological school has a course of three years, and the students are divided into three classes, junior, middle, and senior. Tuition is afforded free of expense, and other assistance is granted when necessary. Graduates of other colleges are admitted. The law school was founded in 1817. For admission, it is necessary to be a graduate of some college, or to be qualified for law students, according to the rules of court. The course occupies three years. It is furnished with able professors.

Cambridge was a place of importance in the early history of the country, and intimately connected with Boston. The first printing-press in America was established here in 1639 by Stephen Day, and the first work printed was the Freeman's Oath. It was long the literary centre, around which the affections of the colonists clustered. Immediately after the battle of Lexington, at the commencement of the Revolutionary war, 20,000 militia were collected here, and July 24, 1775, Gen. Washington arrived here, and took the command of the American army. Cambridge is a quiet, rural place, well suited to be the seat of the Muses; while its ready access to Boston gives it all the advantages, and some of the dangers too, of a large city.

CAMBRIDGE, p. t., Somerset co., Md., 63 m. N. Augusta, 658 W. Bounded S.E. by a branch of Sebasticook river. It contains one store, two grist-mills, one saw-mill, five schools, 198 scholars. Pop. 461.

CAMBRIDGE, p. t., Lamolite co., Vt., 48 m. N.W. Montpelier, 542 W. Watered by Lamolite river, which, with its branches, affords water-power. Chartered in 1781; first settled in 1733. It contains two churches, one Congrega-

## CAMDEN.

donal and one Baptist; eight stores, two fulling-mills, one grist-mill, three saw-mills, seventeen schools, 530 scholars. Pop. 1796.

CAMBRIDGE, p. t., Washington co., N.Y., 34 m. N. by E. Albany, 404 W. Watered by Hoosic river and its tributaries. It contains two stores, one grist-mill, three saw-mills, two tanneries, thirteen schools, 397 scholars. Pop. 3005. The village contains one Presbyterian and one Associate Reformed church, 100 dwellings, and about 700 inhab.

CAMBRIDGE, t., Ocoee co., N.H. Bounded N.E. by Umbagog lake. Watered by Androscoggin river. Chartered in 1773. Its population is only 5.

CAMBRIDGE, p. v., capital of Dorchester co., Md., 61 m. S.E. Annapolis, 101 W. Situated on the S. side of Choptank river, 12 m. from Chesapeake bay. The river is here 8 m. wide. It contains a court-house, jail, an academy, with a fund yielding \$500 annually; and two churches, one Methodist and one Episcopal.

CAMBRIDGE, p. t., Lenawee co., Mich., 66 m. S.W. Detroit, 596 W. It contains two commission houses, one saw-mill, four schools, 114 scholars. Pop. 644.

CAMBRIDGE, p. t., capital of Gurnsey co., O., 77 m. E. Columbus, 316 W. It contains one academy, 35 students, nine schools, 339 scholars. Pop. 1845. The village, situated on Willis' creek, contains a court-house and other county buildings, 130 dwellings, and about 700 inhabitants. The National road passes through it.

CAMDEN, county, N.C. Situated in the N.E. part of the state, and contains 928 sq. m. Bounded S.W. by Pasquotank river. It contained, in 1840, 4149 neat cattle, 3672 sheep, 12,569 swine; and produced 3739 bushels of wheat, 285,574 of Indian corn, 9480 of oats, 15,455 of potatoes, 6799 pounds of cotton. It had twenty-one stores, eighteen grist-mills, five saw-mills, five distilleries, one academy, 70 students, six schools, 169 scholars. Pop.: whites, 3844; slaves, 1661; free coloured, 153; total, 5663. Capital, Jonesburg.

CAMDEN, county, Ga. Situated in the S.E. part of the state, and contains 700 sq. m. St. Mary's river winds along its S. border. Separated on the E. from the Atlantic by Cumberland island, which extends its whole length off its coast. Drained by Santilla river. It contained, in 1840, 17,093 neat cattle, 1453 sheep, 7202 swine; and produced 68,565 bushels of Indian corn, 53,575 of potatoes, 1,006,440 pounds of rice, 3,038,740 of cotton, 30,450 of sugar. It had fifteen stores, four grist-mills, four saw-mills, five tanneries, one academy, 80 students, eleven schools, 158 scholars. Pop.: whites, 5004; slaves, 446; free coloured, 23; total, 6075. Capital, Jeffersonton.

CAMDEN, p. t., Waldo co., Me., 42 m. S.E.E. Augusta, 10 m. N. Thomaston, 633 W. Pleasantly situated on the W. side of the Penobscot bay. It has a good harbour and considerable navigation employed in the coasting trade and the fisheries. Ship-building is carried on, and lime is manufactured and exported. The heights, back of the village, present a fine view of Penobscot bay and its islands. It contains forty-one stores, five grist-mills, four saw-mills, two tanneries, one printing-office, one weekly newspaper, one academy, 100 students, seventeen schools, 1180 scholars. Pop. 3005.

CAMDEN, p. t., Oneida co., N.Y., 198 m. N.W. Albany, 397 W. Drained by the W. branch of Fish creek, which flows into Oneida lake. It contains five stores, one furnace, one fulling-mill, one woolen-factory, six grist-mills, thirteen saw-mills, one oil-mill, five tanneries, one academy, 60 students, fourteen schools, 720 scholars. Pop. 2331. The village is situated on the S. side of the W. branch of Fish creek, and contains a town house, three churches, 100 dwellings, and about 700 inhabitants.

CAMDEN, city, p. t., and port of entry, Gloucester co., N. J., 29 m. S.S.W. Trenton, 139 W. Situated on the E. side of Delaware river, opposite to Philadelphia. Incorporated as a city in 1831. It extends 2½ m. on the river and 1½ m. back from it. Much of this territory is still employed in raising fruit and vegetables for the Philadelphia market. It consists of three distinct villages, of which the middle is the largest, and each of which is connected with Philadelphia by a ferry. The channel of the river is near the Philadelphia side, and vessels of the largest class come not above the lower village, and those of 150 tons only to the central part of Camden. It contains six churches, two Methodist, one Episcopal, one Baptist, two Friends; an academy, a bank, 400 dwellings, and seventy or eighty buildings occupied in manufactures. It has several public gardens. The Camden and Amboy rail-road from New-York city terminates here. There is also a railway S. to Woodbury. It has thirteen stores, capital \$28,400; two lumber-yards, capital \$18,000; one turpentine-factory, one grist-mill, five saw-mills, three printing-offices, three weekly newspapers, and one periodical; total capital in manufactures, \$24,050; three academies, 240 students, three schools, 150 scholars. Pop. 3371.

## CAMPAN.

CAMDEN, p. t., Hillsdale co., Mich., 120 m. S.E. Detroit 537 W. Pop. 174.

CAMDEN, p. v., capital of Kernhaw dist., S.C., 23 m. N.E. Columbia, 473 W. Situated on the E. bank of Wateree river, which is crossed 1½ m. S.W. of the village by a bridge, which cost \$90,000. The river is navigable to this place for flat-boats of 70 tons. It contains a court house, jail, an academy, a bank, a masonic hall, a brick market house, a public library, an arsenal, and four churches, some of which are elegant buildings, one Methodist, one Episcopal, one Presbyterian, and one Baptist; forty stores, 900 dwellings, and 1000 inhabitants. One mile from the village are the De Kalb mills, and a cotton-factory with 1300 spindles, which employs 60 hands. A battle was fought here Aug. 16th, 1780, between Gen. Gates and Lord Cornwallis, in which the Americans were defeated; and another April 23d, 1781, between Gen. Greene and Lord Rawdon. Opposite to the Presbyterian church, at the end of De Kalb street, is a fine white marble monument, erected to the memory of the Baron de Kalb, a German by birth, a French officer, who volunteered in the American cause, was made a major-general in the Revolutionary army, and was killed in the above first-named battle.

CAMDEN C.H., p. v., capital of Camden co., N.C., 819 m. E.N.E. Raleigh, 267 W. Situated on the E. side of Pasquotank river. It contains a court house, and several stores and dwellings.

CAMDEN, t., Lorain co., O. It has four schools, 115 scholars. Pop. 504.

CAMELFORD, a bor. and town of England, co. Cornwall, hund. Lemsweeth, on the Camel, 805 m. W.S.W. London. Area of par. 3750 acres; pop. of do. (1841) 8063. The town is mainly built, but the streets are wide and well paved. It has a commodious town-hall, built in 1806; a free school, founded in 1670, has an annual revenue of £28 10s.; and there are a few minor charities. Market, Friday; fairs for cattle, Friday after March 10, May 28, June 17 and 18, and Sept. 5. Inhab. mostly engaged in agriculture. Camelford returned 2 mem. to the H. of C. from 1st Edw. VI. down to the passing of the Reform Act, by which it was disfranchised. The franchise vested in a self-elected corporate body, consisting of a mayor and 31 burgesses.

CAMEL'S RUMP, or HUMP, Chittenden co., Vt. It is the second highest peak of the Green mountains, 17 m. W. Montpelier, 30 m. S.E. Burlington. It is on the E. line of Huntington town, 4168 ft. above tide-water. The view from its top is exceedingly extensive, embracing lake Champlain and its valley, and is beautiful and grand. It can be approached with carriages within 3 m. of its top. The rocks which compose the mountain are wholly of mica slate.

CAMERINO, a town of the Papal States, cap. deleg., on a hill, 5 m. S.S.W. Ancona. Pop. 4900. It is pretty well built. Among the public buildings are the cathedral, which contains some pictures of the great masters, as does the church of Omancia; and the archiepiscopal palace, a fine building surrounded with columns. In the principal square is a bronze statue of Pope Sixtus V. It has twelve monasteries, and seven convents for women; and is the seat of an archbishopric, of a tribunal of primary jurisdiction, and of a university founded in 1727. A good deal of silk is spun and manufactured here; but the business is rather declining.

CAMERON, p. t., Steuben co., N.Y., 7 m. S. Bath, 225 m. W.S.W. Albany, 304 W. Watered by Canisaw river, a branch of Tioga river. It contains two stores, one fulling-mill, one grist-mill, seven saw-mills, twelve schools, 562 scholars. Pop. 1359.

CAMILLUS, p. t., Oneodaga co., N.Y., 7 m. W. Syracuse, 139 m. W.N.W. Albany, 347 W. The Erie canal passes through it. It contains one Methodist and one Presbyterian church, twelve stores, two flouring-mills, one grist-mill, seven saw-mills, two tanneries, fifteen schools, 226 scholars. Pop. 3657.

CAMMIN, a town of the Prussian States, prov. Pomerania, cap. circ., on the Dievenow, about 5 m. above where it falls into the Baltic, 38 m. N. Stettin. Pop. 2200. It was formerly the seat of a bishopric, suppressed in 1648. The fine cathedral still remains, and the chapter continued down to 1812. There is here an asylum for noble ladies, and a hospital. Distillation is carried on to a considerable extent, and the fishery is very active.

CAMPAGNA, a town of Naples, prov. Principato Citra, cap. distr., surrounded by high mountains, 18 m. E. Salerno. Pop. 7000. It is the seat of a bishopric; has a superb cathedral, three parish churches, several convents, a college, a hospital, and a *monte di pietà*.

CAMPAN, a town of France, dep. Hautes Pyrénées, cap. cant., on the Adour, 16 m. S.S.E. Tarbes. Pop. 4248. The houses are mostly built of marble. This town gives its name to a beautiful valley, fertile, *riante*, and full of life and industry. The cottages are clean and comfortable;

## CAMPBELL.

and the neat, well-laid-out gardens, and respectable dress of the peasantry, evince their comfortable condition. (*Anglo's Switzerland*, &c., p. 260.)

**CAMPBELL**, county, Va. Situated in the S. part of the state, and contains 576 sq. m. Bounded N. by James river, and S. by Staunton river, by which it has a boat navigation to the tide-waters of Chesapeake bay and of Albemarle sound. It contained, in 1840, 10,810 neat cattle, 13,858 sheep, 26,991 swine; and produced 177,949 bushels of wheat, 461,960 of Indian corn, 237,530 of oats, 25,632 of potatoes, 163 tons of hemp and flax, 3,357,193 pounds of tobacco, 4234 of cotton. It had three foreign commission houses, ninety-four retail stores, one furnace, one cotton-factory with 1500 spindles, eleven flouring-mills, thirty-four grist-mills, thirty-eight saw-mills, nine tanneries, fifteen distilleries, two printing-offices, two weekly newspapers, five academies, 185 students, twenty schools, 989 scholars. Pop.: whites, 10,913; slaves, 10,045; free coloured, 77; total, 21,930. Capital, Campbell C.H.

**CAMPBELL C.H.**, v., capital of Campbell co., V., 194 m. W.S.W. Richmond, p. 203 W. Situated near the centre of the co., and contains the county buildings.

**CAMPBELL**, county, Ga. Situated towards the N.W. part of the state, and contains 300 sq. m. Watered by Chattahoochee river. It contained, in 1840, 6184 neat cattle, 3103 sheep, 15,779 swine; and produced 37,901 bushels of wheat, 231,475 of Indian corn, 18,194 of oats, 2864 of potatoes, 7436 pounds of tobacco, 985,737 of cotton. It had twelve stores, thirteen grist-mills, eight saw-mills, three tanneries, fourteen distilleries, nineteen schools, 463 scholars. Pop.: whites, 4536; slaves, 849; free coloured, 2; total, 5370. Capital, Campbellton.

**CAMPBELL**, county, Tenn. Situated in the N.E. part of the state, and contains 679 sq. m. Bounded E. by the S. fork of Cumberland river, S.E. by Clinch river. Watered by Powell's river, a branch of Tennessee river. Cumberland mountains cross its S.E. part. It contained, in 1840, 6663 neat cattle, 4954 sheep, 28,803 swine; and produced 14,240 bushels of wheat, 1961 of rye, 199,758 of Indian corn, 63,370 of oats, 6154 of potatoes, 1784 pounds of cotton, 5715 of sugar. It had ten stores, thirty-seven grist-mills, seven saw-mills, one powder-mill, five tanneries, nineteen distilleries, two schools, 56 scholars. Pop.: whites, 5831; slaves, 264; free coloured, 54; total, 6140. Capital, Jacksborough.

**CAMPBELL**, county, Ky. Situated in the N. part of the state, and contains 260 sq. m. Bounded N. and E. by Ohio river. Watered by Licking river. It contained, in 1840, 9446 neat cattle, 4071 sheep, 5589 swine; and produced 37,702 bushels of wheat, 1110 of rye, 113,147 of Indian corn, 19,167 of oats, 15,371 of potatoes, 28,010 pounds of tobacco. It had three stores, eight schools, 186 scholars. Pop.: whites, 4921; slaves, 289; free coloured, 4; total, 5214. Capital, Newport.

**CAMPBELL**, t., Warwick co., Ia. It has four schools, 125 scholars. Pop. 950.

**CAMPBELL**, t., Steuben co., N.Y., 10 m. S.E. Bath, 209 m. W.S.W. Albany. Watered by Conchocton river. It contains one store, two fulling-mills, one woollen-factory, two grist-mills, twelve saw-mills, four schools, 237 scholars. Pop. 853.

**CAMPBELLTON**, p. v., capital of Campbell co., Ga., 102 m. N.W. Milledgeville, 690 W. Situated on both sides of Chattahoochee river, and contains the county buildings and twenty-five or thirty dwellings.

**CAMPBELLTON**, a sea-port and royal bor. of Scotland, co. Argyll, being, though not the capital, by far the most important town in the co., on the E. coast of the long, narrow peninsula of Cantyre. Pop. in 1841, 6787. It consists of two leading streets crossing each other at right angles, with adjoining streets of an inferior description. It is built on the S.W. side of a large salt-water loch, or inlet of the sea, about 2 m. in length by 1 m. in breadth, forming an excellent harbour, having from 6 to 13 fathoms water. Two conical insular hills lying in the mouth of the bay, and intercepting the view of the sea, make the harbour look land-locked. Campbellton was at one time a small fishing village under the name of Dalauran; but having begun to rise into importance, it was made a royal burgh in 1700, when its present name was conferred on it in honour of the noble family of Argyll, on whose property it is built. The parl. boundaries of the burgh are very extensive, embracing a considerable space of ground on both sides the loch not yet built on. It has at present (1839) no fewer than twenty-eight distilleries, which, at an average, pay £100,000 to the excise, and produce about 600,000 gallons of spirits yearly. There are 47 malsters, but in many instances the same person is both distiller and malster. The inhab. also engage extensively in the herring fishery, a branch of trade that at one period of the year gives employment to several hundred individuals. Many of the females are engaged in tannouring; while hand-loom weaving is pretty extensively carried on in connexion with the cotton manufacture in

## CANAAN.

Glasgow. Coal is got within 4 m. of the burgh, and is brought thither by means of a canal. There is a good quay projecting into the bay, but accessible only at high-water. The expenditure of a small sum on its extension might render it available for vessels of any burden at all times of the tide. There is a regular steam communication with Glasgow and various parts of the mainland, as also, though less frequently, with Ireland. The climate of Campbellton is regarded as particularly agreeable and salubrious: hence the number of families that resort thither, either as occasional visitors or permanent residents. The burgh has two places of worship connected with the established church, in one of which the service is performed in Gaelic, and three dissenting chapels. It unites with Oban, Inverary, Irvine, and Ayr, in sending a mem. to the H. of C. Registered electors in 1838-39, 263.

**CAMP CREEK**, t., Pike co., O. It contains one saw-mill, six schools, 181 scholars. Pop. 598.

**CAMPEACHY**, a sea-port town of Mexico, W. coast of the peninsula of Yucatan, on the Rio Francisco, 95 m. S. by W. Merida, lat. 19° 51' 15" N., long. 90° 28' 15" W. Pop. 8000. Distances from about 7000 to about 14,000. It is walled and defended by some fortifications which, however, are of little importance. It has a pier about 50 yards in length; but the water is so shallow that only small boats can come up to it, vessels of considerable burden anchoring at certain distances off shore, according to their draught of water. It is, in common with the whole of this coast, ill supplied with water, that which is obtained from wells being brackish. It derives its entire importance from its being the great seat of the logwood trade; that valuable dye-wood, sometimes called Campeachy wood (*Hæmatosylon Campeachianum*), being found in greater perfection and abundance in the adjoining district than anywhere else. The imports of logwood into this country in 1836, mostly from Campeachy, amounted to 5637 tons. The other exports are wax, the produce of wild, stingless bees, with some small quantities of cotton, &c. Campeachy was founded in 1540, and suffered much at different times from hostile attacks, having been sacked by the English in 1659; by Scott, a pirate, in 1678; and by the buccanniers in 1685. (*Humboldt's*; *Blount's American Pilot*, &c.)

**CAMPILI**, a town of Naples, prov. Abruzzo Ultra l. cap. cant. 5 m. N. Teramo. Pop. 6692. It has a cathedral, three collegiate churches, an abbey of Celestine monks, several convents, a hospital, and a *monte dei pitti*.

**CAMPOBASSO**, a town of Naples, cap. prov. Sannio, on the declivity of a mountain, 53 m. N.E. Naples. Pop. 8000. It is fortified; is the seat of a civil and criminal court; and has a collegiate and four parish churches, several convents, a royal college, a hospital, and an almshouse. The best cutlery made in Naples is produced here; and being traversed by the excellent road forming a communication between the capital and the towns on the Adriatic, it has an extensive commerce. (*Dist. Gag.*; *Balki Abriqt*, ed. 1837, p. 414.)

**CAMPO FORMIO**, a town of Austrian Italy, prov. Friuli, 4 m. S.W. Udine. Pop. 1600. It is famous in diplomatic history for the treaty of peace concluded here on the 17th of October, 1797, between Austria and France.

**CAMPO-MAYOR**, a fortified and frontier town of Portugal, prov. Alentejo, 19 m. N.N.E. Elvas, and 15 m. N.W. Badajoz. Pop. 4500. It is ill built, with narrow, dirty streets, and old low houses; has a collegiate church, two convents, a hospital, and a workhouse. It was nearly destroyed in 1712 by the explosion of a powder magazine. (*Mifano*.)

**CAMPOS**, a town of the Isl. of Majorca, in an extensive plain, 22 m. S.E. Palma, and 7 m. from the sea. Pop. 4981. It has in its vicinity a hot well that is in considerable reputation; and considerable quantities of salt are made along the coast. The surrounding plain is very fertile. (*Mifano*.)

**CAMPTON**, p. t., Grafton co., N.H., 47 m. N. by W. Concord, 528 W. Chartered in 1767, first settled in 1765. Watered by Pemigewasset river and its branches. It contains two churches, one Congregational and one Baptist; three stores, two fulling-mills, two grist-mills, seven saw-mills, two tanneries, fourteen schools, 486 scholars. Pop. 1513.

**CAMPTON**, p. v., Orange t., Essex co., N.Y., 34 m. S.W. Newark, 52 m. N.E. Trenton, 218 W. It contains one Presbyterian church, and one of stone, three stories high, the first story occupied as an academy, the second as a church free to all denominations, and the third as a masonic hall; three stores, one grist-mill, one saw-mill, and seventy-five or eighty dwellings.

**CANAAN**, p. t., Somerset co., Me., 13 m. E. Norridgewock, 36 m. N. by E. Augusta, 631 W. Watered by a branch of Kennebec river. Incorporated in 1768. It contains five stores, one grist-mill, one saw-mill, eleven schools, 355 scholars. Pop. 1379.

**CANAAN**, p. t., Grafton co., N.H., 41 m. N.W. Concord, 18

# CANAAN.

m E. Dartmouth college, 496 W. Chartered in 1761, first settled in 1766. It contains three churches, two Methodist and one Congregational; three stores, two fulling-mills, two woolen-factories, six grist-mills, nine saw-mills, one academy, 144 students, sixteen schools, 377 scholars. Pop. 1576.

CANAAN, p. t., Essex co., Vt., 31 m. N. Guildhall, 106 m. N.E. Montpelier, 603 W. Situated in the extreme N.E. part of the state. Chartered in 1793, first settled in 1785. It has two stores, five schools, 106 scholars. Pop. 378.

CANAAN, p. t., Litchfield co., Ct., 49 m. N.W. Hartford, 18 m. N. by W. Litchfield, 343 W. The Housatonic river bounds it on the W., and between this t. and Salisbury, has a fall of 60 ft. nearly perpendicular, presenting, in high water, an imposing spectacle. It is the most considerable fall in the state, and affords extensive water-power. Limestone is abundant, and the lime, which is of an excellent quality, is extensively exported. Watered by Blackberry and Hollenback rivers, which flow into the Housatonic, and afford water-power. Iron is extensively manufactured, of ore brought from the W. part of Salisbury. It contains two Congregational churches, ten stores, eight furnaces, three fulling-mills, two woolen-factories, three grist-mills, ten saw-mills, three tanneries, one academy, 90 students, fourteen schools, 584 scholars. Pop. 3160.

CANAAN, p. t., Columbia co., N.Y., 30 m. N.E. Hudson, 24 m. S.E. Albany, 393 W. Watered by branches of Kinderhook creek. The rail-roads from W. Stockbridge to Hudson, and also to Albany, pass through it. It contains four stores, two fulling-mills, three woolen-factories, two cotton-factories with 968 spindles, four grist-mills, eight saw-mills, one academy, 25 students, eight schools, 685 scholars. Pop. 1957.

CANAAN, p. t., Wayne co., Pa., 150 m. N.E. Harrisburg, 253 W. Drained by branches of Lackawanna creek. The Carbondale and Honesdale rail-road passes through it. It has one store, eleven schools, 548 scholars. Pop. 1403.

CANAAN, p. t., Wayne co., O., 107 m. N.E. Columbus, 350 W. Pop. 1897.

CANAAN, t., Madison co., O. It has two stores, one fulling-mill, one grist-mill, three saw-mills, eight schools, 315 scholars. Pop. 607.

CANAAN, t., Marion co., O. It has one saw-mill, five schools, 900 scholars. Pop. 1037.

# CANADA.

CANAAN, t., Hillsdale co., Mich. Pop. 164.

CANAAN, t., Athens co., O., 4 m. E. Athens. Watered by Hockhocking river. It contains salt-works. It has four stores, one grist-mill, one saw-mill, four schools, 76 scholars. Pop. 800.

CANADA, a vast territory of N. America, belonging at present to Great Britain, lying principally in a N.E. and S.W. direction, along the N. side of the St. Lawrence, and the N. and E. sides of lakes Ontario, Erie, Huron, and Superior, between 57° 50' and 90° W. long., and 49° and 30° N. lat. The other portion of Canada, or that on the S. side of the St. Lawrence, is of comparatively limited dimensions: it stretches along the river from near Montreal to point Gaspe, at its embouchure, having on the S. the territory of the U. States and New-Brunswick. On the N. Canada has Labrador and the inhospitable territories belonging to the N.W. Company, the boundary in this direction being the elevated grounds, or water-sheds, separating the rivers which run S. to the St. Lawrence and the great lakes from those which run N. to Davis's straits and Hudson's bay. The length of Canada, from Amherstburg, on Detroit river, the extreme S.W. limit of the prov., to Shabon harbour, on the strait of Bellefleur, its extreme N.E. limit, is about 1450 m., its breadth may vary from 200 to 400 m. Its area has been estimated at about 350,000 sq. m.; and its pop. is at present (1830) probably little short of a million. It is wholly within the basin of the St. Lawrence, of which it includes the entire N. and a small part of the S. division.

This great territory is divided into the provs. of Upper and Lower, or, as they might be designated, English and French Canada. The Ottawa or Grand river, which has its sources in about 49° 30' N. lat., and 80° W. long., and flows in an E.S.E. direction till it unites with the St. Lawrence, near Montreal, forms, nearly in its whole extent, the line of demarcation between the two provs.; Lower Canada comprising the whole territory lying N.E. of the Ottawa, on both sides the St. Lawrence; while Upper Canada comprises all the territory lying S. and W. of that river. The latter is entirely an inland prov.; but, from its having the great lakes and a part of the St. Lawrence for its boundary, it has a vast command of internal navigation, and a ready access to the ocean. Subjoined is an account of the divisions of the provs., and their pop. in 1835 and 1831.\*

The N. portion of both Upper and Lower Canada consists of a table-land, little of which has been hitherto explored. In Upper Canada, E. of Huron, it has an average elevation of perhaps from 1200 to 1300 ft. It is covered with forests interspersed with ravines, swamps, and torrents; and abounds with lakes, which, anywhere but in the neighbourhood of the immense lakes of this continent would be deemed of considerable size. The coast of Lower Canada, N.E. of the Saguenay, is less lofty than S.W. of that river, but of a very uninviting description. The interior of this part of the country is described by the Indians and Esquimaux, by whom alone it is traversed, as composed of rocky cliffs and low hills, scattered over barren plains, diversified with thick forests of stunted pines, and chequered with small lakes. There seems reason to suspect that the expectations once entertained of finding here tracts of cultivable land will never be realized; but hopes are still cherished that the district may contain valuable minerals. The greater part of the immense district of Quebec presents a "chaos of mountains, lakes, and torrents, tenanted only by wild beasts, and a few wandering Indians." (Murray.)

From the mouth of the Saguenay to cape Tourment, near Quebec, the shore of the St. Lawrence is bold and desolate; but W. of this point a plain country begins to extend inland, with a variable breadth of from 15 to 40 m., rising into the table-land behind it by successive terraces. The cultivated country N. of Quebec does not extend far, being hemmed in by bill ranges. But as these ranges gradually recede from the St. Lawrence, and the country, at first diversified by varied eminences, sinks into a level plain, the surface of settled and cultivated land increases; and this is especially the case as we approach and penetrate Upper Canada. The peninsula or great plain of this prov., between lakes Huron, Erie, and Ontario, comprising about 30,000 sq. m., consists,

\* Some of the remarks in this article relate to the state of the provinces before the union. They contain important information, and are retained. Since the union of the provinces of Upper and Lower Canada, the organization of the government has been materially changed, and some alterations have been made in the names and arrangement of the districts; but it is thought best not to disturb the above statistics, by introducing them into them. They will be found delineated on the map of Canada. Kingston has been made the capital of the united provinces, where the colonial legislature assembles.—Am. Ed.

## CANADA.

for the most part, of alluvial soil, on a calcareous substratum. It is of varying fertility; but, on the whole, is believed to be the best grain country of any of the more N. portions of the American continent. A large part of this plain is still covered with lofty forests: it has, however, some prairies, or natural meadows; but these are not extensive. At some remote period it had evidently formed part of the bed of a vast inland sea, of which the five great lakes having been the deepest, are now the principal remaining portions. N. of lake Ontario, two terraces intervene between the plain on the shore of the lake and the table-land in the N., decreasing somewhat in fertility as they increase in height, and separated from each other and from the plain by two ranges of hills of moderate elevation. The most S. of these two ranges unites, near long. 80°, with a third, which passes N. and S. from Natasawagan bay, in lake Huron, to the W. extremity of lake Ontario. The combined range, after encircling the head of the latter lake, crosses the bed of the Niagara river, forming the ledge over which are the celebrated falls, and is finally lost in the territory of the United States.

That part of Lower Canada S. of the St. Lawrence, extending between long. 73° 30' and 74° 30', and entering into the distr. of Montreal, consists, for the most part, of an extended plain almost completely flat, except that some detached hills diversify the surface, one of which, that of Rouville, is 1100 ft. in height. It is less extensive than the plain on the opposite shore of the river, and contains no large towns, but it is in many districts equally fertile and well watered, and the cities are dependent on it for a large proportion of their supplies. To the S. and E. it ascends by degrees into the mountainous region, forming the boundary between the British and U. States' territories. The aspect of the S. shore of the estuary of the St. Lawrence, between long. 69° 30' and 73°, though bold and hilly, is not mountainous, as on the opposite shore; and the hill ranges are interspersed with valleys and even plains of some extent, many of which, from the encouragement afforded by the contiguous markets of the cap., have been brought into very tolerable cultivation. E. of Kamouraska, the country is diversified by more abrupt eminences, while pop. and culture become more limited; and in the district of Gaspé the mountains rise into two chains of considerable elevation, enclosing between them a lofty table-land or central valley. The most southerly of these chains bounds on its S. side the valley of the Ristigouche and St. John rivers. The upper part of the basin of the St. John forms a region at least 600 or 700 ft. above the level of the sea, covered with forests, lakes, and rivers, and, according to McGregor and other authorities, equal in point of fertility to any part of America: enclosed by mountain ranges on the N., S. and W., and divided into two nearly equal parts by the St. John river, running from W. to E.

Besides the great lakes indenting the W. outline of the country, Canada contains, as has been already said, numerous minor, yet still considerable, bodies of water. In Lower Canada, the lakes and rivers have been estimated to cover 3900 sq. m. of surface; the principal of the former hitherto discovered are lake St. John, with an area of 540 sq. m.; those of Manicouagan, Pirebith, and others N. of the St. Lawrence, and Memphramog, &c., S. of that river. In Upper Canada, the chief known are Nipissing lake, Temiscamung, and St. Ann's, in the high table-land; and the Simcoe lake in the upper terrace country of Home district.

Among the rivers falling into the St. Lawrence or into the lakes which form a part of its system, there are some deserving of especial mention here for their utility as regards navigation or their agency in fertilizing the soil. In the peninsula of Upper Canada, the Thames originates in the district of London, by the union of several streams, near lat. 43° and long. 81°, and after a course of about 150 m. chiefly S.W., falls into lake St. Clair, situated between those of Huron and Erie. The Thames is navigable for large vessels to Chatham, 15 m. up, and for boats nearly to its source. It intersects and waters a fine and fertile country. Besides Chatham, small towns, with the pompous names of London and Oxford, are situated upon its banks. Next in magnitude to the Thames is the Ouse. This river rises in the Home district, about lat. 44°, long. 80° 10', runs generally S.E., and falls into lake Erie near its N.E. extremity. Parallel to this river for about 50 m., runs the Welland or Chippeway river, which, in one part of its course, forms a portion of the canal between the Ouse and lake Ontario, by means of which the falls of Niagara are avoided. The Trent, in the district of Newcastle, connects the small lakes Balsam, Sturgeon, and several others in the upper terrace country, with the Rice lake, and, after a tortuous course, discharges itself into the bay of Quinté in lake Ontario. It is said to be navigable for boats in the whole of its course. The lake Balsam is separated by only a short portage from that of Simcoe, which discharges its

waters into Gloucester bay (Huron lake) by the Severn river. A short and valuable line of direct water communication between the lakes Huron and Ontario is apparently impeded only by the intervention of this short portage, and by the rapids of the Severn, which river is, however, no more than 50 m. in length. The other affluents of the St. Lawrence and the great lakes are elsewhere treated of. (See LAWRENCE, ST., &c.) If we except the St. John, the Ristigouche, which bounds the district of Gaspé E., and falls into Chaleur bay, is the only river of any importance in Canada not belonging to the St. Lawrence basin. (Bouchette, Darby, McGregor, Hall, &c.)

**Climate.**—The climate of Canada is subject to great extremes of heat and cold; the thermometer ranging between 102° above, and 30° below, the zero of Fahr. In such an extensive region there is, of course, some difference in this respect: as we ascend the St. Lawrence, not only a more S. parallel is reached, but the country is less wild and exposed than that near its entrance; so that, whilst Quebec has been said to have the summer of Paris, and the winter of Petersburg, the great plain of lake Erie has the climate of Philadelphia. Still the Canadian climate, as a whole, must be considered very severe; all the streams are locked up by ice, and the ground is covered everywhere, to an average depth of 5 or 6 ft., by snow, for four or five months of every year. Frosts usually commence in Oct., while the weather, by day, is still mild and serene. But with Nov. begins a succession of snow-storms and tempests, from the N. and E., accompanied by a great increase of cold; and this sort of weather usually continues to the 3d or 3d week of Dec., when the atmosphere again becomes serene, but the cold still more intense, so that the rivers become suddenly frozen over. Towards the latter part of April, or, in late seasons, the beginning of May, the ice begins to break up (often with loud reports like the discharge of cannon); a sudden increase of temperature stimulates vegetation, and makes its growth almost perceptible to the eye; so that spring and summer can scarcely be recognised as distinct seasons. May and June are occasionally wet, to the hindrance of the farmer, whose seed-time this is (to be followed by harvest towards the end of Aug.); but usually, the summers are very fine. Thunder-storms are often of great violence, and the aurora borealis is frequent and vivid: of the prevailing winds, those from the S.W. are usually accompanied by clear and serene weather; those from the N.E. by continued rain in summer, and snow in winter; while a N.W. breeze is usually dry, with severe cold. Fogs (except in the district of Gaspé) are of unusual occurrence. It seems to be the general opinion of the inhab. that the winters are gradually becoming less severe: and this may be attributable to the clearance of the forests and the increased extent of cultivated surface; for, while the state of climate (especially of humidity) influences vegetation, that, in turn, reacts on climate. Humboldt's reasoning and tables (*Mémoires d'Arcueil*, tom. iii.) may be satisfactorily referred to for the conditions that have the greatest and most permanent influence on the Canadian climate.

The length and severity of the Canadian winter is a heavy drawback on the country, and lays the farmer under serious difficulties and privations not experienced in countries where the climate is milder, as in the contiguous territories of Indiana and Illinois. For five or six months almost all agricultural operations are suspended, so that time is not left in the rest of the year for the proper preparation of the ground for the crops and other necessary labours. It is clear too, that horses, cattle, and other farm stock, must require a proportionally large supply of fodder for their keep; and to these causes Mr. Shreff is principally inclined to ascribe the leanness of the animals, the high price of produce, and the cheapness of labour as compared with the U. States. (*Tour in America*, p. 354.) In these respects, however, there is a material difference between the lower and the upper province. In the latter the severity and the length of the winter are considerably diminished. The soil, too, is generally better; and the quality of the wheat improves as we draw nearer to the S. limit of the province.

Most of the causes that contribute to make the climate of the northern part of America more severe, and subject to greater extremes than that of Europe, in the same parallel, bear with especial force on the Canadian regions. The greater portion of these provinces is covered by extensive forests; the trees composing which (especially in the more northern and eastern parts) do not, generally speaking, attain the same lofty size as those of the U. States, nor flourish with the same exuberant vitality: the pine family, and various species of evergreens, are the most numerous and predominant. Among various other kinds of trees, are, the silver and American fir, Weymouth and Canadian pines, white cedar (*Thuja occidentalis*), maple, birch, American ash, bass wood, hickory, two or three species of wild cherry, and numerous species of oak. Like the rest of the American continent, most of the plants and animals differ

## CANADA.

specifically from those of the Old World. Many of the smaller kinds of annual and perennial plants are common to Canada and regions lying much further to the S., which may be accounted for by the high summer temperature, while the deep winter snows effectually protect their roots through the severest seasons; but the trees and larger shrubs, which find no such shelter, belong for the most part to more northern and arctic regions. Of the smaller plants, the *Zizania aquatica* may be noticed as peculiar to Canada, and abounding in most of the swamps (a grass not unlike rice, and affording food to birds, and occasionally to the Indian tribes), and the ginseng, and Canadian lily, common to this country and Kamtschatka. From the sap of the maple (*acer saccharinum*), as it rises in the earlier part of spring, sugar is made in considerable quantities; in collecting which, from trees scattered over thousands of acres, while the snow still covers the ground, much hardship is frequently endured: these districts are called sugaries, and are a valuable description of property. The mode of procuring it is by inserting a small cane shoot through an incision made in the bark, the sap being received in a wooden trough placed under it; it is afterwards boiled, and then left to cool into a hard solid mass, of a dark brown colour, which is moulded by the form of the jars which contain it; the value of the article is about half of that produced from the sugar-cane. Most of the oak growing in the woods is unfit for ship-building, and the greater part of the timber used for that purpose is imported from New England. The species called the live oak, which grows in the warmer parts of the colony, is, however, said to be well adapted for ship timber; the various kinds of wood available for no other purpose, serve to supply the pot and pearl-shell manufactories. Among the wild animals ranging through these unreclaimed regions, are the American elk, fallow deer, bear, wolf, fox, wild-cat, raccoon, martin, otter, and various species of *Viverra* and *Mustela*; the beaver, hare, grey and red squirrel; and in the more northern parts, the buffalo and roebuck: the bears usually hibernate, if the season has enabled them to get sufficiently fat for the purpose; if not, they migrate to a more southerly climate. (*Richardson's Fauna Boréalis*, p. 16.) Among the birds, may be noticed the wild pigeon, quail, partridge, and different kinds of grouse; of the water birds, the species are very numerous, as might be inferred from the general character of the region, where, in the basin of the St. Lawrence, and the numerous lakes occupying the elevated table-lands around it, half the fresh water on the surface of the globe is collected; a humming bird (the smallest of its genus) is also indigenous, and may be seen in the Quebec gardens, flitting round the flowers, and constantly on the wing. Among the reptiles, the rattlesnake is occasionally met with. Fish, in great variety and abundance, are found in the lakes and rivers; in which respect few streams can rival the St. Lawrence; the sturgeon is common, and the salmon and herring fisheries are considerable; seals are also met with occasionally, in large shoals, in the lower parts of the river. Forests can only exist where the prevailing winds bring with them sufficient moisture, but they may usually be taken as a measure of the fertility of the soil, no less than of the humidity of the climate: in this respect, therefore, taken generally, Canada must be considered a fertile region; the upper province much more so than the lower one. Tobacco, hemp, flax, and the different kinds of grain and of pulse, are successfully cultivated; as are all the commoner fruits and vegetables of England; melons of different species abound, and are probably indigenous; as are also the strawberry and raspberry: these last flourish luxuriantly in the woods; and on the plains behind Quebec are gathered in great quantities, and taken to that market. Pears and apples succeed well, both there and at Montreal; and on the shores of lake Erie, the grape, peach, and nectarine, as well as all the harder kinds of fruit, arrive at the greatest perfection.

Canada does not appear to be rich in minerals, but iron abounds in some districts; veins of silver-lead have been met with in St. Paul's bay, (50 m. below Quebec), and coals, salt, and sulphur, are also known to exist in the colony. No volcanoes have been discovered, but authentic accounts are preserved of several violent earthquakes: among others, one in 1663, when tremendous convulsions, lasting for six months, extended from Quebec to Tadoussac (130 m. below it), which broke up the ice of the rivers, and caused many great land-slips and dislocations; in 1791, earthquakes were also frequent and violent, in the same region; and the shores, both of the gulf and river St. Lawrence (like those of the great lakes, as previously noticed), present many proofs of former convulsions in the horizontal banks of recent shingle and shells, and in elevated limestone strata, with wave-scooped marks, and lithodromous perforations, that occur on various parts of the shores. (*Lyell's Geology*, vol. ii.)

*People*.—The majority of the population in Lower Canada

are of French origin, and are for the most part descendants of settlers from Normandy, established in the colony previously to 1759. Their number at that period was about 70,000, and in 1831 they had increased (according to the census) to upwards of 400,000; the most rapid augmentation probably of any on record from births alone. Neither the conquest, nor the long period which has since elapsed, has wrought any great change in their character and habits; nor has their increasing numbers induced them to make any considerable encroachments on the wilderness around: on the contrary, they have contained within their original limits, subdividing the land more and more, and submitting to a constantly decreasing ratio of comfort. They are frugal, honest, industrious, and hospitable, but cling with unreasoning tenacity to ancient prejudices and customs; by temperament cheerful, social, engaging, and (from the highest to the lowest) distinguished for courtesy and real politeness, they retain all the essential characteristics of the French provinces under the ancient regime, and present the spectacle of an old, uneducated, stationary society, in a new and progressive world. A few seigniorial families possess large, but not very valuable, properties: the class wholly dependent on wages is a very small one; and the great majority consists of a hard-working yeomanry (usually called *habitans*), among whom there is almost a universal equality of condition and property, and of ignorance too; for scarcely one of them can read or write. From the public colleges and seminaries established in the cities and other central points by the early possessors of the colony, chiefly by the Jesuits (where the education resembles that of our public grammar schools, and is entirely in the hands of the Catholic clergy), between 300 and 300 annually finish their education, and are dispersed through the community: nearly the whole of these are of the class of *habitans*, and return to reside among them, mostly as notaries or surgeons; and thus, living on terms of complete social equality, though with greatly superior knowledge, in communities which possess nothing in the shape of municipal institutions, they possess almost despotic influence over popular opinion and conduct in all public matters. The *habitans* under the old feudal tenures have cleared two or three baits of land along the St. Lawrence, and cultivate them on the west system of small farming; their farms and residences being all so connected, that the country of the seignories appears like a continuous village. They spin and weave their own wool and flax, and make their own soap, candles, and sugar. What energy and enterprise there exists in the community (beyond the portion required by this sort of routine) is exerted in the fur trade and in hunting, which, it appears, they still monopolize through the whole valley of the Mississippi. (*Lord Durham's Report*, p. 11-13.) The Anglo-Saxon portion of the population of Lower Canada consists almost wholly of persons who have emigrated from the United Kingdom, or the descendants of such, subsequent to 1759. A considerable addition was made to their number by U. S. loyalists in 1787; at a subsequent period many families from Vermont have settled in the townships adjoining that state, and since the formation of the American Land Company, many have emigrated through their exertions. A majority of the labouring class in this portion of the population are Irish Catholics; the rest are English or Scotch Protestants, by whom the resources of the colony, so far as they have been called forth, have been mainly developed. It is also by these that the internal and foreign commerce has been created, which is wholly in their hands, as well as a large portion of the retail trade of the province: besides this, they possess the best cultivated farms in the province, and are owners of fully half the more valuable seignories. (*Lord Durham's Report*, p. 14.) The inhabitants of the upper province consist principally of the descendants of U. S. loyalists, previously to 1787, and of subsequent settlers, or their descendants, from the United Kingdom and the States: an extensive emigration from the former, subsequent to 1835, nearly doubled the previous population of the province. Of the immigrants from the U. Kingdom, many were half-pay army or navy officers, and of the working classes a considerable proportion were Irish. The Catholic population of the upper province is estimated at one fifth part of the whole: in the back part of the Niagara district some Dutch settlers are established; and a few French families along the Detroit. The population at present is estimated at 400,000, scattered for the most part along an extensive frontier, with very imperfect means of inter-communication; the more thickly-settled districts being, of course, in the occupation of the older section of residents, who are for the most part owners also of the wild lands in those districts. The number of immigrants from the U. Kingdom, which landed at the port of Quebec in the nine years ending 1835, amounted to 233,697: of these, 165,000 proceeded to the upper province; but of the whole number, from 50 to 60 per cent. re-emigrated after a short residence, to the U. States. The greatest

## CANADA.

number which emigrated in any one year was in 1838, when 51,746 arrived at Quebec; the smallest number was in 1838, when 4993 only reached that port. Within the period spoken of there were also 50,000 estimated to have reached the provinces by way of New York and the Erie canal; a like proportion of whom also re-emigrated. (*Lord Durham's Report*, p. 76, 77, *Append. C*.) The arrangements made for conveying and locating these immigrants (mostly of the poor labouring classes, and two thirds of the number Irish) were most imperfect and unsatisfactory; causing an enormous amount of suffering to them, and a very great inconvenience and alarm to the residents of Quebec. The crowded state of the vessels, and deficiency of food, induced disorders of an infectious nature, so that a quarantine station had to be established at Grosse Isle (a desert spot about 10 m. below Quebec, and a fever hospital on point Lévi), to obviate the spread of infection through the city; and funds had to be raised and distributed, by a voluntary society, to relieve the wants of such as were unable to obtain or unfit for employment.

The disturbances of which Canada has been recently the theatre, and which, it is not very likely, will soon subside, will most probably prevent, for a lengthened period, any considerable influx of immigrants. And, certainly, if we look to the well-being of the immigrants, which is the principal consideration, this is not much to be regretted. There can be no doubt that the valley of the Mississippi offers incomparably greater advantages to industrious immigrants, whether with or without capital, than can be enjoyed in any part of Canada. It has a better climate, a better and a cheaper soil, and is free from the greater number of those social grievances that disturb and embitter society in Canada. The wonder, in fact, is, not that so many of the immigrants to Canada have left it for the U. States, but that any considerable portion of them should have remained behind.

The native Indian tribes still occupy portions of this colony on lakes Superior and Huron, and along the whole extent towards the N. boundaries; but their numbers are rapidly diminishing, and they are fast degenerating from their original spirit and character, so that the utter extinction of the race seems inevitable, as civilization advances on the wilderness, to which, only, they appear to be adapted. Various attempts have been made, from 1776 downward, to settle and instruct them in agriculture and the arts, but with little success. There are five of these settlements in the lower province; the number of Indians at which is estimated at 3437, the most numerous being the Iroquois and Algonquins. (*Parl. Report*, 1837; *Report of Gen. Darling*, 1838.) It is stated in these reports that some years back the Indians were able to supply our settlements (then suffering from famine) with some corn; but they have been driven back by subsequent settlers; and the introduction of the fur trade has also tended to dispossess them from settling: those located on the reserves of the colony are a degenerate race, and live much like the gypsies among us. Those of the Six Nations (who were the firm allies of the British in the first American war) are estimated at 2149; the Mohawks of the bay of Quinté 337; the other tribes at 6498: they occupy tracts along the rivers St. Clair, Aux Sables, Detroit, Thames, Ouse, and Credit; lakes Simcoe, Rice, Mud, and Balsam, and Point Peter: the great Manitowanning (containing about 1,000,000 acres) is also appropriated to Indians, who choose to settle. The lands are held under the crown in joint tenancy to them and their posterity, and are not allowed to be leased or sold without its consent. Besides the above, there are other tribes round the shores of lake Michigan and the E. side of lake Superior (about 3000 in all), who consider themselves as owing allegiance to the British crown, and attend to receive presents annually: there are also many tribes on the N. sides of lakes Huron and Superior, who consider that vast tract their own, and occupy it as hunting-grounds. Large sums have been expended by religious societies in futile efforts to improve them; and the Indian department of government has occasionally cost £150,000 in a single year: the object of the last, however, has rather been to make the services of the Indians available in war, than with a view to their permanent improvement.\* The Hudson's Bay and Canada companies have, also, not scrupled to employ them in the same way; and the report above referred to states, that without a change of system in both respects "the fate of the Indians is sealed." But the truth is, that, however it may be changed, their fate is "sealed." Experience has sufficiently proved that the red men are incapable of any real civilization; and nothing can prevent their extermination other than the abiding by a determination not to enter their territories, or to interfere in any degree with their

grounds, habits, or pursuits. But would such a determination be either politic or proper? We answer, certainly it would not. America has been settled, civilized, and improved only through perpetual encroachments on the natives; and to say that these should cease, would be to say that vast tracts of fine country should be doomed to continued barbarism.

*Distribution and Tenure of Lands in the Lower Province, Government, &c.*—About 1-38th part of the area of the prov. is estimated to be under some sort of cultivation. The extent of land surveyed in each district, down to 10th July, 1838, was—in the Montreal district, 9,386,750 acres; Three Rivers, 2,088,908 do.; Quebec, 1,383,666 do.; Gaspé, 400,639 do.; making a total of 6,169,963 statute acres. (*Lord Durham's Rep., Append. B*, p. 176.) This is divided into townships averaging about 70,000 sq. acres, and is exclusive of an allowance of 5 per cent. for highways and of a block of land set off for the British American Land Company, in the co. Sherbrooke, distr. of Three Rivers, containing 585,069 acres. The land comprised in the seigniorial districts amounts to about 8,300,000 acres; of this last, the whole has been granted by the crown, subject to an obligation to concede to actual settlers, and 4,300,000 acres have been thus conceded. Of the township land 3,500,000 acres have been disposed of "for other than public purposes." The grants made by the French government previously to the conquest were on one uniform system. *Seigneuries* (or manors containing from 9 to 36 sq. leagues) were created in favour of certain leading individuals, who were bound to grant or "concede" a specified portion to any applicant; the profit to the seignior being derived from payment of a small rent, from services which the *casésitaires* (or tenant) was bound to perform; from 1-13th of the corn ground (by compulsion) at the seigniorial mill; and from a fine on the transference of the property (other than by inheritance).

This wretched sort of tenure, copied in great part from the feudal system existing in France previously to the Revolution, was unfortunately maintained after the British acquired possession of the country. The consequence has been that the French pop. has been confined to a comparatively limited extent of territory, and has never amalgamated with the British; for, by enabling every individual to obtain a portion of land, which, as the pop. increased, became gradually less, without any immediate outlet, young men were tempted to remain at home; and being subject to feudal regulations and services, the occupiers were bound, as it were, to a routine system. Hence the French Canadians exhibit a singular want of activity and enterprise; and the portion of the prov. which they occupy has a dense and a poor pop., strongly attached, as already seen, to ancient habits and modes of existence.

Since the prov. came under the British government, the plans under which land has been granted and sold have differed very widely at different periods; but have very rarely, indeed, been established on sound principles. The township lands have been granted in many modes, differing both in their character and object; at first, they were granted to settlers in free and common socage, with a reservation to resume all, or any part, if required for military purposes, but subject to no other conditions; the quantity so granted to each individual being limited to 100 acres for himself, and 50 acres additional for each member of his family; the governor having authority to increase this amount by 1000 acres. These favourable terms were meant to attract settlers from the colonies which now form the U. States. In 1775 this arrangement was superseded, and the *Quebec Act* of the preceding year having restored the French code and language, corresponding instructions were given, that future grants should again be made in fief and seignior, and three seigniories were thus created. In 1791 the regulations of 1763 were revived, though with certain conditions annexed to them, which in practice were avoided; and this mode continued till 1826: but the constitutional act of 1791 also enacted that a reserve for the support of a Protestant clergy should be made, in respect of every grant, equal in value, as near as could be estimated, to 1-7th part of the land granted. The crown reserves, to a like extent, originated in the view of supplying, first by sales and ultimately by rents, an independent source of revenue, and obviating the necessity of taxes, and consequently of such disputes as had led to the independence of the U. States. These reserves, however, have proved most serious obstacles to the welfare of the colony, which the mis-construction or violation of the act, has aggravated, by increasing their extent beyond what appears to have been contemplated. (*Lord Durham's Report, Append. B*, p. 6, 7.) From 1806 downward no new townships were granted; and the grants, on to 1814, were in lots of 200 acres, to actual settlers, and few in number. From the last date, grants were made on "location tickets," requiring the erection of a house, and the clearing and cultivating four acres before

\* It is not a wonder that this has not tended to civilize and christianize them. The efforts of the U. States among the Indians have a different object, and have been attended with happier results.—*Am. Ed.*

the title was perfected. In 1836 the new mode of selling land by auction, at a minimum upset price was adopted, the purchase-money being payable by four annual instalments, without interest. In 1831, the purchase-money was to be repaid by half-yearly instalments; and in 1837, to obviate the bad effects of giving credit on such sales, the purchase-money was made payable at the time of sale: but in practice this has not been effected. Besides the grants made under these different regulations, other exceptional ones have been made—mostly in reward of public services; such as those to the militia of the revolutionary war, and of that of 1819—many valid claims in these respects still remaining to be settled: there has also been an exceptional sale of nearly 800,000 acres to the British N. American Land Company. The crown reserves must be considered as virtually abandoned when the auction sales were introduced; and an act of the imperial legislature has authorized the sale of 1-4th part of the clergy reserves, at a rate not exceeding 100,000 acres annually. In these various ways, about 3,500,000 acres have been disposed of. (For some remarks on the policy of these grants, see *post*.) Of late years a revenue has been derived from timber property in both provinces: originally the right of cutting timber was a monopoly in the hands of contractors, for supplying that article for the navy, who usually sold licenses to merchants and lumber-men, by whom all the legal trade was in consequence engrossed. In 1824 licenses to cut were first offered by government by auction: the value of an acre of timber, at the price charged for these, is often very much greater than that required for land, and the first instalment has been paid frequently for land solely in the view of cutting down the timber. The Ottawa is the chief seat of the trade, which is, in a great measure, forced and factitious; and which, while it is of no real advantage to Canada, entails a heavy burden on Great Britain. In fact, but for the unjust and oppressive regulation by which a duty of 55s. a load is laid on Baltic timber, while timber from British America is only charged with a duty of 10s., very little, indeed, of the latter would be imported. The amount received on the sales of crown land in the lower province, from 1828 to 1837 inclusive, was £33,853; on clergy reserves, £30,425; timber duties, £38,085. In the upper province, for the same period, crown lands, £33,853; clergy reserves, £114,618; timber duties, £38,085. The timber is chiefly red and white pine and oak.

Each district has its own judges, whose jurisdiction (except Gaspé) is independent of the others, and only subject to the court of appeal. A sheriff is also appointed for each district, and grand voyer, or general inspector of the roads. These appear to be the only characteristics; but as respects judicial affairs Gaspé is dependent on Quebec; and the roads of St. Francis are surveyed by the grand voyers of Montreal and Three Rivers. The subdivisions of these districts are counties, townships, parishes, and extra-parochial places: that of Montreal has 19, Quebec 13, Three Rivers 5, St. Francis 3, and Gaspé 2 counties, respectively; they are chiefly political subdivisions, marked out for the purpose of returning members to the provincial parliament. The parishes and townships are merely divisions for such local purposes as the repairs of roads, inspection of fences, water-courses, &c.: each is subdivided into sections (not exceeding 10) the parishes vary much in extent, and those which are Catholic also serve for limits, in the ecclesiastical jurisdiction of that church: the townships usually enclose a square of ten miles. There are in all 175 seigniories, 33 fiefs, and 160 townships. The cities of Quebec and Montreal were incorporated under temporary acts, which have been allowed to expire without renewal; these were the only municipal corporations in the province. In the Catholic parishes, churchwardens are appointed, and in some localities, "a council of notables," to manage the secular affairs of the church, and what are called the funds of "the fabrique," under old French ordinances, so doubtful and contradictory, as to cause frequent litigation. The income of their clergy is derived from the 26th bushel of all grain grown by the parishioners; this, however, is constantly passing into Protestant hands, this right is lost; and hence the natural aversion of the priests to any Protestant settlements being made within the seigniories; nor is there any provision for the Catholic clergy in the event of any part of the French population settling beyond the seigniories, which, no doubt, has had some effect in confining it within their limits. There are no provisions or regulations for the poor; and this, as well as all other local matters, were under the immediate direction and control of the colonial legislature, whose time appears to have been chiefly occupied by affairs, such as usually come under the cognizance of parish vestries and corporations in England. The ecclesiastical government of the Church of England vests in the bishop of Quebec (whose jurisdiction extends over both provinces), an archdeacon of Quebec, and under them

rectors for each parish, and ministers for each mission where formed: there are forty-four clergymen, and fifty-three churches and chapels, finished and in progress. The bishop states that from fifteen to twenty additional clergymen are required for the present wants of the colony. (*Lord Durham's Report, Append. C., p. 38.*) There is also a Catholic bishop of Quebec, paid by the government out of certain public revenues, and under him a body of secular clergy, for the seigniories, and some female monastic establishments. The Protestant dissenters have places of worship, and ministers in various parts of the province. The ministers of what are called "missions," are paid through the medium of the Society for Propagating the Gospel, to whom an annual parliamentary grant is made for the purpose. The ministers of the Church of Scotland are in part paid by the general government, and in part by their congregations; the other sects support their own clergymen. As respects charitable institutions, and the relief of the poor, certain sums are granted annually by the legislative assembly, under certain acts "for securing and supporting the indigent, the insane, and foundlings;" and for "the aid of such religious communities as receive and administer relief to sick and infirm persons, and foundlings;" other benevolent societies, unconnected with religion, are occasionally assisted in the same way; these are mostly managed by nuns, or by benevolent Protestant ladies. The general hospital of the Gray nuns, the Ladies' Benevolent Society, the orphan asylum, and the house of industry, at Montreal; the convent of Ursuline nuns at Three Rivers; the Hôtel Dieu, and two other asylums, at Quebec; are the chief of these: £4690 6s. 8d. currency, were granted for this purpose in 1829: this has exclusive reference to the resident poor. For emigrants, an hospital was established by a provincial act of 1833; a fever hospital was also subsequently erected at Point Lévi, and a fund created to give medical assistance to sick emigrants, and assist indigent ones to reach their destination; a poll-tax of 5s. currency on those coming out under government sanction; and 10s. on all others was also levied on ship-masters, and the amount divided equally between the Quebec Emigrant Hospital and Society, and the Montreal General Hospital and Emigrant Society; besides which, occasional grants have continued to be made for these purposes, by the legislature, from time to time. For the relief of mariners, a duty of a penny a ton is levied on every vessel arriving from any port out of the limits of the province: the portion received at Quebec goes to support the marine hospital there, which was built by a public grant; that received at Montreal goes to the general hospital of that city: various acts have also passed to establish depôts for the relief of ship-wrecked mariners. There are four such at Anticosti, one near Cape Chat, and another at Magdalen river. Another class of persons have become regular objects of legislative relief; viz., the small farmers of particular localities, in consequence of the failure of their crops; in some cases, to supply immediate want; in others, to enable them to procure seed corn and seed potatoes; this is usually done by way of loan—the repayment being quite hopeless: the pernicious tendency of this, and the gross partiality and abuses it has occasioned, are stated, in a very forcible way, in Lord Durham's Report (p. 35, and Appendix B., p. 23, 25). As respects the vagrant poor, much complaint is made by townships bordering on the seigniories, of the burden caused by an influx from these; while no township poor are found levying contributions in the seigniories. In the Quebec district a like complaint is made, by parishes on the south bank, of similar visitations from those on the north side; but they do not appear to have hitherto produced any remedial measure.

According to the system of elementary schools established by the provincial legislature, each county was divided into districts (usually smaller than the parishes or townships): the number has varied under different acts, but lately there were said to be about 1000 schools, with 40,000 scholars; and the funds granted for their support amounted to £25,000 annually; the patronage and irresponsible management of this grant (amounting to half the whole ordinary civil expenditure of the province) were vested in the county members. The teachers appointed were for the most part so utterly ignorant as to be unable to write, and the extent of their exertions amounted to teaching the children the catechism by rote. When the act sanctioning this gross political job came to be renewed, the legislative council properly refused their sanction. (*Lord Durham's Report, p. 35.*) There is an act still in force (41 Geo. 3. c. 17,) "by which a majority of the inhabitants" of any parish or township, by petition to the government, may subject the whole of it to the expense of erecting schoolhouses, and accommodation for teachers, but none have availed themselves of it.

The superior colleges and schools, that exist under the management of the Catholic clergy, have been previously

noticed: at present there exists no means of college education for Protestants within the province, and consequently the desire of obtaining general and professional instruction annually draws a great many young men to the U. States: in respect to the commoner kinds of education, the British pop. are scarcely better off than the French.

The roads and bridges of the province are under the control of a "grand voyer" and deputy for each district, a surveyor of roads for each parish or township, and an overseer of highways for each section of either of the latter. The grand voyer opens new roads, and sees established ones kept in repair throughout the district; and decides, by a *procto verbal*, the share each farm ought to contribute of whatever work is done by "joint labour." There appears to be no appeal from his authority: the other officers are his representatives, each within his respective bounds. Two kinds of public highways are recognised—*voies* and *avues* roads: the former are those which run between two ranges of "concessions," or through the front range of the river; the different portions of these are maintained by the farms which they limit: those of the townships are usually of a square form, while the seigniorial farms have ten breadths to one length; and hence the latter have the smallest extent of road to maintain. The bye-roads are repaired by "joint labour," and so, in fact, is a considerable portion of the other, such as hills, marshes, bridges, or any parts of more than average difficulty, as well as through all unenclosed and all uncultivated lands, the contributors being "all those to whom the road is useful," that is, those who must pass over it to get to church or market. No local rates are levied for these purposes, but charges, usually defrayed in England by parish or county rates, frequently come out of the provincial treasury for such purposes, and large sums have from time to time been granted by the legislature, and disbursed by commissioners appointed by the governor. Mr. Bouchette, the surveyor-general (*Top. Dict.*), states the sums voted for repair of roads and canals, from 1814 to 1830, to be £384,173, of which, however, £25,000 was granted for the Welland canal in the upper prov. This heavy expenditure does not appear to have produced corresponding results; for the roads in general are very bad, and the lines of communication very incomplete: in this respect, the blocks of land called "crown," and "clergy reserves," have proved the greatest nuisances, for they are dispersed over every part of a township, one between every two settlements. The present law, whereby the roads are regulated, was passed in 1796, and the system sanctioned by it appears to be generally reprobated by the settlers; and turnpikes have been suggested as very desirable for the colony, and also the establishment of a highway rate.

*Government of the Lower Province.*—Previously to its suspension, the constitution of this prov. rested on the authority of an act of the imperial parliament, passed in 1791 (31 Geo. 3. c. 31). By this act (which proposed to extend the forms and advantages of the British constitution to the colony) a legislative council and a house of assembly were created; each of these had the power of framing laws, which, to be valid, required the assent of both houses, and of the provincial government, by which they were transmitted to England, for the sanction of the crown: the council was to consist of not less than 15, nor more than 23 members, to be nominated by the crown during life. The House of Assembly was composed of 32 members, and now of 83 members; those of the counties elected by proprietors of land of the ann. val. of 40s., those of the towns by the owners of tenements of the ann. val. of 25, or by renters of tenements of £10 a year, having been residents in the colony, and paid not less than one year's rent: the members were elected for four years, but the governor had the power of dissolving the house within that period. It was ordained that they should meet annually at least: their functions and powers resembled and were nearly as extensive as those of the British Commons. The executive government remained, as before, in a governor appointed by the crown, who is assisted by an executive council of 15 members; and for carrying on the provincial government, the crown appears to have at first almost wholly relied on its territorial resources, and on duties imposed by imperial acts that had been passed prior to the introduction of this representative system into the colony. At length the government was obliged to accept the assembly's offer of raising an additional revenue by fresh taxes; this gave the latter some control in the levying and appropriation of part of the public income, and step by step they obtained the entire control, every portion of the reserved revenue being given up to them in 1832 (with the exception of the casual and territorial funds), by the 1st and 2d Wm. 4. c. 23. But it still remained without the least control or influence over the conduct or appointment of the public functionaries, by which the affairs of the province were administered; hence, the contest was continued after its financial demands

had been conceded; and the civil list appears to have been refused, in consequence of the determination of the assembly not to give up its only means of subjecting the executive council to any sort of responsibility; for the legislative council was confessedly, in practice, merely an instrument in the hands of the executive council to restrain the popular branch of the legislature, to which it was generally opposed; hence, from first to last, "the assembly were in a state of continuous warfare with the executive, for the purpose of obtaining the powers inherent to a representative body, by the very nature of a representative government." (*Lord Durham's Report*, p. 26-31.) The great business of the colonial legislature appears to have consisted in what is usually called parish business in England; this was the necessary consequence of there being no local bodies, with authority to manage local affairs, or levy local rates; hence the general practice of making parliamentary grants for local works; and the situation of such a colony makes these of such primary importance, that the number of roads and bridges constructed is the test by which the merits of a colonial legislature are usually estimated. In this respect, however, the views of the assembly of Lower Canada appear to have been very narrow and exclusive, and to have afforded just cause of complaint to the upper province, by causing the suspension of their vigorous efforts to connect their territories with the great highway of the St. Lawrence. Nor is the character of their other legislative measures such as to entitle the assembly to any great share of admiration or respect. During the 45 years of its existence, it effected little or no reform in the acknowledged evils of the civil code; and its attempts in this respect had exclusive reference, not to the law itself, but merely to its administration; and resulting, as they did, in statutes passed only for limited periods (which were sometimes renewed and sometimes allowed to expire), they for the most part caused additional uncertainty and confusion. (*Lord Durham's Report*, *Append. B.*, p. 9-12.)

The principal officers of the government are appointed by the crown, and hold their appointments during pleasure. The chief of these are—the assistant civil secretary, provincial secretary and registrar, receiver-general, inspector-general of accounts, &c.; there are also 6 collectors of customs; 3 judges at Quebec, and 3 at Montreal; with numerous other functionaries. There is also an unpaid magistracy, appointed by the crown, who are required to possess immovable property, beyond all liabilities, of at least £300 currency; and commissioners who sit in the small cause courts, which are held weekly in the cities, and on the first and third Saturday of each month in the rural districts, with power of adjournment. As regards the superior courts of justice, the judges presiding in each district have supreme jurisdiction. The delay, expense, and uncertainty in the administration of the law in civil suits, is much and justly complained of. Trial by jury was introduced, with the rest of the criminal and civil law of England, in 1763; the juries were, at first, exclusively taken from the cities, and subsequently (by a government order) were selected by the sheriffs, from these, and from the adjacent country, for 15 leagues around. An act was subsequently passed, extending these limits to the whole district; this gave the French an entire preponderance, and as it was a temporary act, the legislative council refused to renew it, and consequently it expired in 1836; since which, there has been in reality no jury law whatever, and the composition of juries has been wholly in the hands of government, who have directed the sheriffs to act in conformity to the previous order. All this, in the excited state of the public mind, prevents any chance of impartial verdicts where race interferes, and destroys all confidence in the administration of criminal justice. The French code of civil law was re-established in the province in 1774, by an imperial act, usually called the *Quebec Act*; from this, commercial cases have been subsequently excepted, but there is great difference of opinion as to what constitutes a commercial case.

The external trade of Lower Canada (as well as a considerable portion of that of the upper province) is carried on through the medium of the ports of Quebec, Montreal, St. John's, Coteau du Lac, and Stanfield. From the United Kingdom, Canada imports coals, metals, cordage, E. India produce, and various kinds of British manufactures; from the British W. India colonies, sugar, molasses, rum, coffee, and hard woods; from the U. States, beef, pork, biscuit, rice, and tobacco. Owing to the unjust and oppressive preference given to Canadian timber in the markets of Great Britain, it forms by far the principal article of export from the colony. The next article is corn, especially wheat, which, however, is supposed to be mainly derived from the U. States; and then follow ashes, furs, fish, &c. In 1834, the total value of the exports from Canada amounted to £1,018,992. The imports chiefly consist of cottons, woollens, silks, linens, glass, hardware, coal, &c. Their total value in 1834 was £1,063,645. The

total revenue derived from taxes in 1836 amounted to £102,637.

Canada was ceded by France to England in 1763: it had previously been governed by French military authority; from thence, to 1774, it was under the rule of an English governor and council, with *English law*, administered in the English language only. From 1774 to 1791 it was governed by an English governor and a legislative council, appointed by the crown, with *English criminal*, and *French civil law*; and from 1791 downward, by the constitution, previously explained; the colony being then divided into two provinces, each with an independent legislature. Down to 1774, the line of policy pursued was that which, had it been vigorously and systematically followed up, would certainly have redounded most, in the end, to the advantage of the colony; inasmuch as it would have gradually subverted the institutions and language of France, and established in their stead the institutions and language of England. But the Quebec Act of 1774 introduced a new and more liberal, but at the same time a short-sighted and most mistaken, policy. If Canada was to be preserved as an English colony, it is clear it should, in as far as possible, have been made English in its laws, its language, and in the feelings and prejudices of the people; and no institution should have been tolerated that might have prevented the gradual and complete amalgamation of the French with the English settlers. The Quebec Act unfortunately proceeded on totally different principles. In order to conciliate the colonists, it substituted the old system of civil law, or that called the *Coutume de Paris*, for the civil law of England, and it directed the use of the French language to be resumed in the law courts. It is probably true that these concessions, by gratifying the Canadians, had some effect in hindering them from joining the American colonists of English origin in their great and successful revolt; and consequently contributed to preserve the prov. for the British crown. Without stopping to inquire whether this has been of any advantage to Great Britain, we incline to think that the difference of language, and the peculiar circumstances under which the French Canadians were placed, would have effectually prevented them, though the Quebec Act had never been heard of, from making common cause with the colonists of New England and the other American colonies. But, whatever opinion may be come to as to this, there can be no doubt that the establishment of French laws and language in the prov. has tended to insulate the French pop., to maintain them as a distinct race, and to restrain, and in a great degree prevent, all intercourse between them and the colonists from England: in point of fact, the French in Canada are now almost as much a distinct people as in 1760. The *Nation Canadienne* has no sympathy, and but little communication, with England; on the contrary, a broad line of demarcation and a deep-rooted antipathy subsists between them; and we are afraid that there is but little hope of tranquillity being restored in the prov. otherwise than by the complete triumph and ascendancy of one or other of the races.

The institution of a representative assembly, in 1791, was intended by Mr. Pitt as a boon to the Canadians, and it was supposed would attach them still more strongly to British interests. Most probably it could not have been much longer refused; but it might have been foreseen from the outset, that a representative assembly, fairly chosen by the colonists, could not long act in harmony with a legislative council nominated by the crown, and having a veto on its measures. The two bodies were in complete contradiction to each other; and yet it is plain that unless a veto on the proceedings of the assembly were placed in the hands of the legislative council, or directly in those of the executive government, the colony would have been independent in fact. The truth is, that it is not possible to establish a really responsible representative government in a colony; such government can exist only in an independent state. It is also obvious that while the proceedings of a representative assembly possessing the confidence of the inhabitants of a colony, may be controlled and thwarted by the agents of the mother country, there must be endless dimensions and disputes, unless, indeed, the latter concede all that is demanded, and content themselves with the name of rulers, while all real authority is engrossed by others.

It would be to no purpose, even if our space permitted, to attempt to trace the history of the disputes that have prevailed in the colony during the last twenty years. They had all, or mostly all, their origin in the same cause—the desire of the assembly to acquire additional powers, and of the executive to withhold them, or to concede such only as it would have been unsafe to deny. In the course of this struggle the assembly succeeded in redressing some abuses, and in acquiring some valuable privileges. But in such cases the conceding of any privilege, how important soever,

is productive only of a temporary respite from fresh demands. The pretensions of the leaders of the assembly rose at length to such a height, that to concede them would virtually have been to concede the independence of the colony; and as neither the government nor people of Britain were prepared for such a step, the outbreak that took place on the part of the Canadians, and the subsequent suppression of the constitution, and the occupation of the country by British troops, seems to be only the necessary results of the peculiar circumstances under which the colony has been placed.

*Distribution of Ground in Upper Canada, Government, &c.*—The surveyed portion of Upper Canada comprises 17,653,544 acres, in 11 districts, and between 300 and 400 townships. The pop. in 1835 was 336,500; the number of men embodied in the militia 39,499, forming 63 regiments. Wheat and tobacco are the chief exports. Of the surveyed lands, 450,000 acres are reserved for roads; 2,395,687 acres are clergy reserves; 13,660,836 have been granted and appropriated, and there remain for future grants 1,147,019 acres. About 1-48th part of the area is considered to be under cultivation. The modes of granting have been the same as those described in the lower province. The crown and clergy reserves have also been made on the same principle as those of Lower Canada; in two cases the government has delegated the disposal of its waste lands to others; the district of Talbot (46,500 acres) to Col. Talbot; and the crown reserves (1,384,413 acres) and a block of land in the Huron district (of 1,100,000 acres) to the "Canada Company;" about 1-30th part of the granted land is under cultivation.

The profuse manner in which these grants have been made, many very extensive tracts having been given to parties who had no intention of settling upon them, coupled with the great extent of the clergy and state reserves, has had a most injurious influence over the colony, and has materially retarded its progress. The lands thus given away to individuals not settling upon them, and reserved, by interposing uncultivated desert tracts between the actual settlers, render it, in all cases, much more difficult and expensive, and sometimes all but impossible, to form roads, and other means of communication; so that the cultivators are frequently cut off from a market for their produce; and being settled only in particular districts, they are less able to combine for municipal and such like purposes, and for the establishment of schools and churches, and the undertaking of public works that require co-operation.

Lord Durham ascribes the backward state of Canada, as compared with the adjoining districts of the United States, mainly to the influence of the circumstances now glanced at. But though their disastrous operation be established beyond all doubt, they are by no means the only, nor even the principal, cause of the backward state of the colony. Quite as little providence was manifested in the granting of lands in the greater number of the American states when they were colonies of England, and yet their progress was one of unexampled prosperity.

Were this the proper place for such investigations, it might be very easily shown that that plan for the disposal of public lands by auction at a fixed upset price, which Lord Durham is so anxious to recommend, would be very little better than the system he has so justly censured. "When," says Mr. Shireff, "the extent of unoccupied surface, the extent of soil which is occupied and remaining uncleared, and the tens of millions of acres which have never been surveyed, are considered, the price of Canadian land is extravagantly high, and far above its intrinsic value to actual settlers. Land, like other things, is cheap or dear by comparison; government land in the U. States being sold at 6s. 3d. an acre, Halifax currency, ought to make the British government blush for its policy in Canada. The price of land surrendered by the six nations, and covered with forest, is fixed at 15s. an acre, which is more than double the price of government land in the western United States, superior in quality, situated in a finer climate, clothed with luxuriant grass, and without an obstacle to immediate cultivation. It is population alone which imparts value to land, and a more effectual method could not be devised for preventing a further influx of inhabitants to Upper Canada, and drawing away many of those already settled, than government adhering to the present prices of land." (*Through N. America*, p. 365.)

This is the statement of an excellent judge of agricultural matters, and is obviously quite conclusive. But whatever the upset price may be, the plan of selling land in any colony, and especially in one in the situation of Canada, seems highly objectionable. The preferable plan would be to make grants of lands to all settlers on a uniform system, in some proportion to their available capital, with a limitation of the maximum quantity to be assigned to any individual; and making it a condition of all grants, that they should be forfeited in a given time, unless certain spe-

## CANADA.

Other improvements were effected upon them within that time.

A small tax, not exceeding 1d. in the pound, is levied both on cultivated and waste lands; the former being valued at 20s. the acre, the latter at 4s. The whole amount of tithes of a farm of 100 acres, in the upper province, is about 18s. This tax began to be levied by the provincial government in 1820. If eight years are in arrear, the sheriff is authorized to sell; but this has been done only in a few instances, when the owners allowed it as the cheapest and easiest way of making a title to the rest of their land. The number of churches built, or in progress, connected with the Church of England is about 90; the number of clergymen 73; the number of followers are estimated at 150,000, by the Bishop of Montreal, within whose diocese the province is included, and under him are the archdeacons of York and of Kingston. (*Lord Durham's Report*, Appen. C., p. 57.) The Presbyterians of the Scotch Church, the Catholics, and the Wesleyans, are the other chief sects: the latter are said to outnumber any of the rest. The ministers of the Church of Scotland are supported partly by stipends from the government, partly by their respective congregations; the Catholics have a bishop, who resides at Toronto, and who also receives an annual grant from the government to aid in the maintenance of himself and priesthood; the ministers of the other sects are wholly supported by their congregations. By the Constitutional Act of 1791, reserves of land were set apart in this, as in the lower province, for the maintenance of "the Protestant clergy;" the economical evils resulting from this mode of raising religious funds have been previously noticed, but another important question has arisen, which has reference solely to their application: the chief point at issue being, whether the words "Protestant clergy" are to be understood in an exclusive or general sense. The adherents of the Church of England have claimed, from the first, the sole enjoyment of the funds, though (even if all who belong to no other sect be supposed to be within their pale) they are in a considerable minority, and likely so to continue; the adherents of the Church of Scotland claim to be put entirely on a level with the Church of England, and have demanded an equal division of the funds between the two; the other Protestant sects affirm that the term includes them also, and have formally claimed that an equal provision shall be made for them. But besides these sectarian claimants, there is another party, comprising the Catholics, and no inconsiderable portion of the members of the other sects, who affirm the justice of a broader principle, and contend that the funds shall either be applied to the purposes of all religious creeds whatever, or that, leaving each sect to provide for its own establishment, the law shall be set aside, as inexpedient, and the funds appropriated to the general purposes of government, or to the support of some general system of education. In 1833, the governor (Sir J. Colborne) established 37 rectories, which are supposed to convey the same privileges and authority as English ones, even to the right of levying tithes. Previously to this, though the clergy of the Church of England were an endowed body, and in the receipt of a much larger share of public money than the other sects, they possessed no exclusive privileges or authority. Hence the measure was regarded by the other sects as placing them in a position of legal inferiority, and caused so much indignation, that some are disposed to rank this as the chief predisposing cause of the recent insurrection; nor has a subsequent opinion in favour of the legality of the measure given by the English law officers of the crown, in 1837, tended to recommend it. (*Lord Durham's Report*, p. 69-73.)

The educational establishments of the colony are very insufficient and defective: a college has been established at Toronto; but the mode in which it has been established, and the regulations adopted in it, are among the grievances publicly set forth by the colony; the most valuable portion of the lands originally set apart for the support of schools throughout the country having been diverted to its endowment. There have been, occasionally, grants by the legislature for the purposes of education; but the schools are few, and of an inferior kind, even in the best-settled districts, and in the remotest ones there are none. It must also be understood that a very considerable portion of this province is, as yet, without roads, mills, post-offices, or churches; hence the intercommunication of the different settlers is of a very limited and uncertain description; nor has any adequate system of local assessment been established to improve or create internal means of communication. Funds have been occasionally voted, as in the lower province, by the provincial legislature, for the purpose; but, as they were at the disposal of the house of assembly, which chiefly represents the interests of the older and more settled districts, they were not usually applied where they were most needed. At present the state of the provincial finances precludes any such aid being granted, in consequence of the

debt incurred by attempting to carry into effect a resolution, many years since adopted, of removing or obviating all the natural impediments in the course of the St. Lawrence, and effecting a continuous ship navigation from its mouth to the head of Lake Huron. With this object in view, the house of assembly took a large portion of the shares of the Welland canal (which had been commenced by a few spirited individuals), and it subsequently undertook the Cornwall canal, to avoid Long Sault Rapids; but the house neglected to ensure the continuation of their plan in the lower province, which was indispensable to its completion; and as the legislature of the lower province declined to co-operate with them, the works have been suspended, after encumbering the province with a public debt of £1,000,000 sterling. As the external trade of the province is conducted through the medium of Lower Canada (not so much because it is a matter of necessity as in consequence of revenue laws), this, also, has a prominent place in the list of grievances. In the mean time, the United States, having created a St. Lawrence of their own, from the shore of Lake Erie, through the state of New York, by the Erie Canal, the colony has become anxious to participate in the benefit derivable from it, by making New York a port of entry, and being allowed to land goods there, under as low a bounty as if they were imported by the St. Lawrence. New York is, in fact, the natural and proper channel of communication with Upper Canada, the voyage by the St. Lawrence being incomparably more tedious and dangerous than that by New York, while, owing to the accumulation of ice, it is impracticable long after the Erie Canal is open.

The Constitutional Act of 1791 (which separated the provinces) gave a similar form of government to both, so that it is unnecessary to repeat here what has been previously stated in respect to its working in Lower Canada. A lieutenant-governor, appointed by the crown, is at the head of the executive, and is also usually the commander of the forces. The civil and criminal code of England, and the forms of procedure in her courts, are adopted in those of the colony; which has, also, an unpaid magistracy, and sheriffs for each district, as in the lower province. The expenses of the civil administration are defrayed by duties on articles imported from the United States, by a portion of the customs' duties collected in Lower Canada, and by a small land tax; the military expenditure, the funds for the partial support of ministers of the churches of England, Scotland, and Rome, and for presents to the Indian tribes, being defrayed by the general government, or, in other words by the people of Britain. The colonial revenue which is about £200,000, hardly suffices to pay the interest of the debt incurred in the formation of the canals, in consequence of which, the few and imperfect local works in different parts of the province have been left to be provided for by local assessments.

The recent political disorders that have occurred in this province may be dismissed very briefly. There is here no war of races, as in Lower Canada; and financial disputes, so long the subject of contention there, have been more smoothly arranged in the upper province, though it has a deficient, and the other a surplus, revenue; there is however great disorganization, much bitterness of party feeling, and many real grievances requiring redress. There exists no chief centre in the province, where the general sentiments of the different parties may be gathered, and a prevailing tone given to their purposes and actions, but, on the contrary, many local centres, differing in opinion and in supposed interests from each other, and having little intercommunication. The removal of those restrictions which make the subjects of the United Kingdom, who emigrate thither, be considered aliens, as much as if they had chosen to settle in the United States, and for a more prolonged period, is loudly and justly complained of. But these, after all, are subordinate matters, and here, as in the lower province, the real struggle is, whether the colony shall be self-governed, or really independent. Other grievances may be redressed, and the connexion of the colony with the mother-country preserved: but the demand for a really responsible executive is, as already seen, substantially equivalent to a demand for separation.

The government has been, for a considerable period, in the hands of a party known throughout the province by the designation of "The Family Compact," who are in possession of the higher public offices, and distribute the minor patronage, and whose interest is still paramount in the executive and legislative councils. By grant or purchase, this party is also in possession of the greater portion of the waste lands of the province, and their influence predominates in the chartered banks. To the monopoly of political power possessed by this party an opposition gradually arose, and gathered more and more strength, till it obtained a majority in the House of Assembly, which, on a dissolution, was lost again, and on a subsequent one recovered. This alternating state of things continued through four or five

## CANADA.

general elections, neither party preserving the mastery for two successive ones. The mode in which the clergy reserves should be disposed of was the most important question raised by the reformers in this struggle; and, though various methods of appropriating these were advocated by various sections of the party, all united in appealing to the people against the exclusive claims of the church of England, while these claims were uniformly and strenuously supported by their opponents. This struggle was at its height, when a third party, consisting of emigrants from the United Kingdom, within a short period doubled the population of the colony. Of these both the old parties became equally jealous; those who enjoyed the power and privileges of office, and those who were struggling for ascendancy, betraying equal anxiety to exclude the new settlers from political power; nor did they, for a considerable period, appear in the field as a distinct political party, though subsequent events have made it probable that the distinction of old and of new settlers will become an absorbing element in the political divisions of the colony. The objects of the original reformers were uniformly defeated by the influence of their opponents in the legislative council; so that, finding the practical inutility of a majority in the House of Assembly only, they ultimately directed their attention, not to the reorganization of that council, like the Lower Canadians, but to the securing of a responsible executive administration. Both these parties have shown an equal degree of jealousy in respect to the interference of the general government; while the party subsequently introduced with that its influence in the colony were increased. It has not been ascertained what proportion of the colonists were prepared to join Mackenzie's treasonable enterprise, in the event of a successful commencement; though it appears improbable that his views were sympathized with to any serious extent, notwithstanding the great political dissatisfaction of the period, caused by the result of the elections, which secured the old party a majority in the House of Assembly, and enabled them to carry some obnoxious measures. But it is probable that this dissatisfaction was the proximate cause of that ill-planned and worse conducted affair, which, however, was sufficient to show that, without some signal change, the tranquillity and preservation of the colony must depend rather on the extent of the military force and the vigour of the government, than on the attachment of the colonists to the mother country.

The measures that have been proposed for obviating the diversified and complex evils that have accumulated in these colonies, are, in the first place, their reunion, under one legislature; by which all disputes relative to the division and amount of revenue would cease, and the completion of the great works, undertaken to make the St. Lawrence available to the upper province, would be promoted: but the primary object, avowedly proposed to be effected by the measure, is the annihilation of the majority possessed by the French party in the lower province; and this is contended for on the ground of imperative necessity, and in preference either to more despotic, or more indirect means of governing the colony. In a legislative assembly composed of the representatives of both provinces, it is expected that the French party would be outnumbered; and thus, order and progressive improvement being secured, the ultimate amalgamation of the two races is predicated, as in the state of Louisiana. There are, however, many, and some very weighty objections to this plan; and it is by no means certain that it would effect the object in view. To remedy the other grievances, a modification of the spirit, rather than of the form of the previous constitution, is relied on; and it is proposed to be supported by a good system of municipal institutions. Among other secondary measures, the removal of all such civil disabilities as new settlers are now liable to is proposed, and the repeal of the law which forbids American citizens holding land in the colony.

But supposing these measures were adopted, and that they had the anticipated effect of amalgamating the English and French colonists, and redressing other grievances, still the question remains, would they be sufficient to tranquillize the colony, and to attach it to British interests? All experience says that they would not. Nothing, we may depend upon it, will satisfy the Canadians, or any people in their situation, short of substantial or total independence; and the latter would be in all respects more for our advantage than the former. Were the duties on Canada timber reduced to the same level as those on Baltic timber, we question whether Canada would be found to possess a single article that could be advantageously exported to this country, or that we might not buy cheaper and better elsewhere. It no doubt has afforded an extensive outlet for emigrants, and has been in no far useful; but in all other respects its occupation has always been, and will most probably continue to be, productive of little except loss. And, even with respect to emigration, it is by no means clear

that the field would be at all narrowed by Canada becoming independent, or connected with the United States. The presumption seems, indeed, to be very much the other way; and notwithstanding the efforts that have been made to attract emigrants to Canada, they seldom have been so numerous as those to the U. States, and would have been incomparably fewer, had they been aware of the real situation of the two countries. The people of Britain would, therefore, do well to reflect dispassionately on the state of the Canada question. We believe most men of sense admit that, sooner or later, Canada will be independent, or be incorporated with the U. States. But if so, what should be our policy in the mean time? Having put down rebellion for the present, the question is, are we resolved to maintain an army of 10,000 or 15,000 men in Canada? to expend, directly and indirectly, some three or four millions a year in preserving a mere nominal ascendancy in a colony, by the independence of which we should certainly lose nothing? If such be our determination, it may be doubted whether we have profited much by the dear-bought experience afforded by the American war. We deny that Canada contributes, in any way whatever, either to the strength or security of Great Britain. On the contrary, the connexion with it is an evident source of weakness; and, while it multiplies the chances of our being involved in disputes with other powers, it supplies no means of carrying them on, and distracts and lessens those in our possession. National pride may prevent our relinquishing this costly and worthless dominion, but good sense, and the most obvious views of expediency, would suggest the policy of voluntarily anticipating what must, in the end, necessarily happen; and of providing for the independence of Canada, under a system of friendly and mutually beneficial relations with this country.

*History.*—Canada is said to have been first discovered by Sebastian Cabot, in 1497; if so, it was comprised with the rest of the extensive line of coast he explored, under the general name of Newfoundland, subsequently limited to the island so called. The French first attempted to make those discoveries available, and are said to have framed a map of the gulf so early as 1508. In 1535, the country was taken possession of in the name of the king of France, and in 1535 Cartier explored the river, naming it St. Lawrence; from having entered it on that saint's day. Quebec, however, the first settlement was not founded till 1608. For a considerable period subsequent to this, the colonists appear to have been engaged in a series of sanguinary conflicts with the native Indian tribes, and to have been often on the brink of being extirpated: the strife, however, ultimately terminated in a friendly compact, which converted the Indians into available auxiliaries against the English. Quebec was taken by the British forces under Gen. Wolf, in 1759, and the whole territory formally ceded by the Treaty of Paris, in 1763. The seigniorial rights, the various holdings and tenures under them, and the endowments of the Catholic church were left undisturbed; and all the estates, including all the unappropriated lands in the port, held at the period by the French king, became vested in the British crown. In the years 1812-13-14, the lakes, and especially the shores of Niagara, were the scene of a succession of severe contests; the war was wholly a frontier one, and the militia on either side being engaged in it, near relatives were often found contending in opposite ranks, so that common was aggravated to civil warfare; and Indians also were employed, and increased its horrors. The grievances and complaints of Lower Canada first obtained the attention of parliament in 1826, when a select committee of the H. of C. reported on them. The legislative assembly's claims were—the right of appropriating all the crown revenues as they pleased, and also all those accruing from parliamentary and provincial statutes, and the settlement and alienation of all the wild lands of the province; but the most important point, without which the rest would be conceded in vain, according to their statement, was, that the legislative council should be elected by the people, and thus assimilated to the senate of the United States. Another H. of C.'s report led to the nomination of Lord Gifford (who was also appointed Governor), and two other commissioners, and five reports and appendices, published in 1837, are the only result of their labours. In the divisions which took place in the House of Assembly, the British party divided from 8 to 11 in a house of 88 men. The grievances of the upper province were set forth in the report of a committee of their H. of Assembly, who adopted it, and laid it before the king. The extent and abuse of the crown patronage; the virtual irresponsibility of the executive; the mode of conducting the business of the provincial post-office; the management of the Toronto college; the provision made for the ecclesiastical establishment, and for the maintenance of certain sects only (the House, say they, "recognize no particular denomination as established in Upper Canada, with exclusive claims, powers, or privi-

## CANADICE.

leges"); the partially shown in the choice of magistrates; the absence of control over the crown revenues; and the failure on the part of the local to carry into effect the recommendations of the general government, are the most prominent of the grievances set forth. Subsequent to this, Sir F. Head replaced Sir J. Colborne as gov., in 1836; and during his government the outbreak under Mackenzie took place. (Besides the references in the text, see *Darby's Geog. of U.S.*; *The London Geog. Society's Trans.*; *Hall's Travels*; *Stuart's Three Years' Residence in America*; *Geology's Upper Canada, &c.*)

CANADICE, p. t., Ontario co., N. Y., 18 m. S.W. Canandaigua, 918 m. W. Albany, 334 W. Honeoye lake, 5 m. long and 1 broad, lies chiefly in its E. part; Canadice lake, 2 m. long and half a mile wide, occupies its centre, and Hemlock lake, 6 m. long and 1 wide, occupies a portion of its S.W. part. It has three saw-mills, eleven schools, 611 scholars. Pop. 1341.

CANAJOHARIE, p. t., Montgomery co., N. Y., 50 m. W.N.W. Albany, 395 W. Bounded N.E. by Mohawk river. Drained by Bowman's and Otseque creeks, which flows into the Mohawk. It contains eleven stores, two furnaces, two fulling-mills, four grist-mills, twelve saw-mills, two tanneries, two distilleries, two academies, 955 students, twenty-eight schools, 1655 scholars. Pop. 5146. The village is situated on the S. side of Mohawk river. Incorporated in 1890. It contains four churches, one Methodist, one Presbyterian, one Dutch Reformed, and one Lutheran, an academy, ten stores, two grist-mills, two saw-mills, one furnace, two distilleries, one brewery, included in the statistics of the town. The Erie canal passes through its centre, and the Catskill and Canajoharie rail-road will terminate here. It contains 175 dwellings and about 1300 inhabitants.

CANANDAIGUA, p. t., Ontario co., N. Y., 195 m. W. by N. Albany, 341 W. It contains a considerable portion of Canandaigua lake, and is drained by the streams which flow into it, and by its outlet. It contains twenty-six stores, two fulling-mills, three grist-mills, one saw-mill, one tannery, two printing-offices, one bindery, one weekly newspaper, four academies, 500 students, twenty schools, 1318 scholars. Pop. 5092. The village, one of the most pleasant in western New-York, is beautifully situated on a plain at the N. end of Canandaigua lake at its outlet, and the ground gently descends towards the lake, presenting a fine view of it from the village: 15 m. W. by N. Geneva, 19 m. S. of the Erie canal, at Palmyra. The village, which is beautifully built, lies chiefly on two parallel streets, running N. and S., and crossed at right angles by a number of others. At the centre is a fine public square, on which stands the court-house, and other public buildings. It contains a court-house, jail, and county-offices of brick; a town-hall, five churches, one Methodist, one Presbyterian, one Episcopal, one Baptist, and one African; two banking-houses and a bank for savings; an academy of a high order, with a large endowment; a distinguished female seminary, twenty-five stores, one steam flouring-mill, one saw-mill, 350 dwellings, and 5700 inhabitants. It is surrounded by a rich agricultural country and is flourishing. The above statistics of the village are included in those of the township.

CANANDAIGUA LAKE, Ontario and Yates co's., N. Y. This beautiful sheet of water is 14 m. long, and from 1 to 1½ m. wide, is surrounded by a highly cultivated country, and presents, on its shores, much delightful scenery. Its waters are deep, transparent, and abound with fish of various kinds. Its outlet flows N.E. into Flint creek, which enters Clyde river, one of the constituents of Seneca river, the common outlet of Cayuga, Seneca, Crooked, Canandaigua, and some smaller lakes, by which their waters are finally discharged through Oswego river into lake Ontario.

CANANORE (Canura), a marit. town of Hindostan, prov. Malabar, at the bottom of a small bay, 45 m. N.W. Calicut, and 96 m. S.S.E. Mangalore; lat. 11° 49' N., long. 75° 37' E. It trades with Bengal, Arabia, Sumatra, and Surat, from which it imports horses, piece goods, almonds, sugar, opium, silk, benzoin, and camphor: its exports are chiefly pepper, cardamoms, sandal wood, oil, and shark-fins. It is the cap. of the talook of Cherikul, a lofty and uneven tract, extending for 9 m. inland from the fort, and some years since containing together with the town about 11,000 houses. Its territory is now subordinate to the British, but has long been governed by a succession of female sovereigns, whose authority has extended over most of the Laccadive islands.

Cananore is the head military station of the British dominions in Malabar prov. (*Hamilton's E. I. Gaz.*, i., 340; *Madras Almanack*.)

CANARA, a marit. prov. of Hindostan, presid. Madras, comprising the ancient countries of Tulava and Haiga, with small portions of Malabar and the Hindoo Kaunkans. It lies chiefly between lat. 12° and 15° N. and long. 74° and 76° E.; having N. Goa and Dharwar (Bejapoor), E. the latter province and Mysore, S. Coorg and Malabar, and W. the

## CANARY ISLANDS.

ocean; length, N. to S., 330 m.; average breadth about 36 m.; area 7477 sq. m. Pop. (1837) 736,776. It is mostly bounded by the W. Ghauts, but includes a portion of the country above them, called Carnata, of which the name of this distr. is a corruption, most improperly applied. Surface generally rugged and uneven. It has no considerable river, but a number of minor ones, of which Mangalore is the chief. The coast in the S. is occupied by a chain of salt lakes. Soil and climate very similar to those of Malabar. Granite and laterite are among the prevailing rocks, and near the sea shore there is much sandy soil, on which cocopalms are grown in great number. The periodical rains are extremely heavy, and set in from the middle of May till the end of Sept., during which ships leave the coast, and a stop is put to all traffic. The country abounds in forests; those in the N. producing teak, and other large timber, also, *bacaria latifolia*, prickly bamboo, the varnish-tree of Birmah, *sus sonica*, *simoes catechu*, *camia*, sandal-wood, wild pepper, a species of nutmeg, &c.; those in the S. containing teak, mango, caryota palm, and much jungle, greatly infested with tigers. Canara is the granary of rice for Arabia, Goa, Bombay, and Malabar; and both the climate and soil, especially in the valleys, are highly adapted for its culture. Sometimes 50 bushels a year are obtained from an acre; and in the S. the land frequently yields two or three crops during the same period. Besides rice, sugar-canes, pepper, betel-nut and leaf, cucurbitaceous plants, &c., are grown. Husbandry is better here than in Malabar; the plough is a neater implement, and manure of both leaves and dung is made use of; some cultivators employ twenty-five ploughs, although full half of them use no more than one. Rice is thrashed by beating handfuls in the straw against a bamboo grating. There are no barns, and the grain is kept in straw bags hung up in the houses: carts are not used, the roads are bad, and goods have to be conveyed on the heads of the peasantry. There are neither horses, asses, nor goats. Black cattle, in 1836-7, estimated at 573,419 head, sheep at 544,336 head; hogs are kept, and eaten only by the lowest ranks. All the lands in the S. are private property, but generally much encumbered with mortgages: in the N. mortgages are much less frequent, and the cultivated lands only are the property of individuals: government claims all the hill, forest, and waste land. In S. Canara inheritance in land, goods, honorary dignities, and whatever else is capable of being conveyed, descends in the female line; and instead of a man's own children, those of his sister, or maternal aunt (as is the case in all the country in the S. part of the Malabar coast) become his heirs, while he has a corresponding right over them, to the extent of selling them for slaves. In Karnata Proper, above the Ghauts, these laws are reversed, and a man's children inherit his property. The lands mostly belong to individuals, who let them, and even frequently mortgage them to cultivators; the land assessment is moderate, being about 30 per cent. on the produce; but the cultivators generally are as much depressed as elsewhere, since they have about 20 per cent. to pay to their landlords, and out of the remaining 50 per cent. to provide live and dead stock, and subsist the slaves. Land, when sold, usually fetches from 8 to 12 years' purchase-money on the clear rent. Slavery is very common, and almost all the supposed aborigines are slaves. Their total number was, a few years ago, estimated at 82,000; but their proprietors are said to treat them well. Many different tribes inhabit Canara. The Jains (*see HINDOSTAN*) are more numerous here than in any other part of India, and many ancient Jain temples exist in tolerable perfection. Nairs inhabit the inland parts, where, together with Bunts and Sudras, they own most of the land. There are about 50,000 R. Cath. in Canara, mostly descendants of the Portuguese, Dutch, French, and Danish colonists. Canara is not celebrated for manufactures; the chief are those of sugar from the palms, and salt on the coast. The exports, consist principally of rice, betel-nut, black pepper, ginger, cocconuts, and oil and raw silk; the imports are cloths, cotton, thread, blankets, tobacco, black cattle, and sandal-wood, for export to Bombay. The total public revenue, in 1836-7, was 2,758,460 rup., of which, 1,671,315 were derived from land, 374,438 from salt, 240,551 from land customs, &c. All the chief towns, viz., Mangalore, Barcelore, and Calliamproe, are in the S.

Tulava was governed by its own princes till A.D. 783; from that year till 836 it was subject to the rajahs of Bijanur; and afterward to the princes of Ikert. It escaped the Mohammedan conquests till 1765-6, when Hyder invaded and conquered it, after which it suffered all the horrors of anarchy, till the death of Tippoo in 1799, when it passed into the hands of the British, and under them has become a tranquil and orderly district. (*Hamilton's W. & E. I. Gaz.*, i., 330-340; *Madras Almanack*, &c.)

CANARY ISLANDS (believed to be the *Fortunate Isles* of the ancients), a group in the N. Atlantic ocean, belonging to Spain, between 27° 40' and 29° 24' N. lat., and

## CANARY ISLANDS.

19° 32' and 19° 29' W. long., 135 m. N.W. cape Ejador, in Africa, and 650 m. S.W. Cadix. This group consists of seven principal islands, as follows:

| Name.                   | Area.<br>Sq. m. | Pop. (1742.) | Pop. (1834.) |
|-------------------------|-----------------|--------------|--------------|
| Tenerife . . . . .      | 577.7           | 80,318       | 85,911       |
| Gran Canaria . . . . .  | 756.6           | 80,964       | 83,049       |
| Palma . . . . .         | 719.5           | 17,580       | 23,000       |
| Lanzarote . . . . .     | 323.5           | 7,310        | 17,494       |
| Fuerteventura . . . . . | 366.1           | 7,528        | 18,455       |
| Gomera . . . . .        | 190.7           | 6,351        | 11,742       |
| Hierro . . . . .        | 108.3           | 8,877        | 4,444        |
| Total . . . . .         | 5,356           | 196,192      | 235,016      |

Besides these, several small islands, viz. Graciosa, Clara, Allegranza, &c., called the Little Canaries, are situated to the N.W. of Lanzarote, and connected with that island by a bank, on which there is, for the most part, 40 fathoms water. Lanzarote is the most easterly, Allegranza the most northerly, and Hierro, or Ferro, the most southerly and westerly of the group. This last-mentioned island has acquired considerable celebrity, from its having been selected by the early geographers as the point where they placed the first meridian, or from which they began to reckon the longitude. In some countries this method of reckoning is still kept up; but the English and French adopt for their first meridians those passing through the Observatories of Greenwich and Paris. The most W. part of Hierro, or Ferro, La Dabessa, is 18° 9' 45" W. of the meridian of Greenwich, and 30° 30' W. of that of Paris. The islands are all of volcanic origin, very mountainous, their coasts precipitous, and the channels between them very deep. The greatest height of some of them above the level of the sea is as follows:

|                       |            |                            |           |
|-----------------------|------------|----------------------------|-----------|
| Tenerife (Peak)       | 11,400 ft. | Lanzarote (Montaña Blanca) | 2,000 ft. |
| Canary (El Cumbre)    | 6,648      | Allegranza . . .           | 930       |
| Fuerteventura (India) | 2,990      |                            |           |

Tenerife and its peak, a half extinct volcano, which may be seen at a distance of more than 150 m., will be found elsewhere described (TENERIFFE). In all the islands there are plentiful traces of extinct volcanoes; but in that of Lanzarote one burst forth in 1823, which still continues active. The basaltic cliffs in that island rise almost perpendicularly to the height of 1500 ft.: Allegranza appears wholly composed of a mass of lava and cinders. The Canaries have no rivers, properly so called, but they are watered by numerous brooks, which rise in the higher mountain regions, and during rains suddenly swell to torrents. There are few safe roadsteads, and no close harbours: the Great Canary island has, perhaps, more safe anchorages than any of the others, and the bay of Las Palmas at its N.E. extremity offers a spacious haven for ships, secure from all winds except those from the S.E., which seldom blow with any violence. The climate, though hot, is generally healthy; the heat being tempered by the elevation of the land, and the prevalence of N. and W. breezes. The temperature is in most parts very equable; the average in Dec. and Jan. has been found to be 67°, in Aug. 79° Fah. The range of temperature is seldom more than four or five degrees in the twenty-four hours. The S. and S.E. winds occasionally cause pestilential maladies in the E. Canaries, and bringing intolerable heats, and clouds of locusts, scorch up and desolate the country. The fertility of the lands is in proportion to their humidity. In some parts they produce abundance of wheat, maize, and other kinds of corn, dates, figs, guavas, lemons, olives, and numerous other fruits, of both the torrid and temperate zones; the sugar-cane, tobacco, cotton, orchill, and many perfumes and medicinal plants. They contain, also, woods of pine trees, laurel, arbutus, &c., and excellent pasturage. The average annual quantities of the principal articles of produce in the entire group, are said to be,

|                  |                 |                   |                |
|------------------|-----------------|-------------------|----------------|
| Wine . . . . .   | 53,200 pipes    | Rye . . . . .     | 41,000 bushels |
| Wheat . . . . .  | 360,500 bushels | Pulse . . . . .   | 50,000 —       |
| Millet . . . . . | 212,400 —       | Potatoes . . .    | 792,000 cwt.   |
| Barley . . . . . | 354,000 —       | Barilla . . . . . | 330,000 —      |

Canary is, perhaps, the best watered and most fertile island; and it and Tenerife are the two best cultivated. Tenerife is the principal seat of the vine culture; the Viduemo and Malvasia wines are exclusively the produce of that island: the vine is, however, largely grown in the others, and the wines produced exported to Europe under the name of Tenerife. The best wine in the E. Canaries is that of Lanzarote, where the grapes grow on a soil of decomposed scorie. Much brandy is distilled and exported. Among the other chief products are silk, honey, wax, and cochineal. Game is very plentiful; and they are said to be without either ferocious or venomous animals. Cattle and poultry have been introduced from Europe. The canary-bird (*Fringilla Canaria*, Linn.) is still found in these islands; but in its wild state its colour is gray or linnet-brown; the plumage of those we are accustomed to see, has derived its hue from repeated crossings. The fishery, which is principally car-

ried on along the opposite African coast, occupies a great number of hands: and it is said that Spain might, in case of emergency, procure 2000 able young seamen from the islands without distressing the fishery. Sugar, with coarse woollens, silks, and linens, are among the manufactures.

The quantities of the principal articles imported and exported in 1833 were as follows:

| Imports.          | Exports.       |                   |               |
|-------------------|----------------|-------------------|---------------|
| Sugar . . . . .   | 6,481 arrobas  | Silk . . . . .    | 4,464 lbs.    |
| Coffee . . . . .  | 908 —          | Almonds . . .     | 180 —         |
| Brandy . . . . .  | 80,058 —       | Brandy . . . . .  | 17,125 —      |
| Coin . . . . .    | 80,440 doll.   | Coin . . . . .    | 181,300 doll. |
| Paper . . . . .   | 2,580 rums     | Pulse . . . . .   | 5,000 bags    |
| Soap . . . . .    | 2,188 quintals | Fish . . . . .    | 6,155 arrobas |
| Oil . . . . .     | 13,390 arrobas | Barilla . . . . . | 109,481 —     |
| Tallow Candles .  | 107 —          | Grain . . . . .   | 8,284 fangs   |
| Wine . . . . .    | 8 pipes        | Wine . . . . .    | 8,624 pipes   |
| Leather for soles | 46,000 lbs.    | Orchilla . . . .  | 400 arrobas   |
| Wax . . . . .     | 900 —          | Iron . . . . .    | 815 —         |

1275 lbs. of cochineal were also exported in the same year, and flax, woollens, cottons, glass, earthenware, drugs, iron, staves, salt fish, hams, cheese and butter, are imported. The total value of the imports and exports were:

|                             | Imports.                | Exports.        |
|-----------------------------|-------------------------|-----------------|
| Foreign countries . . . . . | 11,678,555 reals valles | 5,570,185 r. v. |
| America . . . . .           | 1,000,000               | 422,255         |
| Spain . . . . .             | 2,814,216               | 2,875,585       |
| Total . . . . .             | 14,492,771              | 8,867,925       |

Santa Cruz in Tenerife, and Las Palmas in Canary, are the principal commercial ports. The present inhabitants are probably almost wholly of Spanish origin. The islands are governed by the Spanish law, the administration of which is directed by an *audiencia* in Great Canary. The governor of the Canaries, who is president of the *audiencia*, resides at Santa Cruz. The three easterly islands form one bishopric, and the four westerly another. There are 41 monasteries, and 15 convents, with 423 regular clergy; and the people are said to be equally ignorant and bigoted. They are not, however, deficient either in industry or enterprise. On the contrary, many of them emigrate to America, to the Philippine islands, &c., where they are distinguished by their adventurous spirit. But, at home, such of them as are not engaged in the fishery, are sunk in comparative apathy, produced by vicious laws and institutions. The lands are parcelled out in immense estates, held under strict entail, and the plan followed in letting them to the actual occupiers being as bad as possible, industry is at the lowest ebb, and few or rather no improvements are ever attempted, or even so much as thought of. The military force is composed of 25,000 men. (For descriptions of Santa Cruz, Laguna, and Orotava, see TENERIFFE.) Las Palmas is the Great Canary, near its N.E. extremity, lat. 29° 8' N., long. 20° 23' 30" W., has a handsome sea-port town with 18,000 inhab., a cathedral, hospital, college, a mole, many public fountains, and a well-supplied market. In good weather ships anchor within half a mile of the town, but the roadstead is but indifferent. The other chief towns are, Areicife, or Port Nao, in Lanzarote, a well-built town, with 2500 inhab.; Cabras, 1000 inhab., in Fuerteventura; La Hila, in Gomera; and Santa Cruz, in Palma.

When these islands first became known to Europeans of modern times, they were inhabited by a race of people called Guanches, of a tall, athletic, and vigorous frame (though this has probably been exaggerated), and who made a determined resistance to the invaders. Though unacquainted with the use of iron, they appear to have arrived at a considerable degree of civilization; they cultivated music and poetry with success, had a kind of hieroglyphic writing, believed in a supreme being, in a future state of reward and punishments, and embalmed their dead. Many of their mummies have been found in modern times in caves in various parts of the islands. They are placed erect upon their feet, and are in so remarkable a state of desiccation, that some of them do not weigh above from 6 to 8 lbs. Their government was oligarchical. Humboldt and Dr. Prichard think that the Guanches were either intimately connected with, or descended from the Berbers of N. Africa. Many of the Guanches were reduced to a state of slavery by the Spanish and other European traders, by whom the islands were first visited; and those who escaped the scourge of slavery, war, and famine, were mostly carried off by a pestilence in 1494. The Canaries were first discovered by accident about 1330 by the crew of a French ship driven thither in a storm. After several unsuccessful Spanish expeditions, John de Bethencourt, a French gentleman, sailed with a fleet from Rochelle in 1400, and took possession first of Lanzarote, and subsequently of Fuerteventura, Gomera, and Hierro. Bethencourt's heir subsequently disposed of these to a Spanish nobleman, and they afterward became the property of the Spanish crown: the conquest of the other islands was effected by Spain before

## CANASTOTA.

the termination of the 15th century. (*Humboldt's Personal Narrative*, vol. 1; *Tables of Revenue*, &c., 1833; *Journ. Geog. Soc.*, 1836; *Prichard's Researches*, II, 34.)

CANASTOTA, p. v., Lenox t., Madison co., N. Y., 119 m. W.N.W. Albany, 364 W. Situated on the Erie canal. The Syracuse and Utica rail-road passes near the village. Incorporated in 1835. It contains two churches, one Methodist and one Dutch Reformed; eight stores and forwarding houses, 120 dwellings and about 500 inhabitants.

CANCALE, a sea-port town of France, dep. Ille-et-Vilaine, cap. cant., 9 m. E. St. Malo; lat. 49° 40' 40" N., long. 10° 51' 30" W. Pop. 5151. It is situated on the W. side of St. Michael's bay. At a short distance from the town there are some large rocks, within which there is good anchorage in 5 or 6 fathoms. Excellent oysters are found in the bay, and make a considerable article of traffic. The English made, in 1758, an unsuccessful descent on the coast here. (*Dict. Geog.*)

CANDAHAR, a fortified city of Caubul, cap. (1838) of an indep. territory held by a Bazarikay chief, brother of the sirdar of Caubul, in a plain near the Urgundab river; 200 m. S.W. Caubul, 200 m. S.E. Herat; lat. 33° 30' N., long. 68° 15' E. Pop. 50,000 the greater proportion of whom are Afghans. It is said to be of an oblong form, enclosed by a bastioned mud wall, on the ramparts of which three men walk abreast, and a ditch, 9 ft. deep, recently constructed, surrounds the whole. Candahar is regularly built, most of the streets meeting at right angles; its houses are generally of brick, and often with no other cement than mud. Four long and broad bazars meet in the centre of the city, in a small circular space about 45 yards in diameter, and covered with a dome, where proclamations are made, and the bodies of criminals exposed. The principal bazars are each about 50 yards broad; their sides are lined with well-supplied shops one story high; and there is a gate at the end of each opening into the surrounding country, except the N. bazar, having the palace at its end, its structure, in no respect remarkable externally, but containing many courts and buildings, and a private garden. There are many caravanserais and mosques; the principal building of the latter kind is the tomb of Ahmed Shah, an elegant, but not a large structure, with a handsome cupola, formerly an inviolable sanctuary. A great variety of trades are carried on, and the streets are filled with a noisy and bustling crowd from morning till night; but, unlike most other Afghan cities, there are here no water sellers, the city being well supplied by canals from the Urgundab, whence subterranean or open water-courses are carried to the different streets; and there are, also, numerous wells. Three of the principal bazars were at one time planted with trees, and had, it is said, a narrow canal running down the middle of each; but many of the trees have withered, and if the canals ever existed, they are no longer visible. The vicinity of Candahar is fertile, and abounds with gardens and orchards, producing the finest fruits and vegetables, especially pomegranates; with corn, tobacco, madder, asafoetida, and artificial grasses. The climate is mild and healthy. Were the city the seat of a just government, it would be the centre of a rich circle of cultivation; but the chiefs who, by oppressions of all sorts, have contrived to raise about £50,000 annual revenue from the land, have also, by their exactions, banished much of the trade and opulence of the city. Persian traditions, and the conjectures of European geographers, agree in assigning the foundation of Candahar to Alexander the Great. The present city was built by Ahmed Shah in 1753 or 1754, who made it the capital of his dominions, an honour which his successor Timour transferred to Caubul. (*Elphinstone's Caubul*, II, 129-134; *Conolly's overland Journey*, II, 91-93.)

CANDEISH, a soubah or prov. of the Deccan, Hindostan, between lat. 20° and 30° N., and long. 73° and 77° E.; having N. Malwah, E. Gundwana, S. Berar and Aurangabad, and W. Gujrat; length, E. to W., about 210 m.; average breadth, 80 m. It contains parts of three mountain ranges, viz., the Satpura mountains in its N.; the Chandore, or Adjuntah range, S.; and the Sydarce mountains, or W. Ghauts, in its S.W. parts: its principal plain is between these ranges, and opens E. into the plains of Berar, and W. is continuous with those of Surat, from which it is separated by a thick and extensive jungle. The Tuptee river flows through this plain. The Nerbudda forms the N. boundary. Candesh, though intersected with low, barren hills, has a large extent of very fertile territory, watered by copious streams and limpid rivulets from the table-lands, which greatly enhance its natural beauties. For thirty years, however, before the British became possessed of it (1819), it had been the scene of continual anarchy, and much of the best land, especially N. the Tuptee, had become overgrown with an uninhabited forest, abounding with the ruins of former villages, and swarming with tigers. This prov. is comprised within the several territories of the Guicowar, Sindia, the Nizam, and the British government; the land in those parts belonging to the latter is

## CANDIA.

granted on the most easy terms to the cultivators, but some length of time must elapse before the country recovers its former prosperity. The existing villages are mostly built of mud, and protected by a mud wall and fort, without ditch or outwork. The hill ranges, and the whole country along the courses of the Nerbudda and Tuptee rivers are inhabited by Bheels, who have been here less disturbed than in any other part of India. They are of small stature, dark complexion, prone to rapine and thieving, go armed with a bow and arrow, and in many respects resemble the hill-people of Bhanguipore. They eat beef and pork, drink spirits, and bury their dead; yet they pretend to be Hindoos of the Brahmin and Rajpoot castes. They have contributed greatly to the devastation of the province.

Candesh formerly contained a large number of Mahratta fortresses: its principal towns are Boorhanpoor, Asseerghur, Hindia, Nundoorpoor, and Gaulia. Numerous Arab colonists settled here, and early in the 15th century Candesh was an independent kingdom, governed by sovereigns claiming descent from the caliph Omar, who had their capital at Asseerghur: towards the end of that century it was completely subdued and annexed to the Mogul empire. The decline of Candesh may be dated from 1652, when Jeswant Row-Holcar ravaged it; next year it was depopulated by famine, and subsequently ruined by the exactions of the Bheels' officers, and the predatory incursions of the Bheels, Pindaries, and insurgent bands of the Arabs, who had established themselves in the strongholds. On the British conquest in 1818, when Holcar's possessions in Candesh fell under our dominion, these refractory tribes were either brought into subjection or pacified; or else, as the Arabs, obliged to emigrate from India after having been paid what they were legitimately entitled to by the British government. (*Hamilton's E. I. Gaz.*, I, 343-345; *Reports, &c. on Affairs of the E. I. Company*.)

CANDIA, an isl. in the dist. of Hindostan, prov. Candesh, Bombay; between lat. 20° and 21° 45' and long. 73° 37' and 76° 59' E.; having N. the collectorate of Surat and Sindia's dom.; E. the latter, and those of the Nizam; S. the Nizam's dom. and the collect. of Ahmednugur; and W. a portion of the Guicowar's territory: shape somewhat rhomboidal; length, E. to W., about 180 m.; greatest breadth 115 m.; area 12,597 sq. m. Pop. 478,500. This dist. is capable of great improvement, being, for the most part, overgrown with jungle; very complete embankments on the various streams, and many dilapidated, though substantially-built dams and aqueducts for irrigation are met with, which might be again rendered available at a small expense. In 1830, when Col. (now Gen.) Briggs entered upon the civil management of this dist., there were eighty distinct bands of freebooters ravaging it; and out of 3700 villages, 1100 had been altogether desolated during the preceding thirty years of anarchy. The Bheels were at that time in the habit of levying a kind of *black mail* upon the villagers, consisting of a portion of the produce of the land; but, by conciliatory treatment, in less than ten years most of them had returned to their former occupations as village watchmen and guardians, and only one gang of forty individuals remained to infest the country when Colonel Briggs left it. The agricultural classes are peaceable and inoffensive, but timid and destitute of energy. There are no large or wealthy landholders, excepting the proprietors of certain jaghires granted for military services by the British government. The village constitution exists, but the ryotwarry system has been introduced into this dist., to which, in the opinion of gentlemen who have held civil offices in it for a considerable time, it is, from various causes, extremely ill adapted. Grain, cotton, and indigo, are the chief articles of culture; but there is a vast quantity of waste land, and the cultivation and revenue have both diminished of late years, owing to the difficulty of disposing of the produce, from the general fall of prices, want of roads, &c.

Civil justice is administered by the *punchayet*, or native arbitration; and in criminal cases, while Colonel Briggs superintended the dist., trial by jury was established, which is said to have worked exceedingly well. Schools are common in Candesh dist.; every Brahmin, and all who have anything to do with mercantile business, are instructed in reading, writing, and accounts: in 1835 there were 189 schools in all, attended by 9023 scholars, or 1 in 18 for the whole male population. The Mohammedans are said to be the most ignorant of the population. (*Hamilton's E. I. Gaz.*, I, 345, 346; *Briggs's Evidence*, in *Reports, &c.; Hodge's Evidence*, in ditto.)

CANDIA, or MEGALO-KASTRON, a fortified marit city, cap. of Crete, on the N. shore of that island, near its centre, 34 m. W. Spinalonga, and 64 m. E.S.E. Canes; lat. 35° 31' N., long. 24° 8' 15" E. Pop. 12,000, 9000 of whom are Mohammedans. This city, and hence Crete itself, derived its name of Candia from the word *kandak*, signifying an intrenchment in the language of the Saracens, by whom

## CANDOR.

It was built. Its present fortifications are of Venetian construction; they are massive, bastioned, and furnished with outworks; the scarp wall, a beautiful specimen of art, is in most places 50 ft. in perpendicular height; the sea wall is not above 30 ft. in height, irregular, and but badly flanked. The port is formed by two moles, which, bending towards each other, project about 250 yards into the sea, and are defended at their extreme points by forts. It is at present so choked up by sand and the ruins of the old Venetian docks and arsenal, that a vessel drawing more than 8 ft. water cannot enter. The city has four gates, three on the land side and one towards the sea. Principal streets wide, roughly paved, but clean, well furnished with fountains, and adorned with clumps of trees. Houses generally well built, but have seldom more than one story above the ground floor. The bazars, which are good, have quite a Turkish appearance. In the E. part of the city the houses are mostly interspersed with gardens. Candia is the residence of the pacha, and seat of the provincial council, and of a Greek archbishop. Chief buildings, governor's palace, the Greek cathedral and other churches, many mosques, a synagogue, the remains of two Roman Catholic churches, a light-house on the W. mole, and some good baths. The arch-vaults built for the Venetian galleys still exist, and several other relics of Venetian sway are found. The country immediately round Candia is not particularly fertile. Its prov. comprises all the E. part of the island, and produces chiefly wheat, barley, raisins, and a little cotton. (*Scott's Trav. in Egypt and Candia*, i.; *Pashley; Consular Report*, 4c.)

CANDIA. See CRETE.

CANDIA, p. t., Rockingham co., N.H., 18 m. S.E. Concord, 470 W. Chartered in 1753, first settled in 1755. The site is elevated, and commands a view of the White hills on the N., and extends S.E. to the ocean. It contains one Congregational and two Free-will Baptist churches, five stores, one fulling-mill, thirteen schools, 498 scholars. Pop. 1430.

CANDOR, p. t., Tioga co., N.Y., 8 m. N. Oswego, 171 m. S.W. Albany, 285 W. Drained by Cotoctong and West Oswego creeks. The village contains three churches, one Methodist, one Episcopal, and one Presbyterian; three stores, two grist-mills, three saw-mills, one clothier's works, forty-five dwellings, and about 300 inhabitants. The town contains four stores, two fulling-mills, one woollen-factory, two grist-mills, fifty-four saw-mills, and 1141 scholars in schools. Pop. 3370.

CANDY, an isl. town of Ceylon, at the head of an extensive valley in lat. 7° 17' N., and long. 80° 33' E., about 1400 ft. above the level of the sea, 60 m. E.N.E. Colombo, and 95 m. S.W. Trincomalee. Pop. about 3000. It is surrounded by woody hills and mountains, varying from 200 to 2000 ft. in height, and stands on the border of an artificial lake; but its situation, though beautiful and romantic, is insecure. At a distance of 3 m. it is nearly surrounded by the Mahavelli Ganga, here navigable only for small boats. Excepting those inhabited by the chiefs, which are tiled, the native houses are built entirely of clay, and thatched. Temples very numerous, and considered almost indispensable appendages to the houses of the opulent; in the greater number lights are constantly kept burning; and in one of them the celebrated tooth, said to have belonged to Boodh, is still preserved! Since the capture of Candy, residences for the governor and commandant, and a jail, have been built by the British, and several missionary and other schools established. There is no church, but the district court-house and missionary school-room are made use of for divine service. Candy was anciently the cap. of an independent kingdom of the same name, which comprised the central mountainous country of Ceylon. It was taken by the British in 1815. (*Haber's Nar.*, iii, 173; *Hamilton's E. I. Gaz.*)

CANEA or KHANIA (an. *Cydonia*), a seaport and the principal commercial town of Crete, cap. prov. of same name, on the N. shore of the island, 25 m. from its W. extremity, 64 m. W.N.W. Candia, and about 140 m. S. the island of Syra. Pop. 8000, about 5000 of whom are Mohammedans, and 1000 foreigners, chiefly Hellenes and Ionians, who engross most of the import trade. The town, inclusive of the port, forms an irregular square, enclosed by walls, with bastions and a ditch on the land side. The present fortifications were constructed by the Venetians, but are inferior, both in magnitude and disposition, to those of Candia. The port is formed by a mole about 1200 ft. in length, prolonged from the N.E. extremity of the town to the N.W., where it is terminated by a light-house opposite to a fortress defending the harbour's mouth. The port has recently undergone great improvements: it is the best in Crete, and capable of containing many vessels of 300 tons burden. Streets wide and well paved, but not clean; houses lofty, old, and rickety, but shops good. At the N. part of the town is a kind of citadel, formerly containing the arsenal, docks, &c. The Venetian galley vaults are still in good preservation. There is a small but excellent

## CANOSA.

lazaretto, and several soap manufactories. (For the exports, &c., see CRETE.) Canosa is the residence of the provincial governor and of several European consuls, and the seat of the provincial council, and of a Greek bishop. Strabo and Scylax describe the site and port of Cydonia as to leave no doubt that Khania stands upon the identical spot. No vestiges of the ancient city are now to be seen, though some existed at the end of the 17th century. The plain around Canosa is celebrated for its beauty; its province comprises all the W. portion of the island. (*Scott's Egypt and Candia*, ii, 306-319; *Pashley's Trav. in Crete*, i, 1-17; *Consular Report*, 4c.)

CANEADEA, p. t., Allegheny co., N.Y., 10 m. N. Angelica, 371 m. W. by E. Albany, 347 W. Watered by Genesee river and its branches. It contains six stores, one grist-mill, ten saw-mills, seven schools, 379 scholars. Pop. 1633. The village is situated on Angelica creek, a branch of Genesee river, and contains one store, one fulling-mill, one saw-mill, and about fifteen dwellings.

CANFIELD, p. t., Trumbull co., O., 14 m. S. by E. Warren, 164 m. N.E. by E. Columbus, 293 W. It has ten schools, 469 scholars. Pop. 1979.

CANICATTI, a town of Sicily, prov. Girgenti, cap. cant., 16 m. S.W. Caltanissetta. Pop. with cant., 17,384. It is well built. The greater part of the population consists of agriculturists.

CANISTEA, p. t., Steuben co., N.Y., 14 m. S.W. Bath, 243 m. W.S.W. Albany, 711 W. Watered by Canisteus river and its tributaries, flowing into Tioga river. It contains two stores, one fulling-mill, two grist-mills, nine saw-mills, eight schools, 316 scholars. Pop. 941.

CANNÆ, an inconsiderable place in Naples, prov. Terra-di-Bari, near the Ofanto (the anc. *Andria*), 8 m. W.S.W. Barietta. It is adjacent to the site of the ancient city of Canne, so famous for the decisive victory gained in its vicinity by Hannibal over the Romans, in the year 217 B.C. Never were the talents of a great general more conspicuously displayed than on this occasion. The army of Hannibal was very inferior in numbers, and perhaps, also, in the quality of the troops, to that of his enemies; but the ability of the commander made up for every other deficiency, and, with a loss of only 4000 of his own men, he put 50,000 Romans to the sword, and took 10,000 prisoners! (The English reader will find a good account of this great battle in Ferguson's *Roman History*, cap. 5; the classical reader will resort to Polybius and Livy.)

The scene of action is marked out to posterity by the name of *Campo di Sangue*, "field of blood;" and spears, heads of lances, and other pieces of armour, still continue to be turned up by the plough.

The city of Canne was destroyed the year before the battle; but it was afterward rebuilt, and was a bishop's see in the infancy of Christianity. It seems to have been abandoned in the middle ages for the cities along the coast. (*Swissburne's Two Sicilies*, i, 168, 4to ed.)

CANNES, a sea-port town of France, on the Mediterranean, dep. Var, cap. cant., 25 m. E. Draguignan; lat. 43° 31' N., long. 7° 1' E. Pop. 3997. It is situated on the declivity of a hill projecting into the sea; has a fine quay, an old Gothic castle, and an old church. Its port is neither deep nor commodious, and can only be used by fishing boats and small coasting vessels. Napoleon landed in the vicinity of Cannes on the 1st of March, 1815, on his memorable return from Elba. (*Hugo, art. Ver.*)

CANNON, county, Tenn., situated in the central part of the state, and contains 100 sq. m. Drained by Stone's creek, and branches of the Caney Fork of Cumberland river. It contained, in 1840, 7188 neat cattle, 9746 sheep, 28,929 swine, and produced 38,665 bushels of wheat, 1249 of rye, 419,367 of Indian corn, 56,800 of oats, 9115 of potatoes, 22,355 pounds of tobacco, 39,301 of cotton, 8545 of sugar. It had four stores, one flouring-mill, nineteen grist-mills, nine saw-mills, seven tanneries, eighteen distilleries, one academy, 25 students, nineteen schools, 495 scholars. Pop.: whites, 6558; slaves, 618; free coloured, 17; total, 7193. Capital, Woodbury.

CANNONSBURG, p. b., Charters t., Washington co., Pa., 216 m. W. Harrisburg, 18 m. S.W. Pittsburg, 343 W. Situated on Charlier's creek, which flows into Ohio river a little below Pittsburg. Incorporated in 1802. It contains a Presbyterian church, seventeen stores, seventy dwellings, and 676 inhabitants. It is the seat of Jefferson college, founded in 1802, has a president and six professors or other instructors, 693 alumni, of whom 237 have been ministers of the gospel, 164 students, and 4300 vols. in its library. The commencement is on the last Thursday in September. The collegiate course is completed in three years. It has a medical department, located in Philadelphia. There is a theological school connected with the institution, under the care of the vice-president.

CANOSA (an. *Causaria*), a town of Naples, prov. Terra-di-Bari, cap. cant., near the Ofanto, 15 m. S.W. Barietta.

## CANOURGE (LA).

Pop. circa 4000. The old city, said to have been founded by Diomed, or in a period antecedent to the records of Roman history, was in ancient times one of the most considerable cities in this part of Italy for extent, population, and magnificence in building. Its walls are said to have embraced a circuit of 16 m.; and various ruins still remain to attest its former grandeur. Among these are the remains of an aqueduct and of a vast amphitheatre, with tombs (of which a very singular one was discovered in 1813), columns, triumphal arches, &c. Great numbers of fictile vases of the best period have been found here, surpassing in size and beauty those found in the tombs of any other ancient city, not excepting even Nola. The modern town occupies the site of the ancient citadel, and is said by Swinburne to be a "most pitiful remnant of so great a city." The ancient cathedral, built in the 6th century, still remains. Its altars and pavements are rich in marbles; and the *verde antico* columns that support its roof are the finest that Swinburne, no mean judge, had ever seen. There is here, also, the mausoleum of Bohemund, so celebrated in the *Jerusalem Liberata*.

Canusium was the place to which the wreck of the Roman army fled after the battle of Cannæ. It seems to have been at the acmé of its prosperity under Trajan. It was reduced to its present deplorable situation by a series of disasters inflicted on it by the Goths, Saracens, and Normans. (*Cramer's Ancient Italy*, ii., 292; *Swinburne's Two Sicilies*, i., 400, 4to ed.; *Craven's Calabria*, p. 90.)

CANOURGE (LA.), a town of France, dep. Lozère, cap. cant., in an agreeable and fertile valley on the Urganne, 9 m. S.S.W. Marvejols. Pop. 1909. It carries on some branches of the cotton and woollen manufactures, the products of the latter being formerly in extensive demand, and has some trade in cattle and grain. Excavations made in the vicinity in 1829 have been the means of discovering a number of vases and other remains of Roman pottery, which appear to have been manufactured on the spot. (*Hugo, art. Lozère*.)

CANTAL, an inland dep. of France, formed of parts of the ancient districts of Haute Auvergne and Velay, between 44° 37' and 45° 28' N. lat. and 2° 5' and 3° 14' E. long., bounded by the following depts.; viz., N. Puy-de-Dôme, E. Haute Loire, S.E. Lozère, S. Aveyron, and W. Lot and Corrèze. Area, 562,939 hectares. Pop. 262,117. This is one of the least productive, poorest districts of France. Surface much encumbered with mountains. The highest summit, that of the Plomb-de-Cantal, in the centre of the dep., and whence it takes its name, is elevated 1836 mètres (6040 ft.) above the level of the sea. We everywhere find indications of the action of subterraneous fires and volcanoes: and though steep, the mountains furnish, in summer, excellent pasture. Valleys not very extensive. Between Murat and St. Flour there is a level plateau, which may be said to be the granary of the department. Climate severe, the snow generally lying on the summits of the mountains for seven or eight months together. Several rivers, flowing in different directions, have their sources here; among which may be specified the Cère, Alagnon, Rue, Arceuil, &c.: the Dordogne runs along its N.W. frontier. Agriculture in the most backward state; the occupiers being generally poor, and wedded to old practices. The produce of wheat and oats is insufficient for the consumption; but the inhabitants live principally on buckwheat, rye, potatoes, and chestnuts. The last, indeed, is the staple article of food in an extensive district, thence called *Chataigneraie*. Hemp and fine flax are also raised, with various descriptions of fruits, and a little very bad wine. The principal wealth of the dep. consists in its mountain pastures and meadows; partly occupied, in summer, in dairy farming, and partly in the fattening of cattle and sheep. Large quantities of cheese and butter are annually produced. The ordinary yield of a cow is estimated at 75 kilogs. of cheese, and 15 ditto of butter. The best cheeses are made in the environs of Salers; they weigh from 70 to 80 lbs.: great numbers of pigs are fed on the refuse of the dairies. Large herds of cattle are also fattened on the mountains; and it is said that the value of an ox is increased, in the course of a summer, from 150 to 220 fr. The native breed of sheep is small, and have fine fleeces. Large flocks are brought from the more E. departments, to be fattened during the summer, the fattening and pasturage grounds being often let to the proprietors of herds and flocks from the neighbouring departments. Horses small and hardy, and used for the light cavalry. Numbers of mules, asses, and goats are also raised; the skins of the latter are sent to Millhaud to be made into parchment. Honey is an important product. Manufacturing industry is at a very low ebb in this department. There are a few fabrics of coarse woollens and linens; and these, with coarse lace, copper and branders' work, wooden articles, paper, tanneries, &c., include almost all that is worth notice. Numbers of the people annually emigrate, in search of employment, to Paris, and other parts of

## CANTERBURY.

France, Spain, &c. Hugo gives a most unfavourable account of the state of the bulk of the population, who are said to be ignorant, lazy, rude, and brutal in their manners, and depressed by poverty. The inhabitants of the mountains and plateaux suffer severely from the scarcity of fuel, and cold in winter. To obviate the influence of the latter, they lie in bed as long as possible; and have their cottages so planned that the family occupies the middle space between the cattle and the barn! Cantal is divided into four arrond., and returns four members to the Chamber of Deputies. Number of electors between 1100 and 1200. Public revenue in 1831, 4,512,227 fr. Chief towns, Aurillac, St. Flour, Murat. (*Hugo, art. Cantal, Dict. Geog.*; *Malte-Brun*, viii., Eng. transl.)

CANTELEU, a town of France, dep. Seine Inférieure, on the summit of hills which command the right bank of the Seine, at the entrance of the forest of Roumare, 4 m. W. Rouen. Pop. 3591. It commands a fine view of Rouen and the hills by which it is surrounded, the course of the Seine as far as Elbeuf, the valley of Deville, and vast meadows.

CANTERBURY, a city, co., and bor., and the metropolis of England, co. Kent, in a fertile, well-cultivated valley, intersected by various branches of the Stour near the base of the N. Downs, 53 m. S.E. by E. London, lat. 51° 18' N., long. 1° 53' E. Pop. in 1821, 12,745; in 1841, 14,966. The town was originally enclosed by turreted walls (the remains of which still exist), and had four main streets branching from the centre, each terminating by a gateway, of which the W. only remains. The modern town consists of these and of four suburbs, continued in the direction of each, that on the E. side being much the largest. The High street, along which the main line of road from London to Dover passes, is of considerable width, with well-built houses on either side, and a handsome guildhall near the centre. The whole is well paved, lighted by gas, and supplied with water; the Stour, which flows through it, divides and makes an island of its W. part. There are eleven parish churches, but except that of All Saints (a plain modern structure in the High street) they are generally small and insignificant in external appearance. Within these few years they have generally undergone extensive repairs; the interiors have been renovated, and they contain several handsome monuments and tablets. The cathedral is a noble pile, and forms a conspicuous object from whatever part of the city it may be viewed. The approach to it from the street was formerly disfigured by a row of low, mean buildings. These have been removed, and a very fine view of nearly the whole S. front is now obtained. It stands on the site of the cathedral anciently founded by St. Augustine, in connexion with the monastery of Christ Church, established by Ethelbert, king of Kent, on his conversion to Christianity, by St. Augustine, in 597. The oldest part of the present structure dates from 1184: the nave, cloister, and chapter-house are two centuries later, during the best period of the pointed ecclesiastical style; the interior is very fine, and the styles of different ages skilfully adapted to each other; the choir is the most spacious in the kingdom, and the great stained window accounted one of the finest. The structure is of the usual cruciform shape, with a semicircular E. end, and is 513 ft. in length inside, the central tower being 235 ft. in height; under the whole is an old crypt or undercroft. The ancient celebrity of this cathedral is partly attributable to its being associated with the first establishment of Christianity in England, but more especially to the murder of its famous archbishop, Thomas à Becket, at the foot of one of its altars, in 1171. Becket having been canonized, his bones were, in 1220, removed, with great pomp and expense, from the undercroft, where they had been previously deposited, to the Trinity Chapel, built for the purpose. The anniversary of the day on which they were removed, was celebrated as a great festival down to the Reformation; and devotees, not only from every part of England, but of Europe, made pilgrimages to the shrine of the saint, to the enrichment both of the establishment and of the city generally.\* A supposed pilgrimage of this sort, such as was then usual, was made the medium of a lively description of the characters and customs of his day by the earliest of our great poets; and has been rendered familiar to most of our readers by the excellent engraving of Stothard's "Canterbury Pilgrimage," in which the characters described by Chaucer are admirably represented. Erasmus, who saw the fame in undiminished splendour a short time previously to its anni-

\* The estimation in which the principal altars at Canterbury were held by the public, may be inferred from the fact that in one year the contributions were:

|                   |       |          |
|-------------------|-------|----------|
| At Christ's altar | ..... | l. 0 0 0 |
| The Virgin Mary's | ..... | 4 1 8    |
| Thomas à Becket   | ..... | 264 6 8  |

(*Lytton's Hen. II.*, vol. vi., p. 269; see vol. iv., p. 262-263, of the same excellent work, for a full account of the circumstances connected with the death of Becket, and a character of that turbulent priest.)

## CANTERBURY.

hibition, gives a vivid account of its wealth and magnificence. In 1530, however, all high festivals occurring between July and September (which included the chief festival at Canterbury) were forbidden, on the ground of their taking people from the necessary labours of harvest. But this was merely a prelude to more energetic measures; and in the following year, Becket was thrust out of his place in the catalogue of saints, declared to have been a rebel, his bones being, at the same time, burned and scattered, and the treasury of his shrine appropriated to secular purposes. Subsequently to this vigorous and salutary exercise of the prerogative, the present collegiate establishment was ordained, consisting of a dean, twelve canons, six preachers, six minor canons, and other subordinates; three of the prebendaries being in the gift of the archbishop, the rest in that of the crown. In 1643, considerable injury was done to the cathedral in consequence of a parliamentary order to purify it, and subsequently the nave was converted into temporary barracks for Cromwell's troops. On the Restoration, the choir was rededicated for divine service; and now, for many years past, considerable funds have been annually devoted by the chapter to the restoration and improvement of this magnificent old structure, which contains many interesting monumental remains; among others, that of the Black Prince. The diocese of Canterbury consists of the co. of Kent (with the exception of the city and deanery of Rochester, and of eight other parishes, which last are in the London diocese), and the parishes of Croydon and Addington, and district of Lambeth Palace, in the co. of Surrey.

The province comprises twenty other dioceses, and about 100 scattered parishes, called "seculars." Its archbishop is primate and metropolitan of all England, and takes precedence of all great officers of state, and of all peers of the realm except those of the royal blood; he has also the privilege of conferring degrees in divinity, law, and physic. The revenues of the see amounted, at an average of the three years ending with 1831, to £19,189 a year. The succession is traced with tolerable regularity from St. Augustine, A.D. 597. Cardinal Pole was the 70th and the last archbishop under the Catholic system; and Dr. Howley, the present metropolitan, is the 91st. The site of the ancient palace, near the cathedral precincts, is occupied by modern buildings, leased to private individuals; the present archiepiscopal residence being at Lambeth. There are several dissenting chapels in the town, and a Jewish synagogue. A grammar school, founded by Henry VIII., is in the patronage of the dean and chapter; there are two masters, and fifty king's scholars. The other public structures are a sessions-house, theatre, assembly-rooms, philosophic institution (with library, museum, and lecture-room), and the subscription wells, whose mineral waters were discovered in the latter part of the 17th century, and were for some time in great repute, but have since been comparatively neglected; one spring is a pure chalybeate, the other impregnated with sulphur. The city generally has, of late years, undergone considerable improvement; the Dojon-d'eld, and a large artificial mound in it, is laid out in public walks, and forms a pleasant promenade. There is little or no trade carried on except what is required for the supply of the town and its immediate vicinity. The silk trade, originally established by Flemish and French refugees (to whom Elizabeth granted the undercroft of the cathedral for public worship), and that of silk and cotton, subsequently introduced, have ceased; but there is a considerable traffic in hops and agricultural produce, large quantities of which are sent from it to London; the business caused by its being one of the chief thoroughfares to the Continent is also tolerably extensive. The Stour is navigable from Sandwich as far as Fordwich, for lighters; and by its means, much of the heavier merchandise, such as coals, timber, &c., formerly reached the city; but a railway for goods and passengers between it and Whitstable, opened in 1830, has drawn the entire traffic to that line of communication. There are four market-places for the sale of meat, and poultry, fish, cattle, corn, and hops; there is a daily supply of provisions, but the chief markets are held, one on Saturday, and another, for fat stock, every alternate Tuesday; there is also an annual statute fair, which begins October 10, and lasts ten or twelve days, but little business of importance is transacted at it. Canterbury has long been noted for brawn, which forms an article of some importance in the trade of the place, and is sent to various parts of the kingdom. The hop-grounds of the vicinity afford employment to a large proportion of the labouring population of both sexes.

This city, which is a county of itself, contains within the walls fourteen parishes, besides ancient monastic precincts. Before the passing of the Municipal Act the city magistrates had no jurisdiction over these precincts, but they are all now under the authority of the civic powers, with the exception of the ville of Christchurch, in which the city and county magistrates have concurrent jurisdiction. The city boundaries having been by the same parliamentary enact-

## CANTON.

ment greatly extended, several parishes without the walls are now jointly under the city and county authority.

Canterbury has sent two members to the H. of C. from the 23 Edward I.: the right of voting being, previously to the Reform Act, in the resident and non-resident freemen; the freedom of the town being acquired by birth, marriage, apprenticeship, purchase, and gift. The present par. includes, besides the above par., parts of those of three others, and the bor. of Longport; and, in 1831, a pop. of 14,112. No. of £10 houses not exactly known, but probably exceeding 1000. Registered electors, in 1837-38, 1335. The municipal limits comprise only the city and immediate neighbourhood, excluding several hundred acres of the agricultural part of the par. bor. It is divided into three wards, and is governed by a recorder, mayor, six aldermen, and eighteen councillors.

This city is of great antiquity, as is proved by the notice of it in the Itinerary of Antonine, and by many Roman remains. A staple of wool was granted by Edward III.; but its chief importance previously to the Reformation was derived from its numerous religious establishments, and the influx of pilgrims of all ranks and conditions. It was the most frequented thoroughfare to the Continent, and is noticed as such in the charter granted by Henry IV., when it is called "a city near the sea, and, as it were, a port of entrance by which foreigners come to the kingdom." During the last war, a large body of military were usually stationed here, for whose reception there are three sets of cavalry and infantry barracks. The outer walls of a castle of the Norman period still exist. (*Illustr. Views of Kent, Church of Canterbury, and Hist. Descrip.*, 4to, 1638; *Canterbury Guide*, &c.)

CANTERBURY, P. T. Merrimac co., N. H., 8 m. N. Concord, 416 W. Bounded W. by Merrimac river. Several mill streams, issuing from ponds, flow into the Merrimac, and afford water power. Chartered in 1797. Three bridges over the Merrimac connect it with Bozeman. There is a Shakers' village in the S.E. part, which occupies over 200 acres of land. They are distinguished for the neatness of their cultivation, their fine gardens, and their useful manufactures. The town contains four churches, one Congregational, two Free-will Baptist, and one Christian; two stores, one fulling-mill, one woollen-factory, one grist-mill, six saw-mills, three tanneries, two distilleries, twelve schools, 575 scholars. Pop. 1643.

CANTERBURY, P. T. Windham co., Ct., 12 m. N. Norwich, 41 m. E. Hartford, 366 W. Bounded E. by Quinebaug river, over which is a bridge, connecting it with Plainfield. First settled in 1690. It contains three churches, two Congregational and one Baptist, five stores, one fulling-mill, two woollen-factories, one cotton-factory with 1000 spindles, six grist-mills, ten saw-mills, sixteen oil-mills, two tanneries, twelve schools, 536 scholars. Pop. 1791. Half a mile W. of Quinebaug river, on elevated ground, is a pleasant village, built chiefly on two streets which cross each other at right angles, having at the centre a handsome public square, on the E. side of which stands a neat Congregational church.

CANTERBURY, P. T. Cornwall t., Orange co., N. Y., 9 m. S. Albany, 969 W. Situated 1 m. W. of Cornwall Landing on Hudson river. It contains four churches, one Methodist, one Presbyterian, and two Friends, three stores, one woollen-factory, one cotton-factory, two tanneries, eighty dwellings, and about 500 inhabitants.

CANTON (called by the Chinese *Seng-Ching*, the provincial city), a marit. city of China, on its S. coast, prov. Quang-tong, and residence of the provincial authorities; the principal emporium of the East, and the only port in China at which any Europeans are established. It lies on the N. bank of the *Che-kiang*, or Pearl river, and on the E. bank of its affluent, the *Po-kiang*, 60 m. N.N.W. of Chinese sea, and 1900 m. S. by W. Peking. Lat. 23° 7' N., long. 113° 14' 30" E. It is nearly square, about 6 m. in circ., built generally upon level ground, except on its N.W. side, and is divided into two unequal parts, the outer, or *China*, and the inner, or *Manchou* (Tartar) city, which are surrounded by one wall, and separated by another. The walls are partly of sandstone and partly of brick, about 20 or 25 ft. thick, and from 25 to 40 ft. high. A line of battlements, with embrasures at intervals of a few feet, raised on the top of the walls all round, are in some places mounted with cannon. The city is further defended by three forts on its land side, and two on Pearl river; but as a place of strength Canton is insignificant. The outer walls are pierced with twelve gates, and four others lead through the inner wall from the old to the new city; all of these are daily opened at dawn, and shut at an early hour of the evening, and strictly guarded, to prevent the exit or entrance of any one except upon special occasions. The suburbs are, perhaps, as extensive and populous as the city itself. They fill up the space between the walls and the water's edge on both rivers; those on the W. side are much the largest. The city and suburbs are laid out in a precisely similar manner.

## CANTON.

Streets numerous, and generally short and crooked, though sometimes of considerable length. They vary in width from about 2 to 16 ft., but are commonly from 6 to 8 ft. wide, paved with little round stones, and flagged, close to the houses, with larger ones, chiefly of granite. Each is closed by strong gates, secured and guarded at night; and streets of business are each devoted to one distinct branch of trade. Several canals, used for the conveyance of passengers and goods, intersect the city and suburbs. Two of the largest run along the outside of the E. and W. walls, and communicate by a third, which passes through the new city. Several smaller ones branch off from these on either side: they are crossed in many places by stone bridges. Houses built chiefly of brick; but mud, stone, and wood, are also used in their construction, and many of the habitations in the old city are said to be composed entirely of the former material. Near the river they are raised on wooden piles, and elsewhere are generally erected on solid foundations. Scarcely any are more than one story in height; the roofs of many are flat, and being surrounded with a breastwork, they form terraces, frequented by the family in the cool of the evening. The floors are usually composed of indurated mud, marble, or other flagstones, or tiles joined by cement. Windows small, the place of glass being supplied by paper, mica, thin shell, &c. Very little iron is used. The better sort of residences are built within a court, surrounded by a wall, 12 or 14 ft. high, and the interior of those of the opulent Chinese are in general very richly furnished. The houses of the middle orders, in which about 1-3d part of the population reside, have no court, nor any superabundant room; those of the lower orders, which are very numerous along the banks of the canals, in the N. part of the old city, and in the extreme parts of the suburbs, are wretched mud hovels, in which six, eight, ten, or sometimes even double that number of individuals, are crowded into one low, dark, and dirty apartment. The foreign factories, or *hong*, as the Chinese call them, are situated in the S.W. suburb, where they extend from E. to W. for about 14 furlongs. They occupy a muddy flat, which has been gained from the Choo-king river, which they face, being separated from it by a quay about 100 yds. wide. This space, which is considered as belonging to the European merchants, is called in, and forms a promenade, called *Respondantia Walk*. Near it is another small open space, about 50 or 60 yds. sq., walled in, and laid out as a garden, with gravel walks, flower-beds, &c. These narrow limits bound all the territory assigned to foreigners within the Celestial empire: even the quay and enclosure were not obtained without considerable difficulty, and the European merchants cannot erect a few steps on the water's edge without express permission from the authorities. There are thirteen hong, or factories, including the British, Dutch, American, French, Austrian, Swedish, Danish, Persian, &c. They are among the handsomest buildings in the city, and usually consist of three, four, or more brick or granite buildings surrounding a kind of close or court: two tolerable European hotels occupy portions of two of them. The English hong far surpasses the rest for elegance and extent; this, the Dutch, and the American hong, are the only ones which have their national flags flying; the British flag, which had been hauled down at the expiration of the E. I. Company's charter, was again raised in April, 1857. (*Fengus in China*, i. 240.) Contiguous to the hong are three noted thoroughfares, Old and New China streets, and Hog Lane. The first two are among the best streets in the suburbs, rather wider than the generality of the public ways, pretty regularly paved, and lined with shops, in which a considerable amount of business is sometimes transacted. The filthy street, or alley, appropriately named Hog Lane, has an infamous notoriety as being the place where foreign seamen are intoxicated, robbed, and maltreated, and where, owing in a great measure to their imprudence, most of the disturbances have arisen which have led to serious disputes between the Chinese government and the foreign traders. Except in those devoted to the European trade, most of the shops open to the streets, and the most valuable kinds of wares are exposed, apparently without any protection from theft: but the sharp eye kept by the dealers, the gates at the end of the streets, which may be shut in an instant, and a most vigilant police, commonly prevent any frauds. Burglaries are rare, but loss by fire is frequent, to avert which, in the winter months, an additional body of watchmen occupy watch-towers erected on bamboo poles high above the roofs of the houses, and an alarm, given by bells or other means, quickly spreads through the city. The Chinese have very generally adopted the use of our engines, which they occasionally manufacture sufficiently well to answer the purpose; but Mr. Davis says, that the foolish notion of fatalism which prevails among the people makes them singularly careless as regards fire. In 1852 a fire broke out, which destroyed the British factory and above 10,000 other houses. The loss of the E. I. Company on this occasion was estimated

at £300,000 sterling, 3-5ths in woolens. Canton is subject to inundations, which carry away many mud hovels, and frequently fill the lower apartments in the hong to the height of several feet. The city is tolerably well supplied with water by several reservoirs, many wells, the canals, &c. and some fine springs on its N. side, both within and without the walls.

A large part of the pop. of Canton resides on the water. For 4 or 5 m. opposite the city, and both above and below it, the river is crowded with vessels and rafts of all descriptions and sizes. Every one is registered, and the whole number in the neighbourhood of the city is reported to amount to 84,000! (*Chinese Rep.*) Many of these, called egg-boats, which are no more than 12 or 15 ft. long, about 6 ft. broad, and covered with a low bamboo shed, not only accommodate whole families, but contain coops in which large broods of ducks and chickens are reared. Others are immense rafts of timber, on which many individuals live. Some of the floating-houses are, however, handsome residences; their hull is large and broad, and the building in the centre is surrounded by a spacious wooden terrace, and supports another on its roof, both of which are ornamented with flowers, evergreens, &c. The narrow channel left between the stationary shipping and the shore is so incessantly thronged with barges, and craft of all kinds as to render landing or embarkation usually a difficult undertaking. Upwards of 190 different temples are enumerated in and adjacent to the city, and this does not include the whole number. The principal is the Buddhist temple on the left-hand of Honan, in the river opposite Canton. Its buildings are numerous, and chiefly of brick: it covers, with its courts and gardens, six or eight acres, which are surrounded by a lofty wall. The stillness which reigns within this barrier forms a striking contrast to the turmoil which prevails without. The pathway to the great central temple leads through two wide court-yards laid out with gravel walks, and planted with rows of trees; in the gateway separating these courts are two fierce-looking colossal figures, seated on huge pedestals of granite. The principal hall is about 80 feet sq.; its walls are hung with crimson tapestry, tablets, &c., and its roof is ornamented with grotesque paintings and figures in relief; in the centre of the hall are three enormous, heavy, gilded figures, representing the "Past, Present, and Future," before which incense is continually burning. In various other halls there are shrines of inferior deities, and the remainder of the building is occupied chiefly by the dwellings and offices of the priests, of whom there are nearly 900. There are two other considerable Buddhist temples in the N.W. part of the old city, one of which, founded about A.D. 250, has about 900 inmates, and 3500 acres of landed property. In the old city there is also a Mohammedan mosque, with a dome and minaret 160 ft. in height: there are about 3000 Mohammedans in Canton. Without the walls, on the N. side, there is a lofty pagoda five stories high. There are several charitable institutions, but they are mostly of recent foundation. Vagabonds and beggars are very numerous in Canton, but not more so than in many large cities of Europe. A founding hospital established in 1698, with accommodations for 900 or 950 children, and supported with about £240 a year; a retreat for the aged, infirm, blind, &c., supported by imposts on foreign ships bringing rice to the port, and a hospital for lepers, all on the E. side, without the city walls, are among the chief native charities. A general hospital in the S.W. suburb, established by an American missionary society in 1835, has been productive of much benefit. But the best maintenance for the poor consists in the manner in which both law and custom enforce the claims of kindred. In the old city are the residences of the lieutenant-governor, Tartar-general, treasurer of the provincial revenue, literary chancellor, criminal judge, &c.; and in the new city, those of the prov. governor, and the grand *hoppo* or commissioner of the customs on foreign trade. These residences, and others of the hong-merchants, and some wealthy citizens, are little inferior, except as respects size, to the imperial palaces. In the old city is the grand hall for the examination of candidates for literary honours. There are fourteen high schools, and about thirty colleges in Canton; three of the latter have each 500 students. It is estimated that about half the inhabitants are able to read.

We have no information on which it would be safe to place any reliance as to the pop. of Canton. It is estimated in the *Chinese Repository* (vol. ii. 307), at 1,226,000; but the data on which this estimate is made are far too loose to entitle it to any weight. Mr. Davis does not think it possible that 1,000,000 could be stuffed within its precincts; and it is probable that the pop. does not exceed half the number mentioned in the *Repository*.

The manufactures of Canton are numerous and important. It is said in the *Chinese Repository* that there are about 17,000 persons employed in the weaving of silk, and that 50,000 are engaged in the manufacture of all kinds of

## CANTON.

cloth. There are said to be 4000 shoemakers; besides great numbers of persons who work in wood, brass, iron, stone, &c. The book trade is considerable. The persons engaged in these trades are all formed into distinct companies, and have each their own laws for the regulation of their business. But a large portion of the manufactures required for the consumption and trade of Canton are carried on at Fuh-shan, a large city a few miles W. from Canton. It may surprise our readers to learn that combinations to support the prices of goods and the wages of labour are very general, and are vigorously maintained.

**Trade.**—All the legitimate trade of China with European nations (Russia excepted) is conducted at Canton. The Russians are the only nation not permitted to have a resident office here; the commerce between the two empires, which is very extensive, centres at Khasia, on the border of the empire, in Mongolia. The policy which has determined this regulation, as well as that which has fixed the only foreign mercantile port at almost the greatest possible distance from the capital, is probably dictated not only by a jealous fear of strangers passing the boundaries of the empire, but also from a desire, on the part of the government, to obtain the greatest amount of transit duties. The European trade, now so immense, originated in a commercial treaty between Emmanuel, King of Portugal, and the Emperor of China, in 1517. In 1634, some British ships first touched at Canton. In 1680, the direct trade of the E. I. Company with China commenced. In consequence of the extraordinary increase in the demand for tea, which, from being a luxury seldom seen, so late as the reign of Queen Anne, even in the houses of the nobility, has become a necessary of life, used by the poorest classes: the British trade with Canton has progressively and rapidly increased since 1700; and the great mass of the foreign commerce (which, inclusive of that of the junk, is estimated at 80,000,000 dollars yearly) is carried on by the English and Americans. Until the expiration of their charter, in 1834, the British trade was entirely in the hands of the E. I. Company; and during the last three or four years of their monopoly, that body imported tea (which has always been the principal export from China) into England to the amount of 31,500,000 lbs. annually. After the expiration of their charter, the quantity imported was still greater. In 1834, no less than 150 British vessels, with a united tonnage of 98,470 tons, resorted to Whampoa, near Canton, and brought away 43,641,900 lbs. of tea. The import of that article subsequently diminished; but it is still greater than at any period during the Company's monopoly. In the season from October 1, 1836 to April 30, 1837, the British traders took away 33,911,339 lbs. of tea, in proportion of 1 part green to 3½ black. The total value of tea exported that year was 90,255,065 doll. Next to tea, raw silk and silk piece-goods are the principal articles of export; their aggregate value having amounted in 1837 to above 10,000,000 dollars; then follow treasure, sugar, and a host of inferior articles.

The trade between British India and China has been greater in amount and importance than that between China and England. The principal export from India was formerly raw cotton, chiefly from Bombay; but opium has long exceeded that article in importance, having latterly been clandestinely imported into China to so vast an amount, that its value has rather exceeded that of the tea exported. Very recently, however, the Chinese Government have, in appearance at least, set vigorously to work to suppress the trade in opium, and to exclude it from the empire. But those best acquainted with China believe that the taste for the drug is too firmly rooted among the population to admit of the government succeeding. The probability, however, seems to be, that the events that have occurred, particularly the confiscation of the opium belonging to British merchants, will lead to very material changes in the trade, and perhaps, too, in our relations with China.

A fleet of fifty or sixty vessels, of 300 or 400 tons burden, are annually despatched to Canton from the United States, and the whole of the American trade is valued at about 10,000,000 dollars. About the same number of pounds of tea are annually imported into America. The Dutch usually send sixteen or seventeen vessels during the season; but many come from Batavia; and the import direct of tea from Canton into Holland, is not more than 3,000,000 lbs. a year. About three or four French ships annually have appeared of late years at Whampoa: the trade of Spain, Sweden, Denmark, and Austria with Canton is very small. For farther and full details as to the commerce of Canton, see *Commercial Dictionary*.

The Choo-kiang opposite Canton is deep enough for vessels of 800 or 1000 tons burden; but foreign ships only come up the river as far as Whampoa, about 15 m. below the city, loading and unloading by means of native boats. The Hong merchants are the only individuals legally rec-

ognised as traders with foreigners by the government, and no foreign ship is allowed to come up the river until a Hong merchant has become security for the payment of all her crew, &c., while within the limits of the empire. There were, until lately, eleven Hong merchants, who formed a joint-stock partnership to indemnify each other for losses in the part of those they dealt with, the turbulent behaviour of foreigners, the exactions of the mandarins, &c. There are now twelve separate firms, the coalition between them having been abolished. These merchants enjoy great consideration, and frequently accumulate large fortunes; but their situation in other respects is not very enviable; they live in a state of constant anxiety lest their enemies should misconduct themselves; are the marked victims of men in power; and, having once undertaken their office, are never suffered to retire. But other native traders, called *outside merchants*, are allowed to deal with foreigners; their number being unlimited, the greatest competition exists among them. It is said that they also are closely watched by the mandarins, and are sometimes accused of sums of money on various pretences. The state affairs of this city, receiving little or no salary from the government, but frequently purchasing their appointments, derive their profits chiefly by extortion; and Canton has the character of being not only the most licentious, but the most corruptly governed city of the empire. We incline, however, to think that in these respects it is not so bad as is represented; and that foreigners, from impatience of the restraints under which they are placed, exaggerate the rapacity and capriciousness of the Chinese, in order to prejudice their governments against them, and to induce them to adopt coercive measures.

Canton is peculiarly the emporium of Chinese manufactures, and the shops are crowded with articles of the most and most minute workmanship. The markets devoted to eatables are less attractive to European tastes: peapods, cats, owls, horse-flesh, worms, slugs, and even snakes and other reptiles, are exhibited as tempting delicacies. All are sold by weight, and a cat and a pheasant frequently fetch the same price. The arts of *pu-ku* are not forgotten in Canton; in the suburbs, strapping labels and banners are common enough over the shop doors inviting the custom of the passengers by means of laudatory mottoes, &c., written in English and other languages; and many of the Chinese shopkeepers have acquired sufficient English, and the free and easy style so well adapted to captivate the British seamen, and make them part with their money. The streets are generally clean, but abound with cripples and miserable objects, beggars, and vagabonds of all descriptions. No wheeled carriages are ever seen in them; the only vehicles used are sedan chairs slung on poles, which some of the government functionaries and more opulent natives are privileged to use. They are not allowed to Europeans, who are also destitute of any place of public amusement, prohibited entering the walled city, and herded all female society.

As soon as the season for business has terminated, an edict from the emperor comes to Canton, ordering the removal of the foreign merchants to Macao, where they remain for several months. During the summer, excursions are made by both Chinese and Europeans to Fuh-fu, a village about two miles higher up the river, above Canton, where there are some gardens laid out in the English style. The scenery in this direction is delightful. "Beyond the city, and when clear of the buildings, and the crowd of boats which throng the passage, the river winds about in a beautifully serpentine manner. The country opens gradually, and displays both hill and dale covered with luxuriant vegetation. On every remarkable eminence pagodas are erected, and *ghat*-houses adorn the banks in every direction. In the midst of the stream, often dividing it into two or three separate channels, are romantic islands, either under the hand of the agriculturist, or covered with trees to the water's edge." (*Fusqui in China*, III. 293.) Canton, although extremely hot in summer, is much colder in winter than might be expected from its lat., and fires are often agreeable.

According to native historians, Canton was founded by one of the last sovereigns of the Chow dynasty, who reigned about 9000 years ago. About the year 700 it became a regular mart for foreign trade, and the residence of an imperial commissioner of customs. The former city was utterly destroyed in 1650 by the Tartar dynasty, now on the throne, after a siege of eleven months, during and subsequent to which vast numbers of persons are said to have perished. (*Chinese Repository*, Cant.; *Davis*, *The Chinese*, &c.; *Hamilton's E. I. Gaz.*; *Downing's Fusqui in China*; *Official Tables*, &c.)

CANTON, P. T., Oxford co., Me., 30 m. W.N.W. Augusta, 602 W. Watered by Androscoggin river. Incorporated in

## CANTONMENT GIBSON.

1821. It has three stores, eight schools, 370 scholars. Pop. 912.

CANTON, p. t., Norfolk co., Mass., 16 m. S. by W. Boston, 426 W. Bounded N.W. by Neponset river, which, with its branches, affords water-power. The Boston and Providence rail-road passes through it, and has here a bridge of viaduct 600 feet long, 63 feet above its foundation, supported on a number of arches, which cost \$50,000. It is a substantial structure of granite. It has four churches, one Congregational, one Unitarian, one Methodist, and one Baptist; nine stores, three furnaces, five forges, two woollen-factories, four cotton-factories with 1868 spindles, two grist-mills, one saw-mill, one academy, 18 students, seven schools, 306 scholars. Pop. 1995.

CANTON, p. t., Hartford co., Ct., 13 m. N.W. by W. Hartford, 330 W. First settled in 1740, incorporated in 1806, taken from Simsbury and New Hartford. Watered by Farmington river. It contains the flourishing manufacturing village of Collingville. It has three churches, two Congregational and one Baptist; three stores, one fulling-mill, three saw-mills, one powder-mill, eight schools, 310 scholars. Pop. 1736.

CANTON, p. t., capital of St. Lawrence co., N.Y., 293 m. N.N.W. Albany, 495 W. Watered by Grass river and its branches, which afford water-power. A natural canal, five miles long, connects Grass with Oswegatchie river. It contains eight stores, one furnace, three fulling-mills, four grist-mills, three saw-mills, three tanneries, one academy, 323 students, 33 schools, 854 scholars. Pop. 3465. The village, situated on the E. side of Grass river, contains a court-house, jail, county clerk's office, three churches, one Presbyterian, one Methodist, one Union; an academy, six stores, one furnace, one grist-mill, two saw-mills, one clothier's works, a marble factory, 125 dwellings, and about 800 inhabitants. A bridge here crosses Grass river.

CANTON, p. t., Bradford co., Pa., 136 m. N. Harrisburg, 346 W. Watered by Towanda creek and its tributaries. It contains two stores, two fulling-mills, three grist-mills, six saw-mills, eight schools, 407 scholars. Pop. 1254.

CANTON, t., Washington co., Pa. Drained by Chardier's creek and its tributaries. Washington borough lies partly in this town. It contains one store, one fulling-mill, one woollen-factory, one flouring-mill, one grist-mill, two saw-mills, five schools, 320 scholars. Pop. 1132.

CANTON, p. t., capital of Stark co., O., 194 m. N.E. Columbus, 313 W. It has 1284 scholars in schools. Pop. 3200. First settled in 1808. The village is situated between two branches of Nishmillen creek, which unite 1½ mile below the village, and are crossed by four bridges, two of which are two hundred feet long, each. It contains a court-house, jail, three brick county offices, a market house, an academy, a bank, a library company, a mechanics' society, four churches, one Presbyterian, one Methodist, one German Lutheran, and one Roman Catholic; eighteen or twenty stores, two printing-offices, 300 dwellings, many of them of brick, and neat, and about 1800 inhabitants. Three of the churches are built of brick.

CANTON, p. v., capital of Cherokee co., Ga., 125 m. N.N.W. Milledgeville, 670 W. Situated on the N. side of Etowah river. It contains a court-house, and a number of stores and dwellings.

CANTON, p. v., Trigg co., Ky., 235 m. S.W. by W. Frankfort, 723 W. Situated on the E. side of Cumberland river, forty miles from its mouth. It has great facilities for navigation, and is the centre of an extensive trade. Pop. about 900.

CANTON, p. v., capital of Madison co., Miss., 23 m. N. by E. Jackson, 998 W. Situated on a branch of Big Black river. It is connected with Jackson by a rail-road, and thence with Vicksburg. It contains a court-house and a number of stores and dwellings.

CANTON, t., Wayne co., Mich. Drained by head waters of branches of Rouge river. It contains a saw-mill, and 243 scholars in schools. Pop. 1081.

CANTONMENT GIBSON, p. v., and military station, Indian Ter., 221 m. W.N.W. Little Rock, 1286 W. Situated on the E. side of Neosho river, 5 m. above its entrance into Red r. It contains a United States fort and garrison, for the protection of the western frontier.

CAPACCIO or CAPACCIO NUOVO, a town of Naples, prov. Principato Citra, cap. cant., 35 m. S.E. Salerno, and 4 m. from the sea. Pop. 2500. It has two fine parish churches and a convent. The cathedral is at Capaccio Vecchio, a small place in the vicinity, destroyed in the 12th century by the emperor Frederic II. The inhabitants having fled to S. Pietro, gave it the name of Capaccio Nuovo.

CAPE ANN, Mass. Situated on the N. side of Massachusetts bay. The North light is in 43° 38' 18" N. lat., and 70° 34' 44" W. long. The South light is in 43° 38' 10" N. lat., and 70° 34' 44" W. long.

CAPE BRETON, a large and most irregularly shaped island of British America, separated from the N. extremity of Nova Scotia, of which prov. it is a part, by a narrow,

## CAPE BRETON.

navigable channel. It forms the S.E. boundary of the gulf of St. Lawrence, and lies between 45° 37' and 47° 4' N. lat., and 59° 45' and 61° 38' W. long. Area estimated at near 4000 sq. m. Pop. (in 1839) probably about 35,000. Militia (in 1834) 6651. The coast is, for the most part, rocky and elevated; and it is everywhere indented by deep gulfs and arms of the sea, by one of which, the Bras d'Or, it is very nearly separated into two great divisions. This island sea has deep water throughout, and affords the greatest facilities to navigation. The island has many fine harbours; that of Sydney, the cap., on the E. coast, being one of the best in the prov. Louisbourg, so famous in the history of America in the reign of George II., lies on the S.E. coast of the island. It was a strongly fortified settlement established by the French in 1730, and reckoned the key of their possessions in this part of the world; but having been taken by the English in 1745, was first dismantled, and afterward entirely abandoned.

The climate of Cape Breton is subject to considerable extremes. The mean summer heat is said to be 80° Fahr., while in winter 30° below zero is not a very uncommon degree of cold. The temperature, however, is subject to more variation, and is less uniformly severe than the continent in the same parallel. The frost usually sets in about Dec., and between that and the end of April there are sometimes intervals of a week or two of mild weather. The spring is short, and vegetation very rapid: May is the sowing season, and the harvest is gathered in Aug. and Sept.: on the E. coast, the summers are usually dry; on the W. they are usually more moist.

This island terminates a low mountain range, which traverses the whole province of Nova Scotia (from S.W. to N.E.), and consists of granite, trap, and slate, in alternating strata; the slate being in narrow, and the trap in broad belts; beyond these, are gneiss, sandstone, limestone, gypsum, and several other formations, which for the most part rest on an amygdaloid base. In this more recent portion are extensive beds of coal, said to resemble that of Newcastle, and well adapted for steam and other general purposes; it also yields an abundance of excellent gas. Cape Breton is supposed to contain a sufficiency of this to supply the world for centuries. The mines at present in work are near Sidney; they were leased by the crown (in 1827) for 60 years to the General Mining Association, on payment of £3000 sterling a year for 90,000 chaldrons, and 2s. currency for every chaldron beyond that quantity; which terms embrace the other mines of the prov., wrought by the same company, who have several steam-engines, and employ regularly about 500 men. Since the commencement of their operations, the demand has steadily increased, and is supposed likely to proceed in an increasing ratio, from the circumstance of the only available mines of the U. States, at present, being those of anthracite, in Pennsylvania, to which, for general purposes, the Cape Breton coal is much superior: the produce, in 1837, was 70,000 tons; above half of which went to the States, the remainder to Nova Scotia and Newfoundland: the price at Sydney was 14s. 6d. per ton, currency. These mines were first opened about 50 years since, and have continued from that period to be wrought; but, previously to 1827, on a very imperfect system, and to a very limited extent. Iron and copper have also been met with, but neither has yet been attended to. Lime (gypsum) well adapted for agricultural purposes is abundant, and at places perfectly accessible to shipping: there are also brine springs of great strength, which it is supposed may be in time made available, by means of the refuse coal, in the manufacture of salt for the fisheries: excellent freestone for building purposes is also met with.

The vegetable products resemble those of the neighbouring continent, the woods being composed of hemlock, black and white spruces, the white and red pines, oak, beech, birch, maple, &c.: the timber trade has been gradually diminishing. The greater part of the shipments at present are from the W. basin, opening from the little Bras d'Or; on the Atlantic side, the spruce fir are mostly of stunted growth, but supply fuel to the different fishing settlements: these, however, are conducted with little energy, and to a much more limited extent than the great capabilities of the stations would seem to admit of. The fish most commonly taken are cod, halibut, haddock, mackerel, shad, smelts, and alewives; sturgeon and salmon are also caught in the streams, and these and the lakes abound with trout and perch. The inhabitants engaged in the fisheries are chiefly French Acadians, and Scotch, from the Western Islands. Those engaged in the timber trade and agriculture are chiefly Scotch and Irish emigrants, and a few are the descendants of U. S. loyalists. Those engaged in the coal-mines are mostly skilled labourers from Scotland. There are also about 300 Indians, for whom some tracts are reserved, on which they cultivate maize and potatoes: they are an inoffensive tribe, and support themselves chiefly by

## CAPE CHARLES.

fishing; wandering along the shore in summer, and returning to a fixed winter station. The returns relative to farming produce, cattle, &c., show the same figures for several successive years, so that probably little reliance can be placed on them. The quantity of land in cultivation, in 1831, was said to be 85,000 acres (*Bouchette*): the common kinds of grain, maize, and potatoes, are cultivated; but the island does not, at present, produce sufficient for its own consumption. The exports consist of timber to the U. Kingdom, fish to the W. Indies, and coals to the U. States, and corn. The imports consist of British manufactured goods; corn, meal, &c., from the U. States; and colonial products. Total value of the imports, in 1834, £10,501: of the exports, £23,182. Between 300 and 400 vessels, varying from 30 to 300 tons, are registered in the island, and some ship-building is carried on, which is included in the provincial returns.

Sydney, which is the chief settlement, contains 80 or 90 houses, all with gardens attached, and regularly disposed, so that its appearance is very neat and respectable; the courts of justice for the island, and the residences of the gov. officers are in this little town, which was founded in 1833: its pop. is between 500 and 600. The rest are all small fishing settlements, on different parts of the seacoast, or round the borders of the Bras d'Or. Cape Breton is a co. of the province of Nova Scotia, and returns two members to the H. of Assembly in Halifax. It is comprised within the diocese of the bishop of Nova Scotia; but the great majority of the inhab. are Catholics. Legal provision is made for the poor, and there are also other local assessments to defray county charges. The French formed the first settlement on it in 1712; a detachment of British troops from New England took possession of it in 1745, and from that period it has remained under British government. (*Bouchette's Brit. Dom.*; *Lord Durham's Report and Append.*; *Geog. Trans.*; *McGregor's Brit. America, &c.*)

**CAPE CHARLES, Va.** Situated on the N. side of the entrance into Chesapeake bay, 13 m. N. of cape Henlopen, opposite. It is in 75° 38' N. lat. and 37° 12' W. long.

**CAPE CLEAR,** a bold promontory, rising 400 ft. above the level of the sea, on the S. side of Clare island, near the W. extremity of St. George's Channel, and about 7 m. S.E. from Baltimore, co. Cork, Ireland. Adjoining the cape is a light-house of the first class, with revolving lights, having the lantern elevated 455 ft. above the level of the sea. The light-house is in lat. 51° 28' 3" N. long. 9° 29' 30" W. This is the point from which ships leaving St. George's Channel for the W. usually take their departure, and those arriving prefer making it their landfall.

**CAPE COD,** the S.E. point of Massachusetts bay. The whole peninsula comprises Barnstable county, which see. It projects from the S. shore of Massachusetts, is 65 miles long, and from 1 to 30 broad, and has been compared, in shape, to a man's arm, curved inward at the elbow and the wrist. The light-house at the extremity of the cape, is in 42° 2' 23" N. lat., and 70° 4' 9" W. long.

**CAPE DE VERD ISLANDS** (*Port l'As Verdes*), a group in the N. Atlantic ocean, belonging to Portugal, between lat. 14° 30' and 17° 30' N., and long. 23° 30' and 25° 30' W., about 330 m. W. cape de Verd, on the W. coast of Africa, which, as well as the islands, derives its name from the greenish dye given to the adjoining sea by the abundance of seaweed. The group consists of ten or twelve islands, besides islets and rocks, having a united area of about 1700 sq. m., and a pop. (1851) of 88,460; 30,000 of whom are said to have been swept off by a famine in 1833. (*Casimich.*) They are, in general, mountainous, rocky, and very ill supplied with water; are all evidently of volcanic origin; and in Fogo, the most elevated of the group, an active volcano still exists. The heat is extreme from November to July, and the rest of the year storms and fogs are prevalent, and the climate is exceedingly unhealthy. Droughts are of frequent occurrence; and sometimes, as was the case previously in 1833, no rain falls for three or four years together. The soil, where not composed of volcanic matters, is chiefly calcareous or sandy, dry, stony, and in many parts barren. Vegetation is consequently partial; but in various places it is very vigorous, and rice, maize, bananas, oranges, melons, pomegranates, and other fruits, both of Europe and the tropics, grow abundantly. The first two products constitute the chief food of the inhabitants; but agriculture is neglected, and the wheat that is consumed is brought from America. This, however, is not so much the consequence of the poverty of the soil, or the indolence of the inhabitants, as of the rapacity and short sightedness of the government which fleeces the cultivators of everything that can, under any pretext, be laid hold of. Oranges, lemons, melons, &c., come to great perfection, and the guavas, figs, sweet potatoes, and guards are excellent. Vines and sugar-canes are cultivated to some extent; but the making of wine is prohibited. In-

## CAPE HAYTIEN.

dig and cotton are indigenous. One of the principal products is orchilla weed, which here attains to great perfection; it is monopolized by the government, and is supposed to yield about £50,000 a year. Some parts are well wooded, chiefly with the tamarind-tree, *Adansonia*, palms, &c. Goats, asses, and poultry are the most numerous domestic animals; monkeys, wild cats, wood pigeons, and other birds, and turtles are plentiful. There is no dangerous animal; but clouds of locusts often do much damage to the crops. Chief manufactures those of leather and salt. Notwithstanding the severe droughts, the actual produce of these islands in cotton, indigo, fruits, salt, goat-skins, and turtle-oil, might give them a considerable value under a more intelligent government. The other chief articles of export are cotton, indigo, some cattle, ox hides, cotton cloths and rum. St. Jago, the principal island and most southerly of the group, contains the towns of Ribiera Grande, formerly the cap.; but, during the dry season, the governor-general now usually resides at Port Playa, which has a good harbour, and is occasionally touched at by vessels bound for India. Porto Grande, in the island of St. Vincent, is, however, decidedly the best harbour in the group. Ships in it are completely sheltered from wind and sea. In St. Nicolo, the island second in importance, very good cotton stuffs, stockings, &c., are made. The pop. are a mixed race of Portuguese and negroes; but all have an exceedingly dark colour.

These islands were first discovered in modern times, in 1450, by Antonio de Noli, a Genoese navigator, in the service of Prince Henry of Portugal, by which nation they were soon after taken possession of, and colonized. (*Males Bras. iv.* 467-480; *Purdy's N. Atlantic Ocean, &c.*)

**CAPE ELIZABETH, S. Me.** It consists chiefly of a peninsula, 6 m. S. of Portland. The S. point is cape Elizabeth, in 43° 33' N. lat. and 70° 11' W. long. In the E. part of the t., at the entrance of Portland harbour, is another cape, on which is a light-house. The township has nine schools, 670 scholars. Pop. 1866.

**CAPE FEAR, N. C.** Situated near the mouth of Cape Fear river, on the S. end of Smith's island, in 33° 48' N. lat., and 78° 9' W. long. It has a dangerous shoal, called from its form, the *Frying-pan*.

**CAPE FEAR, N. C.** It is formed by the union of Haw and Deep rivers, and after an entire course from its remote sources of about 350 miles, it enters the Atlantic through a broad estuary by two channels, one on each side of Smith's island. Immediately above Wilmington, 35 m. from the ocean, it receives the N. E. branch or Clarendon river. It affords the best navigation of any river in the state. Sea vessels navigate to Wilmington, and steamboats proceed 90 m. from its mouth to Fayetteville, and small boats above the forks.

**CAPE FLORIDA,** situated on the E. coast of Florida, on Key Biscayne, in 25° 44' N. lat. and 80° 34' W. long. The island is 7 m. long and 9 broad, and the light-house is on the W. end. It was burned by the Indians in the Seminole war.

**CAPE GIRARDEAU,** county, Mo. Situated in the S.E. part of the state, and contains 864 sq. m. Drained by head branches of White Water river. Bounded E. by Mississippi river. First settled by French and Germans in 1794. It contained in 1840, 12,857 neat cattle, 10,300 sheep, 38,588 swine; and produced 41,935 bushels of wheat, 461,635 of Indian corn, 111,383 of oats, 84,577 of potatoes, 230,191 pounds of tobacco, 9934 of cotton, 37,318 of sugar. It had twenty-six stores, seven flouring-mills, sixteen grist-mills, sixteen saw-mills, twelve tanneries, thirty-five distilleries, one printing-office, one weekly newspaper, seven schools, 175 scholars. Pop.: whites, 6090; slaves, 1235; free coloured, 14; total, 9359. Capital, Jackson.

**CAPE GIRARDEAU, P. V.** Cape Girardeau, Mo. 207 m. S.E. Jefferson city, 850 W. Situated on the W. bank of Mississippi river, 45 m. above the mouth of the Ohio. It has an excellent landing, and contains ten or twelve stores, a steam saw-mill, one printing-office, one weekly newspaper, two academies, 40 students, one school, 30 scholars. Pop. 1738. It was formerly the capital of the county.

**CAPE HENLOPEN, Del.** Situated on the S. side of Delaware bay, 18 m. S.W. of cape May, in 36° 47' N. lat., and 75° 6' W. long.

**CAPE HAYTIEN,** a sea-port town of Hayti, originally called by the Spaniards, Gascon, and afterwards by the French, Cape François, or Le Cap, on the N. shore of the island, 90 m. Port-au-Prince, lat. 19° 48' 20" N., long. 72° 14' W. Pop., probably from 12,000 to 16,000. This town, formerly the cap. of the island, was, previously to the revolution, "remarkably beautiful, and must have been, during its glory, the most agreeable residence in the W. Archipelago." Streets broad and well paved; houses chiefly of stone, with handsome squares, large markets, and a copious supply of water. "But now little more is to be seen than the traces of its former grandeur: even in the Place d'Armes, the handsomest square in it, some of the finest houses are

## CAPE HORN.

unroofed, and plantain trees are growing in the middle of the ruins. The church, which was handsome, is in ruins, as are the theatre, government-house, Jesuit's college," &c. (*Mackenzie*.) It is built on the verge of a very extensive, well-watered, and fruitful plain; but being screened on the N. and W. by a mountain (Morne Cap), it is exposed to all the violence of the sun's rays, and is, in consequence, not very healthy. The harbour and road, to the E. and S. of the town, are protected on the N. by a projecting tongue of land. The entrance is rather difficult; but the anchorage is good, and the quays handsome. The defences towards the sea are respectable. The arsenal was constructed in the reign of Louis XV. Under the French, cape Haytien was, as well as Port-au-Prince, occasionally the seat of government; and it continued to enjoy this distinction under Toussaint and Christophe. Its trade, though greatly fallen off, is still very considerable. It is principally carried on with the U. States. (*Mackenzie's Notes on Hayti*, I., 153, &c.)

CAPE HORN, a famous promontory of S. America, commonly regarded as the S. extremity of that continent. In point of fact, however, Cape Horn does not belong to the continent, but to a small island of the same name, the most S. of the Tierra del Fuego group, separated from the continent by the straits of Magellan, or Magalhães. Cape Horn is the most S. point of the island; and is high, black, precipitous, destitute of all vegetation, and having a most desolate appearance. According to Weddell, it is in lat. 55° 31' S., and long. 67° 14' W.: Maleplina places it in lat. 55° 38' 30" S., and 67° 31' 15" W. The dangers attending the doubling of cape Horn have, in consequence of the improvements in navigation, been very greatly diminished. The coast may be approached with comparatively little danger; the water being deep, and free from either rocks or shoals. Different opinions are entertained as to the proper season for passing the cape. Captain Hall prefers the summer (that is, the winter of the N. hemisphere) on account of the greater length of the day, and the comparative fewness of icebergs and floating masses of ice, which are always dangerous. (*Hall's S. America*, II., Append. 16.)

CAPE ISLAND, p. v., Lower L., Cape May co., N. J., 108 m. S. Trenton, 218 W. Situated on a beach of the Atlantic ocean, near the S. point of the state. It is much frequented as a watering place, and contains six boarding-houses, three of them large, besides several fine hotels. The adjacent waters furnish the finest opportunities for bathing and fishing.

CAPE LOOKOUT, situated on the coast of N. C., on the S. point of an island which encloses Core sound, in 34° 42' N. lat., and 76° 37' W. long.

CAPE MAY, N. J. Situated on the N.E. side of the entrance into Delaware bay. It is 18 m. N.N.E. of cape Henlopen, in 39° 57' N. lat., and 74° 38' W. long. It has a light-house. It was named from Cornelius Jacobus Mey, a Dutch navigator, who visited the Delaware in 1623. He

## CAPE OF GOOD HOPE.

called cape Henlopen, cape Cornelius, from his Christian name.

CAPE MAY, county, N. J. Situated in the extreme S. part of the state, and contains 252 sq. m. Bounded N. by Tuckahoe river. It has a sand-beach along the coast, from  $\frac{1}{2}$  a mile to 2 miles in width, covered with grass and penetrated by inlets, by which the ocean enters marshes, forming lagoons or salt-water lakes. It contained in 1840, 4875 neat cattle, 5778 sheep, 3208 swine; and produced 8662 bushels of wheat, 7373 of rye, 90,975 of Indian corn, 882 of buckwheat, 24,404 of oats, 14,394 of potatoes. It had twenty-nine stores, eight grist-mills, twelve saw-mills, twenty schools, 992 scholars. Pop. 5334. Capital, Cape May, C. H.

CAPE MAY C. H., p. v., Middle township, capital of Cape May co., N. J., 93 m. S. Trenton, 203 W. It contains a court-house, a jail of stone, county offices of brick, and fire-proof; a Baptist church of brick, and ten or twelve dwellings.

CAPE OF GOOD HOPE, a celebrated promontory near the S.W. extremity of the African continent, lat. 34° 33' 40" S., long. 18° 33' 35" E. It was first seen by Europeans (in modern times) in 1482, Bartholomew de Diaz, a Portuguese commander, having been its discoverer. Diaz, however, merely saw it; the violence of the winds, the shattered condition of his ships, and the turbulence of his crews, prevented him from doubling it; and these circumstances doubtless induced him to name it *Cabo Tormentoso*, or "Stormy Cape." But his sovereign, John II. of Portugal, believing it to be at or near that remote extremity of Africa which the Portuguese had been so long endeavouring to reach, designated it *Cabo di Buena Esperanza*, of which the name we give it is a translation. Vasco de Gama doubled it in 1497, after which it continued for more than a century and a half to be indiscriminately resorted to by European navigators. (For the rest of its history, see succeeding article.)

CAPE OF GOOD HOPE (COLONY OF), an extensive colony, or rather territory, so called from the above cape, belonging to Great Britain, in S. Africa, comprising the greater portion of the extremity of that continent S. of lat. 30° 30', and between long. 17° and 27° 30' E. It has N. the country of the Boesjemaans (Bushmen), Hottentots, &c., from which it is separated N.W. by the Koume or Sand river, and N.E. for a considerable distance by the Nu-Gariep, afterward called the Orange river; E. it has the country of the Kafers or Caffres, from which it is in part separated by the Keiskanna river; and S. and W. the Indian and Atlantic oceans, on which it has a coast line of about 1150 m., broken by numerous bays, the principle of which are St. Helena, Saldanha, and Table bays on the W., and False bay, St. Sebastian's, Mossel, Plettenburg, St. Francis, and Algoa bays on the S. coast. Length of the territory, E. to W., about 550 m.; average breadth, N. to S., 240 m., giving an area of nearly 130,000 sq. m. Pop., subdivisions, &c., according to the Cape Register of 1838, are as follow:

| Provinces. | Districts.    | Area in sq. m. | Whites. |        | Blacks. |        | Total.  |         | Pop. to sq. m. | Births. | Marriages. | Deaths. | Chief Towns.          |

**Topography.**—The whole country consists of three successive plateaus increasing in elevation according to their distance from the sea, and separated from each other by as many chains of mountains. The first great chain running E. and W., the Lange Kloof, or Long Pass, "encloses between it and the S. coast an irregular belt of land from 30 to 60 m. in width, indented by several bays, covered with a deep and fertile soil, intersected by numerous streamlets, well clothed with grass and small arborescent or frutescent

plants, well wooded in many parts with forest trees, supplied with frequent rains, and enjoying, on account of its proximity to the sea, a more mild and equable temperature than the more remote and interior parts of the colony." (*Barrow*.) The next great chain, the Groote Zwaarte Bergen (Great Black Mountain), is considerably more rugged and lofty than the first, reaching sometimes to 4,000 feet in height, and consisting in many places of double and even treble ranges. The belt or terrace enclosed between it and the first chain is about the mean width of that between the first and the sea. Its surface is very varied; it is composed in some parts of barren hills, in others, of naked, arid plains of clay, called *karroes*, and again in others, of fertile and well-watered patches of land. The temperature is here less uniform than in the grounds skirting the sea. The third great mountain chain, the Nieuwveldt Gebirge, between lat. 30° and 33° S., is continuous towards the E. with the Schneeuw-bergen (Snow Mountains), the highest range in S. Africa, the loftiest summit of which is estimated at

## CAPE OF GOOD HOPE (COLONY OF).

not less than 10,000 feet in height, and is covered with snow for nearly half the year. Between this and the second chain is the Great Karroo, an arid, desert plain, nearly 300 m. in length by from 80 to 100 m. in breadth. This is not a sandy plain, and bears no resemblance to the Sahara or Arabian deserts. It consists of a sort of table-land, or elevated basin, thinly covered with an argillaceous soil, largely impregnated with iron, upon a substratum of rock or gravel. Some large portions of it are perfectly level, but in others the surface is diversified by stony hills and eminences, some of which would appear considerable save for the lofty mountains which bound the Karroo on all sides except towards the E., where it extends into Camdeboo. Its medium height above the level of the sea is estimated at about 3000 feet. It is crossed by many beds of rivers, or rather torrents, most of which run from N. to S., and find an exit for their waters to the coast through a few breaks in the S. chain of mountains. These rivers, however, are for the greater part of the year either entirely dried up or furnish only few scanty pools barely sufficient for the wild animals, *zebras*, *quagga*, *ostriches*, &c., which frequent this inhospitable region. Not unfrequently even these brackish pools and fountains also fail, as was the case at the time of our journey; and then the Karroo becomes almost impassable by man, and a large portion of it uninhabitable even by the wild beasts.

"In such a region, where rain is rare, and dews almost unknown, the vegetation must of necessity be at all times extremely scanty; and in summer, when the sun has dried the soil to the hardness of brick, it ceases almost entirely. Except along the courses of the temporary rivers, which for the most part are marked by a fringe of mimosa, not a tree nor a bush, nor a blade of grass, decks the wide expanse of the waste. Low, stunted shrubs resembling heath; numerous species of *fig*, *marigolds*, and *ice-plants* (*mesembrythemum*), *ghassia-bosch* (*salicula*), *gorteria*, *asters*, &c., some sorts of prickly euphorbia, and other succulent plants; and bulbs, whose roots nature has fortified with a tenfold net of fibres under the upper rind, to protect them during the long droughts, are alone able to subsist in the arid Karroo. During the dry season even these appear to be for the most part parched into a brown stubble, thinly scattered over the indurated or stony soil; but in the early spring, when the ground becomes moistened with the fall of rain, these plants rush into vegetation with a rapidity that looks like enchantment; and in a few days millions of flowers of the most brilliant hues enamel the earth. It is chiefly at this season, when the whole dreary waste may be said to be transformed into a vast flower-garden, that the colonists of the Schneeweberg, the Nieuwveldt, the Bokkeveldt, and the Roggeveldt, whose alpine farms are then chilled with keen frosts and the piercing mountain winds, descend into the Karroo to pasture their herds and flocks on the short-lived vegetation." (*Pringle's Sketches*, p. 397.)

From the W. coast the country ascends in a similar manner towards the interior by successive plateaus, separated by mountain chains, the loftiest of which, the Roggeveldt (Rye-field) mountains, reach to upwards of 5000 feet above the level of the sea, and unite about long. 21° with the Nieuwveldt chain. To the N. of all, and near the boundary line of the territory, there is a chain of mountains, the height of which is estimated at 9000 feet. The whole tract of country to the N. is much more sandy, barren, and thinly inhabited, than that to the E., which seems to increase in beauty and fertility in proportion as it is distant from the Cape. The third great chain of mountains forms the watershed, or division between the streams which flow N. into the country of the Boesmans, and those which have a S. or W. course through the colonial territory. On its N. side rise the Great Eiet, Braak, and other affluents of the Orange river; on its E. side, the Great Doorn (Thorn), the Gamba, or Great Lion, Camtoos, Sunday, Great Fish, and other rivers. The principal streams on the W. coast are the Great Berg (or Mountain) and Olifant or Elephant river; both are navigable by small craft for about 90 m. inland, but the mouth of the former is choked up with a bed of sand, and that of the latter has a reef of rocks across it. The chief of those which discharge themselves on the S. coast are the Breede or Broad river, the Gauritz, Camtoos, Sunday, and Great Fish rivers. Nearly all of them, unfortunately, have bars or other obstructions at their mouths, rendering them in great part useless for navigation. The Broad river, however, may be navigated by small craft for about 30 m., and its mouth, which is called port Beaufort, allows vessels of 300 tons to enter in safety. The Gauritz, formed by the union of several other streams, is in the rainy season a large and rapid river; but in the summer months has only a very weak current, while the bar at its mouth is then generally dry. The Camtoos has within its bar a wide basin deep enough to float a ship of the line, but the bar itself is fordable at full, and frequently dry at ebb-

tide. Besides the above there are a number of smaller rivers; but, for the most part, they are either dried up during a part of the year, or run in such deep channels as to be nearly unserviceable.

Considering the great extent of coast, good harbours are few. Seldanna bay, 65 m. N.N.W. Cape Town, is by far the most commodious. Ships lie safely in Table bay at Cape Town during the prevalence of the S.E. monsoons from Sept. to May; but after this, when the N.W. winds set in, they are obliged to resort to Simon's bay, in False bay. This harbour is protected on the W. by the peninsula of the Cape, and affords shelter all the year round; it is consequently much frequented by our ships of war, transports, and steamships in their voyages to and from the East Indies, and is the station of the Cape squadron. Flettenburg's bay is open to the S.E.; but affords safe anchorage in 8 or 10 fathoms water, and desirable shelter, during strong N.E. or N.W. gales, to vessels intending to make Table bay. Algoa bay, the most E. but one, is exposed to the prevailing winds, but it contains good anchorage; Port Elizabeth, the principal port next to Cape Town, is seated on it.

*Climate*.—Though in general temperate and healthy, the climate is neither steady, agreeable, nor suitable for agricultural purposes. In the S.W. districts rains, in the cold season, are profuse; but in summer they are of rare occurrence, and during the greater part of that season the ground is parched up with drought. The deficiency and irregularity of the rains are, in fact, the great drawbacks on the colony. In some of the more northerly tracts bordering on the Great Karroo there has occasionally been no rain for three years together; and even in the more favoured districts of Albany and Uitenhage, and generally throughout the greater part of the colony, the rains, when it does come, descends in torrents that swell the smallest streams to an extraordinary magnitude, and occasion great damage. Sometimes the S.E. wind is really a species of simoom, and is not only excessively hot, but is loaded with impalpable sand, which it is all but impossible to shut out; but as the breeze continues, it gradually cools, and usually, in about 24 hours, becomes supportable. The mean temp. of the year, at the Cape, is about 67½° Fahr., that of the coldest month being 57°, and of the hottest 70°. Cape Town is a customary place of resort for invalids from India, who certainly benefit by the change; though perhaps they have been led to it as much from its being within the limits of the E. I. Company's charter, which entitles servants of the company resident there to full pay, as from its salubrity.

The beautiful white cloud frequently seen during the S.E. monsoons, resting on Table mountain, and thence called the "Table cloth," is occasioned by the condensation of the moisture in the air, cooled by contact with the mountain. During the prevalence of this phenomenon, the cold air often rushes down the sides of the mountain with such impetuosity as to be fatal to shipping in the bay. Hail-storms are occasionally very violent and destructive. Owing probably to its elevation, the cold of winter in the Great Karroo is much more severe than could have been anticipated from its latitude. (See *Cape Almanac* for 1838, &c.)

*Geology, Minerals, &c.*—The general geological character of the Cape is that of a region of sandstone resting upon a base of granite. In proportion as the latter rock is near the surface, as occurs on and round Table mountain, springs are abundant; but wherever the granite lies at a considerable depth, as is the case throughout a great portion of the country, the contrary obtains. The territory generally suffers from a deficiency of water. Limestone is found in the E.; clays and sands of various kinds compose most of the surface of the plains; an alluvial loam and black peat mould are very abundant in some of the basins skirting the sea. Very pure and white alum; saltpetre and salt, with which the ground in some of the N. parts of Graaf Reinet and in the Great Karroo are impregnated; coal, iron, galena, argentiferous lead, a little copper, cornelians, blood-stones, &c., are among the chief mineral products. Sulphurous, nitrous, and other mineral springs, are not rare, and several natural salt-pans exist at a considerable distance from the coast. In Beaufort district fossil remains of the mammoth have been met with. (*Mod. Trav.*, &c.)

*Vegetable Products*.—The *Flora* of the Cape is very remarkable; its species are extremely numerous, varied, and elegant; but they want the aroma, whose sweetness fills the flower-gardens of Europe. Bulbous plants are particularly plentiful; and the tribes of *iris*, *iris*, *anethum*, *gladiolus*, *amarillis*, and *gessum*, are both abundant and beautiful; and some of the most magnificent plants that adorn our gardens and greenhouses are brought from this part of the world. Still, however, as Malte-Brun has jealously remarked, "the vegetation of the Cape Colony does not satisfy either the eye or the ideas of a European."

## CAPE OF GOOD HOPE (COLONY OF).

Rocks and sands everywhere prevail. The fields are separated by deserts; the green turf, scattered and thin, nowhere presents a close sward; the forests, filled with pointed trees, have neither a delicious coolness nor a solemn darkness." (Book 70.) The Cape olive-tree, and the *sophora* (a tree like the ash), furnish some wood for joinery; but, except on the E. frontier, in the distr. of George, and in some spots near False bay, there is generally a great deficiency of timber and fire-wood. The only spontaneous vegetable product that is turned to much account, is the aloe, which grows over a large surface in the district of Zwelendani, and for which the farmers sometimes get as much as £20 a load at Cape Town.

*Animals.*—The elephant, rhinoceros, hippopotamus, lion, leopard, hyena, jackal, zebra, quagga, masked boar, antelopes of various kinds, monkeys, raccoons, squirrels, &c., are natives of the Cape; but many of these have now become comparatively rare, at least within the old limits and accessible districts of the colony. The rhinoceros is nearly extinct; the hippopotamus is found only in the Great Fish and Kei rivers; and the elephant and lion have retired from all the old settled districts. Leopards and hyenas are still, however, by no means uncommon, particularly in the eastern districts, and are exceedingly voracious and destructive. The Cape buffalo (*Bos Caffr.*) is a powerful and a formidable animal, which has not hitherto been tamed, and is probably unmanageable. Antelopes of all kinds are exceedingly numerous; and it is said that as many as 5000, 10,000, and even 40,000 springboks have sometimes been seen bounding along in a single herd. Eagles, vultures, and other large birds are not scarce. In the Great Karroo, and along the skirts of the N. deserts, the ostrich is abundant; it is occasionally seen in large flocks, and is eagerly hunted for the sake of its plumage, which meets with a ready and advantageous sale. It is very wary and difficult to come near; small birds are numerous and beautiful, but deficient in song. Lizards and other species of amphibians are met with; and the serpent tribe is both numerous and dangerous. Some rivers are well stocked with fish; but in general this is not the case, the consequence probably of the greater number of the rivers being nearly dried up in a part of the season. A particularly voracious locust (*Gryllus desertator*, Lich.) occasionally commits dreadful ravages. They always come from the N., and are no doubt bred in the interminable deserts of the interior. Their invasions appear to be periodical. They are devoured by the Bushmen and Hottentots.

*People.*—The European inhabitants consist in part of the English authorities and English settlers; but the majority are of Dutch, German, or French origin, being the descendants of the original settlers. The blacks are Hottentots and Kaffers; the remaining portion of the pop. consists of Malays and Africans (the offspring of a black woman and a Dutch father). The Dutch, in the more civilized districts, are distinguished for sobriety, prudence, and economy, and by their hospitality and benevolence towards whites; but various travellers, and Mr. Barrow in particular, have given a very unfavourable picture of the boers, or farmers of the interior, describing them as indolent, rude, and brutal in their manners, and cruel and unfeeling towards their slaves and the native inhabitants. But whatever of truth may be in these statements is accounted for by the circumstances under which the boers are placed, at a great distance from each other, and leading in general a pastoral, semi-barbarous life. We believe that there is really no ground whatever for accusing the Dutch of unusual barbarity in their intercourse with the natives. In this respect they are unfortunately quite on a level with other European nations. And those who read the works of Dr. Philip and Mr. Pringle, and the official papers with regard to the late Kaffer war, will most probably be of opinion that we, at all events, have no very peculiar right to censure them. We have elsewhere given pretty full accounts of the Hottentots and Kaffers. Like other savage and uncivilized tribes, they have both, but especially the Hottentots, suffered severely from the settlement of whites among them, by whom they have been despoiled of their lands; and those that were not exterminated or driven into the desert, were reduced to a state of substantial slavery. At length, however, the British government interposed in favour of the natives; and by an order in council, dated the 15th of Jan., 1839, placed them on the same footing, in respect of civil rights, as the other free subjects of the colony. This wise and liberal measure made less immediate change than was anticipated in the condition of the natives. They can no longer, indeed, be flogged at the pleasure of their masters, nor their children forcibly taken from them, nor be sold along with the estates on which they lived; but in other respects their condition is nearly the same. They continue to be without consideration in society, and are now, as formerly, the servants of the colonists; who employ them, partly as cultivators, but mostly as shep-

herds and herdsmen, occupations for which they are extremely well fitted.

The Kaffers on the E. border are both physically and mentally a superior people to the Hottentots, and less easily subdued. The E. part of the British territory has been at different times much harassed by them, and in 1835 it suffered very severely from one of their invasions, provoked, as has been alleged, by the encroachments of the colonists. It is, we are afraid, in vain to expect that the conflicting interests of the colonists and the aborigines should ever be reconciled, or that European civilization should ever take any firm root among the latter. Very little communication takes place between the negroes, Africans, and Malays, each race holding the others in contempt. (*Pringle's Sketches*; *Thompson's Trav.*, ii.; *Quarterly Review*; *Cape in 1839*; *Ritter*, &c.)

*Agriculture.*—According to the official returns for 1833, the land in cultivation in the colony is estimated at about 324,000 acres, of which 194,494 were in wheat, 46,036 in barley, 12,939 in rye, 49,445 in oats, 20,554 in vineyards and gardens, &c. The pasture land was, at the same time, estimated at 17,510,000 acres, and the waste land at 9,757,000 acres. (*Colonial Returns for 1833*; *Board of Trade Papers*.) The crop lands are principally situated in the districts of Worcester, Stellenbosch, and the Cape in the W. and in Albany in the E. Agriculture is in a backward state, though, perhaps, not so much as is usually stated. The boers are industrious, sober, and parsimonious; but they are, at the same time, strongly attached to ancient habits and routine practices. Better implements have, however, been introduced, and various improvements effected of late years. Agriculture is injured by the Dutch law of succession, which, by dividing a man's property equally among his children, hinders the accumulation of capital in masses, and the formation of proper farming establishments. (*Thompson's Travels*, p. 394, 4to ed.) In some limited districts the soil is very fertile, and the crops and quality of the grain excellent; but the greater part of the vernal land is but of indifferent quality, and the crops are very liable to be injured by droughts, hailstorms, rust, &c. It would appear, from the official returns already referred to, that 194,500 acres in wheat, in 1833, produced only 338,147 bushels. But this must evidently be an error, as a return of less than five bushels an acre would not defray the expense of cultivation. Probably *maïde* (a muid is equal to about three bushels) are meant; and even on this hypothesis, the return would be very indifferent.

The farms occupied by graziers are often of very great extent, comprising from 3000 to 10,000 acres and upwards; those in tillage are comparatively small. The boers are, for the most part, proprietors of the farms which they occupy, paying quit-rent to government as the original owner of the soil. Such a thing as land on rent, from the owner to another, is almost unknown. The transfer of land from one individual to another is effected with the utmost facility, and "without the possibility of fraud." Property seldom remains long in one family. Owing to the law of equal succession, farms are frequently sold on the death of the owner; sometimes the whole is purchased by one son, but it is frequently split into parts. Hence there is here, as Mr. Colebrook says, no attachment to or preference of one's native place: so much land of such a quality, or worth so much, no matter where, is the only thing a Cape Dutchman cares for! (*Cape in 1839*, p. 104.)

The vineyards are mostly in the vicinity of the Cape, where the vine-growers occupy freehold farms of about 190 acres each. The vine (*Vitis vinifera*) has been long introduced to the Cape, and has for a lengthened period been cultivated with more or less attention. The culture, however, made no great progress till 1812, when the duty on Cape wines imported into this country was reduced to a third part of the duty levied on the wines of Portugal and Spain. But, excepting Constantia, Cape wine, whether from the vines being planted in an unsuitable soil, or from a want of care in the preparation of the wine, or both, has an earthy taste, and is generally very inferior; and the consequence of the reduction of the duty has merely been to increase the quantity grown and imported, without in any degree improving its quality, and to make it be employed as a cheap and convenient menstruum for adulterating more expensive wines. It were well, therefore, were this fictitious encouragement withdrawn, and Cape wine charged with the same duty as other wine. At present the average consumption amounts to about 590,000 gallons a year; of which we believe two thirds or more is employed to adulterate sherry and Madeira.

Constantia is produced on a farm of that name at the E. base of Table mountain, 8 or 9 m. from Cape Town. Its soil consists of decomposed sandstone, and is consequently more analogous to the soils which produce fine wine in Europe than the richer clayey soils where the ordinary vineyards are planted. Greater care is also taken in the

# CAPE OF GOOD HOPE (COLONY OF).

production of the wine, and in consequence of these, and probably other causes, it is very superior. It is luscious, sweet, has a strong flavour, and, being produced in limited quantities only, fetches a pretty high price. It is probable, however, that Constantia, or a wine closely approaching to it, might be produced in other parts of the colony, were sufficient pains taken. (*Henderson on Wines*, p. 255, &c.)

In 1833, 1894 acres were under potatoes, which yield two crops a year. The fruits of N. Europe, as cherries and apples, have somewhat degenerated, but figs, apricots, almonds, and oranges are as good as in France. Grapes are

particularly good on the W. coast. Tobacco succeeds well except in clayey soils, or in situations exposed to the S.E. winds; but its culture is, notwithstanding, confined within very narrow limits. Tea was introduced by the Dutch, and some was raised of a tolerably good quality; but, how favourable soever in other respects, labour is too dear in the Cape colony to allow of tea being made a profitable article of culture. Dried fruit and aloes are important articles of export.

A return of agricultural produce for some of the districts is given in the *Cape Ann. Register*, for 1833. We regret that, in many respects, it is so incomplete.

| Districts.      | Wheat.       | Barley.  | Oats.     | Other grain and legumes. | Potatoes. | Wine.       | Brandy.   | Hay.           |
|-----------------|--------------|----------|-----------|--------------------------|-----------|-------------|-----------|----------------|
| Cape district . | 30,950 muids | 6,900 m. | 15,075 m. | 8,005 m.                 | 1,350 m.  | 1,770 leag. | 80 leag.  | 2,625,000 lbs. |
| Stellenbosch .  | 93,611 —     | 7,130 —  | 15,583 —  | 2,985 —                  | 1,000 —   | 13,050 —    | 680 —     | 680 00         |
| Worcester .     | 13,303 —     | 8,743 —  | 7,494 —   | 1,843 —                  | —         | 546 galls.  | 80 galls. | —              |

| George .        | 94,735 —     | 13,713 — | 1,894 —   | 2,409 —                  | 150 —     | 218 —       | 62 —      | —              |
| Beaufort .      | 907 —        | 580 —    | —         | —                        | —         | 61 —        | 62 —      | —              |
| Albany .        | 20,000 —     | 2,500 —  | 6,000 —   | 6,950 —                  | 8000 lbs. | —           | —         | 300,000 —      |
| Graaf Rinet .   | 4,980 —      | 1,508 —  | 85 —      | —                        | —         | 153 —       | 62 —      | —              |

The remainder of the productive surface is, as has been said, chiefly pasture land, and the *Cape Register* gives the following as the numbers of live stock belonging to some of the chief grazing districts.

| Districts.     | Horses. | Horned Cattle. | Sheep.        | Goats.  | Pigs. |
|----------------|---------|----------------|---------------|---------|-------|
| Stellenbosch . | 6,368   | 14,689         | 7,511         | 2,688   | —     |
| Worcester .    | 6,250   | 16,446         | 118,747       | 57,373  | 480   |
| Swellendam .   | 86,549  | 31,374         | 160,888       | 86,480  | 1,174 |
| George .       | 5,074   | 15,361         | 36,588        | 16,964  | 385   |
| Beaufort .     | 1,451   | 7,388          | sheep & goats | 224,700 | —     |
| Albany .       | 2,765   | 88,946         | 704,000       | 21,000  | —     |
| Graaf Rinet .  | 5,191   | 44,788         | sheep & goats | 761,888 | —     |

The climate is not unsuitable for sheep, and great endeavours are making to improve the breed by the introduction of merinos from England and Australia. The native breed of sheep is very inferior; it is remarkable only for the size of the tail, which sometimes weighs 20 lbs.: its wool is good for nothing. But the wool of the Cape merinos fetches a high price. Goats, which are very numerous, serve for the food of the Hottentot farm-servants; oxen are used for draught in large teams. Herds of all these animals wander during the day over large grazing farms of from 3000 to 6000 acres, and at night are shut up in kraals, or inclosures. Hogs attract only a small share of attention, but turkeys, geese, ducks, and other poultry, are reared in great numbers. (*Barrow, H. Ritter, Geogr. Generale*, p. 161, 162; *The Cape in 1825*; *Mod. Trav.*, &c.)

**Fisheries, Mines, Manufactures, &c.**—The fisheries are somewhat important. In 1833, forty-seven boats were employed in the whale, seal, &c. fisheries, and during that year eighteen whales, sixty-eight seals, and other fish were taken, their total value amounting to £3349. Mining industry has made little progress; but salt, lime, and building stone are quarried. Almost every farmer in the interior makes his own candles and soap, the alkali necessary for the latter being furnished by the consumption of a kind of *salsola*, which grows plentifully on such parts of the waste tracts as are at all watered. The other manufactures are mostly confined to those of leather, hats, snuff, saddles, tiles, rope, and a few other articles of a necessary kind; a few wind, water, and saw-mills now exist in most of the districts, and in Cape Town there is a steam flour-mill. There are several breweries and spirit distilleries, which, as well as other manufacturing establishments, are most numerous in the W. part of the territory.

**Commerce.**—The cultivators of the interior send their surplus agricultural produce, wool, butter, soap, candles, ostrich feathers, skins, &c., to the principal towns at stated intervals, and take back in return European manufactures, tobacco, brandy, coffee, &c. The chief foreign imports of the colony consist of woollens, cottons, hardware, earthenware, fire-arms, furniture, paper, books, haberdashery, soap, and portions of most other articles in use in the U. Kingdom; piece goods, sugar, and teak timber from India; tea from China; sugar from the Mauritius, &c. The principal articles of export are—wines, corn to the Mauritius and Rio Janeiro, hides, skins, horns, salted provisions, horses, wool, butter, ivory, whale oil, aloes, argol, &c. The hides, skins, and horns, come chiefly from the E. province. The salt beef and other cured meats are very good, and are largely exported to the Mauritius. The export of wool has, for some years past, been greatly on the increase, and it is probable that it will in time become one of the greatest and most profitable staples. We subjoin an account of the

quantity and value of the principal articles of colonial produce exported from the Cape colony in 1833.

| Description and Quantity of Articles. | Value.    | £       | s.      | d. |
|---------------------------------------|-----------|---------|---------|----|
| Aloes . . . . .                       | 229,327   | Rs.     | 2,153   | 8  |
| Argol . . . . .                       | 21,745    | —       | 200     | 0  |
| Beef and pork . . . . .               | 1,246     | cwt.    | 6,020   | 0  |
| Bone (whale) . . . . .                | 14,357    | lbs.    | 685     | 0  |
| Butter . . . . .                      | 271,268   | —       | 11,057  | 0  |
| Candles . . . . .                     | 21,800    | —       | 685     | 10 |
| Corn, grain, and meal, viz.           |           |         |         |    |
| Barley . . . . .                      | 2,761     | muids   | 1,185   | 0  |
| Beans, peas, &c. . . . .              | 1,801     | —       | 1,235   | 0  |
| Cats . . . . .                        | 3,754     | —       | 3,253   | 10 |
| Flax . . . . .                        | 229,125   | Rs.     | 2,220   | 0  |
| Flour . . . . .                       | 229,125   | —       | 1,894   | 0  |
| Wheat . . . . .                       | 9,654     | muids   | 7,304   | 0  |
| Feathers (ostrich) . . . . .          | 267       | lbs.    | 1,542   | 0  |
| Fish (dried) . . . . .                | 187,548   | —       | 2,150   | 0  |
| Fruit (dried) . . . . .               | 800,076   | —       | 3,220   | 10 |
| Hides (horns and os) . . . . .        | 24,738    | No.     | 26,025  | 0  |
| Horns . . . . .                       | 105,280   | —       | 7,496   | 0  |
| Horses . . . . .                      | 408       | —       | 11,350  | 0  |
| Ivory . . . . .                       | 21,008    | Rs.     | 5,710   | 0  |
| Mules . . . . .                       | 149       | No.     | 1,741   | 0  |
| Oil, viz.                             |           |         |         |    |
| Seal . . . . .                        | 477       | gallons | 30      | 0  |
| Whale . . . . .                       | 21,281    | —       | 2,822   | 0  |

The gross amount of the trade in 1833 was as follows:

| Ports.                   | Imports. | Exports. |
|--------------------------|----------|----------|
| Cape Town . . . . .      | 789,673  | 206,159  |
| Port Elizabeth . . . . . | 57,548   | 47,597   |
| Simon's Town . . . . .   | 23,543   | 677      |
| Total . . . . .          | 869,164  | 254,353  |

Exclusive of supplies to H. M.'s navy, &c., which amounted to £3082.

During the same year, 486 ships entered the different ports of the colony, having a united tonnage of 134,273 tons; outward bound ships 478, tonnage 130,512 tons.

**Weights, Measures, &c.**—The weights generally in use are those which were introduced by the Dutch. Some of these are as follows:

|                          |                         |
|--------------------------|-------------------------|
| Pound { 16 ounces }      | = 21.7 lb. avoird.      |
| Muid { 32 loads }        | = 3 imp. bushels nearly |
| Leaguer { 4 scheepels }  | = 196.6 imp. gallons    |
| Pipe . . . . .           | = 91.6 —                |
| Aum . . . . .            | = 319 —                 |
| Anker . . . . .          | = 7.5 —                 |
| Flask . . . . .          | = 0.4946 —              |
| 128.1 ellis . . . . .    | = 100 English yards     |
| 49.1.11 morgen . . . . . | = 109 English acres.    |

The coin in circulation is exclusively British. There

## CAPE TOWN.

was estimated, in 1836, to be £330,000 gold and silver circulating medium: the amount of paper currency in the same year was set down at £193,740. (*Cape Register*, 1836.) The paper six-dollar is worth 1s. 6d.

**Public Revenue** is derived from custom duties of three per cent. on British goods arriving in British bottoms, and ten per cent. on all others, various licenses, auction and transfer duties, port dues, land-store and rents, postage, assessed taxes, tithes, and duties on stock and produce, interest of money in the government banks, discounts, &c., tolls and ferries, fines, &c. It amounted, in 1836, to £138,697: the public expenditure for the same year was £147,579, exclusive of that incurred in England on account of the colony.

The Government is vested in a governor, with a salary of £8000 per ann., nominated by the crown, and assisted by an executive council composed of the commander of the forces, the chief justice, auditor-general, treasurer, and accountant-general. A legislative council, composed of five official and an unlimited number of unofficial members, has been established by the government in England, the debates of which are carried on with open doors. Each prov. is administered by a lieutenant-governor, and each district by a civil commissioner, subordinate to whom are the field cornets, magistrates superintending tracts of country 75 or 80 m. in circuit each, with jurisdiction in trifling disputes, and power to call out the burghers of their field-cometries armed. These magistrates, unless on the Kaffer frontier, receive no salary, but are exempted from all direct taxes.

Justice is administered by a supreme court of judicature, presided over by a chief justice, with a salary of £3500, and three puisne judges, whose salaries are £1500 a year, a high sheriff, and deputy sheriffs for each district, a court of vice-admiralty, police and matrimonial courts, &c. Civil and criminal circuit courts are held. The laws in operation are a modification of the Dutch civil and criminal code, and "Statutes of India," established before our taking possession of the colony, and supplied, when found deficient, by the *Coryus Jure Civili*. Trial by jury in criminal cases has been established. The Dutch language, formerly used in courts of law, has been superseded by the English.

**Religion, Education, &c.**—The Dutch and English Reformed, Lutheran, Roman Cath., and Presbyterian churches in the Cape are all entirely or in part supported by the government. There are numerous missionary schools; and Bell's, Lancasterian, and other free schools in each district, which, in 1836, were attended by 1559 pupils, and received the support of the government to the amount of £1465. A joint-stock institution, entitled the "South African College," with five professors, was established at Cape Town in 1829.

The **Military Force** consists of three regts. of infantry, the head-quarters of two being at Cape Town, and of the other at Graham's Town; a detachment of royal artillery, a party of the royal engineers, and a regiment of mounted riflemen, termed the Cape Cavalry, the privates and non-commissioned officers of which are principally Hottentots.

The naval force is under the command of a rear-admiral, with authority along the E. and W. coasts of Africa, and the Mauritius and St. Helena.

The possession of this colony is important from its being, as it were, the key of the Indian ocean, and forming a depot, whence ships and troops may be despatched with facility and expedition to most parts in S. India, the E. Archipelago, and Australia. It is probable, too, that in time it may become, intrinsically, a valuable colony: though, from the limited extent of its fertile land, and the other disadvantages attending it, a rapid progress need not be looked for. The average number of emigrants leaving the U. Kingdom for the Cape of Good Hope, during the six years ending with 1837, has been 395 a year.

**History.**—In 1690, two English E. India commanders, by a proclamation dated from Baldeha bay, took possession of the Cape in the name of Great Britain; but no settlement was subsequently established by the English; and, in 1659, the Cape promontory was colonized by the Dutch, who afterward made settlements in Baldeha bay and elsewhere, and disregarding, like other colonizing adventurers, the rights of the original inhabitants, gradually extended their encroachments, till their territory reached nearly to the boundaries of that of the British territory at present. In 1795, the English took possession of the Cape; but at the peace of Amiens, in 1800, restored it to its former masters. In 1806, it was again taken by the English, to whom it was finally ceded in 1815.

**CAPE TOWN**, a sea-port town of S. Africa, the cap. of a small distr. and of the above described British territory, on its S.W. coast, S. shore of Table bay, at the foot of Table mountain, about 32 m. N. from the cape of Good Hope; lat. 33° 55' 55" S., long. 18° 31' E. Pop. (1836, including its distr.) 19,743, of whom 14,041 were whites, and 5702 negro apprentices. It is regularly laid out, and contains several

## CAPO D'ISTRIA.

good squares; its streets, which are straight and wide, cross each other at right angles, many of them being watered by canals, and planted on either side with trees, in the Dutch fashion. Houses, mostly of brick or red granite, "are flat-roofed, and chiefly white, with green windows; they are spacious and convenient, having an elevated terrace, here called a stock, in front, and small gardens behind, usually with a treillage clothed with vines." (*Colebrooke*.) Upon the shore, at the E. extremity of the town, is the castle, a pentagonal fortress of considerable strength, containing some public offices, barracks, &c., and having outworks, which command both the bay and the roads to the country. On the W. side of the town, Table bay is defended by four batteries, placed round and on the hill called the Lion's Rump; on its E. side, the town is protected by fortified lines of defence.

The principal public buildings are the government-house, with extensive gardens, the burgher senate-house, barracks, commercial exchange, custom-house, town and distr. jail, military depot, tax office, English, Dutch, Lutheran, and Presbyterian churches, E. Cath., Independent Wesleyan, and missionary chapels, Somerset Hospital, and two others; the theatre, Freemasons' Lodge, South African College, police office, &c. Cape Town is the seat of the supreme court of justice for the colony, the Vice-Admiralty court, a court for the recovery of small debts, a government bank, called the Lombard Discount Bank; and contains a savings' bank, a public library, four public free schools, and many literary, scientific, religious, and benevolent associations. The town and distr. contain several water-mills, tanneries, hat, candle, snuff, and soap factories, an iron foundry, breweries, distilleries, sawing and steam-mills, &c. It is plentifully supplied with good water.

Table bay is capable of containing any number of ships, and forms a safe and, on the whole, good harbour, except during the months of June, July, and August, when it is exposed to a heavy swell from the W. A wooden jetty projects for half a furlong into the bay from the E. end of the town, near the castle, alongside of which ships discharge or take in cargoes. Ships that only take in water or refreshments lie in the outer anchorage. A light-house, furnished with double lights, stands on the shore, near the W. extremity of the bay, about 3 m. N.W. the town. In the year ending Jan. 5, 1837, 331 British ships, of the burden of 36,368 tons, and 67 foreign ships, burden 20,604 tons, entered; and 330 British, and 66 foreign ships cleared from the port. The value of the imports in the same year from Great Britain and her colonies amounted to £756,538, and those from foreign countries, chiefly from the port of Boston (U. S.), and France, to £24,147. The amount of the exports to various countries of colonial and non-colonial goods, in British bottoms, in the same year, was as follows: Great Britain, £315,477; Madras and Calcutta, £2983; New South Wales, £24,010; St. Helena, £17,061; Mauritius, £44,150; other countries, £7808; total, £318,414. And in foreign bottoms: to Boston (U. S.), £16,115; other ports and countries, £1670. Making the total exports £338,199.

British residents in India frequently resort to the Cape for their health; and the town has generally the appearance of bustle and gaiety; balls and the theatre are the favourite amusements; but "mud is here a passion with the negro only." The environs of the Cape are very picturesque, and between it and the mountains which surround it many handsome private gardens have been laid out.

Cape Town was founded by the Dutch in 1650, and remained subject to them until taken by the British in 1795. It was restored by the treaty of Amiens, but, being again captured by the British in 1806, was finally ceded to us with the rest of the colony in 1815. (*Cape Almanac and Register*; Cape in 1829, &c.)

**CAPE VINCENT** p. v. and port of entry, Lyme t., Jefferson co., N. Y., 190 m. N.W. Albany, 442 W. Situated on the S. side of St. Lawrence river. It contains two churches, one Presbyterian and one Episcopal; five stores, two warehouses, one steam flouring-mill, one saw-mill, one furnace and axe-factory, one ship-yard, eighty dwellings, and about 500 inhabitants. It has a convenient steam-boat landing. A ferry crosses the river to Canada.

**CAPITANATA** (an. *Jgride*), a sea-port town of Illyria, gov. Trieste, circ. Istria, on a small island in the gulf of Trieste, connected with the main land by a causeway, 1-3 m. in length, 8 m. S. Trieste. Pop. 5000. It is fortified and defended by a citadel, and contains a cathedral, with about thirty other churches, and several handsome buildings; but the streets are narrow, and have a gloomy appearance. It is the seat of a bishopric, and has some superior schools, and a prison. Its inhab. manufacture salt, leather, and soap, and trade besides in wine, oil, and fish. The town is ill supplied with water, and not remarkably healthy. Its harbour is large, but little frequented except by

## CAPPOQUIN.

ishing boats. Capo d'Istria belonged, in the middle ages, alternately to the Venetians and the Genoese. (*Oesterr. Nat. Encyc.; Diet. Géographique, &c.*)

**CAPPOQUIN**, an ins. town of Ireland, co. Waterford, prov. Munster, on the Blackwater, 105 m. S.W. by S. Dublin. Pop. in 1821, 1836; in 1851, 2869. Pop. of the parish of Lismore, in which it is situated, in 1834, 15,838, of whom 494 were of the Established church, 45 Protestant Dissenters, and 15,399 R. Catholics. The town, which was a place of some celebrity in the wars of 1641, is finely situated on the N. bank of the river, over which it has a wooden bridge. The public buildings are, a church, a Roman Catholic chapel, and a school-house. Petty sessions are held every alternate week, and a party of the constabulary is stationed here. At Mount Mellory, near the town, is an abbey of Trappists, who lately removed thither from France. Fairs are held on 17th March, 31st May, 3th July, 30th September, and 29th October. Post-office revenues in 1850, £249; in 1856, £362. The mail-coach from Waterford to Cork passes through the town, and a car, carrying an average of three passengers each trip, plies between it and Lismore. The tide flows up the Blackwater to this place; but the navigation to Lismore is chiefly by a canal four miles long. (*Smith's Waterford; Railway Rep.*)

**CAPRI** (an. *Capreae*), a small island belonging to Naples, on the S. side of the entrance to the gulf of Naples, about 4 m. W. Cape Capri (an. *Provetorianus Minervae*). Pop. about 3000. It is about 10 m. in circ., and is mostly surrounded by lofty perpendicular cliffs. It principally consists of two great masses of rugged, calcareous rocks; but though the larger portion of surface be wild and impracticable, it is in part very fertile; and these being cultivated with great industry, yield the finest crops, with the choicest grapes, olives, and other fruits. But the most valuable product of Capri is its stock—doves and quails, particularly the latter, which at certain seasons of the year are caught in vast numbers. Swaburne says that rows of nets are placed across every break in the woods, or chain in the rocks, to intercept the birds in their annual flights; and that the quantity taken is almost incredible.

Capri is famous, or rather, perhaps, infamous in history, for having been for about a year, the retreat of Tiberius, who is reported to have here abandoned himself to the most detestable debaucheries, while his proscriptions filled Rome with blood. The crafty tyrant was most probably led to select this spot for his favoured residence, as well from the difficulty of its access, as from the mildness and salubrity of the climate, and the unrivalled magnificence of the prospects which it affords. He is said to have built no fewer than 15 villas in different parts of the island, some close by the sea, and others in more elevated situations. (*Tacit. Annal. iv. § 67.*) After his death, these were destroyed by order of the senate; but the ruins of some of them still remain; and the sculptures found in these, and the medals that have been dug up, go far to establish the accuracy of what would otherwise appear to be the singularly exaggerated statements of Tacitus and Suetonius, as to the private life of the emperor.

There are two towns on the island, Anacapri, near its W. (see ANACAPRI), and Capri, the cap., on its S.E. shore. The latter, situated on the acclivity of a ridge, has about 1500 inhab., and a cathedral, and some other churches. (*Swaburne's Two Sicilies, ii. 1-4, 4to ed.; Cramer's Ancient Italy, ii. 182, &c.*)

**CAPUA** (an. *Capua* or *Capua*), a city of Naples, prov. Terra di Lavoro, cap. cant., on the left bank of the Volturno, in a fine plain, 18 m. N. Naples; lat. 41° 7' N., long. 13° 58' 30" E. Pop. 15,000, ex gr. It was fortified by Veuhban, has a strong citadel, and is reckoned one of the keys of the kingdom; for though far removed from the frontier, it is the only fortress that really covers the approach to Naples. Swaburne calls it a "neat little city;" but it is said by Simond to be "an ugly, dirty place, and noisy beyond all bearing;" and we suspect that the latter statement is nearer the mark than the former. It has three principal streets, two magnificent gates, two fine squares, and three public fountains. The principal public buildings are the cathedral, the caput of which is supported by eighteen antique columns, the Church of the Annunciation, the palace of the governor, the Hôtel de Ville, the barracks, and the theatre. It is the seat of an archbishopric; has no fewer than eighteen parish churches, several convents for both sexes, a royal college, a seminary, a military school, and four hospitals. A great fair is annually held on the 28th November.

The ancient Capua was situated about  $\frac{1}{2}$  m. from the modern city, which has nothing in common with the former, except that it was partly built out of its ruins. The remains of its amphitheatre, said to have been capable of containing 100,000 spectators, and of some of its tombs, &c., attest its ancient splendour and magnificence. The considerable town of Santa Maria di Capua occupies part of the

## CARBONDALE.

spacious enclosure of the old city. The amazing fertility of its territory, and the commercial spirit of its inhabitants, rendered Capua one of the largest and richest cities of ancient Italy. Its citizens warmly espoused the side of Hannibal, and that great general took up his winter quarters here after the campaign of Cannae. It has been said that this was a false step; that he ought to have marched direct from Cannae to Rome; and that his soldiers, confined by their residence in this luxurious city, henceforth lost their former superiority. But there seems to be little or no foundation for these statements. Hannibal, though victorious at Cannae, was so far from being able to attack Rome, that he was repulsed in an attempt upon Naples; and the fact that he maintained himself, without assistance from Capua, for a dozen years in Italy after he had watered in Rome, and defeated, during that period, several Roman armies, completely negatives the idea of his troops having been enervated. It was hardly, perhaps, necessary to say so much on such a point; the authority of Hannibal being of incomparably greater weight than that of those who have presumed to find fault with his proceedings. The old city was destroyed by the barbarians. (*Swaburne's Two Sicilies, ii. 490, 4to ed.; Simond, p. 203; Cramer's Ancient Italy, ii. 306; Montaigne, Grandeur et Décadence des Romains, cap. 4; Inguarerra, Roman Republic, cap. 5.*)

**CARACAS**, an island of Colombia, cap. of the repub. of Venezuela, prov. Caraca, in a mountainous valley nearly 9000 ft. above the level of the sea, 12 m. S.E. La Guayra; lat. 10° 30' N., long. 60° 53' W. Pop. previously to 1812, 4000; in 1834 only 25,000. This city is finely situated, in the enjoyment of a temperate and healthy though variable climate; but it is exposed to the attacks of earthquakes; it has the advantage of being nearly surrounded by the Guayra and several other rivulets, which supply many public and private fountains, and wash the streets. It is well and regularly built; the streets are sufficiently wide, paved, and cross each other at right angles; there are several squares, the principal of which, the Plaza Mayor, has the cathedral on the E., the University on the S., and the prison on the W. side; but is disguised by ranges of low shops collected in its centre, where the fruit, vegetables, and fish markets are held. Most of the public buildings are of a religious character; the cathedral is spacious but heavily built, and it is probably to this circumstance that its preservation was owing during the great earthquake of 1812. Previously to that year there were eight other churches, the handsomest of which, Alta Gracia, was built by people of colour; but this and the other churches, 9-10ths of the houses in the city, and between 9000 and 10,000 inhab. were totally destroyed by the terrible catastrophe that then happened. There are three convents, two austerities, and three hospitals; besides a theatre capable of holding, perhaps 1800 persons, the pit of which is not roofed. The houses in Caracas are at present inferior to what they were before the earthquake of 1812, at which period those of the upper classes were also very well furnished; they are now chiefly of sun-dried clay, or mud, the roofs tiled, and the walls whitewashed. La Guayra, which is the port of Caracas, is the chief trading town in Colombia; but its merchants are for the most part the agents of others in Caracas, and all negotiations are conducted in the capital. This city was founded by Diego Lozada in 1582, and under the Spanish government was the seat of the captain-general of Venezuela.

**CARAVACA**, a town of Spain, prov. Murcia, 42 m. W.N.W. Murcia, on a river, and at the foot of a mountain ridge both of the same name; lat. 31° 6' N., long. 10° 38' W. Pop. 12,458. It has four convents, three hospitals, a Jesuit college, &c. The remains of the ancient castle of Santa Cruz are on a height commanding the town. In a mountain on the W. is the cavern of Berquilla and its beautiful stalactites. The vicinity contains marbles of various colours, and produces grain, pulse, wine, oil, hemp, flax, exotics or Spanish rush, and pasture for sheep and goats.

**CARBONDALE**, p. v. Luzerne co. Pa., 35 m. N.E. Wilkesbarre, 169 m. N.N.E. Harrisburg, 264 W. Situated on the E. side of Lackawannock creek, which flows into Susquehanna river, though its communication is cut off by rail-road and canal to Delaware river, and thence to Hudson river. It has risen up suddenly by means of the coal trade. The coal mine here, one of the most extensive and best in the Lackawannock region, is situated in the front of a hill, and has been quarried in a continued line for 60 rods, presenting a front of good coal, 30 feet in thickness, besides several feet above of imperfect coal. The miners have followed the bed without removing the superincumbent materials, leaving pillars of coal to support the weight above. The coal is drawn up in wagons by several stationary steam engines to the summit level, 250 ft. above the mine, by several inclined planes. It thence descends by another railway, 16 miles, by several inclined planes, 912 feet to the canal at Homestead, whence it pro-

## CARCAJENTE.

seeds to Delaware r. by canal, and there joins the Delaware and Hudson canal, through which it is conveyed to Hudson r. at Roundout, opposite to Rhinebeck. The coal fields contain 3500 acres, and 119,407 tons of coal were raised in 1846, by 375 persons, employing a capital of \$160,000. The Delaware and Hudson Canal Co. mine and send to market from 180 to 300,000 tons of coal annually. Carbondale contains fourteen stores, one furnace, one brewery, three saw-mills; capital in manufactures, \$337,000, chiefly in the coal business; four schools, 190 scholars. Pop. 4333.

**CARCAJENTE**, a town of Spain, prov. Valencia, 7 m. N.N.E. San Felipe. Pop. 8300. It is in the centre of a large plain, planted with white mulberry trees, and intersected by canals. Its streets are spacious, and the comfortable appearance of the houses announces the prosperity of the place. Many Roman remains are found here. Its vicinity produces silk, wheat, maize, pulse, rice, abundance of oranges, pomegranates, and garden stuffs (*Miscane*).

**CARCASSONNE**, a city of France, dep. Aude, of which it is the cap., on the Aude, by which it is intersected, 97 m. S. of Paris; lat. 43° 15' 54" N., long. 90° 21' E. Pop. (ex. cant.) 14,931. It consists of two parts—the city, situated on a hill on the right bank of the river, and the new town, on a plain on its left bank, the communication between them being maintained by a bridge of 10 arches. The city, which is very ancient, is surrounded by double walls, and has an old castle; it is ill built and filthy, and is said to be at once an *cloaque* et un *labyrinth*. The new town is well built; has broad streets intersecting each other at right angles, a square shaded by magnificent plane trees, and numerous fountains. There is a fine promenade along the canal. The fortifications by which the new town was formerly surrounded have been demolished to make room for gardens and boulevards. Principal public buildings—cathedral, with a fine spire; the church of St. Lazarus in the city, formerly the cathedral; the episcopal palace, the hotel of the prefecture, the Hotel de Ville, the barracks, the theatre, &c. The halles or covered markets are worth notice. It is the seat of a bishopric; has tribunals of primary jurisdiction and commerce, a departmental college, a primary normal school, a diocesan seminary with 116 pupils, a secondary ecclesiastical school, a royal society of agriculture, a public library with 6000 vols., &c.: it has also a hospital and a workhouse. Carcassonne has long been famous for its manufacture of fine woollen cloth, patronised by Colbert: this, however, has much fallen off, though, exclusive of minor articles, it still furnishes annually about 30,000 pieces of cloth, of which about 94,000 are sold in France, and 6000 in the Levant. There are also fabrics of stockings, liness, and soap; with paper-works, distilleries, tanneries, nail-works, &c. Its commerce, which is very considerable, is greatly facilitated by the canal du Midi, a branch from which comes to the town, and serves it as a port.

Carcassonne is very ancient, having been of considerable importance in the days of Caesar. It fell successively into the hands of the Visigoths and Saracens, and suffered much during the wars of the Albigenians. Its last conquest it to France in 1247. (*Hug. art. Aude, Dict. Geog.*)

**CARDIFF**, or **CAERDIFF**, a parl. bor. and sea-port of S. Wales, cap. co. Glamorgan, on the E. bank of the Taaf, about 14 m. above its embouchure in the estuary of the Severn, 5 m. W. Bristol, and 51 m. S. by E. Merthyr Tydvil. It has increased very rapidly, the pop. in 1801 having been only 1870, while in 1831 it was 6187. The two principal streets, at right angles to each other, are well built; but behind these there are several courts, alleys, and lanes of very inferior houses; and some new streets, mostly occupied by Irish labourers, are of the same description. The castle, on the N. side of the town, is of great antiquity; it is in excellent repair, and is partly occupied by its noble proprietor, the Marquis of Bute. Besides the church of St. John, which has a lofty tower, there are places of worship for Baptists, Methodists, Independents, &c. There is here, also, a co. jail, a guildhall, where the amezes are held, a theatre, a bridge over the Taaf, of five arches, and numerous schools and charities. Cardiff has become a place of very considerable trade, being, in fact, the port of Merthyr Tydvil, and of the principal mining district of S. Wales. The exports of iron amount to about 155,000 tons a year, and those of coal to about 850,000 tons, exclusive of corn and other agricultural produce. The products of Merthyr are brought down to Cardiff by the Glamorganshire canal, which unites with the sea about one mile below the town. But as this canal was constructed about 40 years ago, its basins did not afford sufficient accommodation for the vastly increased traffic of the place. To obviate this inconvenience, the Marquis of Bute has constructed, at his own expense, a ship canal and docks a little below the town. These works are on the most magnificent scale. The inner basin occupies a space of not less than 18 acres; and there

## CARDIGAN.

is an outer basin occupying a space of about 1½ acre, for the accommodation of ships and steamers of large burden. These great works are now (1839) almost complete. They will, no doubt, add greatly to the trade and importance of Cardiff; and, it is to be hoped, also to the fortune of their public-spirited proprietor. The limits of the parl. and municipal boundaries coincide, and comprise an extent of 1191 acres. It is joined with the boroughs of Cowbridge and Llantrisant, in sending one member to the H. of C. Previously to the Reform Act, the franchise was vested in the burgesses. Registered electors in 1837-38, 500. Markets, Wednesday and Saturday; fairs, June 22, Sept. 19, Nov. 30.

**CARDIGAN**, a marit. co. of S. Wales, stretching, in the form of a crescent, along the S.E. shore of Cardigan bay, having N. the counties of Merioneth and Montgomery, E. Radnor and Brecon, and S. Caernarvon and Pembrokeshire. Area 439,000 acres. Surface mountainous and hilly, interspersed, however, with several fine valleys, of which the principal are those of the Teify, or Teivy, Rheklod, and Ystwith, so called from the rivers. The soil along the shore of this county, particularly between Llanthysy and Llan Non, is a light sandy loam, and is, perhaps, the finest turnip and barley soil in the empire; it is, in fact, in some places alleged to have produced, with little or no manure, an uninterrupted succession of good, or at least tolerable barley crops, for a period reaching beyond the memory of man! (*Davies's S. Wales*, i. 163.) But this continued succession of corn crops has unhappily been tried in places where the soil is less capable of supporting such abusive treatment; and, altogether, agriculture is here at a very low ebb, being quite as far behind, if not more so, than in Caernarvon, which see. Estates of all sizes, from the smallest patches, which in some districts are very numerous, up to several thousands a year. Farms similarly divided. Average rent of land, in 1810, 4s. 8½d. an acre. Silver, lead, and copper have all been found in Cardiganshire; and at one time the silver mines were an object of great attention, and yielded a considerable produce; but for a lengthened period they have been wholly abandoned, and little or no attention is now paid to those of copper and lead. Slates are quarried in different parts of the county, and are largely exported from Cardigan and Aberystwyth. Manufactures unimportant. Principal towns, Cardigan, Aberystwyth, Tregaron, Lampeter, &c. At the last-mentioned place is a college, established in 1832, for the education of the Welsh clergymen. Cardiganshire contains five hundreds, and 65 parishes, and had, in 1831, 13,645 inhab. houses, 13,668 families, 64,780 inhab., of whom 30,263 were males and 33,919 females. It returns one mem. to the H. of C. for the co., and one for the bor. of Cardigan, Aberystwyth, Lampeter, and Adpar. Registered electors for the co., 1837-38, 1899. Sum paid for the relief of the poor only in 1837-38, 216,593. Annual value of real property in 1815, 2145,933.

**CARDIGAN**, a sea-port and parl. bor. of S. Wales, cap. co. Cardigan, on the N. bank of the Teivy, 5 m. from its embouchure in St. George's channel, 196 m. W.N.W. London. Pop. of old bor. (1831) 2795; but the present parl. borough, which includes the suburbs of Bridgend and Abbey Hamlet, had, in 1831, a pop. of very near 3000. The principal street is spacious, but the others are narrow and irregular, and the town contains a large proportion of small, mean tenements. Recently, however, not only the number of houses has been a good deal increased, but their quality has also been materially improved. (*Boundary Report*.) A stone bridge crosses the river, and connects the town with Bridgend, in Pembrokeshire; and there is another bridge across a deep inlet of the river on the W. side of the town. It has an ancient church, a free grammar school for 30 boys, a national, and another charity school, in which 130 children are educated, a handsome county hall, and a county jail. Two towers, the remains of its ancient castle, still exist on a commanding site above the river. Market, Saturday; annual fairs, Feb. 13th, April 8th, Sept. 6th, and Dec. 19th. The town has no manufacture of any consequence. A bar at the river's mouth is a great impediment to navigation, and makes the entrance to the harbour very dangerous in rough weather. In moderate weather, and at spring tides, vessels of from 300 to 400 tons may come up to the town; but the general trade is confined to vessels of from 15 to 100 tons. There belonged to the port, in 1837, 275 vessels, of the burden of 14,436 tons, manned by 1030 seamen; but of these ships a good many very rarely visit the port: the latter extends from below Fishguard on the S. to Aberavon on the N. Exports, slate, coal, and butter; imports, coal, culm, timber, and deals, limestone, and articles of general consumption.

Cardigan, conjointly with Aberystwyth, Lampeter, and Adpar, returns one mem. to the H. of C. Previously to the Reform Act, the franchise (in Cardigan) was vested in the

## CARDONA.

burghesses, who were created by being presented by a jury of burghesses at the court of the corporation. Registered electors in the four boroughs, in 1837-38, 930. The town is divided into two wards, and governed by a mayor, aldermen, and councillors.

**CARDONA**, a fortified town of Spain, Catalonia, in a rugged country on the Cardener, 55 m. N.W. Barcelona. Pop. 2062. Near it, on the S.W., is a mountain of solid rock-mass, which neither the erosion caused by the rains, nor the mining operations that have been continued for ages, seem to have power materially to diminish. (See **CATALUNYA**.) Being exceedingly hard, the rock is first blasted with gunpowder, and afterwards dug out with pick-axes: it is then ground, and laid up in the government store-houses. Vases, crucifixes, and other articles, are made out of it, which stand very well in the atmosphere of Spain, but soon liquefy in a moist climate. (*Mifane*, *Thomson*, l. 190.)

**CARENTAN**, a town of France, dep. La Manche, cap. cant., on the Tante, near its embouchure, 15 m. N.N.W. St. LA. Pop. 2801. It is situated in the middle of a marsh, and is indifferently fortified, and unhealthy. Small vessels come up to the town, which has some manufactures of lace and cotton.

**CARIACO**, a marit town of Venezuela, prov. Cumana, in a large plain near the head of the Gulf of the same name, 36 m. E.N.E. Cumana; lat. 10° 30' N., long. 63° 40' W. Pop. 7000. The town is small, and its climate is unhealthy; but it has some trade, and its vicinity is extensively cultivated with cotton, &c. (*Geog. Account of Colombia*.)

**CARIATI**, a sea-port town of Naples, prov. Calabria Ultra, cap. cant., on a high promontory washed by the Ionian sea, 18 m. S.E. Rossano. Pop. 8000. Though the seat of a bishopric, it is a desolate, wretched-looking place, surrounded by dilapidated walls, and having a castle in ruins. It has suffered much from the attacks of the Turks and Algerines, and more recently from the depredation of brigands, who, in 1806, made the cause of legitimacy subservient to their own predatory purposes. It is now, however, beginning to improve. The best menna of Calabria is found in its environs, and the rivers furnish fish in abundance. (*Crasen's Calabria*, p. 283.)

**CARIGNANO**, an inland town of N. Italy, kingdom of Sardinia, div. of Turin, cap. distr., on the left bank of the Po, which is here crossed by a wooden bridge, 11 m. S. Turin. Pop. 7000. It is surrounded by old walls, has a handsome square, a fine church, several convents, two hospitals and a college, and some remains of its ancient castle. A good deal of silk is produced in the neighbourhood, and there are several filatures in the town. Carignano is also celebrated for its confectionary. It has been several times taken; the French sacked it in 1544. (*Rampaldi*, *Diet. Geog.*, &c.)

**CARINI**, a town of Sicily, prov. Palermo, cap. cant., on the rivulet of the same name, near where it falls into the sea, 18 m. W.N.W. Palermo. Pop. (inc. cant.) 8684. It stands on a rising ground in a beautiful situation; is a respectable and clean town; and has a Gothic castle, with several churches, convents, and public buildings.

Near Carini are the ruins of the ancient *Hyccara*, a small but rich city, sacked by Nicias, who, on that occasion, captured Lais, the famous courtesan. (*Smyth's Sicily*, p. 66.)

**CARINTHIA** and **CARNIOLA** (Germ. *Karnten* and *Kraia*) **DUCHIES** or, two contiguous inland provinces of the Austrian empire; the former being included in the ancient *Noricum*, and the latter in *Illyricum*: they now respectively form the northern and central portions of the kingdom of Illyria as established in 1815, chiefly between lat. 45° 30' and 47° 10' N., and long. 13° 40' and 15° 40' E.; having N. Salzburg and Styria, E. Styria, S. Croatia and Eszria, and W. a part of the government of Trieste, the Lombardo-Venetian kingdom, and the Tyrol. Area. 6030 sq. m. (326-60 Germ.) Pop. (1836) 748,735, about 3-5ths of which belong to Carniola. These provs. comprise that part of Illyria forming the government of Laybach, and are divided into five circles, viz., Carinthia into Klagenfurt and Villach, or Lower and Upper Carinthia; and Carniola into those of Laybach, Adelsberg, and Neustadt. The whole country is mountainous: the great Alpine chain, which passes from the Tyrol through Styria into Hungary (see **AUSTRIA**, EMPIRE OF, p. 235), bounds Carinthia on the N., and its southern parallel chain, with its second ramification or the Julian and Carnic Alps, run through the W. and S. parts of Carniola, and on its N. separate it from Carinthia. The great Alpine chain consists in its whole extent of granite, gneiss, quartz, mica, and clay-slate, and other primary rocks, and contains many metallic ores: the Carnic and Julian Alps have chiefly a calcareous formation, and the latter abound with ravines, caverns, and grottoes. They are comparatively poor in metallic products. There are fertile valleys between the mountain ranges; but the country generally is sterile and bare, and does not yield corn enough for the consumption of its inhabitants, the de-

## CARINTHIA.

ficiency being made up by imports from Hungary. Carinthia is more abundantly watered than Carniola; the Drave intersects the former prov. In its whole length; the Save rises in the latter, and runs with a S.E. course through its N. and E. divisions; both greatly assist the traffic of these provinces. There are several moderate-sized lakes, as the Worthsee, Ossiacher-see, Muhlschlader-see, in the central part of Carinthia, and the Gailknechtsee and others in the W. and N.W. parts of Carniola, besides many small ones. The temperature depends chiefly upon the elevation; but, except in S. Carniola, the climate is generally cold, and unfavourable to agriculture. According to Becker (*Handel's Lexicon*, 1836), the surface of the conjoined provs. is thus divided: arable land, 678,993 Eng. acres; vineyards, 23,990 do.; meadows and gardens, 702,015 do.; commons, 1,985,629 do.; forests, 2,174,177 do.; total, 4,753,985 do.

The respective quantities of the chief agricultural products are stated to be: Wheat, 88,134 Eng. quarters; 174, 187,981 do.; barley, 126,893 do.; oats, 351,674 do.; wine, 3,350,601 Eng. imp. gall.

Wheat, barley, and wine, are principally produced in Carniola; rye and oats in Carinthia. Buckwheat, millet, hemp, and flax, are also grown, and the flax of Carniola is said to be the best in the empire. The extent of surface devoted to gardens and vineyards in Carinthia is very inferior to that so appropriated in Carniola, in the S. of which duchy the finest apricots, peaches, apples, pears, and plums are produced, besides a considerable quantity of good wine. On the other hand, in Carinthia, the pasture lands are extensive, and cattle are reared in much larger numbers than in Carniola, as will be seen by the following statement from Becker's *Handel's Lexicon*, 1836, and the *Nat. Encycl.*: Carinthia, 38,353 horses, 110,346 oxen, 165,845 cows, 227,671 sheep; Carniola, 14,893 horses, 48,369 oxen, 65,606 cows, 63,804 sheep. The horses, which are large and strong, are bred mostly in the valley of the Gail, and elsewhere, in Upper Carinthia. The sheep yield only inferior wool. Hogs and goats are plentiful. The Alps are inhabited by bears, which make great havoc among smaller animals. Chamois, deer, hares, foxes, &c., are, however, found, as well as a great variety of feathered game. The rivers and lakes, and especially the Drave and the Ossiachersee, abound with salmon, trout, and other superior fish. Bees are numerous, especially in S. Carniola; of late years the rearing of silk worms has increased. The principal wealth of Carinthia is in the produce of its mines. Iron is found throughout the whole extent of the primary Alpine chain, and is also procured in the Carnic Alps. Copper is mined in several places, but although the quantity of ore be inexhaustible, the hardness of the stone in which it is found, and other difficulties oppose serious obstacles to the attainment of any great supply of metal. The lead mine of the ore-mountain near Villach is the largest and most productive of that metal in the empire: it yields annually 35,000 centner of pure metal; other mines in the duchy afford yearly about 50,000 centner. Zinc, silver, and quicksilver, are likewise met with, and near Hüttenberg antimony is found in conjunction with iron. There are some iron and lead mines in Carniola, but those of the greatest importance in that prov. are the celebrated quicksilver mines of Idria, the richest in Europe. Coal, peat, marble, building stone, various clays, talc, asbestos, jasper, beryl, opal, emerald, garnets, are found in various parts of the country. The following shows the average annual produce of some of the mines in both provinces: bar iron, 571,925 cwt.; cast iron, 9942 cwt.; lead and lead ore, 60,823 cwt.; copper, 78 cwt.; coal, 49,614 cwt.

Manufacturing industry in Carinthia is mostly confined to working up its raw produce, and especially its metallic ores. The *Nat. Encyc.* a few years since enumerated 20 furnaces, and 61 forges, iron-plate and steel works. It gives 130,537 centner as the quantity of iron and steel wares annually made. Besides these manufactures, there were two of woollen, one of silk, and many of cotton fabrics, and a white-lace factory: most of these were in the capital. In Carniola the manufactures are more important, although still inferior in amount to those in many other Austrian provinces. Most of the rural male population follow linen weaving, in addition to their agricultural occupations; while their wives spin thread. Both these articles are generally coarse; but there are some fine linen and lace manufactures, and many of woollen cloth, flannel, worsted stockings, leather, &c. Iron manufactures, and others of wooden articles, also occupy many hands, and in Laybach there is a very extensive porcelain and earthenware factory. The principal exports from Carniola are steel wares, timber and wooden articles (to about 163,500 guilders), glass wares, linens (about 2600 pieces), felt hats, wax, wine, to Carinthia; flour to Trieste; quicksilver to Lower Austria, &c. Its imports are Hungarian and Italian wines, salt, oil, fruit, colonial produce, with coffee, sugar, various manufactured fabrics, tobacco, a large supply of harnessed cattle,

## CARIFE.

**Car.** The exports of home produce are not probably much below the value of its imports; but considerable wealth is derived to the province from the traffic through it, and conveyance of goods from Austria, Carinthia, Croatia, &c., to Trieste, and the other ports on the Adriatic. The town of Göttscheer, where a German colony is situated, has a remarkable commercial activity, and its goods are widely diffused over Hungary and the N.W. provinces of the empire, as well as in many other parts of Europe: Laybach, the cap., is the other chief place of trade. The exports of Carinthia are almost confined to its raw and manufactured mineral products, and cattle. Klagenfurt, the cap., and Villach, are its principal commercial towns. The inhab. of these provs. are mostly of the Slavonian race, denominated Wendes or Vandals; in Carinthia, however, those of German are to those of Slavonian stock as 175 to 85. The Drave formerly separated the two races. Carinthia has been always considered as a German prov. of the Austrian empire, and has enjoyed peculiar privileges. It has its own diet, consisting of four ranks—the upper clergy, nobility, knights, and the representatives of the royal burghs and market towns; but its internal administration is subordinate to the government authorities at Laybach. The high criminal and other judicial courts of Carinthia are at Klagenfurt. The Lutheran religion made considerable progress in this prov. in the 16th century, until checked by the government: there are now scarcely 20,000 Protestants, mostly in Upper Carinthia. The state assembly in Carinthia is in most respects similarly constituted with that of Styria, with which prov. it was formerly united. The whole pop. of Carinthia is Roman Catholic—a robust, contented, and frugal people. The Carinthians have, to a great extent, the character and disposition of Italians. They are said to be more inclined to indolence than their southern neighbours, and are often ignorant and superstitious. Both provinces formed parts of the empire of Charlemagne, and afterwards belonged to the dukes of Friuli. After passing through various hands, the houses of Austria became possessors of Carinthia in 1245, and of Carinthia in 1321. In 1809 these countries were annexed to the empire of Napoleon, and remained connected with it till 1814, when they were restored to Austria. (*Centr. Nat. Encyc. art. Kärnten und Krain; Diet. Géographique.*)

**CARIFA**, a town and valley in Venezuela, prov. Cumana, 40 m. S.E. that city. The town is the chief seat of the Chayma Indian missions. The valley is celebrated for a remarkable cavern in a limestone formation, at least 2000 ft. in depth, and for some distance 60 or 70 ft. high. It is inhabited by multitudes of birds, called guacharos, a species of *Cephalopogon*, the young of which are annually destroyed in great numbers by the Indians, for the sake of the fat with which the lining membrane of their abdomen is laden, and of which excellent oil is made. Humboldt visited this cavern. (See his *Personal Narrative*, vol. ii.)

**CARISBROOKE**, a par. and village of England, Isle of Wight, liberty W. Medina, situated by a rivulet, at the base of a conical hill, surmounted by its castle or fortress, 73 m. S.W. London. Area of par. 8680 acres: pop. do. (1831) 4713. Some portions of the fortress are very old; but it was repaired and greatly augmented in the reign of Elizabeth. The walls of the old fortress (a parallelogram enclosing an area of 1½ acre, with its keep in the centre) are comprised within the more modern fortifications, which enclose an area of about 20 acres. The latter have five bastions, and a deep moat; and are connected with a fine terrace, nearly 1 m. in length. The par. church stands on an acclivity opposite the castle: it is a Norman structure, originally attached to a Cistercian monastery, founded in the reign of the Conqueror; some remains of which exist at a farm-house on its site. The most celebrated event in the annals of Carisbrooke castle is the confinement of Charles I. for thirteen months within its walls, immediately previous to his being delivered up to the parliamentary forces. Subsequently, his children were also imprisoned in this castle; and his eldest daughter died in it, at the age of fifteen. It continues to be the residence and head-quarters of the governor of the Isle of Wight; and a considerable body of troops are usually stationed in it. There are many pleasant villas scattered over the parish; within which, also, is the general work-house of the island, whose inmates, in 1881, made an augmentation of 576 persons to the population.

**CARLEE**, a small village of Hindostan, prov. Auranzeb, 24 m. N.W. Poona, near which are some remarkable cave-temples, excavated in a spur from a chain of hills running E. and W.; the chief cavern is said to be 6000 ft. above the level of the sea, and faces due W. A little to the left, before the entrance, stands a large pillar, surmounted by three sculptured lions back to back. The temple is entered under a noble horse-shoe arch, through a small square doorway in a kind of portico screen, which in great part fills up the arch, and abounds with laboured workmanship. To one third of its height, it is covered with various figures

## CARLISLE.

in bas-relief; and one of these, in a dancing attitude, is exceedingly graceful: the ends of this screen are occupied to the same height with the figures of gigantic elephants, projecting in alto-relievo, and well carved. After entering the cave, which is 40 paces long by 14 broad, Mrs. Graham observes, "when we looked round, we almost fancied ourselves in a Gothic cathedral." Unlike the Buddhist cave-temples of Baug, Ellora, &c., the roof is arched, rising to an astonishing height, supported by twenty-one pillars along each side, and above these by ribs of oak, which are fitted by teeth into corresponding holes in the rock above. The pillars are mostly hexagonal, each with a bell-shaped capital, surmounted by two elephants with their trunks entwined, and each carrying one female and two male figures. On several of the columns there are inscriptions, which have recently been translated (see *Journal of the Asiatic Soc. of Bengal*, vol. iii.), and from one of them it would appear that this temple was constructed A.D. 176. The cave is semi-circular at its termination: opposite the entrance is a structure with a dome, on which is fixed a huge teak umbrella, an ornament common in the temples of Buddha; but no separate cells, opening from the main temple, have been noticed, though such have been supposed characteristic of Buddhist structures. (*Erskine in Bombay Trans.*, iii, 512, &c.; *Graham, Journal of a Resid. in India*, p. 63-65; *Mod. Trav.*, x., 269-272, &c.)

**CARLENTINI**, a town of Sicily, prov. Syracuse, 19 m. N.W. Syracuse. Pop. 4176. It was built by Charles V. for the head-quarters of the Sicilian army; but the design was never completed, and since the earthquake of 1693, by which it was partially destroyed, it has become a miserable place. (*Smith's Sicily*, p. 159.)

**CARLINGFORD**, a sea-port town of Ireland, co. Louth, on the S. side of Carlingford lough, 10 m. E. Dundalk. Pop. in 1831, 1318. Carlingford lough is 8 m. in length, by from 1 to 1½ m. wide, with deep water and secure anchorage, but being situated between lofty mountains, is liable to sudden squalls. The bar at the entrance has 8 ft. water at low-water springs, 17 ft. at ordinary high water, and 36 ft. at springs. This bay is well stocked with excellent oysters, the fishing of which employs most part of the pop. of Carlingford. It returned two mems. to the Irish parliament, but was disfranchised at the Union. (*Nimmo's Sailing Directions for the Irish Coasts*, &c.)

**CARLINVILLE**, p. v., cap. of Macoupin co., Ill., 39 m. S.S.W. Springfield, 811 V. Situated on a branch of Macoupin river, a tributary of Illinois river, on a beautiful prairie. It contains a court-house, jail, several stores, one school, 68 scholars. Pop. 337. A theological seminary, under the patronage of the Presbyterian Synod of Illinois, was established here in 1838, which has a library of 700 vols.

**CARLISLE**, a city of England, co. Cumberland, on a gentle eminence, in an extensive plain at the confluence of the Eden, Caldew, and Peterl, which nearly surround it; 900 m. N.N.W. London, and 98 m. N. by W. Manchester. Pop. in 1801, 10,221; 1821, 15,486; and 1841, 36,064. The great increase of pop., particularly since 1821, is attributed to the increase of manufactures, and the influx of Irishmen and Scotchmen to the mills and rail-roads.

The Eden is crossed by an elegant and expensive bridge, finished in 1817, consisting of five large and five smaller arches; the Caldew has two bridges, and the smaller stream of the Peterl one. The principal streets diverge from the market-place, an irregular area in the middle of the town: though not regularly arranged, several of them are well built, and they are generally well paved and lighted, and plentifully supplied with water.

Carlisle is the seat of a bishopric, founded by Henry I., and remodelled by Henry VIII. after the dissolution of the monasteries, with whose lands he largely endowed it. The ecclesiastical jurisdiction extends over ninety-three par., containing the whole of Westmoreland and great part of Cumberland. The revenues of the see amounted, at an average of the three years ending with 1831, to £2213 a year.

The cathedral, having been repaired at different periods, exhibits various kinds of architecture; the E. window is said to be the finest specimen of the kind in England. The dignitaries, beside the bishop, are a dean, four prebendaries, and eight minor canons. The only part of the nave of the cathedral which remains forms the parochial church of St. Mary: that of St. Outhbert is a plain building, erected in 1778. There are two chapels of ease, both built in 1828—Trinity church, in the perpendicular Gothic style, in the suburb of Caldew-gate; and Christ church, in the early English style, in the suburb of Bomber-gate: each has accommodation for 3000 persons. The other places of worship are those of Presbyterians, Independents, two denominations of Methodists, Baptists, R. Catholics, and the Society of Friends. The grammar school was founded by Henry VIII. There are also Lancasterian and national schools. St. Patrick's school for educating 400 children of all denominations, a school of industry for re-

## CARLISLE.

males, &c. The county infirmary is in the town, and it has a fever hospital, a dispensary, &c. An academy for the encouragement of the fine arts was formed in 1835, a mechanics' institute in 1834, and a literary and philosophical institution in 1835: a handsome building, erected in 1830, for the accommodation of these societies, contains a museum and a theatre for lectures. There are two subscription libraries and newsrooms—one of the latter a chaste new building opened in 1831—and two weekly newspapers. The environs afford many delightful rides and walks. Races take place in autumn, at the *Swiffa*, a fine course on the S. bank of the Eden. The ancient castle, which stands on an eminence over the river, consists of an outward and inner wall, each of great thickness, and of a great square tower, constructed according to the ancient mode of defence. The ramparts command a very fine view. It has a governor, lieutenant-governor, &c., but is now used only as an infantry barrack and armory.

The city, technically so called, which formed the ancient bor. of Carlisle, is confined within limits which, in 1831, had only a pop. of 6356. It is a corporation by prescription; and obtained confirmations and extensions of its privileges by a series of eighteen charters, terminating with 13 Charles I., which was the governing charter. Under the new municipal act, the government is vested in a mayor, ten aldermen, and thirty common-councilmen, chosen annually by the rate-payers, whose number in 1836 was 968. There are eight guilds or fraternities of trades; admission into any one of which is by birth or apprenticeship only; and admission into one of the guilds is a preliminary requisite to the freedom of the city. Carlisle has sent two mem. to the H. of C. since the reign of Edward I.; the right of election, previously to the Reform Act, being in resident and non-resident freemen. The boundaries of the par. bor. were extended by the Boundary Act, so as to embrace not merely the city, but also the suburbs and a considerable contiguous circle. Pop. of par. bor. in 1831, 31,073; houses taxed at £10 and upwards, 867. Registered electors in 1837-38, 1013. The election of members for the E. division of the co. is also held here.

The court of the mayor and the bailiffs sits weekly, and holds personal pleas to any amount. Petty sessions are held on Wednesdays and Saturdays. The police consists, besides a constable for each township, of a superintendent, three day men, and twenty night men. There is no city jail, prisoners being confined in the county jail, an extensive and well-constructed building at the S. entrance to the city, or in the house of correction: a subterraneous passage, through which the prisoners are brought to trial, connects both these places of confinement with the county court-house. The county assizes, and the quarter sessions, at Easter and Midsummer, are held in this building, which was erected in 1810 on the site of the ancient citadel: it has two magnificent towers. The revenues of the corporation, amounting to about £1800 a year, arise from tolls, rents, and shares in public companies.

The buildings for corporate and other public purposes connected with the government of the place, are the town-hall, guildhall, and council-chamber. Cotton is the staple manufacture of the town, eight mills for the spinning of cotton, employing 1688 hands, having been at work here in 1830, exclusive of factories for weaving checks, gingham, and other fabrics, both in the city and along the Ouldeu. One of the mills recently erected has a chimney 305 ft. high! The hating trade is also extensive; and there are several dye-works, print-works, iron-foundries, tanneries, and breweries. Coal for manufacturing and domestic purposes is brought from Gilsland, 12 m. distant; and from other collieries, about 30 m. distant. A considerable part of the manufacturing pop. of Carlisle used to be in a very depressed condition; but, on the whole, the city is thriving, and its general aspect is good. The situation of the city, on the great N.W. road from Lancashire to Glasgow and Edinburgh, tends to increase its trade, which is still further promoted by the railway constructed between it and Newcastle. The navigation of the Eden being greatly impeded by shoals, a canal suitable for vessels of 100 tons' burden, has been cut to Bowness, on the Solway Frith, 11 m. distant. The trade with Liverpool and Ireland is carried on by steamers.

The following table shows the amount of tonnage for a series of years, distinguishing the amount inwards and outwards; also that of the foreign from the coasting trade:

| Year. | Coasting. |           | Foreign. |           |
|-------|-----------|-----------|----------|-----------|
|       | Inwards.  | Outwards. | Inwards. | Outwards. |
| 1823  | Tonn.     | Tonn.     | Tonn.    | Tonn.     |
| 1824  | 14,328    | 7,808     | 2129     | 719       |
| 1825  | 16,776    | 18,709    | 2197     | 341       |
| 1827  | 27,673    | 24,521    | 2314     | 547       |
| 1829  | 25,225    | 28,976    | 2846     | 385       |
| 1831  | 24,025    | 25,074    | 3040     |           |
| 1832  | 25,220    | 25,222    | 2789     | 741       |

Markets are held on Wednesday and Saturday; this on the Saturdays before Whittrundle and Martinmas; also a statute-fair on the 28th Aug. and 14 days after, during the continuance of which no attachment from the civil courts can be executed; and another on 19th Sept. The banks are, the Carlisle City and District Bank, the Carlisle and Cumberland Banking Co., a branch of the Cumberland Union Banking Co., the house of Monkhouse, Head, and Co., and a savings' bank. The village of Stanwix, N. of the Eden, may be considered as a suburb of Carlisle, though not included within its corporate or parliamentary limits. Its ancient church, dedicated to St. Michael, is built on the site and out of the ruins of the Roman station of *Convergata*, which stood along the rampart of the wall of Severus. Pop. of the village in 1831, 545. (*Hist. and Antiq. of Carlisle*; *Municipal Reports*; *Sessional Papers*; *Dugdale's Cathedral*.)

Carlisle was a Roman station, under the name of *Leguallum*, as is attested by vestiges of the Roman wall, and by many Roman relics discovered here at various times. The Saxons called it *Caer Lull*, whence its present name is derived. William the Conqueror built the castle; and during the wars between England and Scotland, Carlisle was a frequent object of attack. It surrendered, without making any opposition, to the Freeman Charles Edward, in 1745; but on his being compelled to evacuate it, on the approach of the British forces, he left behind him a small garrison, which surrendered at discretion: the officers of this garrison were subsequently executed at London as traitors, and their heads exposed on the gates and walls of Carlisle.

CARLISLE, p. t., Middleton co., Man., 19 m. N.W. Boston, 456 W.; bounded E. by Concorde river; incorporated in 1805. It contains two churches, one Congregational and one Unitarian; one store, one grist-mill, two saw-mills, five schools, 204 scholars. Pop. 556.

CARLISLE, p. t., Schoharie co., N. Y., 36 m. W. by N. Albany, 8 m. N.W. Schoharie. It contains two stores, one fulling-mill, one grist-mill, six saw-mills, two tanneries, eleven schools, 527 scholars. Pop. 1880. The village, on the Cherry Valley turnpike, contains two stores and twenty dwellings.

CARLISLE, p. v., capital of Cumberland co., Pa., 15 m. W. by S. Harrisburg, 103 W. Situated in 40° 19' N. lat., and 77° 10' W. long. Founded in 1751, and in 1753 contained five log houses; but being a border town and a military post, it increased rapidly. It is regularly laid out with streets crossing each other at right angles, which are generally paved; and it is neatly and substantially built, the houses being chiefly of brick or stone. It contains a court-house, jail, the county office, which are fire-proof; a market-house, a banking-house, a young ladies' seminary, nine churches, two Presbyterians, one Episcopal, one German Reformed, one Lutheran, one Methodist, one Associate Presbyterian, one Roman Catholic, and one African; forty-two stores, six tanneries, three distilleries, two breweries, three printing-offices, one brewery, three weekly newspapers, one academy, 90 students, sixteen schools, 655 scholars, 700 dwellings, and 4351 inhabitants. The United States barracks, half a mile from that village, were built in 1777, chiefly by the labour of the Hessians captured at Trenton. They are sufficient for a garrison of 3000 men; and the U. S. government have recently established a cavalry school here.

Carlisle is the seat of Dickinson college, founded in 1783, under the direction of the Presbyterians, but some time since, it went into the hands of the Methodists, and is flourishing. The buildings are on elevated ground in the W. part of the village. The principal edifice is built of limestone, 150 feet long and four stories high, surmounted by a handsome cupola, which commands a beautiful and extensive view of the surrounding country, embracing North mountains, for a distance of eighty miles. Another building has been erected, 100 feet long and four stories high. It has a president and seven professors or other instructors; has had 561 alumni, of whom 140 have been ministers of the Gospel; has 100 students, and 10,000 volumes in its libraries. The commencement is on the second Thursday in July. It has an academical department.

The Cumberland valley rail-road, extending from Harrisburg to Chambersburg, passes through the borough. In the vicinity are several sulphur springs, and a remarkable cave, with several large apartments.

CARLISLE, p. v., capital of Nicholas co., Ky., 53 m. E.N.E. Frankfort, 496 W. It contains a court-house and other county buildings, several stores, two schools, 50 scholars. Pop. 256.

CARLISLE, t., Lorain co., O., 34 m. E. Elvira. Drained by Black river and its branches, which afford water-power. It contains two grist-mills, five saw-mills, six schools, 379 scholars. Pop. 1004. On the E. branch of Black river is a village, which contains one store, one grist-mill, one saw-mill, and about thirty dwellings.

## CARLOFORTE.

**CARLOFORTE**, a sea-port of the Sardinian States, on the small island of San Pietro, near the S.W. coast of Sardinia: lat.  $39^{\circ} 8' 29''$  N., long.  $8^{\circ} 17' 29''$  E. Pop. 2630. The streets are in "tolerable" order, and it is surrounded by a wall, and has some fortifications. It is moderately healthy. The inhabitants are engaged in the anchovy and coral fisheries, and in the manufacture of salt. (*Savoy's Sardinia*, p. 319.)

**CARLOTA** (LA), a town of Spain, prov. Cordova, cap. dep. of its own name, 17 m. S. W. Cordova. Pop. 302. It is one of the chief seats of the foreign colonists planted in Andalusia in 1768, in the view of peopling and fertilizing the Sierra Morena. It is a pretty town, and the inhabitants, who are clean and thriving, have some manufactures of hempen and linen cloths. (*Anglia's Spain* in 1839, II., 43; *Milano*.)

**CARLOW**, or **CATHERLOUGH**, an lai. co. of Ireland, prov. Leinster, lying mostly on the E. side of the Barrow, having S. and E. Wexford and Wicklow, N. the latter and Kildare, and W. Queen's co. and Kilkenny. Area, 219,563 acres, of which 23,000 are unimproved mountain and bog. Surface on the S. border mountainous, but elsewhere gently undulating. Besides the Barrow, by which it is partly intersected and partly bounded, it is watered by the Slaney. Soil in the uplands a light gravel; in the lowlands a fertile loam. This is one of the principal dairy co. in Ireland; and the stock of cows has lately been a good deal meliorated by the introduction of Ayrshire, and other improved breeds from Great Britain. Estates middle sized; and that minute division of land among the occupiers, so destructive of the best interests of the country, has prevailed less here than in most other parts of Ireland. Agriculture is, in consequence, in a much more advanced state here than in many other Irish co.; there is a considerable breadth of land under green crop; and improved farming implements are pretty generally introduced. Average rent of land, 15s. an acre. Manufactures and minerals of no importance. Carlow is divided into five baronies and fifty parishes, and sends three mems. to the H. of C., viz., two for the co., and one for the bar. of Carlow. Registered electors for the co. in 1837-38, 1698. In 1831 Carlow had 13,375 inhabited houses; 14,609 families; and 81,936 inhab., of whom 40,149 were males, and 41,539 females.

**CARLOW**, a pari. bor., the principal town of the above co., and the place where the assizes are held, on the Barrow, where it is joined by the Burra, 45 m. S.W. Dublin. The town, properly so called, lies wholly on the left bank of the Barrow; but it is connected by a bridge with the suburb of Graigue, on the opposite side of the river in Queen's co.; this suburb has been included in the pari. bor., which extends over a space of 466 acres, and had, in 1851, a pop. of 16,714. It is a well-built, thriving town. It has an old castle, now in ruins, but once a place of considerable strength and importance; a parish church with a spire; a handsome R. Cath. cathedral church, opened in 1834; a R. Cath. college, and convent; barracks; a lunatic district asylum for the co. of Carlow, Wicklow, Wexford, and Kilkenny, erected in 1830 at a cost of nearly 236,000; an elegant new court-house; a co. jail; co. infirmary, &c. Besides the R. Cath. college, fitted for the accommodation of 800 students, there is a diocesan school, and numerous charity-schools both for Protestants and Catholics. There are also several charitable institutions.

Being situated on a navigable river, communicating with Wexford on the one hand, and with Dublin, by means of the Grand Canal, on the other, Carlow has a very considerable trade. It is a great mart for the agricultural produce, particularly the corn and butter, of the surrounding country, great quantities of which are sent down the river to water and for exportation. It has also some large flour-mills, and an extensive maling business; and furnishes considerable supplies both of flour and meat to Dublin. It has 2 breweries and a distillery; and paid duty in 1839, on 89,577 bushels of malt. Postage, in 1839, £1261; in 1838, £1441. The Bank of Ireland has opened a branch here.

Carlow is a place of great antiquity, and has various characters: by the last of these, in 1671, the bor. consists of a corporation, elected annually, and 19 self-elected free burgesses. From 1813 down to the union with Great Britain it sent 2 members to the Irish H. of C., and since the union it has sent one mem. to the Imperial H. of C., viz., till the passing of the Reform Act, was returned by the corporation and burgesses. Registered electors in 1837-38, 419. (*Railway Report*; *Borough Report*, &c.)

**CARLOWITZ**, a town of the Austrian states, Slavonia, within the military frontier, circ. Peterwaradin, on the right bank of the Danube, 4 m. S.E. Peterwaradin. Pop. 5,830, mostly of Serbian descent. Most part of its houses are mere huts, and it is only in part paved. It contains a Greek cathedral, two other Greek churches, a R. Catholic church, a hospital, seminaries for the Greek and Catholic clergy, a Greek lyceum, and a Catholic high-school. The subordi-

## CARLSRONA.

nate jurisdiction of the town is in the hands of an equal number of R. Cath. and Greek magistrates. It is the seat of a Greek archbishop, the only one belonging to that church in the Austrian Empire, to whom all the Austro-Greek clergy are subordinate. (*Oester. Nat. Encyclop.*)

**CARLSBAD**, a town of Bohemia, famous for its hot springs, on the Teplé, near the Eger, 73 m. W.N.W. Prague. Stationary pop. about 5700. It lies in a low narrow valley, surrounded by hills, covered with every variety of foliage, and affording the most extensive and varied prospects. The town consists principally of lodging-houses, hotels, &c. for the accommodation of visitors to the waters; but it has some good shops and private houses, with a theatre, assembly and reading rooms, a hospital, &c. The Sprudel, the principal spring, is the hottest in Europe; its temperature being about  $50^{\circ}$  Ream., or  $163^{\circ}$  Fah. The expansive force of the steam below forces up the water in jets to a considerable height, and to guard against the danger that has sometimes arisen from the obstruction of the apertures by which the water and vapour escape, it has been covered over by a solid bed of masonry. There are several other springs: that of Muhlbrennen, which is the most commonly drank, has a temperature of  $135^{\circ}$  Fah. Baths of all sorts are fitted up with every accommodation. The waters are efficacious in a great variety of complaints, but chiefly in those of the liver and kidneys. The walks and promenades in the neighbourhood of the town have a great deal of romantic beauty and interest. The number of visitors in the season varies from 4,000 to 5,000.

This, which is the most fashionable and aristocratic watering place in Europe, is of comparatively recent origin.

The springs are said to have been discovered in 1370, by the Emperor Charles IV., who, when hunting in the vicinity, was attracted to the spot by the cries of a hound that had fallen into one of the springs. The town belongs to the emperor. A congress was held here in 1819. (*Murray's Hand-Book for S. Germany*; *Spencer's Germany and the Germans*, I. 382.)

**CARLSBURG**, or **KARLSBURG**, a royal town of Transylvania, co. Unter-Albena, on the N. bank of the Maros, 28 m. N.W. Hermannstadt; lat.  $46^{\circ} 8' 31''$  N., long.  $23^{\circ} 25' 19''$  E. Pop. 11,500. It consists of the Upper town or citadel, built on a hill, and the Lower town, situated beneath it. The citadel is surrounded by walls with seven bastions, and its principal gate is adorned with some fine sculptures. The town has a handsome R. Cath. church, containing the tombs and monuments of John Hunyadi, and several royal and other personages; the fine residence of the bishops of Transylvania, a canonical college, containing the provincial archives, royal mint, observatory with a fine collection of apparatus, several libraries and scientific collections, an arsenal, barracks, &c. There are also a hospital, an ecclesiastical lyceum, college, and primary school. From the Lower town a bridge 310 paces in length passes over the Maros. It is worthy of remark that the Jews, who are naturalized in no other part of Transylvania, enjoy in Carlsburg the full rights of citizenship, under the protection of the bishop. (*Oester. Nat. Encyclop.*)

**CARLSBORONA**, or **CARLSKRONA**, a sea-port town of Sweden, on the Baltic, cap. prefecture Bleking; lat.  $56^{\circ} 10' 9''$  N., long.  $15^{\circ} 33' 29''$  E. Pop. 11,500. The greater part of the town is built on the small rocky island of Trö-o, and the rest on some adjoining islets; the communication with the main land being maintained, partly by a mound, and partly by a wooden bridge. The harbour is large and safe, with water sufficient to float the largest ships. It has 3 entrances, but the only one practicable for large vessels is on the E. side of the town, and is defended by two strong forts. The dry docks, however, have been formed at a vast expense; they are of great extent, and have been cut out of the solid granite rock. It is the principal, or rather, the only, station of the Swedish fleet. The town is well built, consisting partly of brick, but principally of wooden houses. The arsenal, and other buildings connected with the docks and shipping, are on a large scale; and there are also two handsome churches, a host for the prefect, a hospital, a lunatic, &c. There is a most delicious spring of good water; that which is obtained from the wells sunk in the town is brackish, so that when rain-water falls, recourse has to be had to springs distant about 3 m. There are some manufactures of canvas and linen, with anchor-forges, tanneries, &c. The trade of the town is but inconsiderable; the exports consist principally of iron, copper, steel, potash, tar, pitch, &c.

Carlskröna derives its name and origin from Charles XI., who, in 1680, conferred on it considerable privileges, and removed the fleet thither from Stockholm. It has since continued to be the principal station of the Swedish fleet; but the Admiralty, which had been long seated here, was, in 1776, transferred to Stockholm. In 1780, it suffered severely from a fire. (*Cox's Travels in the North of Europe*, IV., 222.)

## CARLSHAMN.

**CARLSHAMN**, a sea-port town of Sweden, prov. Bleking, cap. herad., on the Baltic, at the mouth of the Nie, 55 m. W. Carlscrona; lat. 56° 13' 40" N., long. 14° 51' E. Pop. 4150. It has two churches, a hospital, with considerable manufactures of canvass, woollens, and tobacco, and building-yards. The harbour is small, but safe. The exports consist of iron, timber, potash, pitch, and tar, tobacco, &c. Being built principally of wood, it has sometimes suffered severely from fires.

**CARLSRUHE** (*Charles's Rest*), a city of Germany, cap. of the grand duchy of Baden, circ. Middle Rhine, residence of the grand duke, and seat of the administration and principal state authorities, in the fine plain of the Heerswald (Bisg's Forest), which surrounds it on the N. and W.; 4 m. E. the Rhine, 37 m. W.N.W. Stuttgart, 37 m. S. by W. Darmstadt, and 42 m. N.E. Strasburg. Lat. 49° 58' N., long. 8° 23' E. Pop. 20,500 (*Borghaus*), more than two thirds of whom are Protestants. It is built in the form of an outspread fan, or rather wheel, round the grand-ducal palace, from which, as a centre, 33 public routes radiate, 11 of which, forming the principal streets, have been built on both sides; several of these streets stretch into the forest. The high, or long street, runs from E. to W., intersecting those above added to, and dividing the city into a N. and S. portion. Carlsruhe is in part walled, and has seven gates. It is a handsome, but rather dull town. Streets broad, well paved, furnished with foot-paths, and well lighted at night. Houses built in a great variety of styles, but those of wood are daily giving place to brick edifices. There are also public squares, and, facing the palace, at the point of union of the principal streets, is a semi-circular range of elegant buildings, comprising the government offices, and others attached to the palace. The grand-ducal residence, a plain building, composed of a centre and two wings, contains the *Blasphem* (lead-tower), from the summit of which there is an extensive prospect; a cabinet of coins and natural objects; a library of 80,000 vols.; and the church attended by the court. Towards the E. extend the large gardens and park belonging to the palace, which are thrown open to the public. There are several other places belonging to the nobility deserving of notice, and ninety public buildings, including four Protestant and Catholic churches, a synagogue, town-hall, in which both chambers of the senate meet; a museum, the grand-ducal, and another theatre, a new mint, the post-office, infantry and cavalry barracks, arsenal, cannon-foundry, and several hospitals. It may be worth mentioning, that Struats, the fashionable London tailor, is the founder of one of these hospitals, which he endowed with 100,000 florins: in return for his generosity he has been created a baron. The city is supplied with water by an aqueduct from Durach, distant 2½ m. E. by S.; it is adorned by several public fountains, and in the centre of the principal square is a stone pyramid, erected to the memory of the founder of the city. Its chief establishments for education are a lyceum, polytechnic, military, medical, and veterinary schools, and academies of architecture, painting, &c. It possesses an excellent botanic garden, a gallery of paintings, and a society of arts, under the patronage of the grand duke. Carlsruhe is not a place of considerable trade. It has some manufactures of silks, carpets, woollens, stuff, chemical products, furniture, carriages, clocks, jewellery, and articles of luxury, but the prosperity of its inhabitants mainly depends on its being the seat of the court, and the residence of the principal officers of state. It is quite a modern city, and has risen around a hunting-seat built by Charles William, Margrave of Baden, in 1715. (*Borghaus, Allg. Lander und Volk*, 1838; *Cronbach, Lehrbuch der Geogr.*, p. 460, 491; *Murray's Handbook*, &c.)

**CARLSTAD**, a town of Sweden, cap. prefecture of the same name, on the island of Tingvalla, at the mouth of the Klar, on the lake Weser; lat. 59° 16' N., long. 13° 39' E. Pop. 2600. It is built of wood on a regular plan; has a handsome cathedral, a gymnasium, an observatory, an agricultural society, a cabinet of natural history, and a tobacco manufacture; and is the seat of a bishopric, and the residence of the prefect. The opening of the Gotha canal has added considerably to its commerce. It exports copper and iron, corn, salt, timber, &c.

**CARLSTADT**, a royal free town of Austrian Croatia, co. Agram, cap. circ. of same name, at the confluence of the Korana and Dobra with the Kuipa, immediately beyond the limit of the military frontier, 32 m. S.W. Agram. Pop. inclusive of its suburb Dubovaca, 6300. It is well built, though mostly of wood; has a small fortress, originally intended to resist the incursions of the Turks, and which is surrounded by ramparts, trenches, and palisades; and contains a handsome parade, barracks, and arsenal. It has five Catholic churches, a Greek church, a gymnasium, superior and girls' schools, a civic and military hospital, &c., and is the residence of a Greek bishop. Considerable quantities of the liqueur called *resaglio* are produced here. Its trade

## CARNAC.

is unimportant, but its inhab. derive considerable profit from the conveyance of goods to the ports of the Adriatic. It was founded by the Archduke Charles, whose name it bears. (*Oesterr., Nat. Encyc.*)

**CARLTON**, p. t., Orleans co., N. Y., 258 m. W. by N. Albany, 401 W. Bounded N. by Lake Ontario. Drained by Oak Orchard creek, which flows N. to the lake. It contains one store, two fulling-mills, one woolen-factory, one flouring-mill, two grist-mills, twelve saw-mills, two tanneries, fifteen schools, 793 scholars. Pop. 5375.

**CARLYSLE**, p. v., capital of Clinton co., Ill., 90 m. S. by E. Springfield, 771 W. Situated on the W. side of Kaskaskia river, 315 miles, by water, above its mouth. Founded in 1818, on the border of a prairie. It contains a court-house, five stores, one grist-mill, one saw-mill, and about fifty dwellings.

**CARMAGNOLA**, an island town of N. Italy, and Sardina, div. Turin, cap. distr., near the Po, 15 m. S. by E. Turin. Pop. 3200. It is said to be well built and laid out: many of its streets, as well as its principal square, are ornamented with porticoes. It contains several churches and convents, and a hospital, and has two suburbs. It has considerable trade in silk, flax, hemp, corn, and cattle, for which two large markets are held weekly. This town formerly belonged to the marquessate of Saluzzo: it was taken by the French in 1691 and 1794.

**CARMEL** (MOUNT), a famous mountain of Syria, extending from the plain of Esdras to a N.W. direction till it terminates in the steep promontory, forming the S.W. extremity of the bay of Acre. The name, Mount Carmel, is usually confined to this promontory, the height of which is variously estimated at from 1500 to 1800 ft. This mountain is famous in Scripture history, more especially in that of Elijah, being the place where he destroyed the prophets of Baal (1 Kings, xviii.). In more modern times, the mountain has been occupied by monks, who have resided in grottoes cut out of the rock, and in a monastery built near the summit. The latter was destroyed in 1841, but has since been rebuilt. (*Robinson's Palestine*, &c., i., 194.)

**CARMEL**, p. t., Penobscot co., Me., 65 m. N.E. Augusta, 660 W. Drained by branches of Sowadabcock river, which afford water-power. It contains five stores, two saw-mills, and 195 scholars in schools. Pop. 528.

**CARMEL**, p. t., capital of Putnam co., N. Y., 100 m. S. Albany, 357 W. Drained by branches of Croton river. It contains several small lakes. It has seven stores, three fulling-mills, four grist-mills, seven saw-mills, eleven schools, 550 scholars. Pop. 2622. The village is pleasantly situated on the E. side of a small lake in the N. part of the town, and contains a court-house, jail, two churches, one Methodist, and one Baptist; an academy, three stores, forty dwellings, and about 350 inhabitants.

**CARMEL**, p. t., Eaton co., Mich. Pop. 868.

**CARMI**, p. v., capital of White co., Ill., 191 m. S.E. Springfield, 751 W. Situated on the W. bank of Little Wabash river, and contains a court-house of brick four feet square, with a cupola, four stores, one flouring-mill, one saw-mill, fifty dwellings, and 380 inhabitants. It is surrounded by flourishing and well-cultivated country.

**CARMONA** (an. Carra), a city of Spain, prov. Seville, cap. dep. of same name, 30 m. S.E. Seville, 59 m. W.S.W. Cordova. Pop. 24,504. It stands in a picturesque situation on an isolated hill, looking down upon the plains of Andalusia; it is well built, and has seven churches, nine convents, and two hospitals, some Roman antiquities, and a beautiful Moorish gate. It has some manufactures of coarse woollen and hempen cloth, hats, glue, soap, delft, shoe-leather and wax candles; but most of these are in a decaying state. Its environs are very fertile, particularly in vines and olives; and Townsend says that there were above 100 oil-mills in the town and its immediate vicinity (vol. ii., p. 198). It was a place of importance under the Romans, and Caesar conferred on it the privileges of a Roman city. Under the Moors it was celebrated for its castles, palaces, and fountains, of which hardly any remains now exist. (*Wilkins; Agilis*, li., 47.)

**CARNAC**, a village of France, dep. Morbihan, on a height at a little distance from the sea, 90 m. S.E. L'Oréet. It is remarkable for very extensive remains of what is believed to have been a druidical monument. These consist of 11 ranges of granite stones, standing in lines nearly perpendicular to the coast. These stones are of great thickness, and from 9 to 10, perhaps 20 ft. in height. The French writers say that they are generally about 90 ft., and that the highest are 22 (French) feet above ground. But Mr. Stothard distinctly affirms that this is an exaggeration; that the highest do not rise more than 15 ft. above ground, and that the medium height is from 9 to 12 ft. (*Lectures from Morbihan*, p. 226.) Their number is said to exceed 4000: the smallest end is fixed in the ground, and in some instances the stones, supported by two of those that are upright, form vast gateways. The object, and the epoch

## CARNATIC.

of the construction of this extraordinary monument, are alike unknown. It has exercised the ingenuity of the antiquaries of Bretagne; but their researches have not been more successful than those of our own antiquaries on the subject of Stonehenge.

**CARNATIC**, a very extensive maritime province of S. Hindostan, comprising a considerable portion of the territory under the Madras presidency. It extends along the Coromandel coast, from Cape Cormorin to the river Godegam, or between lat. 6° and 16° N., and long. 77° 15' and 80° 30' E., having N., the Northern Circars, W. the Balaghat ceded districts, the provinces Salem and Coimbatore, and the Cechin and Travancore dominions, and S. and E. the Indian ocean, the gulf of Manar, and the bay of Bengal. Length N.E. to S.W. 500 m., average breadth about 90 m. Its area, population, divisions, &c., are as follows:

| Districts.         | Area in sq. m. | Pop. (1892-7). | Land revenue (1892-7). | Total revenue (1892-7). |
|--------------------|----------------|----------------|------------------------|-------------------------|
| Nellore and Ongole | 12,000         | 365,572        | 1,249,214              | 2,744,880               |
| N. Godegam Arcot   | 8,000          | 254,281        | 1,275,426              | 2,577,181               |
| S. Godegam Arcot   | 8,000          | 261,280        | 1,275,426              | 2,577,181               |
| Chingelput         | 8,000          | 261,280        | 1,275,426              | 2,577,181               |
| Madras             | 30             | 693,609        | 6,936                  | 1,641,200               |
| Trichinopoly       | 8,100          | 254,280        | 1,275,426              | 2,577,181               |
| Tanjore            | 8,000          | 254,280        | 1,275,426              | 2,577,181               |
| Madras             | 7,000          | 218,411        | 1,275,426              | 2,577,181               |
| Tamilnadu          | 6,500          | 204,201        | 1,275,426              | 2,577,181               |
| Total              | 55,000         | 4,530,280      | 14,000,464             | 18,612,601              |

The E. Ghats intersect this province in a N.E. or N. direction throughout its whole extent N. of lat. 11° 30', dividing it into the Upper and Lower Carnatic, or the countries above and below the Ghats, differing, of course, greatly in elevation and proportionally in climate. The principal rivers, the Pennar, Palar, Cavery, and Vagah or Vaygaru, all rise in the table-land above the Ghats, and fall into the ocean on the Coromandel, or E. coast of India. The climate of the Lower Carnatic is one of the hottest in the peninsula, though in the immediate neighbourhood of the coast it is sometimes mitigated by sea-breezes; that of the Upper Carnatic is similar to that of Mysore. The primitive rocks of this region are chiefly granite, with a small proportion of felspar, and all the soil of the province appears to consist of the debris of disintegrated granite mountains. Near the sea, sand and loam prevail upon the surface, sparingly intermixed with the remains of marine animals. Elsewhere, according to circumstances, loam is more or less prevalent, mixed with various proportions of gravel and sand, strongly impregnated with iron, and containing frequently large quantities of soda and common salt, which effloresces upon the surface in dry weather. Near Madras the soil is heavy, and abounds with salt; thence to Vellore, and in many other parts, it is so sterile as to nourish only the common bread-tree (*Melia azadirachta*), the *Rottia nitida*, &c. Rice is the principal crop in the low country; in the highlands all kinds of small grains are cultivated. Sugar is grown only in small quantities, the soil not being rich enough for the cane. Tobacco and a little indigo are cultivated; but the latter not for exportation. The cotton raised is chiefly of the dwarf kind (*Gossypium hercynicum*). Irrigation being here generally of extreme importance to the success of the crops, numerous and extensive tanks have been constructed in such districts as are not traversed by considerable rivers. Famines and scarcities are not infrequent in this part of India. The farms are mostly tilled by Sudras. During the first few years after our acquisition of the Carnatic, the land revenue of extensive tracts was rented out to a set of middle-men or temporary semindars, who undertook certain parts to the heads of villages. That this system was not without its defects is certain; and partly in the view of obviating these, and partly in order to secure a greater amount of revenue, the ryotwar system has been generally introduced. The principle of this system is to supersede all middle-men and head farmers, and to bring the collectors into immediate contact with the ryots, or cultivators, who are directly assessed with such a rent as it is supposed the land will bear: the more prosperous persons in a village being at the same time compelled to make up for the deficiencies of their less fortunate neighbours, and the assessment is perpetually varying. Notwithstanding our respect for the able men by whom this system has been recommended, it is not going too far to say, that it is a curse upon the country, and that all it be abolished, or very materially modified, nothing but impoverishment need be looked for. Most of the population are Hindoos of the Brahminical sect; there are comparatively few Mohammedans, and Hindoo customs are retained in wonderful purity throughout the provinces. Madras, Pondicherry, Tranquebar, Tanjore, Arcot, Dindigul, &c., are the chief cities and towns. Formerly there were a vast number of strong hill forts; but most of them are now crumbling into ruin. Few provinces exhibit so many large temples and other public monuments of former

## CAROLINE.

civilization and wealth: the temples are all built on a uniform plan, and enclosed within a four-sided wall, fifteen or twenty feet high.

The Moguls first invaded the Carnatic in 1516, but it was not finally in their possession till the reign of Aurangzeb. In 1717, it was ceded, with the Mogul territories in the Deccan, from the throne of Delhi. After the wars, which lasted with little intermission throughout a great part of the 18th century, the Carnatic was conquered by the British in 1783; but it was not finally ceded to us till 1801. (*Hamilton's E. I. Gaz.*, i., 350-364; *Madras Almanac*.)

**CARNESVILLE**, p. v., capital of Franklin co., Ga., 111 m. N. N. Millidgeville, 365 W. Situated on Steven's creek, a branch of the N. fork of Broad river, and contains a court-house, which cost \$4000, a jail, an academy, and five or six stores. It was founded in 1798.

**CARNIOLA**. (See CARINTHIA and CARNIOLA.) **CARNWATH**, a village of Scotland, E. part of Lanarkshire, 25 m. S.W. Edinburgh. It has of late been greatly increased and improved; the numerous new houses that have been erected are handsome, and built according to a definite plan; and manufacturing industry has been introduced. The inhab. amount to about 800, "the great body of whom are employed in weaving, and dependent on Glasgow for employment." (*New Statist. Acc. of Scot.*) But the par. is not less important than the town, containing, as it does, rich and apparently inexhaustible fields of coal, limestone, and iron-stone. The Wilsontown iron-works were commenced in 1790-81; and, in 1807, the monthly pay of the workmen employed was not less than £3000. (18.) Owing, however, to the embarrassments into which the company (the Messrs. Wilson) fell, the works, after languishing some years, entirely stopped in 1812, and continued suspended till 1821, when, having passed into other hands, they were revived, and have ever since been in operation, though not to the former extent. The following extract from the *New Statist. Account* contains ample information respecting the busy villages by which Carnwath is surrounded, and which have sprung into existence within the last sixty years. "Newblington contains a population of 300, entirely weavers; Breckhead, a mixed population of 190, weavers and labourers; Forth, 300, chiefly miners, as being close upon Wilsontown; and Wilsontown 400, miners and labourers of all kinds belonging to the works." Here is a plain new church, a dissenting chapel, a parochial and other schools, and a subscription library.

**CAROLINA (LA.)**, a town of Spain, prov. Jaen, 35 m. N.N.E. Jaen; lat. 36° 18' N., long. 3° 35' W. Pop. 2980. This is the cap. of the foreign colonies settled in the Sierra Morena in the reign of Charles III. The district where they are established was previously a desert, and abandoned to sandhills; but Don Pablo de Olavido, who then held a high office in the government of Seville, conceived the design of colonizing the Sierra with foreigners, who should support themselves by their own labour. Most of the settlers were Germans, and each received 500,000 sq. ft. of land, free from rent for ten years, and after that to be subject to tithes only. With each allotment the government gave, also, ten cows, one ass, two pigs, two fowls, and seed for the land, with a house and a bakehouse. The settler was restrained from disposing of the land to any one in possession of another lot; but was to be entitled to another equal grant on bringing the first into cultivation. But notwithstanding these and other advantages, the scheme has not been very successful. The funds assigned to carry it into operation were not regularly supplied, and the government was in too much haste to draw a revenue from the new pop. to reimburse itself for the first advances. Still the people present a striking contrast to the villagers in most other parts of Spain, being comparatively industrious and active. Corn, pasture, potatoes, and cabbages, are raised in the spots best suited to them. The cottages are of better construction than the cabins of the Spanish peasantry, and have most necessary articles of household furniture; and their inhab., instead of sitting wrapped up in cloaks in a state of stupid apathy, are all busy with something or other. They have assimilated themselves in language and religion with their neighbours: there are fifty-eight of these townships. (*Agile*, ii., 25, at seq.; *Mitane*.)

**CAROLINE**, county, Md. Situated in the E. part of the state, and contains 940 sq. m. Bounded E. by the state of Delaware, W. by Choptank river, and S.E. by Nanticoke river. Drained by a branch of Choptank river. It contained in 1840, 3678 neat cattle, 5115 sheep, 9397 swine; and produced 34,844 bushels of wheat, 19,371 of rye, 203,373 of Indian corn, 53,735 of oats, 13,897 of potatoes. It had fifty stores, ten grist-mills, thirteen saw-mills, one printing-office, one weekly newspaper, twenty-three schools, 444 scholars. Pop.: whites, 5354; slaves, 722; free coloured, 1730; total, 7606. Capital, Denton.

**CAROLINE**, county, Va. Situated in the E. part of the state, and contains 800 sq. m. Bounded N.E. by Rap-

## CARONDOLET.

hammock river, and S.W. by North Anna river, a branch of Pamunkey river. Drained by Mattaponi river and its branches. It contained in 1840, 10,339 neat cattle, 9340 sheep, 19,372 swine; and produced 80,938 bushels of wheat, 13,117 of rye, 575,685 of Indian corn, 119,965 of oats, 18,766 of potatoes, 773,745 pounds of tobacco, 90,005 of cotton. It had eighteen stores, twenty-four grist-mills, nine saw-mills, four tanneries, seventeen academies, 370 students, thirteen schools, 819 scholars. Pop.: whites, 6725; slaves, 9314; free coloured, 774; total, 17,812. Capital, Bowling Green.

CAROLINA, p. L. Tompkins co., N. Y., 19 m. S.E. Ithaca, 150 m. W. by S. Albany, 231 W. Drained by Six Mile creek, flowing into Cayuga lake. The Ithaca and Oswego rail-road passes through its S.W. part. It contains twelve stores, two fulling-mills, four grist-mills, thirty-seven saw-mills, one oil-mill, three tanneries, thirteen schools, 861 scholars. Pop. 9457.

CARONDOLET, p. v., St. Louis co., Mo., 134 m. E. Jefferson city, 814 W. Situated on the W. side of Mississippi river, 6 m. below St. Louis. It has a large common field, and also an extensive tract of forest, which permanently belong to the owners of lots in the village. It has two academies, 24 students, one school, 20 scholars. Pop. of the t. 2962.

CARORA, an inland town of Venezuela, prov. Coro, in a dry and sterile plain, 94 m. S.E. W. Coro; lat. 10° 13' N., long. 70° 36' W. Pop. 6000. It is well built and contains three handsome churches and a convent: its climate, though hot, is salubrious; it is supplied with water by a small rivulet. Its vicinity abounds with the Indian fig, aromatic balsam, gums, &c., and excellent cochineal; but these resources are neglected for the breeding of cattle, which occupies many of the inhab. The town has manufactures of leather, and of hammocks from the fibre of the *agave-folia*; the inhab. are industrious, and have a brisk trade in the products of their industry with Coro, Maracaybo, and Carthagena. Most of the inhabitants are Mexicanos, Mulattoes, and Indians. (*Geog. Account of Colombia*, i., 136, 137; *Met. Trav.*, xviii., 213, 214, &c.)

CARPATHIAN, or CARPATHIAN MOUNTAINS, a very considerable range, enclosing Hungary on the N. and E., covering the principality of Transylvania, and forming the N.E. portion of the great mountain system of S. Europe. Including a lower range, called Kleine Carpathian (Little Carpathians), these mountains commence on the left bank of the Danube, in the neighbourhood of Presburg; lat. 48° 8' N., long. 17° 6' E.; thence they run N.E. to the borders of Silesia, where, in lat. 49° 30' N., long. 15° 33' E., they meet the mountains of Moravia, through which they are connected with the Sudetes and other Bohemian ranges. After this they bend round to the E. and S.E., separating Hungary from Galicia and the Bukowine, and Transylvania from Moldavia; they continue the last course as far as lat. 45° 30' N., long. 26° 30' E., where the main ridge turns due W., and forms the boundary between Transylvania and Wallachia. Finally, about the long. of 30° E., it turns S.W., and again meets the Danube at the town of New Orsova, lat. 44° 44' N., long. 29° 30' E. Between its extreme points, therefore, the Carpathian system describes a curve of about 600 m., and, except at its S.E. corner, one of a very regular and gradual kind. Its width is various, but generally considerable; the longest line that can be drawn across it, in a direction perpendicular to its course, is from Boksan, in the Banat, N.E. through Transylvania, to Putna in the Bukowine, about 246 m. From the great S. bend of the Danube at Waitzen, or from mount Matra (about 35 m. E. of the bend) to the neighbourhood of the Vistula, the mountains measure 146 m. from S. to N.; but towards the N.E., between the Upper Theiss and the sources of the Dniestr in Galicia, they are not more than 70 m.; and on the W., between the rivers Waag and Moravia, they are less than 30 m. across. At a rough calculation, they may be said to cover 90,000 sq. m. With regard to elevation, the Carpathians do not attain the height of other great ranges, as the Caucasus, or the Alps; the highest measured peaks being under 9000 ft. The highest ascertained eminences are in the county of Zipa, the most N. part of the chain, between the meridians of 19° and 21°; and among these, the following are the most noted:

|                                        | ft.  |
|----------------------------------------|------|
| Lomnitz Peak . . . . .                 | 8779 |
| Great Kemmark ditto . . . . .          | 8647 |
| Great Krivan Ridge . . . . .           | 8438 |
| Gold mine on ditto . . . . .           | 7993 |
| White Sea Peak . . . . .               | 7075 |
| Limestone rocks, above the Felsch Bank | 6590 |
| Felsch Bank . . . . .                  | 6307 |
| Koblack . . . . .                      | 6297 |
| Green See (Green Lake) . . . . .       | 5191 |
| Brook at the foot of the Felsch Bank   | 4090 |

The lower peaks, and subordinate ranges, vary from 2000 or 3000 to a few hundred feet in elevation. But if height

## CARPATHIAN MOUNTAINS.

be not, ruggedness is a very striking feature of the Carpathians: the roads among them are generally difficult, sometimes impracticable for horses; and the whole effect of their appearance is one of great majesty. The descent towards Galicia is much more abrupt than that towards Hungary, and in the S.E. and S. the steepest sides of the mountains are towards Moldavia and Wallachia. The rivers which mark the limits of the Carpathian system, are, on the N., the Vistula, as far as its junction with its most important affluent the San, and the Dniestr; on the E. the Sereth; on the S. the Danube, from the mouth of the Sereth to that of the Morava, which marks the extreme limit of the mountains towards the W. Within these bounds, however, are contained a large quantity of flat land in Galicia and Wallachia, together with the greater part of the Hungarian plain; on the other hand, the bed of the Danube at Orsova is nothing but a cleft between the Carpathians and the N. branches of the Balkhan, and at Waitzen, in like manner, it can scarcely be said to break the continuity of the former with the foothills of the Styrian Alps. (*Townson's Trav. in Hung. passim*; *Born's Trav. in Banat and Transyl. passim*; *Clarke's Trav.*, ii., 397, &c.; *Bright's Trav. in Lower Hung.*, p. 101, &c.; *Korabinsky's and Bright's Maps*.)

*Geology*.—The most ancient rocks are found only on the highest parts of the Carpathians, and not always there (*Born*, p. 302); one of the highest ridges in the Alpine country of Zipa consisting of calcareous limestone, (*Townson*, p. 348.) Granite, however, forms the substratum, or rather the main bulk and nucleus of the whole mass, and sometimes, even at slight elevations, lies at no great depth. Hornblende in small quantities, gneiss is much larger, and trap very considerably distributed, form the mass of the other older rocks; but the formation most worthy of notice is a kind of conglomerate, formed of hardened clay, quartz, sharp, spar, and lithomarge, which, from its richness in ore, has obtained in Hungary the title of *Metallic Rock*, and which is met with most abundantly throughout the whole range, from Presburg to Orsova. (*Born*, p. 303.) Limestone, old and recent, occurs in immense quantities, and in the Alpine regions, Townson found stratifications of the first kind, of the amazing thickness of 2100 ft., (*Trav.* p. 335.) Basalt, porphyry, porphyritic basalt, Jasper, petroselin, lava, obsidian, and a whole host of substances, volcanic, and the result of aqueous deposition, are scattered in the wildest confusion among the lower ranges, giving unquestionable evidence of the extensive agency of both fire and water, but so little defined, that the best observers decline to offer an opinion as to the origin of many of the appearances. (*Born*, p. 298-314, & *pass.*; *Townson*, p. 275-303, & *pass.*) It is worthy of observation that the more recent formations, as sandstone, &c., observable in other countries, are singularly scarce in the Carpathians. (*Born*, p. 296, 311, &c.)

*Hydrography*.—These mountains form the dividing line between important river systems. The N. faces give birth to the Vistula and Dniestr; but with these exceptions, no river that reaches the sea, has its source with them. The affluents of these two, from the N. slopes, are, however, extremely numerous, though not comparable to those that pour from the S. and E. faces, to swell the stream of the Danube, to which river, also, the drainage of the N.W. face is conveyed, with the exception of an insignificant portion, which finds its way to the Oder. The running water of the Carpathians belongs, then, to two systems, the Black sea and the Baltic; and there are no lands better irrigated than those over which it flows: the Theiss, Maros, Auts, and many others, would be called important rivers in most parts of the world, and the smaller streams and sub-tributaries are absolutely innumerable. (*See* DANUBE, VISTULA, DNIESTER, HUNGARY, &c.)

*Mineral Productions*.—The sides of the Carpathians are rich in the productions of the vegetable kingdom, and abound in animals of the most useful kind. The decomposed volcanic matter, which forms so large a portion of the soil, accounts for the first, and consequently for the second of these results. The particulars of both will be, however, better treated of under the heads of the different countries through which the mountains run. (*See* HUNGARY, TRANSYLVANIA, GALICIA, &c.) It is intended here to restrict ourselves to a brief account of their mineral wealth, in which respect they stand pre-eminent among the various ranges of Europe. Nearly every metal, and all in abundance, are produced in the Carpathians. The richest mines of Transylvania and the Banat yield for 1 cwt. of ore 125 oz. of gold, and 66 oz. of silver (*Born*, p. 103), and all the mountains of these beautiful countries are full of signs of undiscovered metals. It appears, however, that native gold and silver is scarce, except in the S.E. districts, but all the other ores are prized with these precious metals throughout the whole range. (*Born*, p. 315, 317.) Clarke says (ii. 676,) that the stamping-works at Schenau employ 1000 han-

## CARPENTARIA.

mers, each hammer stamping three quintals of ore per day; the return averaging 12,000 dolins per month, clear profit to the government. It would be endless to go through a detail of all the wealth of these mountains; suffice it to say, that copper, iron, lead, cobalt, antimony, sulphur, and saltpetre, are found in large quantities; cinnamon also appears, but not in sufficient abundance to tempt the miner; and in many places there are large fields of coal. Rock-salt is also one of the treasures of these mountains. The Polish mines of Galicia have long been famous, and from all appearances, their treasures are actually inexhaustible. In a word, the Carpathians appear to be one extensive mine, where nearly all the varieties of metallic wealth are produced; in addition to which, their recesses yield the opal, one of the noblest and most valuable of gems. (*Born, p. 99, 173, 215, et pass.; Townsen, p. 305-310, 378-391, et pass.; Clarke, ii., 656-678; Bright, p. 146-182.*)

*Name.*—The Carpathians were known to the ancients, and by their present name, *Karpáthy*, (*Ptolemy, iii., 5*); and they applied the same name to that part of the Mediterranean which lies about the island of Rhodes. (*Ptolemy, v., 2; Strabo, x., 488.*) Its etymology is not very clear; but Strabo, in speaking of the sea, calls it also Carpathian (*Karpáthos*); and though it be not very easy to connect the ideas of these mountains with that of the remote shore of Asia Minor, it is something remarkable that the German term for the former is *Krapack*, of which the Greek of Strabo seems only a softened form. The Hungarian name for these mountains is *Tatra*.

**CARPENTARIA** (*Gulf of*), an extensive arm of the sea, deeply indenting the N. coast of New Holland, between 160° 40' and 170° 30' E. lat., and 137° and 143° E. long. No settlements have, as yet, been founded on its coasts.

**CARPENTRAS**, a city of France, dep. Vaucluse, cap. arrond., in an agreeable situation, at the foot of Mont Ventoux, and on the left bank of the Auson, 15 m. N.E. Avignon; lat. 44° 3' 28" N., long. 5° 2' 43" E. Pop. 2234. The town is surrounded by high walls in good repair, flanked by several towers, of which the most remarkable is that surmounting the *port d'Orange*. It is well built, but the streets are narrow, winding, and filthy. There are some good houses without the walls, in the suburbs. It is well supplied with fountains, and water is conveyed into the city by two aqueducts, one constructed by Clement V., and one by the town, in the early part of last century. The principal public buildings are the hospital, erected in 1757, without the walls; the cathedral, a large Gothic pile, with a spire of the age of Charlemagne; the ancient episcopal palace, now the palace of justice: contiguous to the latter is an ancient triumphal arch. There is also a public washing-house, theatre, &c. It is the seat of a tribunal of primary jurisdiction, and has a departmental college, a Jewish synagogue, a society of rural economy, a public library, with 32,000 vols., and some valuable manuscripts. It has distilleries, dye-works, tanneries, and madder-mills, with fabrics of soap and aquaforts; and has a considerable trade in silk, madder, and excellent fruits.

Carpentras is very ancient, having been, under the Romans, a principal town of Gallia Narbonensis. It was successively attacked and pillaged by the Vandals, Lombards, Saracens, and other barbarians. During the residence of the popes at Avignon, it began to revive; and was, for a short period, under Clement V., the seat of the holy see. The bishopric of Carpentras, said to have been founded in the 3d, was suppressed in the course of the present century. (*Hugues, art. Vaucluse, Dict. Géog. &c.*)

**CARRARA**, a town of the duchy of Massa, on the Lavenza, about 3½ m. from the Mediterranean, and 60 m. W.N.W. Florence. Pop. 6000. It has an unfinished cathedral, several churches, a convent, and an academy of sculpture. Several artists have fixed their residence here, attracted by the convenience of obtaining marble almost cost free; and the sale of nude marble and of articles of sculpture forms an important branch of traffic.

The marble quarries from which this town derives its entire celebrity and importance, have been wrought from the age of Augustus, and probably from a still more remote epoch. They are found in the lower ridges of the hills which unite in the Monte Sagro. The beds of the dove-coloured (*kardiglio*) marble are the nearest to the town. Higher up the valley are the beds of white marble. Only a few of these beds produce marble of such a grain and transparency as to be highly prized by the statuary; and if the quarrymen succeed in obtaining one block in ten that preserves throughout a good colour, they are satisfied. Still higher up, the marble becomes of a dull, dead colour; but of this much larger blocks may be obtained. The principal quarries of veined marble are in a parallel valley. Notwithstanding the vast quantities that have been dug up since these quarries began to be wrought, the supply of marble in this district seems to be now as inexhaustible as ever. About 1200 men are, or lately were, employed in

## CARRICKFERGUS.

the quarries. It is pretty certain, however, that the demand for Carrara marble would be much greater were it not for the heavy duty imposed on its export. This has led to the opening of rival quarries at Sorravezza and in other parts of Italy. (*Corder's Italy, ii., 45; Simoni's It., p. 578; Browning's Report on the Statistics of Tuscan, &c., p. 53.*)

**CARRIBBEAN SEA** is the name given to that arm of the Atlantic ocean included between the Caribbee islands on the E. Hayti and Jamaica on the N., Guatimala on the W., and the N. coast of S. America on the S.

**CARRIBEE ISLANDS**, or **LESSEER ANTILLES**, the name sometimes given to that portion of the W. Indies that includes the vast chain of islands which extends, in a circular sweep, from Anguila on the N. to Trinidad on the S. They comprise the whole of the Windward and the more S. portion of the Leeward islands. The principal islands, reckoning from the N., are St. Christopher, Antigua, Guadaloupe, Dominica, Martinique, St. Lucia, Barbadoes, St. Vincent, Grenada, Tobago, and Trinidad. They derived their name from having been mostly occupied, at the period of their discovery, by a tribe of Indians, called Carriba or Caribbees, now nearly extinct. The reader will find an excellent account of the Carriba in *Edward's Hist. of the W. Indies*, book 1, cap. 2.

**CARRICKFERGUS**, a pari. bor. and sea-port of Ireland, co. Antrim, prov. Ulster, on Carrickfergus bay, or Belfast lough, 95 m. N. Dublin, 9 m. N.N.E. Belfast. Pop. in 1821, 8023; in 1831, 8696; and in 1834, 8660; of whom 1367 were of the Established church, 6469 Protestant Dissenters, and 974 Roman Catholics. The castle, on a rock projecting into the sea, was built or much strengthened by the English shortly after their first landing in Ireland under Strongbow. King William landed here on the 14th of June, 1690, 16 days previously to the battle of the Boyne. In 1760, it surrendered to a French naval force under Thurot, who soon after evacuated it on the appearance of the English squadron under Commodore Eliot, by which Thurot's squadron was captured, after an engagement in which he lost his life. On the 24th of April, 1778, Paul Jones captured the Drake sloop of war in the bay; but sailed off without making any hostile attempt on the town.

Carrickfergus consists of the town within the walls, parts of which still remain; and of suburbs on the E. and W. sides, called the Scotch and Irish quarters. It is pretty well built, and has a respectable, though antiquated appearance; it is not lighted, and is but indifferently supplied with water. The church, a large cruciform building, with a fine modern spire, has, in one of the transepts, a large mural monument of the Donegal family; there is also a Roman Catholic chapel, and places of worship for Presbyterians, Independents, Methodists, Covenanters, and Unitarians. The castle, kept up as a fortress and magazine, has a number of heavy guns mounted on the walls, and is garrisoned by a company of foot. The town and the adjoining district, containing 16,700 acres, forms a co. independent of that of Antrim, within which it is enclosed on every side, except towards the sea. By its ruling charter, granted by James I. in 1613, who also, in 1623, granted it a charter of the staple, the corporation consists of a mayor, sheriffs, sixteen aldermen, twenty-two burgesses, and an indefinite number of freemen, who were classed in eight guilds, now kept up only in form. It returned two mem. to the Irish H. of C.; and sends one mem. to the Imperial H. of C. Registered electors, in 1835-39, 1431. The mayor, as admiral of the liberties, has jurisdiction along the coast, from Fairhead, co. Antrim, to Beirloma, co. Down. The assizes for co. Antrim are held here in the court-house in the county prison, a large and expensive, but ill-arranged building. There is a small local police. The rural district is watered by numerous streams, and in it is lough Bourne, covering 90 acres, at an elevation of 536 ft. above the level of the sea. Tanning is carried on to a considerable extent; a distillery paid duty in 1836 for 15,493 gallons of whiskey. There were in the town, in 1836, two cotton-mills, and one flax ditto; the former employing 253, and the latter 113 hands. The inhab. derive their principal support from the concourse of strangers at the assizes, and during the bathing season; and from the fisheries. Excepting haddock, all kinds of fish that frequent the Irish coast are abundant; as are oysters celebrated for size and flavour, scallops, and lobster. A pier has been lately built for the use of the fishermen; but it is defective, in not being accessible at low water. The greater part of the fish is sent by land to Belfast for sale. Markets are held in an antiquated market-house on Saturdays; fairs on 12th May and 1st November. A branch of the Northern Bank was opened in 1834. Post-office revenue in 1830, £2367; in 1834, £423. Two caravans, conveying ten passengers each, and ten cars conveying four passengers each, ply daily to Belfast; and two coaches, with ten passengers each, daily to Larne. The port was long the chief mart on its exclusive of the coast; but in 1837, the corporation having sold its private privi-

## CARRICKMACROSS.

lugs to the crown, the business has since been almost wholly transferred to Belfast; its trade being, at present, confined to the import of coal, and the export of cattle and grain. Shipping in 1835, 3900 tons. The largest vessels may enter the bay at low water, but are prevented from discharging at the town, through the want of a landing-place, with sufficient depth of water. The appearance and manners of the inhab. exhibit striking indications of their Scotch descent. The lower classes are industrious, frugal, and honest. Though wealthy residents are not numerous, many are in a state of respectable independence; most industrious persons attain the means of comfortable subsistence, and very few are in a state of destitution. (*N. Shinn's Carrickmacross; Stat. Surv.; Fishery Rep.; Railway Rep.*)

**CARRICKMACROSS**, an isl. town of Ireland, co. Monaghan, prov. Ulster, 46 m. N.W. by N. Dublin. Pop. in 1831, 1641; in 1851, 3979. It consists of one long street, in which is the church, a R. Cath. chapel, which serves as the cathedral for the R. Cath. bishop of Clogher, and a Presbyterian meeting-house. A grammar school, endowed by Lord Weymouth, is now (1852) being rebuilt. There is also a dispensary, a mendicity society, a savings' bank, and a bride-well. Petty sessions are held every fortnight: a party of the constabulary is stationed here. There is a tavern, a brewery, and a distillery; which last paid duty, in 1850, on 165,500 gallons of spirits; duty was also paid on 14,964 bushels of malt. Markets are held on Thursdays, and on corn on Wednesdays and Saturdays: fairs on 27 May, 10 July, 27 Sept., 9 Nov., and 10 Dec. Post-office revenue in 1850, £396; in 1852, £471. The mail-coach from Dublin to Londonderry passes through the town; and a mail-car, carrying at an average two passengers each trip, plies daily to Dundalk. (*Stat. Surv.; Railway Rep.*)

**CARRICK-ON-SHANNON**, an isl. town of Ireland, prov. Connaught, co. Leitrim and Roscommon, on the Shannon, 65 m. W.N.W. Dublin. Pop. in 1831, 1673; in 1850, 1426. Pop. of par. 17,593; of which, 3691 are of the estab. church, and 13,902 R. Cath. It lies principally on the Leitrim bank of the river, being connected with a small suburb on the Roscommon side by a bridge; and has a new church, a R. Cath. chapel, two Methodist meeting-houses, and a co. infirmary and dispensary. It was incorporated by James I. in 1613, under a provost, twelve burgesses, and an unlimited number of freemen; and returned two mem. to the Irish H. of C.; but was disfranchised at the Union. The assizes for the co. Leitrim, of which it is the co. town, are held here, as are general sessions in Jan. and July, and petty sessions on alternate Mondays. The county court-house, jail, and bridewell, are in the town. A party of the constabulary is stationed here; and it has an infantry barracks. A smart trade in butter, grain, and provisions, is carried on by the Shannon, now rendered navigable to Lough Allen. Yarn is also manufactured. Markets are held on Thursdays, in an enclosed market-place; and fairs on 18 Jan., 20 Mar., 15 May, 6 June, 11 Aug., 14 Sept., 28 Oct., 31 Nov., and 10 Dec. Post-office revenue in 1850, £355; in 1852, £311. The mail-coach from Dublin to Sligo passes through the town; and a mail-car plies daily to Cesharrigan, conveying, at an average, two passengers every trip. (*Stat. Surv.; Railway Rep.*)

**CARRICK-ON-SUIR**, an isl. town of Ireland, prov. Munster, co. Tipperary and Waterford, on the Suir, 65 m. S.W. by S. Dublin. Pop. (1831) 7400; (1851) 9080; being almost wholly R. Cath. The town, situate at the S.E. extremity of the Golden Vale, and near the junction of the co. Tipperary, Kilkenny, and Waterford, consists of an open area surrounded with houses, and a long street leading to a bridge across the river, connecting it with the suburb of Carrick-beg formerly C. merrigall, in co. Waterford. It has a par. church, a R. Cath. chapel, an abbey, a sunnery, a fever hospital and dispensary, an almshouse, and the ruins of the castle built by an ancestor of the Earl of Ormonde. Some traces of the town walls are still visible. The woollen manufacture was carried on under the auspices of the Ormonde family till the close of last century; but all traces of it have now disappeared, and the labouring pop. are very poor and miserable. Tanning and brewing are still carried on; duty was paid in 1850 for 12,941 bushels of malt; and there is a considerable trade in grain and provisions. Large vessels come up the Suir to Piltown, about 4 m. lower down, whence their cargoes are conveyed to the town by lighters. A local act, lately passed, authorises river improvements, which, if effected, will enable vessels of larger tonnage to discharge at the town. Petty sessions are held every fortnight. A party of the constabulary is stationed here. Markets are held on Saturdays; fairs on the first Thursday of every month. A branch of the National Bank was opened in 1835. The post-office revenue in 1850 was £263, and in 1852, £716. By a grant of William III. the par. is exempted from co. rates. A mail-coach and a car, from Waterford to Limerick, pass daily through the town; as do cars from the former city to Clon-

## CARROLL.

mel and Thurloe: a car, plying six days in the week, from the town to Kilkenny, carries, at an average, three passengers every trip. (*Macon's Paroch. Survey; Railway Rep.*)

**CARROLL**, county, N. H. Situated in the E. part of the state, and contains 530 sq. m. Bounded S.W. by Wind-piscogee lake. It has Squam lake on its W. border, and contains Ossipee lake and other ponds. Drained by Bear, Camp, and Saco rivers and their branches. Swift and Pig-wacket rivers are branches of Saco river. Ossipee mountain is in its W. part. Formed from the N. part of Stratford co., since 1840. The statistics are included in that county.

**CARROLL**, county, Md. Situated in the N. part of the state, and contains 300 sq. m. Bounded S.E. by Patuxent river. Drained by branches of Monocacy river. It contained in 1840, 11,915 neat cattle, 12,565 sheep, 23,311 swine; and produced 160,504 bushels of wheat, 72,691 of rye, 254,304 of Indian corn, 308,230 of oats, 112,171 of potatoes, 335,560 pounds of tobacco. It had fifty-four stores, seven saw-mills, two woollen-factories, two cotton-factories, with 2038 spindles; thirty-one flouring-mills, thirty-seven grist-mills, sixty-one saw-mills, three oil-mills, four paper-mills, one ropewalk, twenty-six tanneries, twenty-eight distilleries, one brewery, six potteries, two printing-offices, two weekly newspapers, two academies, 39 students, fourteen schools, 334 scholars. Pop.: whites, 15,921; slaves, 1122; free coloured, 686; total, 17,741. Capital, Westminster.

**CARROLL**, county, Ga. Situated toward the N.W. part of the state, and contains 600 sq. m. Bounded S.E. by Chattahoochee river. Drained by branches of Tallapoosa river. This county was ceded to the U. States by the Cherokees in 1825. It contained in 1840, 9773 neat cattle, 3345 sheep, 15,173 swine; and produced 34,538 bushels of wheat, 322,640 of Indian corn, 14,439 of oats, 6930 of potatoes, 14,456 pounds of tobacco, 354,969 of cotton. It had fourteen stores, produced gold to the amount of \$17,370; thirteen smelting-houses, four furnaces, four cotton-factories, with fifty-four spindles; one flouring-mill, sixteen grist-mills, ten saw-mills, four tanneries, thirteen distilleries, two academies, 36 students, twenty schools, 441 scholars. Pop.: whites, 4725; slaves, 383; free coloured 5; total, 5108.

**CARROLL**, county, Miss. Situated a little N.W. of the centre of the state, and contains 950 sq. m. Bounded W. by Yazoo river, and S.E. by Big Black river, by branches of both of which it is drained. It contained in 1840, 16,651 neat cattle, 4137 sheep, 31,937 swine; and produced 6925 bushels of wheat, 453,305 of Indian corn, 10,340 of oats, 25,743 of potatoes, 3,542,051 pounds of cotton. It had seventeen stores, two flouring-mills, twenty-two grist-mills, eight saw-mills, seventeen tanneries, one printing-office, one weekly newspaper, one college, 60 students, three academies, 168 students, eleven schools, 267 scholars. Pop.: whites, 8136; slaves, 5344; free coloured, 1; total, 13,481. Capital Carrollton.

**CARROLL**, parish, La. Situated in the N.E. part of the state, and contains 1100 sq. m. Bounded E. Mississippi river. Drained by bayou Macon, and Tensas river. It contained in 1840, 3670 neat cattle, 10,414 swine; and produced 160,590 bushels of Indian corn, 12,971 of potatoes, 8,676,090 pounds of cotton. It had one saw-mill, one school, 18 scholars. Pop.: whites, 1146; slaves, 3023; free coloured, 9; total, 4577. Capital, Providence.

**CARROLL**, county, Tenn. Situated in the W. part of the state, and contains 900 sq. m. Drained by Big Sandy river, a branch of Tennessee river, and branches of Obion river, flowing into the Mississippi. It contained in 1840, 47,163 neat cattle, 30,635 sheep, 65,349 swine; and produced 694,091 bushels of wheat, 692,340 of Indian corn, 74,679 of oats, 34,399 of potatoes, 668,464 pounds of tobacco, 315,338 of cotton. It had thirteen stores, three flouring-mills, sixteen grist-mills, twelve saw-mills, nine tanneries, eight distilleries, one printing-office, one weekly newspaper, thirty-five schools, 923 scholars. Pop.: whites, 10,114; slaves, 2218; free coloured, 30; total, 12,362.

**CARROLL**, county, Ky. Situated in the N. part of the state, and contains 140 sq. m. Bounded N. by Ohio river. Watered by Kentucky river. It contained in 1840, 4322 neat cattle, 3944 sheep, 11,125 swine; and produced 31,288 bushels of wheat, 1595 of rye, 166,595 of Indian corn, 18,666 of oats, 5636 of potatoes, 255,020 pounds of tobacco. It had eleven stores, three grist-mills, five saw-mills, three tanneries, six schools, 314 scholars. Pop.: whites, 312; slaves, 731; free coloured, 23; total, 3966.

**CARROLL**, county, O. Situated in the E. part of the state, and contains 400 sq. m. Drained by Sandy river and Crotten creek. It contained in 1840, 13,641 neat cattle, 32,329 sheep, 16,519 swine; and produced 222,498 bushels of wheat, 23,565 of rye, 137,029 of Indian corn, 12,388 of buckwheat, 218,978 of oats, 23,164 of potatoes. It had sixteen stores, five flouring-mills, eleven grist-mills, fourteen saw-mills, one oil-mill, four tanneries, two distilleries, ten printing-offices, two weekly newspapers, one academy, 28

## CARROLLTON.

students, twenty-three schools, 681 scholars. Pop. 18,168. Capital Carrollton.

CARROLL, county, Ia. Situated towards the N. W. part of the state, and contains 360 sq. m. Watered by Wabash river, and Deer, Rock, and Wild Cat creeks. Organized in 1828. The Wabash and Erie canal passes through it along the Wabash river. It contained in 1840, 7943 neat cattle, 5928 sheep, 17,442 swine; and produced 69,172 bushels of wheat, 2214 of rye, 295,331 of Indian corn, 76,636 of oats, 26,736 of potatoes, 77,650 pounds of sugar, 3773 of tobacco. It had twenty stores, three flouring-mills, ten grist-mills, thirty saw-mills, seven tanneries, five distilleries, one pottery, two printing-offices, two weekly newspapers, one academy, 60 students, eleven schools, 398 scholars. Pop. 7819. Capital, Delphi.

CARROLL, county, Ill. Situated in the N.W. part of the state, and contains 445 sq. m. Bounded W. by Mississippi river. Drained by Plum and Rush creeks. It contained in 1840, 963 neat cattle, 337 sheep, 3,365 swine; and produced 7236 bushels of wheat, 86,530 of Indian corn, 10,150 of oats, 7805 of potatoes. It had seven stores, four schools, 100 scholars. Pop. 1022. Capital, Savanna.

CARROLL, county, Mo. Situated in the N.W. part of the state, and contains 700 sq. m. Bounded S. by Missouri river, and N.E. by Grand river. Drained by Wsconda river, which flows into Missouri river, and by branches of Grand river. It contained in 1840, 3652 neat cattle, 9113 sheep, 16,895 swine, and produced 1100 bushels of wheat, 141,735 of Indian corn, 10,545 of oats, 6401 of potatoes, 7380 pounds of tobacco. It had eight stores, five grist-mills, three saw-mills, one tannery, one distillery, one school, 26 scholars. Pop.: whites, 9135; slaves, 308; total, 9433. Capital, Carrollton.

CARROLL, county, Ark. Situated in the N.W. part of the state, and contains 1650 sq. m. Drained by branches of White river and by Little Red river. It contained, in 1840, 4308 neat cattle, 2636 sheep, 10,439 swine; and produced 4428 bushels of wheat, 119,599 of Indian corn, 1533 of oats, 4999 of potatoes, 6995 pounds of tobacco, 6754 of cotton. It had nine stores, twelve grist-mills, one saw-mill, three distilleries, eight schools, 185 scholars. Pop.: whites, 2707; slaves, 137; total, 2844. Capital, Carrollton.

CARROLL, p. t., Coos co., N. H., 99 m. N. Concord, 566 W. It lies at the foot of the White mountains, on the N.W. side. Chartered in 1773. It contains a Free-will Baptist church, two schools, 75 scholars. Pop. 318.

CARROLL, p. t., Chautauque co., N. Y., 336 m. W. by S. Albany, 313 W. Drained by Conewango creek, which flows E. into Allegheny river. It contains three stores, two grist-mills, twenty-two saw-mills, two tanneries, ten schools, 595 scholars. Pop. 1640.

CARROLL, t., York co., Pa. It contains three stores, three grist-mills, three saw-mills, two tanneries, six distilleries. Pop. 771.

CARROLL, t., Washington co., Pa. It contains fourteen stores, three tanneries, two schools, 70 scholars. Pop. 1923.

CARROLL, t., Cambria co., Pa. It contains two saw-mills, five schools, 150 scholars. Pop. 606.

CARROLL, t., Perry co., Pa. It contains two stores, two flouring-mills, one woollen-factory, one flouring-mill, two grist-mills, eleven saw mills, seven schools, 315 scholars. Pop. 1106.

CARROLLTON, p. v., capital of Carroll co., Ga., 131 m. W. N.W. Milledgeville, 719 W. It contains a court-house, jail, three stores, and about twelve dwellings.

CARROLLTON, p. v., capital of Pickens co., Ala., 49 m. W. Tuscaloosa, 380 W. Situated on the W. side of Lubbub creek, a branch of Little Tombigbee river. It contains a court-house, and other county buildings.

CARROLLTON, p. v., capital of Carroll co., Miss., 99 m. N. by E. Jackson, 379 W. Situated on the S. side of Big Sandy creek, a branch of Yalabusha river, and contains a court-house, and a few dwellings.

CARROLLTON, p. v., capital of Carroll co., Ark., 912 m. N. N.W. Little Rock, 1146 W. Situated on the N. side of a branch of White river, and contains the county buildings.

CARROLLTON, p. v., capital of Carroll co., Mo., 194 m. N.W. Jefferson city, 1018 W. Situated on the N. side of Wsconda river, six miles from its entrance into Missouri river. It has a neat, brick court-house, and about 300 inhabitants.

CARROLLTON, p. v., Centre t., capital of Carroll co., O., 125 m. N.E. Columbus, 926 W. It contains a court-house, several stores, a printing-office issuing a weekly newspaper, and 698 inhabitants.

CARROLLTON, p. v., Greene co., Ill., 69 m. S.W. Springfield, 634 W. It is pleasantly situated on the borders of a prairie, and has a neat, brick court-house, four churches, one Methodist, one Presbyterian, one Baptist, and one Reformed; twenty-three stores, two steam flouring mills, two

## CARTAGENA.

steam saw-mills, many neat dwellings, thirty schools, 190 scholars. Pop. 667.

CARRON, a village of Scotland, celebrated for its iron-works, co. Stirling, 2 m. N.E. Falkirk, on the Carron, a stream which falls into the Frith of Forth, at Grangemouth. The iron-works were first set on foot in 1700. The Carron company, which is chartered, had an original capital of £50,000 sterl., divided into 600 shares; but that is understood to have been greatly augmented since its formation. In addition to the periodical dividends, "there is an accumulating undivided capital of landed, mineral, and other fixed property, with a large stock of materials and implements" for carrying on the works. (*Nysson's Hist. of Stirlingshire*, edit. 1817, p. 721.) The Carron iron-works were long the most extensive in Scotland, and were for a while, perhaps, the most extensive in Britain; but they are now far surpassed by similar establishments in Scotland, such as those of Gartsherrie, Calder, and Clyde, and by vast numbers in England. The works are employed in the smelting of iron ore, and the manufacture of all kinds of cast-iron goods, whether for civil or warlike purposes. But they were chiefly celebrated during the late French war, for the manufacture of cannon, mortars, howitzers, carriages, (so called after Carron, where they were first made), bombs, and such like warlike instruments. Since the peace, this branch of business has been well nigh annihilated, except for the supply of a limited foreign demand. These pieces of ordnance, after being cast and bored, are proved by water forced into the chamber by a powerful compressing machine—a method more esteemed than the old powder-proof. (*Ib.*, p. 721.) The consumption of coal in the works is about 300 tons per day. The company convey their goods to Liverpool and London (at both of which they have warehouses), and other places, in their own vessels, which vary from 15 to 30 in number. The Forth and Clyde canal runs within a ½ m. of the works, so that the access to both seas is most convenient. The company have cut a canal from the interior of the works down to the Carron wharf at Grangemouth, 3 m. dist., on which lighters ply and carry their goods for shipment at the latter place. The supply of water is abundant, derived partly from the river, and partly from artificial reservoirs, which cover about 250 acres of ground. The whole people employed in the works, mines, and pits, or otherwise by the company, is, on an average, about 3500.

CARTAGENA, or CARTHAGENA, a marit. city of New Granada, and the chief naval arsenal of that repub., cap. prov. of same name, on a sandy peninsula in the Caribbean sea, connected with the continent by a narrow neck of land, 410 m. N. Bogota; lat. 10° 39' N., long. 75° 34' W. Pop. 18,000. It has, on its E. side, a suburb called Ximant, standing on an island, and almost as large as the city itself, with which it communicates by a wooden bridge. Both the city and its suburb are surrounded by strong fortifications, and at a short distance from them on the main land they are overlooked by a strong fort placed on an eminence about 150 ft. high. These works are, however, commanded by a contiguous hill, rising to the height of 350 ft. above the sea, and which, instead of a fortification, has on its summit an Augustine monastery! The possession of this hill has several times led to the capture of the city.

Cartagena is famous for its port, one of the largest and best on the N. coast of S. America. It lies to the S. of the town, between the peninsula on which it is built and the island of Tierra-Bomba, and the main land. The anchoring ground is excellent; and being completely land-locked, vessels lie in it as if in dock. It had originally two entrances, the *Boca Grande*, close to the farther S. The former, however, was blocked up by the Spaniards, subsequently to Adm. Vernon's attempt upon the place in 1741, by sinking several ships in the channel. The *Boca Chica* is defended by two strong castles. Cartagena contains a handsome cathedral, several other churches, convents, &c., and some fine public edifices. The city and its suburbs are well laid out; streets regular, and well paved; houses mostly of stone, and of one story above the ground floor, with balconies in front, and lattices instead of windows. A recent French traveller, speaking of the town, observed that it presents a melancholy aspect with its long galleries, short and clumsy columns, and streets darkened by projecting terraces, &c.; but he admits that how singular soever the construction of the houses, they appear to be well contrived for supplying the indispensable luxury of fresh air. The great drawback upon the place is its climate, which is intensely hot. It is not unfrequently visited by the yellow fever; and is infested with tormenting and destructive insects. The importance of Cartagena has greatly declined of late years; but it is still the principal depot for the goods of Bogota, Popayan, and Quilo, and has a considerable foreign trade. Its artisans are ingenious and excel in the manufacture of shell articles. The packet boats between Columbia

## CARTAGO.

the U. States, and Europe, sail from this place. In 1887 the value of the specie and bullion exported is supposed to have amounted to about £240,000, and that of ordinary merchandise to about £20,000. (*Board of Trade Papers*, viii., 226.) Cartagena was founded in 1583, and was long considered as the great bulwark of the Spanish possessions in S. America. It was taken by a Corsican pirate in 1544, by Sir F. Drake in 1585, and by the French in 1697. Under the Spaniards, it was a bishopric, and the seat of a captain-general, and of one of the three tribunals of the Inquisition in America. It is still the residence of a bishop. (*Geog. Account of Colombia*, *Mod. Trav.*, xviii., 226-228.)

**CARTAGO, or CARTHAGO**, an inland town of New Granada, prov. Popayan, on the left bank of the Velez, a little before its junction with the Cauca, 145 m. N.N.E. Popayan; lat. 4° 45' N., long. 76° 8' W. Pop. 5500. It has a handsome appearance, and contains a cathedral, two parish churches, and a Lancasterian school. Its trade is chiefly in cattle, dried beef, fruits, cocoa, and tobacco. Its whole district is rich in mineral products; its climate is hot and dry, but healthy. (*Mod. Trav.*, xviii., 226.)

**CARTERSVILLE**, county, N. C. Situated in the S.E. part of the state, and contains 260 sq. m. Bounded S. by Beaufort county, S.E. by Currituck, and N.E. by Pamlico sound. Separated from the Atlantic by low islands on one of which is Cape Lookout, its southern point. It contained in 1846, 4731 neat cattle, 9003 sheep, 7864 swine; and produced 2153 bushels of wheat, 25,674 Indian corn, 41,526 of potatoes, 4633 pounds of cotton, 16,347 barrels of tar, pitch, or turpentine, 263 bushels of salt. It had seven steamers, seven grist-mills, two saw-mills, three schools, 47 scholars. Pop.: whites, 5957; slaves, 1269; free coloured, 144; total, 6991. Capital Beaufort.

**CARTER, county, Tenn.** Situated in the N.E. corner of the state, and contains 549 sq. m. Drained by Watauga river and its tributaries, and a branch of Holston river. It has mountains on its S. and E. borders. It contained in 1846, 2933 neat cattle, 3470 sheep, 11,292 swine; and produced 92,693 bushels of wheat, 999 of rye, 180,041 of Indian corn, 1730 of buckwheat, 54,530 of oats, 14,520 of potatoes, 3711 pounds of tobacco, 7608 of sugar. It had five stores, three furnaces, eight forges, one sawing-mill, twenty-three grist-mills, eighteen saw-mills, one powder-mill, four tanneries, eight distilleries, one printing-office, two academies, 46 students, three schools, 60 scholars. Pop.: whites, 4696; slaves, 328; free coloured, 22; total, 5072. Capital, Elizabethton.

**CARTER, county, Ky.** Situated in the N.E. part of the state, and contains 989 sq. m. Drained by Little Sandy river and its branches. It contained in 1846, 3041 neat cattle, 2909 sheep, 6768 swine; and produced 25,555 bushels of wheat, 1539 of rye, 95,039 of Indian corn, 95,530 of oats, 4396 of potatoes, 2946 pounds of tobacco, 7413 of sugar, 8000 bushels of salt. It had five grist-mills, two saw-mills, two tanneries, two schools, 59 scholars. Pop.: whites, 3711; slaves, 198; free coloured, 8; total, 3905. Capital Grayson.

**CARTHAGE** (*Lat. Carthago, Gr. Καρχηδών*), a famous marit. city, long the rival of Rome, with which she waged a long-extended, doubtful, and desperate contest for the empire of the world; situated on the N. shore of Africa, in the immediate neighbourhood of Tunis. But such is the instability of human affairs, and so complete the destruction that has overtaken this celebrated city, *desse opem stultitque asperitima belli*, that even her position has been matter of dispute among the learned!

*Quid Palis Carthago, o pons iugis /  
Dol Palis me ruine si tibi caris!*

But the plans of M. Falbe seem to have put to rest all doubts as to the situation of Carthage; and, combined with the learned and elaborate dissertation of Dureau de la Malle, give not only a satisfactory explanation of the form and situation of the city, but of all that can be ascertained respecting it from the most careful examination and comparison of ancient authors. Referring such of our readers as may wish for full information as to this interesting subject to the sources now mentioned, we shall content ourselves with stating that Carthage was principally built along the coast of the peninsula to the N.E. of Tunis, from a little N. of the goletta or entrance to the lagoon of Tunis to cape Carthage (lat. 36° 51' 30" N., long. 10° 39' 45" E.), and then round to cape Quamart. It was defended on the land side, where it was most open to attack, by a triple line of walls of great height and thickness, flanked by towers, that stretched across the peninsula from the lagoon of Tunis to the sea on the N. The harbour lay to the S. of cape Carthage, and was entered from what is now the gulf of Tunis. Having less to fear from attacks by sea than by land, the city had on that side only a single wall.

At the period of its greatest splendour Carthage must have been one of the richest and finest cities of the ancient world. It consisted of three principal divisions, viz., the *Byrsa*, or citadel, built on an eminence, the summit of which was oc-

## CARTHAGE.

cupied by a magnificent temple in honour of Esculapius; and it also contained the famous temple of the Phœnician Ashtar, the *Jomo* of Virgil: the *Aggera*, or town so called, lay to the W. of the *Byrsa*, along the triple wall, and was of great extent, comprising extensive squares and gardens: the third division was called the *Odorus*, or port; this, as its name implies, was artificially excavated, and consisted of two great basins, one outer and an inner; the first for merchant-ships and the latter for ships of war. The access to both basins was by a common entrance, which was shut up by a chain; and which was supplied with quays, warehouses, stores, &c., suitable to its destination. It was in this quarter that the seamen, shipwrights, merchants, and others connected with the mercantile marine of the republic principally resided.

Besides the public buildings already alluded to, Carthage had a famous temple in honour of its tutelary deity, Melcart, or Baalim, whose altars were sometimes stained with the blood of human victims; with temples to Ceres, Jupiter, &c. It had also all the usual places of public resort, and theatres, including a magnificent forum, a circus, and a theatre. The water within the precincts of the city must have been at once scarce and bad; and to obviate the inconvenience thence arising for the saving and preservation of rain-water. The streets were all paved; and this essential improvement in the construction of streets is said to have been originally introduced by the Carthaginians. Strabo states that the pop. of Carthage amounted to 700,000; but M. Dureau de la Malle has shown that no reliance can be placed on this statement, and that the pop., previously to the destruction of Carthage by the Romans, cannot safely be estimated at above 250,000 persons, slaves included. (*Recherches sur la Topographie de Carthage*, p. 1-109.)

The early history of Carthage is involved in the greatest obscurity. All that is certainly known with respect to it is, that it was founded by a body of emigrants from Tyre; but of the occasion and epoch of their migration we have no certain knowledge. The common opinion is, that Utica, also a Tyrian colony, was founded before Carthage; and that the foundation of the latter took place anno 1539 B.C. It is probable that the colony subsequently received fresh accessions of immigrants from the mother country; and it is supposed that one of these was headed by Hima or Dido, to whom Virgil has ascribed the foundation of the city. (*L'Art de Vérifier les Dates*, iii., 414, 2vo ed.)

The Carthaginians appear to have inherited, in its fullest extent, the enterprising character of their ancestors; and, like them, were principally addicted to navigation and commerce. After extending their sway over a considerable part of Africa, they began to make settlements in, and to endeavour to subvert, in more distant countries. The fine and fertile island of Sicily seems to have early excited the ambitious views of the Carthaginians; but, though they had several valuable settlements in it, they were uniformly thwarted in their efforts to effect its complete subjugation. After the destruction of Tyre, Carthage inherited the possessions of the former in Spain, to which she afterward made large additions; and she also subjugated the island of Sardinia.

Of the long-continued struggle between Carthage and Rome, it would be useless, even if our limits permitted, to say anything. It is a favourite subject of every classical reader, and has been ably treated of in many modern works; but it is much to be regretted that we have no Carthaginian history of this memorable contest, and that we are constrained to depend wholly on the one-sided, prejudiced accounts of the Latin historians, and the Sicilian Greeks. The reader will do well to bear this in mind, and to modify most of their statements unfavourable to the Carthaginians.

**Government.**—As far as can be gathered from Aristotle, and the incidental allusions of other writers, the government of Carthage seems to have been one of the wisest and best constituted of ancient times. Like that of the mother country, it is generally supposed to have been originally monarchical; though on its first emerging into authentic history we find it an aristocracy of birth and wealth, with a slight mixture of democracy. At the head of this aristocracy was a senate analogous to the senates of Sparta and Rome, and composed of the most illustrious citizens. Its members appear to have been very numerous; but all statements with regard to the mode of their election, or the duration of their authority, must be purely conjectural. The senate had the management of all affairs of peace and war, the arrangement of treaties and negotiations, and, in short, the power of deliberating, and to a certain extent, of deciding upon all public affairs. Within itself, the senate contained a committee of 104, called, by a round number, *centumviri*, originally instituted as a check upon the encroachments of the aristocracy. It afterward became a high court of justice, vested with such authority as rendered it in effect the depository of all the sovereignty which lay in the senate itself. Aristotle compares this committee, or council, to the

## CARTHAGE.

glori of Sparta, but it should seem that the pentarchies, or *quinquaviri*, had a better title to the comparison. These were composed of several bodies, each consisting, as the name implies, of five persons selected from the *gens*, or committees, and possessed of almost despotic authority. They had cognisance of all affairs both public and private, and appear to have constituted a court of appeal in the last resort for all causes. They continued in office a long time, and had not only the power of filling up vacancies in their own body, but the right of choosing those who composed the tribunal of the *centumviri*. This, no doubt, was a highly aristocratical institution; and Livy says of it, that *vis, fama, vitæque omnium in illorum potestate erat*. At the head of the senate were two magistrates, or *suffetes*, answering to the Spartan kings or the Roman consuls. Originally the right of electing the *suffetes* was vested in the senate: but in the decline of Carthage it fell into the hands of the people. In their nomination, according to Aristotle, regard was had chiefly to birth, riches, and popularity; and a passage in the recently discovered work of Cicero, *De Republicâ*, in which he compares them with the Spartan kings, and contrasts them with the Roman consuls, would lead us to infer that they were elected for life. Their province was to convene the senate, in which they presided, to propose subjects for deliberation, and to collect the suffrages. In time of war, one of the *suffetes* was usually appointed general of the forces of the state, while his colleague remained at home. But besides the *suffetes* there were other subordinate magistrates, with the nature of whose duties we have become acquainted only through the Roman writers. We hear, for instance, of a *præfectus morum, prætor, quæstor, &c.*, with powers analogous to those of the Roman magistrates so called; but these statements must be received with great caution, considering the tendency of the Roman, as indeed of all authors, to represent the institutions of other people as corresponding with or analogous to their own, though, in reality, there might be very little in common between them. The people were divided into guilds or corporations; and though in the infancy of the state they did not directly participate in the administration of affairs, they possessed, from the first, the important privilege of deciding upon those questions about which there was a difference of opinion in the senate. They had also, like the Spartans, their public or political festivals, at which questions of policy were discussed; and thus public opinion was enabled to exercise a salutary influence over the deliberations of the senate. Upon the whole it should seem, that although, as indeed might have been expected in a commercial state, the influence of wealth preponderated in the administration of affairs, still so well had the constitution of Carthage been balanced, that while, on the one hand, the nobles did not engross the whole power, as was the case in Sparta, Carthage, and Rome, the people seldom or never exhibited the factious spirit of the "ferocious Athenian democracy," or the ferocity of the Roman rabble. "The excellence," says Aristotle, "of the Carthaginian government is evinced by a single reflection: though its origin mounts to a very ancient date, and though, for many centuries, it has continued within its bosom a numerous and a free people, yet Carthage has never, to the present day, experienced any one sedition worthy of record, nor has it ever endured, for a moment, the cruel yoke of a tyrant." (*Gillie's Aristotle*, book II., § 9.)

*Possessions, Commerce, &c.*—At this distance of time, and with our scanty means of information, it is almost impossible to trace the various stages of Carthaginian encroachment on the neighbouring territory; but we are enabled to state pretty accurately the extent of country in Africa subject to Carthage at its most flourishing epoch. E. It stretched to the Syrtis and the confines of Cyrene; S. to Lake Triton and Mount Atlas; and W. (though this point has been less accurately ascertained) to the territories of the Numidian princes; while in the same direction the whole African coast was studded with Carthaginian colonies. Hence its subjects were divided into three different classes: the first were the cities on the coast, such as Utica, Hippo, Zaryta, and others, which, like itself, were colonies from Phœnicia. These were at first not so much its subjects as its allies; though at a later period a supremacy was conceded to it which soon passed into sovereignty. The next class consisted of its own colonies—the maritime colonies on the coast and the agricultural settlements in the interior of the country. The third class were the native Libyans, to whom Carthage had originally been tributary, but who now submitted to her authority. These were partly a fixed agricultural people, who, from a gradual amalgamation with the Carthaginians, were called Liby-Phœnicians, and were kept in restraint by the agricultural colonies planted among them; and partly nomadic tribes, whose allegiance was partial and precarious. The agricultural party only, which the Carthaginians had trained and accustomed to that mode of life, could be treated as subjects, properly so called; for the nomadic tribes were subject to Carthage

only so far that they paid her tribute; and their hatred of those who disturbed their aboriginal mode of life, fomented as it was by the oppressions of the Carthaginian government, frequently broke out in revolt when the approach of an enemy gave the signal. But the Carthaginians appear to have attached less importance to their possessions in Africa than in other parts. At an early period they became masters of Sardinia, the Balearic islands, and Malta. We have already noticed their vigorous and long-continued efforts to make themselves masters of Sicily; and had they succeeded in this, the foundations of their power would probably, as Heeren supposes, have been established on a solid basis. The failure of their efforts to effect the conquest of Sicily, and the loss of Sardinia, that was taken from them by the Romans, seem to have impelled them to attempt the subjugation of the entire Spanish peninsula. They had also several settlements along the W. coast of Africa; and it is probable, though not certain, that Madeira and the Canary Islands (*Fortunate Islands*) were included in their dominions.

The commercial operations of Carthage embraced the whole ancient world, and have only been surpassed by those of Europe since the discovery of America and the passage to the East Indies by the Cape of Good Hope. But the greatest difference of opinion exists as to the extent to which the Carthaginians carried their maritime expeditions; and while some geographers restrict their limits between the S. coast of Britain on the N. and Cape Bojador on the S., others contend that they reached the coasts of the Scandinavian peninsula, circumnavigated Africa, and even visited the shores of the New World! We have elsewhere seen (*ant.*, p. 37) that it is probable, from the statement of Herodotus, that the circumnavigation of Africa was really performed by Phœnician mariners; but there is no ground whatever for supposing that it was ever performed by the Carthaginians, or that they ever approached the shores of America. The only really authentic information, as to their navigation, is embodied in the account of the voyage of Hanno along the W. coast of Africa; and it is so very difficult to identify the localities mentioned in it, that some critics assign to it a length of 3000, and others of not more than 700 miles.

The merit of being the first who, in modern times, drew attention to the *land trade* of the Carthaginians belongs to Heeren, whose researches have placed the connexion of Carthage with the central nations of Africa in a clear and striking light. We have already, however, adverted to this interesting subject, and must refer those wishing for more comprehensive details to Heeren's work. It is sufficient here to remark that the internal trade of Africa seems to be alike unchanged and unchangeable. The countries to the S. of the great desert of Sahara are destitute of two most important articles, salt and dates, which abound in the countries N. of the Sahara; while, on the other hand, the S. countries have ample supplies of gold dust, ivory, drugs, gums, and slaves, all articles in great demand along the Mediterranean. Here are the wants and materials that go to form an extensive and mutually beneficial intercourse; and the oases found in the desert, and the camel furnish the means of carrying it on. It is, in fact, carried on at this moment by caravans, nearly in the same manner that it was carried on by the Carthaginians and negroes 2500 years ago; and the probability is, that it will continue in time to come to flow in the same channels. (*See ant.*, p. 35.) It is impossible to enumerate the various articles of Carthaginian traffic, seeing that they most probably included the commodities of every known country and climate. The exports from Carthage consisted chiefly of articles of native produce, and of those procured by its land trade from the interior of the continent. She freighted her ships with the wines of Italy, Sicily, and Sardinia, and carried these articles to Cyrene, the Balearic islands, and W. Africa. She carried on a large trade in oils and other articles, which she sent to Carthage, the "ultima thule" of her African colonies, and received skins, gold, and ivory in exchange. She procured iron from Elba, alum from the Lipari islands, and tin from the N. of Spain, the Scilly islands, and Cornwall. The Baltic supplied her with amber; but whether it was procured by sea, or conveyed overland to the head of the Adriatic, and thence imported into Africa, has not been ascertained. From Tyre, with which she always maintained the most friendly relations, she received not only trinkets, glass, pearls, and other ornaments, and Sidonian cloths, the chief branches of the industry of Tyre itself, but cassia and cinnamon, and the other precious spices, which were imported into Tyre from India. Malta, too, supplied her with articles of woollen manufacture equal if not superior to those of Tyre. Her traffic in slaves, which she procured from the interior of Africa and from Corsica, was most important, and formed a large source of revenue. So abundant were slaves, that during the second Punic war, Asdrubal is said to have pur

## CARTHAGE.

chased 5000 at a time. The commercial policy of the Carthaginians has been said to be of a peculiarly grasping, jealous, and selfish character; but it is not entitled to any such distinction, and really differed in very few respects from that of most other commercial nations. Her object was, in as far as possible, to monopolize the trade of the world; and in this view she practised most of the favourite schemes and devices of the mercantile system. The privilege of trading was vested exclusively in the citizens (in contradistinction to the slaves or tributaries of Carthage); no commodities were suffered to be exported or imported except in Carthaginian vessels; the trade of her colonies was restricted to the mother city; and the ships of the foreign nations with whom she had entered into commercial treaties were absolutely excluded from her harbours; but this regulation appears to have been dictated more by political than commercial jealousy.

But though Carthage was from the first a trading city, it would be wrong to regard the Carthaginians as a mere nation of merchants. On the contrary, it is sufficiently proved that they found leisure to engage in other pursuits, among which agriculture held a prominent place. This science, in its widest range, was so well discussed by them in their writings, that the Romans considered them worthy of translation. Nowhere, indeed, was agriculture better understood, or practised with more seal, than in Carthage; and most families were in the habit of applying the produce of their commerce to the cultivation and improvement of the soil. All accounts concur in assigning a high state of cultivation to the neighbourhood of Carthage. "The territory," says Diodorus Siculus (li. 411), "through which Agathocles led his army was covered with gardens and large plantations, and everywhere intersected with canals, by which they were plentifully watered. A continual succession of landed estates was there seen adorned with elegant buildings, which evinced the opulence of their owners. Vineyards, olive grounds, and meadows spread on every side; and the whole region was thickly studded with the country seats of the wealthy citizens of Carthage and the other towns in its vicinity."

**Revenues.**—Our information on this subject is, unfortunately, extremely meagre; but there is little doubt that the revenues of Carthage were more considerable than those of any state of antiquity. They were derived from three sources; the *tribute*, levied on the subject and confederate states; the *customs*, and the *mines*. To what extent tribute was levied in time of peace is unknown; but examples are not wanting to prove that, in cases of urgency, the tributary nations were very heavily taxed. It is a curious fact that the contributions paid by the allied states and the cities along the African coast were in money, and by all the other tributaries in kind. The *customs* were levied with great rigour both in Carthage and in all her colonial ports; and in later times they became so important that they are said to have supplied all the wants of the state without the imposition of any other tax. The *mines* formed an important source of revenue; in working these all the inventions which ingenuity and industry could suggest were rendered available. The most considerable mines were situated in the neighbourhood of Carthage Nova in Spain; they gave employment to 60,000 slaves, and yielded about 50,000 drachmas daily. At first they belonged entirely to the state; but we afterward find them in possession of some of the great families, who worked them on their own account. What use the Carthaginians made of the great quantity of precious metals which they procured from the mines, cannot be ascertained with certainty. The circumstance that no Carthaginian coin has been handed down to us will scarcely warrant the belief that no coined money was employed in Carthage; and though it be true that many, and indeed the most important, expenses of the state were not paid in money, it is highly improbable that a city, whose colonies confessedly coined money, should herself be without a coinage.\*

These were the ordinary revenues of the state; but in cases of emergency, the Carthaginians resorted to other means of recruiting their exhausted treasures, either by procuring foreign loans, by legalizing piracy, or by the imposition of a property tax, which should press more heavily on the rich than the poor. But with regard to all that concerns the administration of the revenue, we are still in the dark; though it has been said that one of the pontarches above mentioned, with a magistrate at its head, formed a board for its management.

**Naval and Military Forces.**—To maintain the sovereignty of the sea, the chief source of her prosperity, and to pro-

tect her commercial marine, as well as to extend her conquests and preserve them, rendered the formation and support of vast fleets and armies indispensable. The ordinary number of ships or galleys of war possessed by Carthage, at the period immediately preceding the Punic war, was from 150 to 200. It was increased in the first Punic war, when their naval power appears to have attained its highest pitch; and in the fatal naval engagement by which Rome opened its way to Africa, the Carthaginian fleet consisted of 350 galleys with (but this is no doubt exaggerated) 150,000 men, exclusive of transports. Their warships were manned partly by fighting men and partly by rowers; the latter of whom consisted entirely of slaves bought by the state for this particular purpose, and amounting, even in time of peace, to 50,000. But though the genius and position of Carthage naturally led the citizens to regard the navy as their main bulwark, the wars of conquest in which the republic was perpetually engaged, and the maintenance of its foreign possessions, obliged it to keep large armies continually in the field. These were composed almost entirely of mercenaries, collected from every part of the world, and exhibiting every diversity of blood, complexion, tongue, and weapon: "*Exercitus mixtus ac colubinus omnium gentium quibus non lex, non mos, non lingua communis; alius habitus, alia vestis, alia arma, alius ritus, alia sacra.*" (Livy, 23, 12.) Hordes of half-trained Gaul stood side by side with bands of white-robed Iberians; wild Ligurians were arrayed with far-travelled Numans and Lotophagi; Carthaginians and Phœnician Africans formed the centre or main army; Balearic slingers formed the advanced guard; and lines of colossal elephants, with their Ethiopian drivers, preceded their march like a host of moveable fortresses; but the main strength of their army consisted in its light cavalry, which was provided in abundance by the nomadic tribes which flanked their positions. All these tribes, including the Masætes and the Mauruli, the Numidians, the nomadic races of the Sytes, the Nazamonæ, and Lotophagi, were accustomed to war in the Carthaginian armies, and received their pay. The heavy cavalry were formed from Carthaginians, Libyans, Spaniards, and in later times Gauls, levies. In case of emergency the Carthaginians could raise an army of 80,000 from the citizens alone, besides the battalion called "the sacred legion," which consisted entirely of the sons of the Carthaginian nobles, and amounted, even in time of peace, to 3500 men.

**Language, Religion, Literature, &c.**—The destruction of the Carthaginian records, which would otherwise have thrown a flood of light, not only on the history of Carthage, but on that of the numerous nations with which she came in contact, must be considered as one of the greatest losses the civilized world has sustained. It has, no doubt, been usual to regard the Carthaginians as wholly immersed in commercial pursuits, and thence to infer that their attainments in literature and the arts must have been very inconsiderable. But there is not so much as the shadow of a foundation for this opinion. So far from commercial pursuits being unfavourable to literature and the fine arts, their effect is distinctly and completely the reverse. The experience of Athens and Corinth in antiquity, of the Italian republics in the middle ages, and of England in modern times, is conclusive as to their humanizing influence. But the literature of the Carthaginians survived the wreck of their empire, we believe it would have been found to be at least as valuable intrinsically as that of Rome, and less erotic. It is worthy of notice that they began their career under the most favourable circumstances. Their descent from the Tyrians, confessedly one of the most civilized nations of antiquity, gave them, as it were, an almost intuitive knowledge of many of the most useful and ornamental arts and sciences, and placed at once within their reach all those means and contrivances which both facilitate the prosecution of commercial undertakings, and extend the boundaries of civilisation. Surely then it may be reasonably inferred, even in the absence of all monuments of genius, that the rich legacy of their ancestors, increased as it must have been by the intercourse they carried on for seven centuries with the most renowned nations of antiquity, and by the researches and inquiries which their wealth afforded the means of prosecuting, must have produced in the end, a vast accumulation of science and literature. But, like the city itself, nothing remains of all this. The only traces of the language of Carthage are to be found in a comedy of Plautus, from which it is clear that, like the Phœnicians, it formed a branch of the original Asiatic languages, bearing a strong resemblance to the Hebrew, Syrian, and Chaldean, with a slight admixture of purely Libyan idioms and phraseology. The voyage of Hanno and a few other fragments, are known to us only by the medium of translations.

Like all colonies, they brought with them the customs of their fathers; but the authentic information is very scanty.

\* A singular circumstance connected with this branch of the history of Carthage is the contrivance which they made use of in their colonies, nearly answering the purpose of our paper money, or bank notes. It consisted of a small piece of leather, stamped by the state, upon which a fictitious value was bestowed, and which could be exchanged at pleasure for the precious metals.
